MEMORANDUM TO PREFACE PART I.

This Collection contains all the Despatches of the Government of India in reference to the Famine, all the narratives of the Government of Bengal, and all communications that have passed between the two Governments. Many documents are referred to in these papers which are not printed on account of their enormous bulk; but any of them can be given if desired.

CORRESPONDENCE.

No. 9 of 1873.

Government of India.

Department of Revenue, Agriculture, and Commerce.

Agriculture and Horticulture.

To His Grace the Right Honorable the Duke of Argyll, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, Simla, the 30th October 1873.

We regret to have to inform Your Grace that we have received from the Lieutenant Governor of Bengal accounts which give rise to serious apprehension that the failure of the crops in a great part of that Presidency will occasion severe distress, if not worse results.

2. We enclose a copy of Sir George Campbell's letter, together with the last reports of the rainfall and of the state of the crops in Bengal, and also of the telegraphic communications which have passed between him and the Viceroy.

3. Even if the worst anticipations should not be realized, it is obvious that considerable distress will have to be encountered in the winter and spring, and under those circumstances we have thought it desirable to give instructions for the carrying on at once of some extensions of the Soane Canal, which will afford employment to the people in the neighbourhood of Patna, and also to anticipate Your Grace's sanction to the commencement of the Northern Bengal railroad, which extends through a portion of the country where the failure has been severe.

4. Your Grace will observe that Sir George Campbell, in his letter of the 22nd instant, advocates the immediate prohibition of the export of rice from all Indian ports. We have not thought it desirable to issue this order, and it appears to us to be probable that the wiser course will be to obtain any supplies of rice which may be necessary by purchase, directly or indirectly, rather than to take a step which must necessarily derange trade, give occasion to claims to compensation which it would be difficult to adjust, and which might not add materially to the stock of rice available to meet the apprehended scarcity.

5. The Viceroy has decided to proceed at once to Calcutta with Sir Richard Temple for the purpose of arranging, in consultation with Sir George Campbell, the best measures for meeting a crisis which we fear must in any case be serious. We have every confidence in the zeal, ability, and courage of Sir George Campbell, and we feel convinced that everything in his power will be done to prepare for the danger which may have to be encountered. In the meantime we have authorised Sir George Campbell, who is now at Patna, to use his discretion with respect to commencing relief works, and arranging for the importation of grain, where this may appear to him to be necessary, and where he does not expect that it will be provided for by traders. We have also telegraphed to the Governor of Madras and the Chief Commissioner of British Burmah, with the view of ascertaining what amount of rice can be obtained within the next three months from Madras and from Burmah, and the manner in which it can be purchased and transmitted to Calcutta with the least interference with private trade.

6. We have also called for information from the Lieutenant Governor of the North-West Provinces and the Chief Commissioner of Oudh with respect to the surplus supply of grain which may be obtained in Oudh and in the North-Western Provinces.

We have the honour to be,
My Lord Duke,
Your Grace's most obedient humble Servants,
(Signed) NORTHBROOK.

ENCLOSURES of (Agriculture and Horticulture) Despatch No. 9, dated 30th October 1873.

No. 50 T, dated Hazareebaugh, the 22nd October 1873.

From H. L. JOHNSON, Esq., Private Secretary, for Secretary to the Government of Bengal, in the General and Revenue Department, to the Secretary to the Government of India in the Department of Agriculture, Revenue, and Commerce.

As long as there was any hope that the fall of rain which frequently occurs in October would very much alter the whole state of things, the Lieutenant-Governor has refrained from officially addressing the Government of India on the subject of the apprehensions which the crop reports have made manifest. Till now we could only wait and hope. But the time has come when it is the Lieutenant-Governor's very painful duty to report that throughout the greater part of these provinces the shortness and early cessation of the rains has caused irreparable injury, and that in the absence of all symptom of any return of rain up to this date, 22nd October, it is impossible to avoid the gravest apprehensions of general scarcity throughout the country, and worse evils in large parts of it.

2. The most immediate fear appears to be for the very thickly populated Patna Division. Except in the north-east portion the total rain-fall of that division has not, the Lieutenant-Governor believes, been so much below the average as in other parts of these provinces, but it has been distributed in the most unfortunate manner. Here, as elsewhere, the rains were extraordinarily late; when they came they were so heavy in some parts of the division that very great injury was reported to have been done to the early crop called locally the Bhadoee (Indian corn and the like) by excessive rain; at some places it was even said to have been entirely ruined. The late rice crop, however, seems to have been pretty well started everywhere, except in the north-east, and if the rains had lasted as long as usual, the result might have been fair. Unhappily the rains may be said to have closed before the middle of September, and the crop already very late has more and more suffered; the hope of saving it gradually diminishing as time passed without rain, and being now reduced to the lowest, since the October rains have so far failed, and seem likely to fail altogether. Not only is much of the rice crop irreparably gone, and much of the remainder almost gone, but the continued drought has given rise to the greatest fears for the cold weather crops, which are an important staple in the Patna Division. If there is no rain in the next few days, and the rubbee sowings do not give both immediate employment and hopes for the future, distress and difficulty of a serious character may be almost immediate in this division.

3. Throughout almost the whole of the remainder of these provinces the rains have been not only very late to commence and very early to cease, but have been in quantity below the average in amount to an extraordinary degree. This has been most markedly the case in the tracts north of the Ganges and near the Himalayas, which are usually great rice-producing countries, the north-east of Behar, and the north of Bengal, Dinajpore, Rungpore, and almost the whole of the Rajshahye Division. In parts of this usually moist tract the rain-fall has hardly exceeded that which is usual in the driest parts of the North-Western Provinces. It is in this tract that the greatest failure has taken place. Possibly in the moister and less populous parts even failure may not be so complete and ruinous as further west, but in the west of this tract there may be said to be already panic.

4. In Calcutta and the neighbouring districts the rain-fall has been below the average to an extraordinary degree. The tanks about the Lieutenant-Governor's residence have never once been half-filled. The rain was, however, well distributed so long as it lasted, and there have been in these parts a few irregular and partial showers here and there in the first half of October. There seems to be reason to hope that in the moister districts, *e.g.*, the 24-Pergunnahs, the crop may so far escape that, though injured, it will not wholly fail. In Western Bengal, where the soil is higher and drier, the apprehensions are of a much graver character. In Eastern Bengal, usually the granary of these provinces, we may hope that there will be no actual want of grain for local consumption, but it will be a very bad feature of the case if, as is feared, the crops are there so short that the usual exports are impossible.

In Orissa only, the scene of the last great misfortune, there has been good rain in October, and the prospects are good. But Orissa is a very small province, and its surplus supply must be in a comparatively small scale. The rice-producing district of Backergunge also seems to have had rain.

5. Hope of a late fall of rain has hitherto so much buoyed people up and kept down prices, that it is impossible yet to form a confident opinion of the actual results, but the time has come when within a very short period the fate of the crops throughout the country generally must be known. The Lieutenant-Governor has already taken every means to obtain information, and now that the issue cannot be long doubtful, he is about to go to take counsel on the spot with the Commissioner of Patna, and otherwise to make such inquiries and arrangements as circumstances may suggest.

6. The Lieutenant-Governor trusts that if, unhappily, the necessity is undoubted, he may have authority to make immediate arrangements for relief works, and any importations which may seem possible and are not likely to be effected by private enterprise. He trusts that immediate authority will be given to him to exercise his discretion in this respect.

7. The Lieutenant-Governor also begs to suggest that the export of rice to foreign countries from the Indian dominions should be stopped. In the face of a general failure in Bengal, any

supply that could be derived from British Burmah, the Godavery and Kistna Districts and Orissa would go but a very little way, and if, as is believed, the premature cessation of the rains has extended to the North-Western Provinces, we probably cannot expect help from that quarter. If any change due to an unexpected rain-fall should occur, it must be before orders can be passed on this letter, and such a measure as the stoppage of foreign exports carried into effect. If before then no rain has fallen, every grain of rice will be wanted.

Telegram, dated the 25th October 1873.

From Viceroy, Simla, to Lieutenant-Governor of Bengal, Hazareebagh.

Do you wish any communication made to Burmah with reference to the possibility of having to buy rice for Bengal?

Telegram, dated the 27th October 1873.

From Lieutenant-Governor of Bengal, to Viceroy, Simla.

Your telegram. See my letter of the 22nd to the Agricultural Department. Things look as bad as possible. I think that the sooner we buy rice in Burmah the better. I shall be at Bankipore to-day.

Telegram, dated the 27th October 1873.

From Viceroy, Simla, to Lieutenant-Governor of Bengal, Bankipore,

Clear the line. Your letter 22nd and telegram 27th. Orders will be given at once to proceed with Soane Canal and Northern Bengal Railway works. You are authorised to act as you think best as to the other relief works and importations. I leave Umballa for Calcutta on Wednesday evening to meet you and arrange further measures. If you wish to join me on the way telegraph where.

Telegram, dated the 28th October 1873.

From Lieutenant-Governor of Bengal, Bankipore, to Viceroy, Simla.

Clear the line. I go from this to Bhaugulpore on Wednesday; will meet your Lordship at Luckeeserai or Burdwan. Please telegraph exact time. If convenient, will be glad to receive your Lordship at Belvedere. Inquiries proceeding here. On the whole I think rain within ten days or fortnight might avert great suffering here, failing that there will be much distress. State of Bengal Proper not yet realised.

Note.—The Duke of Argyll replied to this despatch on the 1st December 1873. A copy of His Grace's despatch is given on page 51 of the Abstract. [Command Paper 933 of 1874.]

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

No. A. of 1873.

To the Right Honourable the DUKE OF ARGYLL, K.T., Her Majesty's Secretary of State for India.

MY LORD DUKE, The 7th November 1873.

I HAVE the honor to inform your Grace that I arrived at Calcutta on the 31st ultimo, accompanied by Sir Richard Temple. We saw Mr. Bayley, the Commissioner of Patna, on the road. Sir George Campbell met us at Burdwan, and proceeded with us to Calcutta.

2. Since my arrival I have been in constant communication with Sir George Campbell, and have obtained from the British and Native Commercial community much useful information upon the prospects of the Province.

3. The reports from Behar, as your Grace will perceive from the *Calcutta Gazette* of the 5th instant, have by no means improved, nor are those from the rest of the Province reassuring. The failure of a large portion of the autumn rice crop is now certain. In many parts the spring crop is not yet sown, and the possibility of cultivating the land for that crop depends upon a speedy fall of rain. From further accounts received there have been some showers in Rajshahye, Moorshedabad, Hooghly, Raneegunge, Bheerbhoom, Bhaugulpore, the 24-Pergunnahs, and parts of Jessore; but it is not considered probable that any considerable fall of rain will occur in the course of this month.

4. According to our present knowledge, the condition of things throughout the Province is as follows: In Behar, comprising the Patna and Bhaugulpore Divisions, with a population of 20 millions, the failure of the rice crop has been very general, and the prospects of the spring crop are bad. The Division of Rajshahye, with a population of 9 millions, is affected in the same manner as Behar, but the failure of the rice crop has not been so complete, and the prospects of the spring crop are somewhat better.

5. In the Burdwan, Presidency, and Cooch Behar Divisions, with a population of 14½ millions, there has been a considerable amount of failure, but it is hoped that the results may not be very serious.

6. In the Dacca, Chittagong, Chota Nagpore, and Assam Divisions, with a population of 19 millions, there has been a failure of the rice-crop in some districts, but on the whole there may be expected to be a surplus of rice available for export, although less than in ordinary years. The district of Backergunge, in the Dacca Division, which ordinarily exports rice largely, has not materially suffered.

7. In the Orissa Division alone, with a population of 4½ millions, are the reports altogether satisfactory.

8. In the rest of India, as your Grace will see from the reports published in the *Gazette of India* of the 1st of November, the crops are generally good, with the exception of Oude, and the Benares Division of the North-Western Provinces, which have suffered in part from the want of rain which has affected Behar. Sir William Muir informs me that the Eastern districts of the North-Western Provinces, where the rains hardly ever fail, have had, on the whole, a scanty supply. The rice has suffered, and unless more rain should fall, there will be difficulty in ploughing for the autumn sowings. Some scarcity and distress is, therefore, apprehended in the Benares Division. From Allahabad northwards the prospects are better, and in the North-West they are very favourable. Sir George Couper reports that the autumn crop in Oude, owing to the paucity of rain, is not above half the average, with the exception of maize, which is plentiful, and that the usual area has not been sown for the spring crop, owing to the want of rain, so that it is to be feared that the harvest will not, even with the most favourable Christmas rains, yield much more than two-thirds of the average.

9. Your Grace will observe that so much depends upon the result of the spring crop that it is impossible at the present time to foresee the effect which the drought will have upon the food resources of the country during the coming year, and the necessary information can hardly be completely obtained before the middle of January next.

Enclosure C., page 8.

10. A memorandum written by the Lieutenant-Governor of Bengal on the 29th of October, after personal communication with the officers of the Patna Division, and the reports of the Commissioner and local officers, which I have the honour to enclose, will put your Grace in possession of the latest information from that Division.

11. All the recommendations of the Commissioner of Patna have been complied with, and he did not, when I saw him, anticipate any serious distress before the beginning of next year.

Enclosure D., page 10.

12. The general result of the anxious consideration which I have given to the present state of affairs is embodied in the accompanying Resolution of Government, in framing which I have had the great advantage of the assistance of Sir Richard Temple, and in which he entirely concurs.

13. I have but little to add to what is stated in that Resolution.

14. The prohibition of all export of grain from British Indian ports is strongly advocated by the native press, and is still recommended by Sir George Campbell.

It is a course which does not commend itself to my judgment. It is probable, from the experience of former years and the information which is available as to the supplies of food grain in India, that the deficiency in Bengal and Behar can be met without recourse to importations from abroad; in the term 'abroad' I include British Burma, for Burmese rice is not imported into Bengal in ordinary years.

The rise of prices which has occurred, and which, if the prospects should become worse, must increase, will, in my opinion, of itself prevent any considerable export of the common classes of grain from Indian ports proper, and if it reaches 4 rupees a maund, it would, according to the best information I can obtain, probably bring a considerable amount of Burmese rice into the Calcutta market.

Your Grace will observe from the enclosed return that the principal exports of rice from British Indian ports begins in February, before which time there will be full information as to the probable wants of Bengal, which information must necessarily operate upon prices.

15. To prohibit exports would have the effect of artificially reducing prices at the commencement of a season of scarcity, and moreover it would shake the confidence of the mercantile classes in the determination of Government to maintain the utmost freedom of trade as the best preservative against famine, and so by checking commercial operations cut off sources of supply from without which would naturally come to our aid in time of need.

16. The general principles which should guide the Government in times of scarcity were enunciated by the Government of India in 1868 after the experience of the famine in Orissa, which extended to the same districts which have suffered on the present occasion, and I have only to add that I concur generally in the opinions then expressed.

17. Experience shows that the great difficulty in India lies more in the obstacles to the transit of grain presented by the situation of some parts of the country in the case of a sudden demand, than in any deficiency of supplies in the great marts situated upon or in the neighbourhood of lines of railway or river communication. In order to guard against the people suffering in such cases, I have, as your Grace will observe from the 26th paragraph of the resolution, authorised advances to be made to Zemindars and others, who may consent to import grain from a distance into such exceptionally situated districts, and sell it to the people in their neighbourhood.

18. The Government of India and the Government of Bengal will also purchase a certain amount of grain in order to secure a supply to the labourers employed on Government works. These purchases will be made through the trade, and appear to me to be a perfectly legitimate course of action. I have been assured upon good authority that they are not likely to have an injurious effect upon the trade.

19. It may be interesting to your Grace to know that the East Indian and Eastern Bengal Railways can each carry 2,000 tons of grain a day without deranging their ordinary traffic, and could increase that quantity if necessary. From the 8th to the 26th of October, 335,000 maunds, or about 12,000 tons of food grains, were despatched by the East Indian Railway from Howrah and Chandernagore to the districts where the rice crop has failed. The goods traffic of the East Indian Railway for the week ending the 25th of October was 300,000 maunds above the corresponding week of last year. There has been the greatest activity in the grain trade all over Bengal, and Sir William Muir assures me that his experience of 1868–69 showed that there would be no want of private enterprise in the transport trade, wherever there are good roads or railways.

20. Sir George Campbell thinks, and I agree with him, that it would be premature to call a public meeting, appoint a Central Relief Committee, and appeal to the public for subscriptions, until a better estimate can be formed of the amount of distress there is likely to be, which, in order to prevent loss of life, must be met by the distribution of food; but preparations will be made for the constitution of local relief Committees at once, so as to be ready when the time of action arrives.

21. Your Grace will see from the Report of the Orissa Commission and from Mr. Cockrell's report of the distress in Behar in the same year, the importance of taking the distress in time, and Her Majesty's Government may rely upon the Government of India not shrinking from using every available means, at whatever cost, to prevent, so far as they can, any loss of the lives of Her Majesty's subjects in consequence of the calamity which now threatens Bengal.

22. In conclusion I have to inform your Grace that I thought it desirable to prevent any unusual assemblages of people in the districts which may be affected by the rise of prices. I have therefore put off the Durbars at Agra and Lucknow, countermanded the Kirwee Camp of Exercise, and requested the Commander-in-Chief to reduce as far as possible the force which was to be collected at the Roorkee Camp.

I have the honour to be,
My Lord Duke,
Your Grace's most obedient and humble Servant,
NORTHBROOK.

Enclosure C. to foregoing Despatch.

Patna, Oct. 29th, 1873.

I HAVE now had the advantage of discussing the food prospects of this division with the Commissioner, with local officers of most of the districts, and with several persons, European and native, who have a good knowledge of the country.

The season may still be very materially affected by an early fall of rain, but there is so little prospect of this, that we must face the question on the supposition that there will be no rain in time for the rubbee sowings.

In this view, I fear there is entire unanimity that the prospects are extremely bad, at least as bad as, if not worse, than any year within recent memory. Except in very low-lying places, and in the lands near the course of the great rivers subject to flood, there must be very great failure of both the kurreef and rubbee crops—not mere shortness of crops, but disastrous failure; the greater part of the rice lands not producing at all, and the greater part of the rubbee not being sown or not germinating.

I don't feel that we have the means of forming even an approximate estimate of the stocks in hand, or the degree to which, if well distributed, they will suffice to keep the country alive till another harvest. All that can be said is that the general tendency of opinions on this subject is very gloomy. Yet, although the failure has now been for some weeks impending, and the people are thoroughly alive to it, there has been little symptom of panic, and the course of prices has not yet been so unfavourable as we might expect at this season when the country is alarmed to the last degree; rice in most places has not reached what can be called an actual famine price, and the cheaper grains, maize especially, have up to this time been procurable at rates which I may call surprising. Though the "bhadoee" crop, which produces these grains, has been very short in some parts of Behar, it has produced tolerably in others. In the face of the rice failure, wherever there has been much maize, it has been, and I believe is, selling at prices far better than famine prices; in some parts of the country almost cheap, the circumstances considered. I am told that planters and others who desire to lay in stocks have been able to get maize north of the Ganges, not only at comparatively cheap prices, but in considerable quantity. A great peculiarity of the present failure is that it is greatest in the parts of the country which ordinarily export the most food. We cannot tell whether actual want will be most felt in those exporting tracts, where a considerable failure would not bring the food-supply below local wants; or in those other tracts in the division which have hitherto to some extent depended on a large import now cut off. Hitherto, importation from outside has been entirely confined to the districts of the division south of the Ganges, where the shortness of the usual rainfall has been less marked, and the local failure of the crops less complete, than in the northern tracts, and even yet the usual local export from the north to the south has not quite ceased. It should be mentioned, however, that exportation from the Nepal Terai into our territories (usually a large source of supply) has been wholly stopped by the Nepal Government on account of the scarcity there. On the whole question of importing food, only this can be said, that the division, as a whole, has begun to import largely from outside, and must continue to import; but to what extent this necessity will go we cannot yet estimate, nor can we tell in what parts of the division food will be most wanted. We do not know whether it will be enough to supply from the outside those parts which usually receive supplies from *within* the division, or whether the parts which usually export very largely, and still export rather than import, must eventually be supplied. All the accounts seem to show the failure of the great rice tracts in the north to be so complete that to supply them will be a great and most difficult task, unless they have great reserves in hand, such as we cannot trace. The sale of the maize up to this moment is the only symptom which seems to militate against the belief that food in these parts must fail. I very much fear that in some large tracts, as in the north-east of Tirhoot, it is almost impossible that the food-supply can suffice, since in such tracts there is very little grown but rice, and that is a failure. I don't doubt that the tide of trade is turning, and that Durbangah and places similarly situated must import, but to what extent we cannot tell.

We cannot say how soon there may be panic in the grain trade, causing local scarcity and want in many places, long before the stocks are actually exhausted.

As long as there is plenty of rice in Calcutta and the districts from which Calcutta draws supplies, we may presume that if the greatest possible railway and other facilities are afforded, the spontaneous rice import which has already set in, will continue. The question, whether it is necessary to bring rice in great quantities from beyond sea to Patna, depends on the state of the Bengal markets, which we will deal with in Calcutta.

Already it has been arranged that Colonel Burn shall import rice from Calcutta in behalf of the Durbangah estate.

The general food-supply however apart, this is certain that if no providential rainfall comes very soon the distress among the poorer classes of this very populous division must be very great indeed, in the course of the many months which must pass before the earliest crop of another rainy season can be reaped. So much is certain. Whatever be extent of the deficiency of food in the country, and the degree to which it must be imported, it must be very dear, and the poorer classes who have no reserve either of grain or money must be unable to get it without assistance. Relief works all over the country will be clearly necessary.

So long as there is question whether the food in the country and spontaneously flowing into it will suffice if only distributed, and so long as distress has not reached a very extreme point, it may suffice to offer work and pay in money. But when it is evident that the food-supply is wholly deficient, and a large proportion of the population must receive relief, I believe that relief works are of little use unless food is supplied to the labourers. Money, then, only raises the price and affects the distribution of food without increasing the total food-supply. It might be that those who work are in this case better off than they otherwise would be; but large classes who do not go to work till they are at the last extremity, and who suffer the most of all, would suffer more than if no work was going.

The general rule I would follow would be, not to import on the part of Government to supply the general market and to compete with the traders in a part of the country where there are active traders, as is here the case, but to import for relief works, so that relief of this kind should be a relief given by a clear addition to the resources of the affected tract, and not by taking food from one man to give to another. I think that all the local officers should set themselves to devise the means by which food for the purpose I have indicated may be transported to the parts where they see the greatest prospect of a necessity for large relief works. Meantime, although, while people are occupied in the attempt to save crops still alive, and there is a possibility of rubbee sowings, there will probably be little or no seeking for labour, I much feel the truth of what the Commissioner and several officers have said, that there is much danger that people will keep away from relief works till they are half-starved, and I believe we cannot too soon open works sufficient to—

1. Accustom the people to the knowledge that work is available to them.
2. Test the state of the country.

Although the greatest distress usually does not come till a good deal later in the season, I think it very probable that as soon as all hope of farther rubbee sowings is past, there may be many people in want of work, the ordinary field-work being stopped. At any rate there always is in these parts a certain labouring population, and the extent to which works draw this population, and after them tap strata, gradually deeper and deeper, of people not accustomed to ordinary hired labour, will be the surest index to the amount of want in the country. It is an index which must be read with much care and thought. In the early times of scarcity and famine, every one person not accustomed to hired labour who comes to the works indicates the distress of ten, or it may be a hundred, who have not come. This symptom then must be very narrowly watched.

In this view I have told the district officers that they should lose no time in commencing ordinary earth-work on roads, &c. at as many places as possible. I am glad to find that their attention has been already given to the point, and they have generally work of some kind ready which can be advantageously undertaken without delay. This they will do, giving the ordinary wages of the country; and by the aid of their general information, and the index afforded by the works in hand, they will judge of the necessity of more extended works and food relief in each part of the country. I have told them that as soon as the demand for labour exceeds the resources of their local funds, money for works where relief is necessary will be supplied without stint. The great thing is that they should prepare beforehand, and peg out (by a centre line only) roads and other works on which relief labour may be expended to the permanent advantage of the country.

I have discussed with the Commissioner, and he will note some poor and isolated tracts in which there is special necessity to be prepared with work.

The canal works will afford very large employment to the people of Shahabad and Gya, and will be rapidly pushed on with that object. I have seen Mr. Levinge, and am sure that he can be depended on to do all that is possible to assist the people in this emergency. He has already done very much by giving irrigation where it had not been expected that we could do so.

The system of roads from west to east, *i.e.*, from Tirhoot towards the labour-absorbing districts of the east, which I have already indicated as a great desideratum to facilitate movements of the population, will be put in hand at once. Mr. Stevens, the Durbhangah engineer, who has a great knowledge of the country, will undertake the arrangement of these lines so far as they are within this division, and I hope that some of the engineers of the North Bengal Railway will take them up for the Government.

The Commissioner and Manager have already arranged a large scheme of minor relief works on the Durbhangah estates, and similar preparations should be made on other Wards' estates. The Commissioner will occupy himself in settling the works in the various districts that may best be undertaken. I have authorised the entertainment of special men for the design and superintendence of works. Mr. Bayley is to-day submitting a report, and I hope that his report with this note will give a sufficient summary of the knowledge which we have yet gained of the prospects of the Patna Division.

GEORGE CAMPBELL.

29/10/73.

THE GAZETTE OF INDIA, Extraordinary. Published by Authority. Calcutta, Friday, November 7th, 1873.

GOVERNMENT OF INDIA.

DEPARTMENT OF AGRICULTURE, REVENUE, AND COMMERCE.

RESOLUTION by His Excellency the Viceroy and Governor-General of India.

Fort William, the 7th November 1873.

The periodical reports of the state of the crops published in the *Calcutta Gazette* have shown that the autumn harvest of rice will fail to a large extent in many districts of the provinces of Bengal and Behar, and that in some districts of the province of Behar especially there is reason to fear that the harvest of the coming spring will partially fail also. These prospects may yet be modified for the better, or for the worse, by the condition of the weather during the next three months.

2. The Lieutenant-Governor of Bengal brought these grave circumstances to the notice of the Government of India at the earliest possible moment. No time has been lost in devising, in concert with His Honour, the measures and the policy best adapted to avert the distress which threatens extensive and populous tracts of country, for it is certain that such losses must occur as will cause severe pressure on some classes of the population in many districts during a period of several months.

3. As some little time must elapse before the extent of the evil can be fully known, the conduct to be pursued by the Government cannot at present be exactly decided. But the Governor General, fully recognising the advantage of publicity on such an occasion, will state the views and intentions of the Government of India so far as they can now be determined.

4. Various suggestions have been received to the effect that the Government should interfere with the trade in grain, either by prohibiting the exportation of this most important article, or by undertaking the general purchase and distribution of it throughout large tracts of country, or by regulating in some manner the prices of it in the markets. Without making any pledge as to what may or may not be done, in the event of extreme necessity arising which cannot now be foreseen, the Government is not prepared to adopt any such measures, and would always avoid them, so far or so long as they could possibly be avoided.

5. The Governor General has full confidence that the energy and enterprise of those engaged in the internal trade of British India will prove equal to the occasion, and that supplies (excepting under the conditions to be noticed hereafter) will generally be at hand to meet any deficiencies of grain in different parts of the country.

6. It has been officially reported that on the very first appearance of the prospect of a short autumn harvest large quantities of grain were imported into the trade centres of Behar, and much evidence has since been received to the effect that grain is being despatched by the merchants without any delay or hesitation to the principal marts in the districts likely to be affected by scarcity. The Governor General is sanguine that the same commercial activity will prevail wherever it is needed, and that it will become greater and greater according as the demand for it may be intensified.

7. It has, however, been proved, by the sad experience of famines in India, that exceptional circumstances may arise whereby numbers of persons may be exposed to danger of starvation, or to disease arising from want of food. In all such cases, where human life may be at stake, the Government and its officers will do their utmost to apply the most effectual remedy that may be practicable, and will strive, by forethought and management, to prevent the occurrence of any such misfortunes.

8. There are certain respects and particulars in which the Government, while abstaining from interference with the ordinary course of trade, can render assistance towards mitigating the effects of scarcity.

9. In the first place the opportunity will be taken to prosecute with vigour the execution of public works in those districts where large numbers of persons are, or will soon be, in need of employment or in distress.

10. Orders have been given by the Government of India to enlarge the operations on the canal from the river Soane, and to begin the Northern Bengal State Railway in anticipation of the sanction of the Secretary of State, for both which works plans and estimates are ready, which works, too, will be carried on in the midst of the districts where want of employment must be most felt, and are calculated to benefit the country generally, and especially to prevent or lessen the occurrence of scarcity in future.

11. The Lieutenant-Governor of Bengal has been authorised to begin immediately such public works (in addition to those already in progress) as can be usefully undertaken in distressed districts, whether from funds granted by the Government of India, or from provincial funds, or from local resources.

12. The requirements for labour on all these public works will afford employment to large numbers who, by reason of the cessation or the slackness of the usual agricultural operations in a season of scarcity, may be thrown out of work.

13. Thus considerable bodies of men will be congregated on or near the works at a distance from their homes, and often in localities remote from the established markets. It will be necessary, therefore, that sufficient supplies of food be collected for their sustenance. If the

accumulation of such supplies be left to the ordinary course of commerce, special pressure will be put on the grain trade in certain localities at the very time when all its resources are being taxed for the general supply of the province or district. And if the wages were to be paid in cash to so large an aggregate of labourers an extraordinary rise of prices would be created by the action of Government, thereby aggravating the crisis in districts already placed in critical circumstances, and so far counteracting the benefit which the works were intended to secure, namely, the mitigation of the effect of the scarcity.

14. Now, in regard to those public works carried on under the orders either of the Supreme Government or of the Local Government, the State will be in the position of an employer of labour on an unusually large scale, and is justified in doing that which all other employers do, namely, selecting the mode of remunerating its workpeople most acceptable to them and most suitable to the surrounding circumstances. Such mode of remuneration will generally be payment in kind, that is, in food grain. For this particular purpose, then, sufficient supplies of grain will be purchased and laid in both by the Government of India and by the Local Government for the public works under their charge respectively. These supplies will be obtained in such a manner as to interfere as little as possible with the trade in grain and with the supplies of food ordinarily available for consumption in the neighbourhood of the works, or within the area of the distressed districts. The Governor General relies on the carefulness of the Local Government in making provision with this view. For the works to be carried on from imperial funds, the Supreme Government has resolved, in regard to its liability for the maintenance of the labourers, to arrange for obtaining supplies from provinces beyond the limits of the territories affected by the failure of the crops in Bengal and Behar. The Government of Madras and the Chief Commissioner of British Burmah have accordingly been requested to make purchases gradually, through the agency of the trade, for this purpose.

15. The future arrangements for the supply of food grain for the labourers on the public works will be strictly limited according to the requirement and to the purpose in view.

16. Besides the works just described, which are to be undertaken by the Government, there are many public improvements which can be undertaken, either by corporations or other bodies, such as municipalities and trusts. For loans of money from the Government treasury to such corporations ample provision is made by Act XXIV. of 1871 (the Local Public Works Loan Act). In some cases, under the rules recently promulgated in accordance with the Act, the Lieutenant-Governor is competent to make the loans on his own authority from funds which have been allotted for that purpose by the Government of India. In those cases where, under the rules, the sanction of the Government of India is necessary, any judiciously matured project, any well-considered application, which may be recommended by the Local Government will meet with the immediate approval of the Government of India. If the rules in respect to preliminary inquiry and the like shall be deemed by the Lieutenant-Governor to cause delay which may be prejudicial at a critical time, His Honour is authorised to relax them temporarily.

17. For agricultural improvements the Land Improvement Act (XXVI. of 1871) provides for advances of money being made by Government to any landlord or tenant desiring to make an improvement in any land of which he is in possession or occupation. The improvements specified in the Act, that is, wells, tanks, and other works for the storage and distribution of water, works for draining, reclaiming, clearing, and enclosing lands, are well suited for employing the labour which may be unemployed in the villages by reason of the stoppage of ordinary work in the fields. The Governor General earnestly hopes that many landlords will take advantage of the provisions of the Act. The rules under this Act recently promulgated by the Local Government with the sanction of the Government of India contain many precautionary provisions which are necessary in ordinary times, but which at a time of urgency might cause undesirable delay. The Lieutenant-Governor is authorised to make such relaxation of the rules as His Honour may deem advisable under the circumstances of the districts affected by the drought.

18. In reference to the local works, the Governor General desires that the levy of the road cess may be postponed in any district or portion of a district where the Lieutenant-Governor may consider that the cess-payers are in distress. It is to be remembered that in those districts which are not so severely affected the proceeds of the road cess will afford the means of usefully employing any surplus labour that may be thrown upon the market.

19. In the next place the Government may contribute something towards facilitating the transport of grain in the interior of the country. The agents, therefore, of the Guaranteed Railway Companies, whose lines traverse Bengal and Behar, have been authorised to reduce by one-half the rates charged for the carriage of grain despatched to the districts affected by scarcity, the Government undertaking to reimburse the Companies for the difference thus caused in the traffic receipts. The precedent is followed which was established by the adoption of a similar course in 1869.

20. The Governor General is sure that the private steam flotillas on the principal rivers, and the native craft which is so abundant throughout the river system of Bengal, will bear a most useful part in the conveyance of grain to the places where it is urgently needed.

21. In those places where the means of water-carriage do not exist, the grain-traders must mainly depend on the country carriage. There may, indeed, be ground for apprehension that, as the dry season advances, mortality beyond the average must arise among the draught cattle. This subject will, doubtless, receive the anxious consideration of the Local Government and of its officers. Every aid that can be afforded by the Commissariat or other public departments

will be rendered; and inquiries are being made as to the practicability of constructing tramways in the distressed districts.

22. Should the distress become severe, and should the worst anticipations be realized, the Government will assist in the formation of relief committees, and in the organization of a system of relief for those who, despite all the operations of trade, may be threatened with death or disease from want of food. The Governor General is sure that the private benevolence, which has always been conspicuous in India, will be evoked on this occasion, according as the need for its exercise shall become apparent. A central relief committee will, as soon as the Local Government shall consider it to be necessary, be formed at Calcutta as the capital of the provinces under the jurisdiction of the Lieutenant-Governor of Bengal. To this committee will be entrusted the general administration of the funds for relief which may be received from private sources and from the Government, and the distribution of those funds among the relief committees which the Lieutenant-Governor will establish in the districts affected by scarcity. The district relief committees will distribute assistance to the distressed, either in cash or in grain, or in prepared food, according to the instructions which they may receive from the Local Government. Any purchases of grain which may be necessary will be made either by the central committee or by the district committees. If the committees lay in supplies of grain they will be instructed to do so in the manner best calculated to avoid undue interference with the ordinary course of trade, or with the stores available for consumption in the neighbourhood.

23. The Governor General relies upon the Lieutenant-Governor to take steps for organizing these district and local committees in seasonable time, and in sufficient number, so that the measures for relief shall be far reaching and comprehensive in proportion as the distress may become widespread. Whatever application His Honour may make for assistance from the ranks of the public service with a view to effectively constituting these committees will receive immediate attention from the Government of India.

24. Inasmuch as the prevalence of want may give rise to many forms of epidemic disease, the augmenting and the reinforcing of the medical staff of all grades in the afflicted districts will be of primary importance. Any assistance which the Lieutenant-Governor may require in this respect from the Government of India will be duly accorded.

25. The Governor General is sure that non-official gentlemen, both European and Native, resident in the districts affected by scarcity, will come forward to serve on the relief committees, and will render that assistance which has proved so valuable on former occasions of a like nature.

26. Furthermore, non-official gentlemen, European and Native, zemindars, landlords, planters, and others may at once render much service by undertaking the provision and distribution of grain in localities where, from the difficulty of transport, the absence of traders, or other local circumstances, food cannot, during the period of scarcity, be obtained by the people. In such cases the Government will be prepared to grant advances of money to non-official gentlemen who may undertake to import grain from a distance, and to distribute it at prices to be regulated according to the circumstances of the case. The condition that such grain be imported from distant places, so that the ordinary operations of the local trade may not be interfered with, must be observed. Accounts of the advances will be submitted to and passed by the Local Government; and any loss or charge which may arise upon the operations will, of course, be borne by the State.

27. The Governor General is confident also that many landholders, recognising the duty towards their tenants, their dependants, and their destitute neighbours, which is morally imposed upon them by the possession of property, will, of their own accord and from their own resources, dispense relief in the manner which they deem to be most effectual.

28. The Governor General feels assured that the Lieutenant-Governor is well aware of the necessity for preparing the local arrangements for relief beforehand, that is, before the emergency shall have actually befallen the districts in question, before the intensity of the trouble shall have begun to be felt, so that the distress may not attain such proportions that the local authorities cannot adequately deal with it, or make such progress that they cannot overtake it.

29. Hereafter, as the season shall draw near for the sowings of the next harvest, the Government will be prepared to authorise advances of money to landlords or tenants for the purchase of seed-grain wherever the Lieutenant-Governor may consider such a measure to be desirable.

30. It is to be hoped that, in the populous tracts visited or threatened by distress, unemployed labourers may emigrate to places where food is in comparative plenty, where a special demand exists for their labour, where culturable waste abounds, such as the tea districts, the Doars, the provinces of Assam, and of British Burma. If it be found possible for the Government to facilitate such emigration, directly or indirectly, the Governor General will be glad to receive any suggestions which the Lieutenant-Governor may be able to make.

31. Having given such instructions as seem to be called for at the present time, the Governor General requests that the Government of Bengal will transmit periodically, at short intervals, to the Government of India full reports on the state and prospects of the crops, the stock of food, so far as it can be ascertained, the public works in progress, the relief operations, if any, and all other circumstances relating to the scarcity. Together with these reports there should be forwarded the opinions of the district officers, formed on the most recent data obtainable. The Governor General is satisfied that these opinions will be given fully, unreservedly, and promptly, even though time may not have admitted of their being precisely elaborated, and though they may be subject to subsequent correction and verification. Full information on these matters will be published from time to time.

32. Lastly, the Governor General places full reliance upon the foresight and the energy of the Lieutenant-Governor of Bengal to provide for and to cope with the difficulties which may spring from the drought and scarcity, and upon the zeal and experience with which His Honour's efforts will be seconded by the officers of all grades and branches of the public service. He feels the responsibility which devolves on the Government of India under the present circumstances, and he trusts with God's blessing the measures to be adopted will prove successful in averting, so far as may be humanly possible, the calamitous effects of the drought.

By order of His Excellency the Viceroy and Governor General.

R. B. Chapman,
Secretary to the Government of India.

Department of Revenue, Agriculture, and Commerce.

No. B. of 1873.

To the Right Honourable the Duke of Argyll, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, The 12th November 1873.

In continuation of my Despatch A. of the 7th instant, I have the honour to report the further measures that have been taken for the purpose of meeting the anticipated scarcity in Bengal and Behar.

2. The reports of the state of the crops in the Province of Bengal for the past week show that no substantial alteration has taken place in the prospects of which a summary was given in my last Despatch.

3. The enclosed report of the state of the crops in the south-eastern portion of the North-Western Provinces shows that no scarcity is apprehended there, excepting in the District of Goruckpore and the southern portion of Mirzapore.

4. Sir William Muir has been authorised to undertake at once such relief works as he may consider necessary in those districts, and he has informed me that projects are being prepared for South Mirzapore, and that nothing is as yet required elsewhere.

5. In addition to the Soane Canal and the Northern Bengal Railway, I have, on the recommendation of Sir George Campbell, authorised the prosecution of certain embankments on the river Gunduck which will provide employment in that portion of Behar which has suffered most severely from the failure of the rice crop. The plans for these works are complete, and have been approved by the responsible officers of Government in the Public Works Department. Their estimated cost is 20,000*l.*, which will in the first instance be borne as an imperial charge, but may ultimately be covered in part by contribution from the landowners whose property is benefited, under the provisions of the Bengal Embankment Bill which is now before the Legislative Council of Bengal. The correspondence upon this subject is enclosed for your Grace's information. Enclosure C., page 14.

6. I am of opinion that no further measures are required for the provision of employment by means of imperial or local Public Works, which, according to the experience of former times, is the most effectual precaution that can be taken to prevent a period of scarcity from becoming a famine.

7. I enclose copies of a correspondence which has passed with the Government of Bengal with regard to the proposal of the Lieutenant-Governor that the exports of food-grains from Indian ports should be prohibited. Enclosure D., page 17.

8. Sir George Campbell having expressed to me verbally his desire that more specific information of the views of the Government of India should be given to him than was contained in the Resolution of the 7th instant, I arranged for a conference with His Honour, who was accompanied by some of his principal officers, among whom were Mr. Molony, the Commissioner of Rajshahye, one of the divisions which has most suffered, and Major Lindsay, who is in charge of the Northern Bengal railway works. I have the honour to enclose a *précis* of the proceedings, and I trust that advantage will be derived from a free discussion of the present position of affairs and of the measures which are taken or contemplated. Enclosure E., page 19.

9. Every endeavour will be made to supply the officers whom Sir George Campbell considers to be required in order to strengthen the different departments of his administration.

Enclosure F., page 23. 10. The Lieutenant-Governor has, since the conference took place, placed his views before me in a letter, of which and of my reply copies are forwarded herewith. Your Grace will observe that in compliance with the wish expressed by his Honour, I have entered somewhat fully into the details of the immediate measures which in my opinion should be taken, and given such directions as to financial arrangements as appear to be necessary for the present.

11. In these, as in all other measures that have been taken and instructions given, I have had the advantage of the advice and assistance of Sir Richard Temple, as well as his entire concurrence.

12. In accordance with the announcement made in the Resolution of the 7th instant, steps have been taken to obtain supplies of rice for the sustenance of the labourers to be employed upon Public Works, and arrangements will be made for establishing stores at the most convenient places in the neighbourhood of the works.

13. I am happy to inform your Grace that, so far as prices can be considered to afford an indication of the deficiency of supplies, the condition of affairs is not worse than it was in the year 1865, and that all the information which I have received leads me to believe that great activity prevails in the trade of grain, so that it may reasonably be expected that prices will be equalised on the great lines of communication over a large area of country.

Enclosure G. 14. The last return of the traffic of the East Indian Railway is enclosed for your Grace's information.

15. I have thought it desirable, in anticipation of the pressure upon the finances which will probably be occasioned by the scarcity, to instruct the local governments, and all Departments of the State to exercise economy in regard to their expenditure during the remainder of the current year, and in the preparation of their estimates for the coming year. I need hardly add that any assistance which your Grace can afford in regard to the home expenditure will be of material aid to the Government of India at the present time.

16. After communicating with His Excellency the Commander-in-Chief and Sir William Muir, I have not made any alteration in the arrangements for the Camp of Exercise at Roorkee; all the preparations had been made, some of the troops had already marched, and Sir William Muir informed me that no inconvenience would result from the assembly of troops in that neighbourhood.

17. I propose to leave Calcutta this evening for the purpose of holding a Legislative Council at Agra and afterwards visiting Lucknow, returning to Calcutta on the 11th of December. Although it is with some regret that I leave Calcutta under present circumstances, there are measures of considerable importance to be discussed at Agra as to which the advice and assistance of Sir William Muir is required, and I have business to transact with Sir Philip Wodehouse (who has arranged to meet me at Agra) and with Sir George Couper at Lucknow, so that, upon the whole, it has appeared to me to be most to the advantage of the public service that I should not abandon my original arrangements.

I have the honour to be,
My Lord Duke,
Your Grace's most obedient and humble Servant,
NORTHBROOK.

Enclosure C.

No. 2,981.

GOVERNMENT OF INDIA.—FINANCIAL DEPARTMENT.

To the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, FINANCIAL DEPARTMENT.

Expenditure.—Public Works.

SIR, Fort William, the 14th November 1873.

IN reply to your letter No. 3,329, dated 8th November 1873, I am directed to say that the Governor General authorises the immediate commencement of the Gundak embankments on the approved plans. The embankments may be constructed in such manner as will admit of the eventual adoption of Colonel Haig's suggested addition of an irrigation channel in rear of the embankments; but the plan and estimate of the irrigation channel should be sent, in such form as may be now ready, for consideration in the Public Works Department.

2. The work will be imperial, and will be charged as ordinary expenditure.

3. His Excellency does not think that it will be advisable to introduce any particular provisions in the Embankment Bill to provide for expenditure incurred before the Bill passes, being charged to the landholders who benefit thereby; but provision should be made for future expenditure being so charged.

4. His Excellency awaits a further report, in due course, on the proposed irrigation canal from the Gundak.

I have the honour to be, Sir,
Your most obedient Servant,
R. B. CHAPMAN,
Secretary to the Government of India.

Copy of correspondence forwarded to the Public Works Department.

GOVERNMENT OF INDIA.—FINANCIAL DEPARTMENT.

Enclosure to Letter No. 2,981 of 1873.

No. 3,329, dated 8th November 1873.

From C. BERNARD, Esq., Officiating Secretary to the Government of Bengal, to the SECRETARY to the GOVERNMENT OF INDIA, with His Excellency the Viceroy.

At para. 5 of the Government of India Resolution (Public Works Department, dated 28th October 1873), it is remarked that in the north of Behar there is no large project under execution, and it is suggested that the deferred scheme for the revision of the Gundak embankment might be found a suitable source of employment for the approaching time of scarcity.

2. As it happens, these Gundak embankments are situate precisely in that part of the country where the people are poor, and where distress was keenest in 1865–66, and will, but too probably, be very keen again. I am, therefore, to describe briefly how the case stands, and to submit a recommendation that the Lieutenant-Governor may be permitted at once to carry on these works, and subject to the doubts and under the circumstances which at present surround the question.

3. In 1870–71 a large project for taking out an irrigation and navigation canal from the Upper Gundak was very carefully elaborated by Mr. Stoney, C.E.; it was to cost 107 lakhs, to command 989,000 acres, and to possess an inexhaustible supply of water. The Superintending Engineer, Mr. Levinge, wrote strongly in its favour, and the Collector, Mr. Metcalfe, who knew the district well, expressed the opinion that the people would most gladly take any water that could be given them. This Gundak irrigation scheme, however, did not go any further; and it could not now be taken up without much consideration and perhaps some re-modelment.

4. The embankment scheme was a different matter, and it provided* for extending, raising, and improving the Gundak embankments, as well as for training the river to some extent. It was anticipated that outlay would be incurred, thus:—

„ Chumparun „ - - -	54,738
On training walls - - - -	72,189

The work had been previously prosecuted as a relief work, and Rs. 1,24,144 had been spent thereon up to November 1869, when the work stopped.

5. The Government, when acknowledging the submission of the scheme, admitted† that the works were very necessary, and had been devised with great care and judgment; but observed that the zemindars must pay for it, and declined to sanction any further outlay on the Gundak embankments until it was "clearly explained how the amount already expended was to be recovered."

† Public Works Department, No. 1,871, dated 13th May 1870.

6. On this reference was made through the Board to the local officers and to the zemindars' engagements. It was found that the zemindars of Tirhoot and Sarun had bound themselves to pay for the cost of repairing and maintaining the existing (at 1830 and 1840 A.D.) embankments. But it was very doubtful how far this engagement would extend to new embankments, or to improvements, such as training walls or retired aligument of old embankments; it was perfectly clear, moreover, that the zemindars of the Chumparun district had entered into no such engagements, and that there had been until lately no embankments in that district. As the Embankment Bill of 1870 had then been introduced into the Bengal Council under the late Lieutenant-Governor's orders, it was decided (it is not absolutely clear when, or by whose orders) that no further steps should be taken to prosecute the Gundak

embankment scheme until such time as the new Embankment Bill should become law, and should legally lay upon the zemindars the burden (of paying for these embankments) which the Government of India had decided they ought to, and must, bear. Meanwhile, after much correspondence, it has only lately been settled that the zemindars of Tirhoot and Sarun should pay, by easy instalments, nearly the whole of the cost (Rs. 1,24,144) of the work which had been done previous to November 1869. About Rs. 2,000, which had been spent in Champarun, was decided to be payable by Government, as no obligation for embankments lay upon the zemindars of Champarun.

7. This is how the case stands at the present moment. The Embankment Bill has not yet become law; but if it should be passed, as it shortly may be, the Gundak embankments will come within its provision, subject to the provisoes (Sections 44 and 45) that the cost of the work on the right bank of the Gundak is to be allotted according to the custom of the district, and not according to the general provision of Part VI., Chapter 2. As the Bill at present stands, it would apply to *future* works only; and we could not be certain that the Legislature would give it retrospective effect to the works now to be undertaken.

8. Still the Lieutenant-Governor accepts the opinions which have been previously expressed by reliable authorities that the work is a good, useful, and even a necessary work. In its character it is specially fitted for a relief work, as it consists mainly of earthen banks The Lieutenant-Governor would engraft on the original embankment project a very practical and useful addition suggested by Colonel Haig, whereby "a channel should run alongside the "embankment, to be formed out of the excavation required by the embankments to have its "floor reduced to six inches per mile by masonry falls, to have its floor four feet below summer "level, and to be provided with a head sluice." Colonel Haig estimated that this channel, so conducted, would probably water 90,000 acres of land. Seeing how much water there is in the Upper Gundak (a snow-fed stream), and what Mr. Metcalfe says about the need for irrigation, it would be a pity not to make as much as possible of the Gundak embankment project. The extra cost involved by the proposed channel would be an imperial (Irrigation) charge, and would not be payable by the zemindars.

9. The object of the present letter, then, is to solicit permission for the Lieutenant-Governor to take up again, and at once, the unfinished Gundak embankments scheme as a work which will do great permanent good to the country, and will also afford plenty of labour of the very best kind to that part of the country where distress will, it is feared, be most keen. Sir George Campbell recommends that the permission be accorded, on the understanding that the Legislature may or may not accord its sanction to a whole or a part of the cost of the embankments being treated as defrayable by the zemindars under the terms of the future embankment law. Any portion of the outlay which cannot be so defrayed, or which properly pertains to the irrigation channel which is to be led out behind the embankment, would of course remain to be defrayed from the imperial treasury; and the Government of India would decide whether it should be taken against "Loans," or as ordinary expenditure, or how.

10. It may be well to mention that though the original estimate was for Rs. 3,24,000 in all, of which Rs. 1,24,000 only had been spent in 1868–69, yet still the Lieutenant-Governor could not absolutely undertake that the whole work, as originally projected, should certainly be finished for the remaining two lakhs. Four or five years have passed since the work was first begun, the river may have changed—some of the old work may have to be re-done. But at any rate the engineers would keep as nearly as they could to the old plans and estimates which the Government of India then (in 1870) found to be worthy of approval. The subsidiary irrigation channel would not, it is believed, very greatly add to the original cost of the project, while it would very materially increase its usefulness.

11. The question being really financial, and an immediate decision necessary, this letter is submitted to the Secretary to Government in the Financial Department with the Governor-General.

P.S.—While this letter was under despatch, the Irrigation Department of this Government has laid before the Lieutenant-Governor a fresh letter* from the Department Public Works of the Government of India, of which copy is annexed.

* No. 8,031, dated the 31st October 1873.

Colonel Gulliver's conclusion is—"I would propose that a Superintending Engineer be "appointed, with the necessary staff, to carry out the Gundak embankments and the Chumparun "embankment with the canal as rear." This is precisely what the Lieutenant-Governor has already recommended in this letter. Under the circumstances then the Lieutenant-Governor thinks that the Governor General will not hesitate to accord in the Financial Department that financial sanction which is required for works which have been already approved by the Public Works Department of the Government of India.

No. 803 I., dated 31st October 1873.

From Colonel F. H. Rundall, R.E., Deputy Secretary to the Government of India, Public Works Department, to the Joint Secretary to the Government of Bengal, Public Works Department, Irrigation Branch.

With reference to the Resolution of this Government, No. 432 B.C., dated 28th instant, and to the apprehensions of severe scarcity in the Patna Division, I am directed to enquire whether the Government of Bengal has had under its re-consideration the project for the irrigation of the districts bordering on the River Gundak.

2. In the letter from this Government, No. 22 J, dated 19th January 1870, it was observed that the Government of India "is on the whole disposed to consider that there is sufficient "evidence to indicate that the proposed works are of a nature to hold out such promise of "eventual success as will justify their sanction, subject to the further favourable expression of "local intelligent opinion;" but as no reply has been received from the Government of Bengal, and as the present appears to be the fourth year, since 1866, in which scarcity has occurred, it seems to His Excellency in Council that the irrigation project is deserving of further attention, and I am therefore to invite an expression of the Lieutenant-Governor's view on the subject.

3. In a letter lately received from the Government of Bengal, it was stated that there was no present intention of prosecuting any further works on the Gundak embankments; should, however, it be necessary to start relief works in the districts of Tirhoot and Sarun, embankments would (as already remarked in the Resolution quoted) seem to present the simplest and most easily aligned works on which to employ the laboring population. At the same time the necessity of providing a remedy against such frequently recurring scarcity appears to merit careful consideration.

Separate Revenue. Customs.

To the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL.

SIR, Fort William, the 12th November 1873.

I AM directed to acknowledge the receipt of your letters Nos. 3,300 and B. dated respectively the 7th and 8th November 1873, regarding the proposals made by His Honor the Lieutenant-Governor for prohibiting the exportation of food grains from British Indian ports in consequence of the threatened famine in Bengal.

2. In the letter of the 7th November, reference is made to a letter from the Government of Bengal, No. 50T, dated 22nd October 1873. In reply to that part of the letter of the 22nd October in which His Honor the Lieutenant-Governor recommended that the export of rice from the Indian dominions to foreign countries should be prohibited, and also to the letters now under acknowledgment, in which His Honor advocates the prohibition of the export of food grains from British Indian ports, and suggests that if the Viceroy should be unwilling to comply with that proposal, the export of food grains from Bengal should at least be prohibited, I am instructed to say that the Lieutenant-Governor will have observed, from the 4th paragraph of the Resolution of the Government of India of the 7th November, that the Governor General is unable to concur with His Honor upon this subject. The following extracts from a despatch addressed to the Secretary of State on the same day will explain the grounds of His Excellency's decision:—

14. "The prohibition of all export of grain from British Indian ports is strongly advocated by the native press, and is still recommended by Sir George Campbell.

It is a course which does not commend itself to my judgment. It is probable, from the experience of former years and the information which is available as to the supplies of food grain in India, that the deficiency in Bengal and Behar can be met without recourse to importations from abroad; in the term 'abroad' I include British Burma, for Burmese rice is not imported into Bengal in ordinary years.

The rise of prices which has occurred, and which, if the prospects should become worse, must increase, will, in my opinion, of itself prevent any considerable export of the common classes of grain from Indian ports proper, and if it reaches 4 rupees a maund, it would, according to the best information I can obtain, probably bring a considerable amount of Burmese rice into the Calcutta market.

Your Grace will observe from the enclosed return that the principal exports of rice from British Indian ports begins in February, before which time there will be full information as to the probable wants of Bengal, which information must necessarily operate upon prices. Enclosure E.

15. To prohibit exports would have the effect of artificially reducing prices at the commencement of a season of scarcity, and moreover it would shake the confidence of the mercantile classes in the determination of Government to maintain the utmost freedom of trade as the best preservative against famine, and so by checking commercial operations cut off sources of supply from without which would naturally come to our aid in time of need.

16. The general principles which should guide the Government in times of scarcity were enunciated by the Government of India in 1868 after the experience of the famine in Orissa, which extended to the same districts which have suffered on the present occasion, and I have only to add that I concur generally in the opinions then expressed."

3. The conclusion at which the Governor General arrived was strengthened by a careful consideration of the report and recommendations of Colonel Baird-Smith upon the famine in the North-Western Provinces of 1860 and 1861, and of the Commissioners appointed to enquire into the Orissa famine of 1865 and 1866 (Part III., paragraph 59); and also of the proceedings of the Government of India and of the Lieutenant-Governor of the North-Western Provinces during the period of scarcity in 1868 and 1869.

4. I am to add that the Governor General considers that the minor proposal to prohibit the export of food grains from Bengal is open to the same objections in principle which exist to the adoption of the larger measure, while it does not appear to offer any substantial advantage in exchange.

5. The natural effect of a rise in the price of rice must be to check and ultimately to stop altogether the export of ordinary qualities of rice from Bengal, without any interference by the Government.

6. The customs returns show that already the exports of rice from Calcutta have diminished: the amount exported in October last is not one-half of the exports of the corresponding month of last year; and the Governor General has no reason to believe that any peculiar circumstances exist to prevent the operation in Bengal of the laws which ordinarily regulate the distribution of produce.

7. The Governor General is satisfied that no instructions that have been given to the Government of Madras can have the effect which His Honor appears to apprehend.

I have the honour to be, Sir,
Your most obedient servant,
B. B. Chapman.
Secretary to the Government of India.

Copy of correspondence forwarded to Department of Agriculture, Revenue and Commerce.

Government of India. Financial Department.

Enclosure to Letter No. 2980 of 1873.

No. 3300, dated 7th November, 1873.

From C. Bernard Esq., Officiating Secretary to the Government of Bengal, to the Secretary to the Government of India, with His Excellency the Viceroy.

In the last paragraph of my letter No. 50 T, dated the 22nd October 1873 intimating to the Government of India that failure of the food crops was apprehended over the whole of Behar and over a large part of Bengal, was expressed the Lieutenant-Governor's recommendation that the exportation of food grains from British Indian ports might be prohibited, until the Government saw whether the surplus food of our territories would probably suffice to feed the people of Bengal and Behar.

2. Since that letter was written, the prospect of scarcity, distress, and perhaps even of famine has become much more certain. The Lieutenant-Governor has been allowed the privilege of discussing these important matters with His Excellency the Viceroy; and he has submitted orally his opinion that the Government must be prepared to prohibit exportation of food from British India to other countries, unless our food stocks turn out to be larger than is generally supposed. Sir George Campbell has gathered that His Excellency the Viceroy would not be prepared to prohibit exports of food generally from British Indian ports; indeed he believes His Lordship is opposed to any such prohibition. But he desires to submit that even if it be decided not to interfere with the great export of 700,000 tons of rice which goes yearly from British Burmah, still the Government of India might very reasonably and fairly consider the expediency of interposing (by legislation if necessary) to prevent exportation of food from Bengal.

3. The port of Calcutta has in ordinary years sent away about 350,000 to 400,000 tons of food grains per annum; in the current year it may be expected that eventually common rice in Calcutta will be too dear for export, though at this moment export is going on, as much as 94,000 maunds having been exported since the first of the present month. But from the ports of Chittagong and Morellgunge, whence were exported from 50,000 to 70,000 tons of rice during the last year, and from whence common rice only is exported, large consignments of rice will continue to be exported to the Mauritius, Galle and other rice-consuming British, French and Dutch Colonies. The rise of a rupee or so per maund in price will not prevent these colonies from getting their supplies of Bengal rice just as heretofore; and the rice exported from Chittagong comes into the market far earlier than Burmah rice; in fact new rice is already coming into Chittagong. The East Bengal rice moreover being "Ballam" rice is of a kind which is much more acceptable to the people of the distressed districts than Burmah rice can be. If this rice cannot be exported, it will all find its way to the distressed districts. The West Indian and other colonies will still have many sources to indent upon; and so their populations (Indian or other) cannot suffer so long, at any rate, as Burmah exports continue.

The Lieutenant-Governor would very earnestly solicit that exports of common rice from Bengal, or at any rate from Chittagong and Morellgunge to places outside the Lieutenant-Governorship of Bengal be prohibited from the 1st December up to such time as His Excellency the Viceroy may see fit.

No. B, dated 8th November 1873.

From C. BERNARD ESQ., OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, to the SECRETARY to the GOVERNMENT OF INDIA, with HIS EXCELLENCY the VICEROY.

In continuation of my letter of yesterday's date, inviting the consideration of the Government of India to the need for prohibiting export of grain, at any rate, from Chittagong and Morellgunge, I am directed to submit that Bengal rice is still,* during the present month, going to Madras ports and to Ceylon. The Lieutenant-Governor fears that the orders of the Government of India directing the purchase of rice in Madras will raise the price of rice there and lead to fresh exports, if the export of Bengal rice be not prohibited.

2. The Lieutenant-Governor would very earnestly solicit the attention of the Government of India to the need for acting in this matter.

*N.B.—Telegraphic advice received to day from Chittagong shows this.

Enclosure E.

MEMORANDUM of the PROCEEDINGS at a meeting held at Government House, Calcutta, on November 10th, 1873, to consider some questions connected with the measures proposed in view of the anticipated scarcity in Bengal.

Present:

His Excellency the Viceroy.
The Lieutenant-Governor of Bengal.
The Hon'ble Sir R. Temple.
Mr. V. H. Schalch, Member of the Board of Revenue.
Mr. R. B. Chapman, Secretary to the Government of India in the Financial Department.
Mr. C. Bernard, Secretary to Government of Bengal.
Lord Ulick Browne, Commissioner of the Presidency Division.
Mr. H. L. Dampier, Officiating Member of the Board of Revenue.
Mr. J. A. Crawford, Collector of Customs.
Colonel J. E. T. Nicolls, R.E., Chief Engineer.
Colonel H. W. Gulliver, R.E., Chief Engineer, Irrigation Department.
Mr. T. E. Ravenshaw, Commissioner of Orissa.
Mr. E. W. Molony, Commissioner, Rajshahye Division.
Major J. Lindsay, R.E., Superintending Engineer, Northern Bengal State Railway.
Captain E. Baring, R.A., Private Secretary to the Viceroy.

His Excellency the Viceroy requested the Lieutenant-Governor to state anything he might wish to say.

Sir George Campbell, referring to the resolution of the Government of India of the 7th instant, said that, without doubt, the spirit of that Resolution was to support the Government of Bengal cordially. At the same time he could not but feel that a very grave responsibility devolved upon the latter Government. Alluding especially to the 23rd and 28th paras. of that Resolution, His Honor remarked that the Government of Bengal were apparently expected to anticipate any distress which might occur, and to take such measures beforehand as would obviate its occurrence or alleviate it, if it was inevitable. This threw a heavy responsibility on the Local Government, and he should be glad if the orders of the Government of India could be expanded; he would be glad of more explicit instructions on certain points, especially whether any and what provision was now to be made for eventual charitable relief. At present great uncertainty existed; it was difficult to state where or in what degree distress would occur, and it was, therefore, difficult to take such steps now as would prevent the occurrence of distress. Was the Government of Bengal to act immediately in regard to relief centres or to defer action? Was Government to buy and store grain for charitable relief at once? This latter point was one of extreme importance, and it was very necessary to come to some early decision on this branch of the subject. An early decision was especially necessary as regards transport; the East Indian Railway were not nearly working up to their full power at present. There was perhaps no immediate difficulty in obtaining transport, but if any sudden calamity came upon them, the demands for transport would be very heavy, and it would certainly happen that the means of transport would be choked. Lastly, as regards money, His Honor wished to know something more definite as to the funds which would be placed at his disposal. He would like to spend a great deal without further delay, if he looked at the matter solely from a Bengal point of view, but it was of course for the Government of India to decide what funds would be allotted to him.

Public Works.

His Excellency the Viceroy said that perhaps the best course to adopt would be to go through all the important points raised in the Resolution of the Government of India *seriatim*. First, as regards the public works which were about to be undertaken, every one recognised the importance of putting these works in hand without delay, and His Excellency would like to be informed what had actually been done with respect to imperial works, *viz.*, the Soane Canal and Northern Bengal Railway.

Mr. Bernard said that orders had been given to commence two new branches of the Soane Canal at once. Mr. Levinge had a staff of officers with him and had full authority to act; he would commence working so soon as labour came in. Rice was being sent for the immediate supply of labourers by the Government of Bengal. As regards the Northern Bengal Railway, no commencement had as yet been made, but Major Lindsay was here; the arrangements were being actively made, and he hoped that in ten days the Engineers would be at work.

His Excellency the Viceroy then asked whether those works would be treated as relief works or as ordinary contract works, and in what manner the labourers would be employed and paid.

His Honour the Lieutenant-Governor observed that he thought it was impossible to make any hard-and-fast distinction between the labourers employed on relief works, properly so called, and those employed as ordinary contract labourers; the two cases ran so much into one another that the matter could only be decided from time to time according to circumstances.

Mr. Molony said that in his opinion men should, for the present, be employed as ordinary labourers on a daily wage. Railway works should be regarded as ordinary contract works. Light work on roads should be viewed as relief work. It was desirable, as long as possible, to pay in money and to let the labourers purchase grain. Ultimately it would probably be necessary to pay partly in grain and partly in money. A local market would have to be established and shelter provided for the workmen. For the present, Mr. Molony thought, and in this opinion Major Lindsay concurred, that the ordinary coolie huts would meet every requirement.

Major Lindsay then explained on what portions of the line it would be desirable to concentrate work for the present, and some conversation ensued as to the desirability of allowing the railway staff and the working parties collected under them to aid in the construction of the roads which would act as feeders to the Railway. Eventually, His Excellency the Viceroy expressed his general satisfaction with the views set forth, and directed that Major Lindsay should be instructed to aid in the construction of these roads with his staff.

In answer to an enquiry from His Excellency the Viceroy, Major Lindsay said that there would be no difficulty in separating the expenditure chargeable to relief, from that which would be properly chargeable to loan works. The distinction between the two was well understood both on the Soane Canal and Northern Bengal Railway works, and Mr. Levinge was known to be especially alive to the importance of the distinction.

His Excellency then made some enquiries as to the additional staff which might be required to prosecute the works.

Major Lindsay said that he was in no want of senior officers, but that he should require seven or eight additional assistant engineers. In answer to His Excellency the Viceroy, Major Lindsay said that young officers of the Army with some knowledge of surveying would do the work very well. His Excellency directed Major Lindsay to send in a requisition stating the exact number he would require.

His Excellency intimated that immediate authority would be given to commence the Gunduck embankment.

Secondly, as regards local works, His Excellency observed that the Resolution of the Government of Bengal of November 3rd appeared to him to give local officers every instruction which was necessary, and asked if any additional staff was required. Lord Ulick Browne said that he did not want any additional officers at present. Mr. Molony said that he would require one or two more assistant engineers. Colonel Nicolls said that 16 engineer officers would be required; young men of from five to six years' service would do the work well.

In answer to an enquiry made by His Excellency the Viceroy, Sir George Campbell said that plans for local works had been prepared in all districts.

Mr. Molony then observed that in some portions of his division,—for instance, about Maldah and Dinajpore,—it would be desirable for Government to lay in stores of grain whilst water transport was still available. In a couple of months, when the water would have sunk low, this mode of transport would be no longer available, and it might be found difficult then to collect grain in suitable quantities.

His Excellency the Viceroy observed that as regards the purchase and storing of grain by Government, the principles laid down in the Resolution were, he thought, sufficiently clear. Government would take upon themselves the duty of providing grain for the labourers employed on public relief works, so far as might be necessary. They wished to rely as far as possible on the trade to collect and distribute supplies of food for that purpose, but when any exceptional circumstances existed which would probably hinder such an accumulation of food, and when, therefore, adequate supplies would possibly not be forthcoming without the adoption of special measures, there was no intention of precluding Government officers from taking such measures as these exceptional circumstances demanded, in order to secure a supply, including a reasonable reserve of food for persons employed on relief works. On this point the local officers could alone judge. The case mentioned by Mr. Molony appeared to be one in which Government could, through its officers, act properly in purchasing and storing food. It would probably be desirable in most cases to purchase grain from distant markets through some of the leading merchants.

Thirdly, as regards loans to municipalities and other corporate bodies, Sir George Campbell said that notices would be issued with a view to facilitating such loans, and that attention would be given to takavi advances for the construction of wells.

Transport.

His Excellency next adverted to the means available for transporting grain from the railway into the interior of the affected districts, as to which he expressed considerable anxiety.

Sir George Campbell said that this was a subject of extreme importance, and it was desirable to act in the matter without delay, which might prove very prejudicial. Mr. Molony said that, in his district, pack-bullocks formed the most ready mode of transport. Mr. Bernard pointed out that if any large number of pack-bullocks were employed it would be necessary to lay down supplies of fodder at convenient places, and that already, under the orders of the Government of Bengal, arrangements had been sanctioned for laying in supplies of fodder at some roadside stations.

His Excellency the Viceroy remarked that the serious attention of the local officers should be directed to this subject; any assistance which the Government of India could give, either by utilising the Commissariat or Post Office service or in any other way, would be readily given. A communication had already been made to the Government of Bengal, stating the extent to which the Commissariat could render assistance.

His Excellency then observed that it had been suggested to him that the traffic of grain in some parts would be facilitated if the tolls were taken off the canals. The Lieutenant-Governor said that the Government of Bengal had already arranged to take off road-tolls and to reduce actual ferry tolls to a minimum all over the distressed districts; orders to this end were actually under issue. Lord Ulick Browne said that a considerable amount of rice came from the Sunderbunds into Calcutta by water, and that undoubtedly the quantity would be increased if the tolls were taken off. Mr. Bernard said that this would give additional facilities for the export of rice to foreign counties, but Mr. Schalch observed—and in this opinion Mr. Chapman concurred—that Calcutta must always be the great entrepôt through which rice would find its way up country, and that, in this view of the case, it would be advantageous to facilitate the accumulation of rice in Calcutta. After some further conversation, it was arranged that the Lieutenant-Governor should inquire into the matter and consider whether it was desirable to take any action.

Relief.

His Excellency the Viceroy then proceeded to the question of the distribution of gratuitous relief. The paragraphs in the Resolution of the Government of India which dealt with this important branch of the general subject were based upon the experience of what had taken place in former years and more especially on the reports of the Orissa Famine Commissioners and of the scarcity which prevailed in the North-Western Provinces in 1868–69.

In the 73rd paragraph of their report, the Orissa Commissioners said that "there can be no " better rule than that which has hitherto obtained, *viz.*, that Government should supply " employment by means of public works, and that the public should supply the means of " gratuituous relief to the helpless."

The Government would contribute an equal sum to that which had been collected from private individuals; this, however, would not, of course, constitute the maximum amount of relief which would in all cases be given by Government; the principles which would guide Government in this matter were the same as those which were adopted in the North-Western Provinces in 1868–69 and which are thus described on page 5 of Mr. Henvey's report:—" The equivalent of private contributions was not the maximum limit of the Government gift, " but an appropriation for disposal by the relief committees. Charitable relief must be held " primarily the care of the public, but if public charity should fail from any cause, the " Government must step in and save life." In consequence of this determination the Lieutenant-Governor of the North-Western Provinces issued instructions on January 2nd, 1869, in the following terms:—" It is the duty of the State to see that none of its subjects " starve for want of food, even if charitable contributions should (which His Honor has no " reason to suppose) prove inadequate. The Lieutenant-Governor will accordingly hold " every district officer personally responsible that no death occurs from starvation which could " have been avoided by any exertion or arrangement on the part of the district officer or his " staff." There was no intention of throwing upon the Lieutenant-Governor, and upon local officers in Bengal, any greater degree of responsibility than had been incurred by officers in the North-Western Provinces. His Excellency did not doubt that they would accept this responsibility cheerfully, and they would perform the duties which would devolve on them with judgment and ability. It was impossible that sitting in that room, they could lay down detailed instructions to meet every case; much of the detail must be left to the officers on the spot; all that the Government of India could do was to lay down the general principles by which it would be guided and to assure the Local Government that cordial support would be afforded to it. Nothing was more clearly shown from the experience of former famines, and on no point had the Orissa Commissioners dwelt more strongly than on the necessity of being prepared beforehand with such an organisation and administrative machinery as could be brought instantly into play so as to commence relief whenever and wherever the necessity should arise. For the present it was probably not necessary to establish relief committees anywhere, but discretion should be allowed to district officers to do so on the first breaking out of any distress.

The immediate steps necessary were that the various local officers should personally inquire into the circumstances of their districts and then send up, for the approval of the Lieutenant-Governor, detailed recommendations showing the places at which they would propose to establish relief centres, the names of those who would serve on the committees, and any other points of detail which could advantageously be considered beforehand. Thus, an organisation would be planned which could be called into active existence whenever the necessity should arise. The fullest information on all points connected with the affected districts should be obtained, and with this object, it would probably be necessary to strengthen the civil staff in some localities.

Sir George Campbell said that probably a few civil servants of a few years' standing would be required.

His Excellency the Viceroy, in continuation of his remarks, said that as regards the central committee, he agreed with His Honor that it was not desirable to call it into existence at once, because the information in the possession of Government was as yet not sufficiently detailed and complete to allow of the case being placed before the public in such a manner as would probably attract subscriptions to any great extent, but it would be well to consider in what manner the committee should eventually be constituted. When the central committee was once constituted, His Excellency proposed that it should supply grain to the district committees, and thus relieve Government of a most difficult task. As regards the importation of grain from a distance into the scarcity-stricken districts, much would depend upon the circumstances and position of each separate locality. It was difficult to lay down any general principles as to whether purchases should be made through local traders or not; when relief committees were once established, they should, as a general rule, make their own arrangements for the supply of grain. For the present Government would only provide grain for the labourers engaged on public works and would not supply grain for charitable distribution. His Excellency thought that it would now be possible for Mr. Bernard to frame, for the consideration of the Lieutenant-Governor, detailed regulations as to the best method of organising charitable relief on the basis of those which were laid down by the Orissa Commission and in the North-Western Provinces on former occasions. These regulations would deal with the separation of the able-bodied men from those who were unable from physical weakness or other causes, to perform work, the distribution of food to women and others who might be unable from sickness or infirmity to leave home, the times and occasions on which food should be distributed cooked or uncooked, and other similar points. As regards the general question of the effect which would be produced by the distribution of charity, His Excellency said that he did not anticipate any danger of pauperising the people. The experience of former years had shown that so soon as plenty returned and work could be obtained as in ordinary times, the people gladly availed themselves of it.

Sir G. Campbell enquired whether he understood His Excellency to say that for the present Government would only lay up grain for the payment of the labourers employed on the works, and not lay up grain for charitable relief. He understood His Excellency's view to be that till relief committees were formed no grain was to be provided for relief purposes other than relief works, and that the time had not come for the formation of those committees. His Excellency answered in the affirmative.

Mr. Dampier observed that the district committees, as soon as they were constituted, would ask Government to import rice.

His Excellency said that there could be no objection to the district committees drawing on the stores which Government would accumulate for the payment of labourers on the public works, or obtaining supplies of grain in such other manner as they may consider best. The action of the district committees should not be arrested pending the formation of the central committee.

Mr. Molony said that committees were not at present required. If they were empowered, when constituted, to draw on the Government stores collected to pay labourers on the public works, sufficient provision would have been made. Those stores should, of course, be ample.

Statistics.

His Excellency the Viceroy then expressed a wish that all statistical information bearing on the facts of the scarcity and the measures taken to afford relief should be kept in due form, and that periodical reports should be sent in to the Government of India.

Mr. Bernard said that this should be attended to, and that fortnightly reports should be sent to the Government of India as to the state of the affected districts.

Observations.

His Excellency the Viceroy then enquired of each officer present whether he wished to make any further remarks.

Mr. Schalch observed that the Bengalees did not like Burmese rice; they would, however, probably be obliged to eat it; he thought that Government might advantageously obtain rice from Burmah to pay labourers on the public works. Fifty thousand tons of this rice might be introduced; no great loss would probably be incurred.

His Excellency the Viceroy said that Government had announced that they would make importations of Burmese rice. In answer to Mr. Bernard, His Excellency added that he thought it would be better for the Local Government not to operate out of India; any purchases of foreign (including Burmese) rice could best be made through the Government of India.

Lord Ulick Browne said that some inconvenience arose from the necessity, under existing regulations, of one European officer being present at the head quarters of each sub-division daily to superintend the issue of stamps, and suggested that these regulations should be relaxed. The officer could probably be better employed in visiting his sub-division. After some conversation, it was arranged that Sir R. Temple and Mr. Chapman should inquire into the matter with a view to seeing whether any relaxation of the existing regulations would be desirable.

The proceedings then terminated.

Enclosure F.

No. 3003.

GOVERNMENT OF INDIA. FINANCIAL DEPARTMENT.

Expenditure, Miscellaneous.

To the SECRETARY to the GOVERNMENT of BENGAL.

SIR, Fort William, the 13th November 1873.

I AM directed to reply to your letter No. 3379, of the 10th current, respecting the arrangements to be made for averting or mitigating the effects of the scarcity in Bengal and Behar; also your letter E, of the 11th current, asking for a famine credit of fifty lakhs of rupees to be drawn against during the current official year. In these letters the Lieutenant-Governor asks, that "the principles on which immediate measures are to be taken and relief is "to be given, should be somewhat more precisely laid down," whether "grain should be "stored, poor-houses built, and the means of feeding, sheltering, and aiding the people pre-"pared," upon what principles relief is to be administered, and "how much he may spend "upon buying, transporting, and storing food in the places where it is most likely to be wanted "for relief works and relief centres," and, "generally, for some indications which would either "limit the wide responsibility of his Government or make it clear what discretion the Lieu-"tenant-Governor has."

2. His Honour the Lieutenant-Governor, having expressed verbally a wish to be furnished with some further instructions on the topics treated of in the Governor-General's Resolution of the 7th November, a meeting was arranged on the 10th November, at which the Governor-General, Sir R. Temple, His Honour the Lieutenant-Governor, and several of his principal officers were present.

3. A précis has been made of the substance of what passed at this conference, and a copy is forwarded herewith. It will be found to comprise the answers by the Governor-General to the various practical questions put, and to embody His Excellency's views on most, if not on all, of the points adverted to in your letter No. 3,379 under acknowledgment.

4. The various observations by the Governor-General contained in this précis are to be regarded as instructions for the guidance of the Local Government.

5. It may be desirable to observe that the policy indicated in the Resolution of the Government of India of the 7th instant does not include the general provision of supplies of food to districts which have suffered from the failure of the autumn rice crop within the operations which the Goverment are to undertake and for which they are responsible.

6. For the general distribution of supplies at the present time His Excellency has announced, in paragraphs 5 and 6 of that Resolution, that he relies with confidence upon the operations of trade, and no information that he has since received leads him to modify that opinion.

7. It was stated that the action of Government would be limited, first, to arranging, by means of advances of money, for supplies in such parts of the country as, by reason of distance from the main lines of communication, deficiencies of markets, or other exceptional circumstances, may, in the opinion of the local officers, reasonably be presumed to be beyond the ordinary operations of trade; and secondly, to securing sufficient supplies of food for the labourers to be employed upon public works.

8. Chapter XIII A of the Code of Regulations for the Public Works Department, published in 1870, to which allusion was made in the Resolution of the Government of India of the 28th ultimo, contains full instructions as to the manner in which the officers of the Public Works Department should act in regard to laying in supplies of grain. Should the Lieutenant-Governor consider that any of these instructions require modification, His Honour will observe, from the 1st paragraph, that the rules are "subject to any special orders that may be issued by the Local Government."

9. The reply, then, to the question of the Lieutenant-Governor how much it is desirable for him to do in regard to the buying and storing of food, is that the action of the Government of Bengal should for the present be limited to providing for the consumption of the persons who are likely to be employed upon the local relief works. This reply is not intended to debar the Lieutenant-Governor from acting upon his own responsibility in case of any sudden emergency, reporting the circumstances to the Government of India.

10. The information previously in the possession of the Governor-General, and that laid before him at the conference held upon the 10th instant, was to the effect that it will not be necessary to have recourse to the distribution of gratuitous relief for the present. His Excellency is of opinion that relief should not be commenced before a real necessity arises, and he

agrees with the Lieutenant-Governor that it is undesirable to "create obligations which it would be extremely difficult to meet." He explained the manner in which supplies would be obtained through the central relief committee, when appointed, and how any particular cases which might occur previously to the appointment of the central committee should be met. All that appears now to be necessary is that no time should be lost in preparing all the machinery required to set relief operations in motion so soon as the necessity shall arise.

11. The Governor-General trusts to the Lieutenant-Governor to obtain from each division and district statements in categorical form of all that is proposed to be done in consequence of the scarcity, to issue suitable instructions on each statement as soon as it is received, and to give the Commissioners and District Officers discretion to act on emergency even in anticipation of His Honour's instructions.

12. As soon as may be practicable, the Governor-General desires to receive abstracts of the district reports. The Government of India will then be able to form some judgment as to what will be the character and extent of the operations proposed, and of the funds, local, provincial, or imperial, which will be required.

13. Meanwhile I am to state that the Governor-General, although fully determined to support the Local Government with such financial means as may be necessary, considers that there would be objections to the grant of so large a famine credit as fifty lakhs of rupees beforehand. We do not know as yet that such an expenditure as this will really be needed during the current official year 1873-74; and time has not yet admitted of even approximate estimates being prepared.

14. As regards the classes of works set forth in paragraph 2 of your letter under acknowledgment, I am to observe that among the relief works already ordered the most important are the Soane Canal, the Northern State Railway, and the Gundak embankments. These works will be carried on at the charge of the imperial treasury; and all disbursements will be made from cash supplied in the usual way through the imperial Public Works Department.

15. Thus the principal storage of grain for the consumption of the labourers upon relief works will at the outset be made at the cost of the Government of India from imperial resources.

16. As regards advances to private persons for distributing grain, I am to state that money for this purpose may be obtained from the funds, 100,000*l.* (ten lakhs of rupees), already allotted for loans to municipalities.

17. In respect to grants to local committees equal to private subscriptions, I am to state that funds for such grants will be immediately supplied on information being received of such subscriptions being raised or promised.

18. Regarding provincial and local public works, the Governor-General desires that the moneys may in the first instance be disbursed from the available balance of the provincial or local funds, and may be provisionally debited to these funds. At the end of the official year the account will be subject to adjustment. That portion of the expenditure which, though incurred on provincial or local works, is yet really undertaken only for the relief of distress, will then be transferred to the head of "Famine Charges," which was reserved as imperial by Resolution No. 2,086, dated 30th March 1872. But that portion of the expenditure which represents value received by the various districts in the shape of actual works, will be left finally at the debit of provincial or local funds, unless, indeed, it be found that the aggregate of such debits is more than the provincial finances can properly bear, in which case the Government of India will be prepared to consider the grant of an additional allotment for provincial services.

19. For these reasons the Governor-General will defer compliance with the application for a general famine credit, until the requirements of the case shall be more fully known.

20. In view to the expense to be incurred on relief works, the Governor-General trusts to the Lieutenant-Governor to curtail as much as possible public works, whether at the cost of imperial, provincial, or local funds, in those districts which are not affected by scarcity, and in which there is no need to find employment for unemployed labour, in pursuance of the principle laid down for the North-Western Provinces in 1868-69.

21. The Governor-General is fully aware that any estimate which can now be formed of the extent of the distress which may arise must necessarily be uncertain. He knows the disadvantages under which the Province of Bengal is placed as compared with some other parts of India, in regard to the collection of information. And he is confident that the Lieutenant-Governor will act according to the best of his ability and judgment in fulfilling the arduous and responsible duties which will devolve upon him.

22. Furthermore, the Governor-General desires to take his full share in this responsibility, and has endeavoured to comply fully with the wish expressed by the Lieutenant-Governor that the principles and practice which the Government of India wish to be followed should be indicated as far as possible.

23. His Excellency trusts that the Resolutions of the Government of India of the 28th ultimo and 7th instant, together with the précis of the conference of the 10th, and this letter, will enable His Honour to act without delay, in the full confidence that he is carrying out the views of the Government of India, and that he will meet with their cordial support.

I have the honour to be, Sir,
Your most obedient servant,
R. B. Chapman,
Secretary to the Government of India.

No. 3,379, dated 10th November 1873.

From C. BERNARD, Esq., OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, to the SECRETARY to the GOVERNMENT of INDIA, with the GOVERNOR GENERAL.

With reference to the responsibilities of this Government, set forth in the Resolution on the scarcity in these provinces, published in the *Gazette of India Extraordinary* of 7th instant, and especially paragraphs 23 and 28, the Lieutenant-Governor would be glad if the principles on which immediate measures are to be taken and relief is to be given could be somewhat more precisely laid down.

2. All that Sir George Campbell has learned on this great and most difficult subject has impressed on him the following :—

I. When failure of the crops extends over a very wide extent of country and famine results, it may attain, and on occasions has attained, such proportions that no foresight, no energy, and no measures of relief which the Government can command can suffice adequately to deal with and overtake it. When the calamity is very severe and very widespreading, we can only partially mitigate it.

II. In the early, and it may be said the middle, stages of scarcity there must always be an extreme element of uncertainty. Our knowledge of the stocks of grain and habits of the people, of the actual produce of the fields, and of many things which act and re-act on the market, are not such as to enable us to calculate eventual results with any approach to certainty. Especially is this the case in these provinces where any system of agricultural statistics is in its infancy, and executive establishments in the interior of districts are but just formed on a very small scale.

This uncertainty becomes much greater in proportion as the failure of crops extends over a very large area.

Where the area of scarcity is moderate and well defined, we can calculate with some certainty on the supplies which may be poured in from the surrounding countries; but when the failure has extended over such an area that we cannot depend on the outside world to supply an extreme internal deficiency, the main element in our forecasts must be an unknown quantity, viz., the internal stocks, and the uncertainty is enormously increased.

III. While the Government by all means in its power avoids any negligence or undue shortcoming, there is, on the other hand, another difficulty into which we may fall; that is to say, if we give relief with too free a hand we raise expectations and create obligations, which we shall find it extremely difficult to meet.

Sir George Campbell has always put forward this last view of the case as well as the other. It has seemed to him that the people of this country are now by no means very prone to apply for relief, and that we could hardly by any means at our disposal give too much relief in times of scarcity, if necessity were to be measured by an English standard. When there has been much failure of the crops, and food is two or three times its usual price (not to say dearer than that), a very large proportion of the population, in fact the great majority of the population, are without sufficient food, and are in real need of assistance. But we have no poor law, no system of relief, and the people have been wont to feel that they must bear great privations. If the Government were to attempt to relieve all who suffer on every occasion of scarcity, the task would be too great.

3. Now, taking these three statements, the Lieutenant-Governor believes, with respect to the first, he may assume that the expressions in paragraphs 23 and 28 of the Resolution of the Government of India are not to be taken as literally holding this Government responsible to deal with and overtake the distress, however great it may be or might be; he assumes at once that, if we do the best we can, that is all that can be expected of us.

4. But the second and third statements, taken together, do, if they are admitted, raise practical questions of the most extreme difficulty and urgency, and it is because this Government is about to undertake a very great task under very wide instructions, and with so liberal means placed at its disposal, that the Lieutenant-Governor seeks some further guide in the application of those means.

5. All the elements of uncertainty now exist in these provinces in the most eminent degree. Our means of ascertaining the actual yield of the crops and other particulars are still very far below that possessed by the Government in any other part of India. Our information regarding stocks in hand is wholly deficient. The case of Orissa having been very peculiar, and its area comparatively very limited, we have no experience of a very general failure and of famine very widely spread in Bengal in this country, though we know that such a famine did occur in the last century. Even if we could compare that failure with this, we know that the habits of the people and conditions in regard to storing grain, export, import, and everything else, have wholly changed since 1770. The only comparison which we can to some extent effectively make is with the partial failure in Bengal of 1865.

6. Limited as are our means of knowledge, the Lieutenant-Governor is inclined to think that if we had to deal with Bengal alone with its 40 millions of people, or with Behar alone with its 20 millions of people, we could presently to some extent forecast the degree of scarcity. We could only do so within very wide limits, but still we might make some forecast. As it is, we are in this position: say we roughly forecast the degree of scarcity in Behar as we may perhaps do; if we were sure that we could buy in the Bengal markets and seaports, and pour into Behar,

we might to some extent count the cost. But as it is, we know that the crops have failed to a great degree in the Bengal districts with few exceptions, disastrously in many. It is utterly impossible to calculate with the least approach to accuracy the effect on the Bengal markets of great purchases for Behar both by private dealers and by Government for relief works and stores. We know by experience that the markets in these territories are most sensitive and sudden in their variations. There are prices that mean scarcity, and there are prices that mean famine; and we cannot tell when a demand from one province, suffering from scarcity and threatened with famine, upon another, already suffering from scarcity, may not lead to famine prices in both provinces.

7. In the North-Western Provinces, not only has there been more frequent experience of scarcity, but modern failures there have been, either not excessive in degree, or confined to one portion only of those provinces. The scarcity of 1868-69 was not excessive in degree. From Mr. Henvey's report, it appears that a large part of the khurreef crop was lost, and that the rubbee crop was not above two-thirds of an average; but "there was no general failure of "food," active absence of grain, and "the agriculturists suffered comparatively little."

The failure of 1860 was confined to the upper portion of the North-Western Provinces, and in no degree affected either Oude or the lower part of the North-Western Provinces; which on the contrary profited by an enormous exportation.

8. As an illustration of the uncertainty of these things, when the failure extends over a great area, reference may be made to the account of the Bengal Famine of 1770 as ascertained from the India Office records, and published with the "Further Report" on the Orissa Famine.

We have no means of comparing the produce of the crops of 1769 with those of the present year, and may hope that the degree of failure is not similar; but the season seems to have in some respects followed a similar course, inasmuch as the greatest scarcity was for many months supposed to be in the districts north of the Ganges and Behar, while the districts south of the Ganges, about Moorshedabad and Calcutta, were better off; yet later in the season, in the middle of 1870, these latter districts (probably in consequence of exports) suffered far greater extremities than the northern districts, where the failure had been greater.

9. So again, unexpected outbreaks of famine (compared by the Famine Commission to outbreaks of cholera) frequently take place almost without warning, in out-of-the-way and secluded corners of districts cut off from communication, in consequence of a panic.

10. The present uncertainty then being great, it seems to the Lieutenant-Governor impossible to undertake beforehand measures of relief so far-reaching and comprehensive that we can make sure of adequately dealing with and overtaking all the distress that may possibly arise, unless we carry our measures by way of precautions far beyond the necessities that we can distinctly foresee. If we would make sure, we must prepare full means of relief wherever there is a chance or possibility of distress, that is, almost everywhere. This we can hardly do. It seems to the Lieutenant-Governor that in practice we must run some risk, and a very considerable risk. While on the one hand we must observe and act on symptoms which render extreme distress probable, we cannot afford to prepare the means to meet every case in which it may be possible. We may—and if things turn out badly probably shall—be taken by surprise in some instances.

11. When it is said that timely measures must be taken, it must be fully understood that we cannot effectually guard against distress merely by organising district and local committees and such like machinery. If we are to make sure that distress shall not get beyond our means, we must not only prepare the machinery of action, but act—store grain, build poor-houses, prepare the means of feeding, sheltering, and aiding the people. These things are not done in a day; especially as we know by experience in Orissa grain cannot be transported at any time to feed a large population on a sudden crisis. Orissa was, no doubt, an extreme case; but, undoubtedly, in any part of the country beyond rivers and railways, if the strain on means of transport becomes too great next hot weather, the transport will break down. If we are to prepare for probable or possible relief in any locality, it seems most essential that food should be transported and stored in good time before the crisis and when carriage is available. The question then is, when, where, and to what extent these things are to be done when future distress is possible, or when it is probable.

12. Finally, as regards the mode and degree of relief, the questions are very difficult. The difficulties are chiefly connected with the distinction so well known in England, between in-door and the out-door relief. It may be assumed that when distress is ascertained, both work, and as far as possible, food for work, will be given to all applicants, while poor-house food, and if necessary shelter, will be given to the weak, unable to work. But beyond this comes the question of the amount of relief to be given to large classes who will suffer great extremities rather than labour on public works or accept cooked food. And very much of this question of degree of relief is bound up with the other regarding the time at which relief is given. In this country, as has been said, the people certainly do not to an unusual or unreasonable degree seek relief; on the contrary we must for the most part seek them out and offer it to them. Just in proportion as we offer relief soon and near to their homes, they will avail themselves of it. It is scarcely possible to begin relief so soon, and to carry it so far as to bring it home to all in time to avert all distress. To do all that in a limited area it is possible to do, we must not only begin on the earliest appearance of scarcity, but we must scatter relief houses broadcast so as to have one for every group of villages within reach of everyone's home. And we must give outdoor relief to all who have reasonable ground for not working or coming to a relief house. It is only in this way that, beginning as early as possible, we shall get first the beggars on the

surface; then the poorest people ordinarily self-supporting; then tap deeper and deeper strata, and really avert great distress. But it is almost impossible to get together at once the means of doing this over so wide an area as that in which distress is now possible.

13. The Lieutenant-Governor is very unwilling to seem to discuss rather than act, but it does appear to him that the general outcome of the Resolution of the Government of India is this: "We will give you (the Local Government) men, money, and everything you can use; "but on you it lies that disease and death, due to want of food, shall be averted." The Lieutenant-Governor has thought it necessary to represent that this is a burden which in its fullest extent this Government can hardly promise successfully to bear. In his opinion the area affected is so great, and the uncertainty so much precludes accurate calculation, that we cannot, with all the means at our disposal, make sure of doing all that might be done if the area were small and the degree of want could be accurately gauged. We can only take a certain amount of precautionary measures, and take them in the direction where it seems most probable that they will be needed. If happily the scarcity proves less severe, we may meet it fully, and for the most part avert very great suffering; if it unfortunately proves more severe, we must strain every nerve to do all that is possible; but we cannot hope to avert all calamity. In the uncertainty which must for some time hang over everything, the amount of precautionary measures to be adopted is a question of discretion and finance. No man can say exactly how much should be done; but some indication may be given how far the Government of India think it prudent to go without delay, and wish the Local Government to go under present circumstances.

14. In discussing these matters with His Excellency the Viceroy, His Excellency told the Lieutenant-Governor that it might be well that he should submit in writing the questions on which he felt uncertainty, and promised that, as far as possible, His Excellency's Government would indicate the principles and practice they wish to be followed. So far as the Government of India will indicate their views on the very difficult questions which form the subject of this letter, the Lieutenant-Governor will follow those views as much as he is able; and so far as the matter is left to his unfettered discretion, he will act to the best of his ability and judgment in the view that some risks must be run, but that we must apply the means at our disposal in the mode which appears on the whole most likely to be beneficial.

Some indications, which would either limit the wide responsibility of this Government, or make it clear what discretion the Lieutenant-Governor has, he would certainly like to have.

15. To bring to a short conclusion a long argument, the Lieutenant-Governor would say that, at the present moment, the question which seems to him most to press, is that of buying, transporting, and storing food in the places where it is most likely to be wanted for relief works and relief centres. As affecting both the general course of trade and the Indian exchequer, the Lieutenant-Governor would much like some decision as to what and how much it is now desirable for him to do in this respect, and how much he may spend. If he were to deal with the question solely with a view to fulfil to the very utmost the condition that distress should in no case get beyond our means without regard to the capabilities of the general exchequer, he does think that there is such a reasonable possibility of need for very widely extended relief measures, that, to be on the safe side, he would at once undertake very extensive measures indeed; in fact, he would buy grain very largely wherever it is to be had, procure and use every possible means of transport, and prepare food depôts in almost every part of the Patna, Bhaugulpore, and Rajshahye Divisions, and perhaps in great part of the Burdwan Division. But he feels that if he were to act in this respect without stint or limit, he would be taking one view of the case only. If he had the whole case in his hands, his endeavour to do the very utmost to be on the safe side, as regards Bengal and Behar, would be controlled and limited by the feeling that the purchase of grain is connected with great free trade and other questions, and with large questions of imperial finance. But these great subjects are not within his control. The question of free trade or prohibition of exports has been dealt with by the Government of India. The Government of India is more fitted to deal with great trade and economic questions; the Government of India must judge how the necessities of Bengal, on the one hand, and the state of the imperial finance on the other, must regulate and control one another. The Lieutenant-Governor thus is not master of the whole case, and when a discretion is given to him it must in some way be limited. He would like, then, some general indication how far it is desirable that he should at present go in preparation for relief, and how much he may spend in the purchase of food, means of transport, &c. Perhaps it would be convenient that the sum should be named up to which he may draw on the treasury for relief purposes without farther reference.

No. E, dated 11th November 1873.

From C. Bernard, Esq., Officiating Secretary to the Government of Bengal, in the Agricultural Department, to the Secretary to the Government of India, with His Excellency the Viceroy.

In the last paragraph of my letter* of yesterday's date, regarding the important Resolution by the Government of India, dated the 7th November, is put the question how far, and to what extent, His Excellency the Viceroy would permit the Government of Bengal to spend money in providing against the distress that is threatening the country. I am now to solicit that the Government of India

* Now under issue.

may be pleased to grant to the Government of Bengal a famine credit to be drawn against during the current year.

2. The ways in which the money, if granted, would be spent, are—

(1.) Relief works;
(2.) Purchase of grain for storage at relief works;
(3.) Advances to private persons, under paragraph 26 of the Resolution;
(4.) Making grants to local relief committees, equal to the private contributions they may collect.

Some few of the larger relief works will indeed be imperial undertakings, for which the Local Government would not have to find the money. But there will be other minor relief works all over the country; the provincial Public Works Department grants for 1873–74 (which were very liberal grants) are by the last accounts being fully worked up to; the local funds are not large anywhere, and their income this year will be much curtailed by the stoppage of the road cess in some districts, and by the temporary cessation of road and ferry tolls on all roads by which grain is being transported. The provincial and local resources, therefore, for meeting the cost of relief works are not large, and as "famine" was, by the Resolution of December 1870, distinctly reserved as an imperial charge when the provincial system was started, the Lieutenant-Governor hopes that a grant, or a credit, may now be sanctioned against which this Government may draw for famine relief works.

3. There is no doubt that it will be necessary for this Government to buy and store grain largely and immediately at several points in the districts of Tirhoot, Gya, Bhaugulpore, Monghyr, Purneah, Dinagepore, and Bograh, over and above the stores which may be established for the Soane Canal works. The discussion at Government House, at which the Lieutenant-Governor and his officers were permitted to attend yesterday, made it very clear that questions of transport, of price, of possible suddenness of demand, all made it imperative that we should be beforehand with our supplies of grain for relief works. The Lieutenant-Governor cannot say precisely how much grain Bengal officers may be able to store before the 31st March next, but he would be very glad if he could see his way to storing anything like the amount named by Mr. Schalch at yesterday's discussion, namely, 50,000 tons. Moreover, though this amount may not be stored by the 31st March, still in some districts it will be possible to make advances for delivery of the rice directly the new (winter) crop comes into the market in February next. So that, if Government and its officers really can do as much as they would wish to do, very considerable sums will be required for the purchase of grain.

4. As to advances to planters and others who may be willing to lay in store and to take Government advances for such a purpose, the Lieutenant-Governor would hope to leave very full discretion to local officers. The more money that can be properly and early spent in bringing grain from a distance for private storage in the distressed districts the better.

5. The private contributions to be raised in districts by relief committees will, the Lieutenant-Governor apprehends, be small. Already accounts are coming in of cases in which zemindars, village headmen, and others have begun to help and support their people; and any private charity will find a very ready outlet in such like directions. Still, some funds will be required to meet the private contributions.

6. In view of all these wants, I am to solicit that a famine credit of fifty (50) lakhs of rupees may be granted to the Government of Bengal for the service of the remainder of the year 1873–74.

No. 3,004.

GOVERNMENT OF INDIA.—FINANCIAL DEPARTMENT.

Expenditure.—Miscellaneous.

To the SECRETARY to the GOVERNMENT of BENGAL.

SIR, Fort William, the 14th November 1873.

IN continuation of my letter No. 3,003 of the 13th instant, conveying the Governor-General's views and wishes regarding the scarcity in Bengal, there is one special matter on which His Excellency desires to make some suggestions, and that is the prevention, so far as may be possible, of mortality among cattle in the districts affected by drought.

2. His Excellency has learnt that at present the cattle are probably allowed to graze in the fields of the withered crops the stubble of which supplies abundant fodder. But such fodder will doubtless be soon consumed and must be exhausted by January at the latest. After that time the parched ground will nowhere afford pasture, and by degrees want of fodder will cause disease and death among the cattle. The records of past famines in India show the loss of cattle to have been always so severe as to amount to a serious diminution of the agricultural capital of the districts, and even to cripple the sowing operations of the ensuing season.

3. And under the circumstances as it is to be feared they will be during the coming hot season, one main difficulty will probably be want of draught animals for the transport of food grains to the interior of the districts.

4. These considerations are well known to the Lieutenant-Governor, and will doubtless have formed the subject, among many other things, of His Honour's forethought.

5. But the Governor-General would specially suggest for the Lieutenant-Governor's early or immediate attention that the present consumption by the cattle of the withered rice stubble will, if not watched, be very wasteful. Quantities of fodder, in the absence of precautions, might be lost, which, if saved by management and stored for use some months hence, might prove a valuable resource at the most critical period of the scarcity.

6. It appears to the Governor-General that the Lieutenant-Governor might be able to issue such instructions to the local officers as might cause a large part of the rice stubble to be husbanded, stacked, or stored for future use, without at all preventing the cattle from consuming such part as might be needed at the present season. And the cutting and stacking might afford employment to those who are out at work from the cessation of the harvesting operations.

I have the honour to be, Sir,
Your most obedient Servant,
R. B. CHAPMAN,
Secretary to the Government of India.

(Copy.) No. 1 C.

GOVERNMENT OF INDIA.

DEPARTMENT OF AGRICULTURE, REVENUE, AND COMMERCE.

To His Grace the DUKE OF ARGYLL, K.T., Her Majesty's Secretary of State for India.

MY LORD DUKE, Camp Agra, the 21st of November 1873.

WE have the honor to forward special narrative of the drought of 1873 to the 14th of November.

2. During the absence of the Governor-General in Council from Calcutta, the Lieutenant-Governor has been requested to transmit for your Grace's information copies of the weekly special narrative, in which the proceedings of the Government of Bengal in connection with the drought will be recorded. On our arrival at Calcutta, the special narrative will be forwarded through the Government of India in accordance with the usual practice.

3. The special narrative now enclosed contains no information of a later date than that which was conveyed to your Grace in the Viceroy's Despatch B. of November 12th, with which despatch copies were enclosed of the official correspondence with the Government of Bengal on the subject of the prohibition of exports, and of the instruction given to the Lieutenant-Governor in reply to His Honor's letter of November 10th, No. 3,379.

4. The information received by the Viceroy and Sir R. Temple from the Commissioners of Bhaugulpore and Patna, whom they saw when passing through Behar, was to the effect that any extreme distress would be confined to the following districts: Tirhoot, Sarum, Gya; the remaining districts of the Patna Division in a somewhat less degree, half of Monghyr, the northern half of Bhaugulpore, less than half of Purneah, and more than half of the Sonthal Pergunnah.

5. We enclose a copy of the last report of the prospects of those districts of the N.W. Provinces where the rice crop has failed; the opinion of the Lieutenant-Governor of the N.W. Provinces is that no considerable difficulty is likely to be experienced in dealing with those districts. His Honor has taken all the precautionary measures which the situation requires.

6. The Viceroy proposes to leave Agra on the 25th, and after visiting Futtehghur, Lucknow, and Allahabad, to arrive at Calcutta on or about December 10th. In the interim the Government of India will proceed to Calcutta, and we shall nominate the Hon. Sir Richard Temple the President of the Council during the absence of the Viceroy, under the provisions of the 6th section of the Indian Councils Act, 1861, in order to prevent any delay in issuing such orders as may be required.

7. We have communicated with the Scinde, Punjab and Delhi, G. T. P., and Oudh Rohilcund Railway Agencies with the view of reducing the rates for the carriage

of food grains conveyed to Behar and Bengal, as has been done upon the East Indian and Eastern Bengal Railways.

We have, &c.

Camp Agra, the 21st November 1873.

Special Narrative of the Drought of 1873, to 14th November 1873.

1. During three consecutive years, the weather in Bengal has been abnormal. In 1871 the rainfall was excessive—24 inches at Calcutta above the average of previous years. In spite, however, of an excessive rainfall, the crops were very good. It was said in the annual report for the year, that "the season 1871–72 " was comparatively unfavourable for what are called dry crops; but as rice is " the main staple of these provinces, the general result of the season was certainly " good."

In 1872, on the other hand, the rainfall was deficient—29 inches at Calcutta below the average of previous years. In spite, however, of this deficiency, the crops were very good in Bengal, and not bad in Behar. Although extraordinarily scanty, the rain was happily distributed both in time and place.

The year 1873 has again been dry, and dry almost beyond precedent. Not only has the rainfall been deficient, but what rain there has been, has been unfortunately distributed. The hilly country south of the Ganges along its whole line has had more than an average fall; indeed, so heavy were the rains at one time in this part of the country, that the early rains crop was much damaged by excess of rain. Even in Gya and Patna, the early rains crop suffered heavily from rain and floods, which came at an unfortunate time.

This excessive fall did not extend north of the Ganges. On the contrary, in North Behar and almost the whole of Bengal the rain has been far below the average, the greatest deficiency being in the districts north of the Ganges both in Bengal and Behar. For instance, the fall of rain from the 1st January to date in parts of the Rajshahye Division and in North Tirhoot, with an average for the same period, of 84 and 44 inches respectively, has only been 26 to 30 inches. In Calcutta, the fall to date has been 44 inches against an average of 68 inches.

Throughout the country, the absence of storms and showers in April and May, and the late commencement of the rains, deferred the preparation of the lands and the sowing and planting out of the crops till some apprehension was felt regarding the success of those operations. On the 1st July the rainfall from 1st January, at the chief centres of Calcutta, Patna, and Dacca, had been, as compared with the average of previous years, as follows:—

	Up to 30th July 1873.	Average of previous years.
Calcutta - - -	11·10	24·80
Patna - - -	4·71	9·86
Dacca - - -	18·65	33·19

The season was abnormally hot. There was registered in Calcutta a higher temperature than had been registered during many previous years.

2. But late seasons are not always bad seasons for the crops; and though complaints of want of a sufficient quantity of rain continued to be made from certain districts, the general aspect of affairs, from the commencement of the rains in the latter end of June up to the middle of September, was on the whole not unpromising. The dryness of the season and the lateness of the sowings formed the subject of demi-official communications between His Excellency the Viceroy and the Lieutenant-Governor. The latter anticipated that if the usual rain fell no irreparable damage would be done by the singular lateness of the rains. Such seasons had not been uncommon, and wherever the rains subsequently ran their usual course had not proved unpropitious. This anticipation was verified by the result to a

certain point, for up to the middle or end of September the prospect was not at all gloomy, taking the country as a whole.

3. In the last days of June and the early days of July the Lieutenant-Governor visited Northern Bengal, travelling by boat down the Teesta and Brahmapootra from Julpigoree to Goalundo. The state of the crops in that part of the country was not during his progress made the subject of complaint until his arrival at Goalundo, where he found everything very backward.

4. But though the general aspect of the crops was not unpromising, the accounts from Behar did not become more favourable till the middle of July; while from Purneah and Dinagepore unfavourable reports continued to be made up to the second week in August.

From Purneah, in beginning of August, bad accounts were received. The Magistrate reported that the outturn of the *bhadoi* (or September) crop would be bad, and that unless heavy rain fell within the next three weeks there would be a failure of the rice crop in the sub-divisions of Arrarean and Kissengunge. He was directed to keep himself thoroughly well informed of the condition of the people of his district, and prepare himself to meet any distress which might arise, if the contingency anticipated of no rain falling within three weeks should actually occur. Rain however came, and the aspect of affairs improved greatly.

5. With the beginning of September came the harvest of the *bhadoi* crops in Behar, chiefly Indian-corn and *murwa* (a small millet); and of the *aus* crop in Bengal, almost entirely rice. Neither of these crops was an entire failure anywhere, and in many districts the outturn was tolerably good. In parts of Behar injury had been done by heavy rains and floods in the beginning of August; in parts of Bengal scarcity of water affected the outturn; but in some districts, such as Nuddea, where this crop supplies a large proportion of the food of the people, the outturn was good; and in North Behar scanty rain seems to have been not altogether unfavourable to the early crop. This early crop is, however, almost everywhere except in Nuddea a comparatively small crop. During September the accounts of the late rice known as *aghani* in Behar, *amun* in Bengal, continued favourable. With the last week of September came complaints of want of water from several districts, but such injury was not generally done that the usual October rain would not have remedied.

6. The position, then, at the end of September was this: the rains had commenced late, and had not been as heavy as usual. The early rains crop had been below the average on the whole, but by no means a failure. The late rains crop was late but on the whole promised fairly; in some districts it promised so very well that the ryots reckoned on a bumper crop, and sold off their old stocks. The rains had ceased for a time—not an unusual occurrence, and the people were looking forward to a full downfall in October. Although experience of former years had taught them that serious scarcity and distress, if not famine, would be the result of a total cessation of the rains, yet they had been so often saved from ruin by falls in October, that they were not very apprehensive of disaster. Prices had not as yet risen; indeed, were lower than in the same month of the year preceding.

7. But as the days of October wore on, and no rain came, apprehension increased. While anxiously watching the rain and crop reports, the Lieutenant-Governor was loath to give unnecessary alarm. When a considerable portion of October had passed without rain he became alarmed. He thought the time had come when it was necessary to take more than ordinary precautions, to obtain the best information, and ordered a circular which was issued on 13th October, and which directed that the crop and prices-current returns regularly submitted should be supplemented by further reports giving fuller details of the food-supplies of the country.

Circular No. 70, dated the 13th October 1873.

The following were the specific questions contained in the circular:—

(1.) Whether the district (or tract) is devoted to food-growing crops, and what proportion (if considerable) of its land is taken by any staples other than food.

(2.) Whether it exports or imports food; and if it imports, from where.

(3.) What are the main food-staples of the people; and, roughly, in what proportion they are consumed.

(4.) What are the various rice crops of the district or tract (such as *aus*, or *amun dhan*, &c.); at what season are they reaped; and, roughly, what proportion of the whole rice produce each crop represents in an average year.

(5.) The estimated outturn for the present year of each important food-crop which has reached or approached maturity (the different rice crops being distinguished):

(a.) As compared with an average year (*e.g.*, half or three-quarters, as the case may be).

(b.) As compared with any previous short year which can be named.

(6.) State and prospects of the ensuing cold weather food-crops, and the degrees to which people may be expected to derive support from them.

(7.) Date, under favorable circumstances, of sowing and reaping of the earliest rice-crop of 1874, and the extent to which the cultivation might be increased to meet a pressing demand.

8. On the 16th of October the Lieutenant-Governor demi-officially communicated to the Viceroy his fears that the consequences would be very serious if the rains should not return. He said—" The reports we have from Northern and Central " Bengal and the whole of Behar are as bad as they can be; from East, West, and " South Bengal they are bad. There is an area north of the Ganges, comprising " most of the Rajshahye Division, Purneah, and North Tirhoot, in which the rain " has been extraordinarily short, and in which, I fear, nothing can now save us " from great dearness and distress. If the next two or three weeks should pass " without good rain the consequences in these districts would be painful; and I " may say the same of all Behar, where the *rubbee*, or cold weather crop, which is " there an important resource, could not in that case be sown. Rain cannot be " withheld unless we are really doomed to such a year as only occurs once in a " very long period."

At the same time the Board of Agency of the East Indian Railway were requested to keep the local officers, through whose jurisdiction their railway passes, informed of the movements of grain upon it. It has been ascertained that during the latter half of October very large consignments of rice were sent up by the East Indian Railway from Bengal to Behar; but that on the last two days of October the rice-market of Calcutta became much unsettled; prices rose greatly and fluctuated somewhat; and the upward rice trade is still slack.

9. Meantime the reports from the Commissioners became more alarming. The Commissioner of Patna telegraphed and wrote that there was no rain, nor sign of rain. The Commissioner of Rajshahye reported a panic in the district of Bograh, where rice had risen from 24½ to 12½ seers to the rupee within two days. It fell, however, to 18 seers within two or three days afterwards. The Commissioner of Rajshahye added—" Now I fear rain would do little good, and there is no probability of any " further fall."

Letter No. 50 J, dated Hazareebaugh, the 22nd October 1873.

10. When it became clear that, whether rain fell or not, there would be serious deficiency in the crop, while in the absence of rain the consequences might be still more serious, it seemed that the time had come when the Government of India should be officially warned of the disaster which might be impending. Accordingly, on the 22nd October, the Lieutenant-Governor wrote to the Secretary to the Government of India in the Agricultural and Commercial Department, that " it was now impossible to avoid the gravest apprehensions of " general scarcity throughout the country, and worst evils in large parts of it." Of the Patna Division, he wrote: " Not only is much of the rice crops irreparably " gone, and much of the remainder almost gone, but the continued drought has " given rise to the greatest fear for the cold weather crops, which are an important " staple in the Patna Division. If there is no rain in the next few days, and the " *rubbee* sowings do not give immediate employment and hopes for the future, " distress and difficulty of a serious character may be almost immediate in this " division." Of Northern Bengal and North-East Behar he wrote: " In parts of " this usually moist tract the rainfall has hardly exceeded that which is usual in " the driest parts of the North-West Provinces. It is in this tract that the " greatest failure has taken place. Possibly, in the moister and less populous parts " even failure may not be so complete and ruinous as further west; but in the " west of this tract there may be said to be already panic." Of Eastern Bengal he said: " It will be a very bad feature in the case if, as is feared, the crops are there " so short that the usual exports are impossible." Of the Western Bengal districts, the Lieutenant-Governor was unable to give any favorable report. Of Orissa and the southern seaboard districts of Bengal only could he entertain good hope of a favorable outturn. He asked for authority to make immediate arrangements for

relief works, and to import grain for the laborers where necessity arose. He also recommended strongly that the export of grain to foreign countries should be prohibited. Copy of this letter is annexed.*

11. At the same time the Lieutenant-Governor had determined to visit the most threatened divisions and personally confer with the local officers. On his way to Patna, on the 27th October, the Lieutenant-Governor received a telegram from His Excellency the Viceroy, to which he replied that he thought things looked as bad as possible. On the receipt of this telegram and of the letter of this Government of the 22nd October above referred to, His Excellency the Viceroy decided to return to Calcutta at once, and telegraphed to the Lieutenant-Governor at Patna to this effect.

12. The Lieutenant-Governor reached Patna on the 27th October, and there conferred with the Commissioner and local officers and gentlemen of local experience. He had here an opportunity of consulting: all the district officers, with the exception of the Magistrate-Collector of Chumparun; Mr. Levinge, the Superintendent of the Soane Irrigation Works; Messrs. Fox and Milne of the firm of Messrs. Thomson and Fox, large landholders in the Shahabad district; the Manager and Assistant Manager of the Durbungah Estate; and European and Native gentleman from both sides of the Ganges. The result of the Lieutenant-Governor's inquiries are embodied in a note which he recorded on the 29th October, of which a copy is annexed.† All that could be learned regarding the crops was very unfavourable, as the Lieutenant-Governor said "the general tendency of "opinions is very gloomy." But he added this gleam of comfort, "There has been "little symptom of panic. Rice in most places has not reached a famine price."

The Lieutenant-Governor recorded his views on the subject of relief works and the importation of grain as follows:—

"The general rule I would follow would be, not to import on the part of "Government to supply the general market and to compete with the traders in a "part of the country where there are active traders, as is here the case; but to "import for relief works, so that relief of this kind should be a relief given by a "clear addition to the resources of the affected tract, and not by taking food from "one man to give to another. I think that all the local officers should set "themselves to devise the means by which food for the purpose I have indicated "may be transported to the parts where they see the greatest prospect of a "necessity for large relief works. Meantime, although, while people are occupied "in the attempt to save crops still alive, and there is a possibility of *rubbee* "sowings, there will probably be little or no seeking for labour, I much feel the "truth of what the Commissioner and several officers have said, that there is much "danger that people will keep away from relief works till they are half-starved, "and I believe we cannot too soon open works sufficient to—

"(1.) Accustom the people to the knowledge that work is available to them.

"(2.) Test the state of the country."

Authority was accordingly at once given to open works wherever it might be needed, the plans having been already prepared, in accordance with previous precaution, under orders issued in June 1872.

The conditions under which, and the objects with which, work was to be undertaken are set forth in the note.

On the whole, the result of the Lieutenant-Governor's visit to Bankipore was by no means reassuring.

13. On the 29th October the Lieutenant-Governor proceeded to Bhaugulpore, where he met the district officers and such other officers of the division as on short notice could be collected. The result of his inquiries was much the same as that of the Bankipore consultation, as recorded in his note of the 29th; and instructions of a similar import were given verbally, and were afterwards repeated in writing in the letter of the 3rd November, after the Lieutenant-Governor had received the Commissioner's report and suggestions, which that officer prepared after the meeting at Bhaugulpore on the 30th October.

14. The Lieutenant-Governor was unable to prosecute his tour to Moorshedabad as he had at first proposed, on account of the return to Calcutta of His Excellency the Viceroy. But he had an opportunity of conferring with the Commissioners of Rajshahye and Burdwan on his way down, before the arrival of the Viceroy, whom he accompanied from Burdwan to Calcutta. The instructions given to these Commissioners were in substance the same as those given to the Commissioners of Patna

* Page 4.

† Page 8.

and Bhaugulpore, and recorded in the note of the 29th. His Excellency the Viceroy, accompanied by the Lieutenant-Governor, reached Calcutta on Friday the 31st.

15. While he was at Patna, the Lieutenant-Governor received telegraphic information that the Government of India had sanctioned, by the Resolution* of Public Works Department, No. 431 B.C., dated 28th October 1873, the active prosecution of the Soane Canal project and the commencement of work upon the Northern Bengal Railway. He was able to arrange at once with Mr. Levinge for the authorised extension of the former project, and to telegraph instructions to the engineers charged with the latter. The resolution above referred to suggested the advisability of reducing the rates of freight on the Bengal railways for the carriage of food-grains. It also referred to the Gunduck embankment scheme as one which might now be taken up as a relief work. One of the first things done by His Excellency the Viceroy on his arrival was to arrange for the reduction of the railway rates for food-grains to ⅙ pie per maund per mile, the Government recouping to the Railway Company the difference between the ordinary and special rate. On examining the Gunduck embankment scheme the Lieutenant-Governor recommended that project, and it has been sanctioned.

* Page 37.

In prosecution of the instructions issued to the Commissioners with whom he had conferred, and in pursuance of the authority for the prosecution of public works in the distressed districts, conveyed by the resolution of the Government of India of 28th October above mentioned, the Lieutenant-Governor, on 3rd November, recorded and circulated a resolution, of which a copy is annexed.† It will be seen that these orders convey authority for the fullest extension of public works in the distressed districts as soon as work is wanted by the people—that being the mode of relief which, in the present stage of affairs, has commended itself to the Governments of India and Bengal

† Page 38.

16. On the 7th November His Excellency the Viceroy published in a *Gazette Extraordinary* a resolution reviewing the orders which had already been passed in connection with the impending scarcity, and expressing the views of the Government of India on the policy to be adopted in the crisis which had occurred. A copy is annexed.‡

‡ Page 10.

17. Before this resolution was published, the Lieutenant-Governor had again, in his letter, No. 3,300,§ dated November 7th, pressed upon the Government of India his view that all exportation of food-grains from at least Bengal ports should be prohibited. The Lieutenant-Governor showed that the annual export from Calcutta of rice alone is 350,000 to 400,000 tons; that as much as 94,000 maunds had been passed for export from Calcutta between the 1st and 7th November 1873; and that the annual export from the ports of Morrellgunge and Chittagong was fully 70,000 tons. Since sending this letter the Lieutenant-Governor has received intimation that 11,000 maunds of rice were exported from Chittagong between 8th and 11th November, and that the exportable surplus of the Balasore district (about 22,000 tons a year) is being bought up by Madras merchants for export to the Maldive and Laccadive islands, Ceylon, and the Madras Presidency. While this narrative was passing through the press, the orders of the Government of India have been received, to the effect that His Excellency the Viceroy cannot agree to prohibit exportation from Bengal ports, and that he looks to the high prices to check exportation, to bring Burmah rice to Bengal, and in fact practically to stop the export of the commoner sorts of rice.

§ Page 18.

18. On some points the Lieutenant-Governor felt obliged to solicit more definite instructions than were contained in the Resolution of the Government of India of the 7th November. He wished instructions as to the extent to which he should make preparations for relieving distress possible but not certain. There were elements of uncertainty regarding the future which it was impossible to ignore, and it was necessary to decide whether the worst which might possibly happen should be provided for. In the event of its being decided that the Lieutenant-Governor was to make preparation to meet the worst that might befall, then it was pointed out that he was hardly sufficiently master of the situation to be able to act as it would be necessary to act. He asked to be instructed how far it was desirable that he should at present go in preparation for relief, and how much he might spend in the purchase of food, means of transport, &c. On consideration, the Lieutenant-Governor applied for a famine credit of 50 lacs of rupees (500,000*l.*), against which this Government might draw. Copy of the Lieutenant-Governor's letter, No. 3,379, of 10th November, is annexed.||

|| Page 25.

The reply of His Excellency the Viceroy is not yet in the hands of this Government; but the Government of India has not thought proper to give this Government any famine credit, deeming that the expenditure must in the first instance be debited to provincial funds. As regards preparations for possible relief, the view of His Excellency the Viceroy is that, except in the event of extraordinary local emergency, such preparations should be confined to relief works, and that stores for eventual charitable relief need not yet be made.

19. The Lieutenant-Governor had been in frequent personal communication with His Excellency the Viceroy, and on 10th November, by His Excellency's desire, he waited on His Excellency at Government House with several of the principal officers of this Government, and a meeting was held at which the various measures to be adopted towards averting impending distress were fully discussed. It is understood that the result of these discussions is about to be communicated to this Government along with a reply to the letter, No. 3,379, dated 10th November, mentioned above. Having settled so much, His Excellency the Viceroy left Calcutta on the 12th instant. The further orders which the Lieutenant-Governor has felt authorised to issue are now in course of preparation, and will be detailed in the next weekly narrative.

20. It will be convenient at this point to review the weather and its effect upon the crops from the middle of October, when the accounts sent to the Lieutenant-Governor were such as to create his serious apprehension.

In the latter part of September and first part of October up to the 18th, there had been nothing but very partial showers in Bengal, and next to none in Behar. In fact, in Behar in the last half of September there had only been showers in one or two very limited spots, and none at all in October.

Clouds had continually gathered, especially in Bengal, and given hope of rain, but those hopes were as continually disappointed.

When the Lieutenant-Governor wrote in October, a north wind had driven away all prospect of rain, and there was every appearance of the dry cold weather having been set in.

Yet again in the latter part of October, and even in the beginning of November, the clouds gave hope of rain, and some showers fell in Bengal. The showers in October were extremely light and partial. On the 3rd and 4th November we had better hopes. From several places reports of rainfall, almost considerable, were received. Though there was no rain in Calcutta, heavy showers fell at several places in the neighbourhood, and it was at one time hoped that the fall might prove to be pretty general.

These hopes were, however, for the most part disappointed. It proved that the showers were everywhere local and partial, and that they did not extend to Behar. Even where the amount of rain was appreciable, the local authorities would not admit that it was enough very materially to benefit the late rice. Still, undoubtedly in several parts of the Presidency and Dacca Divisions there was rain of some benefit, and there was also some showers at places in the Burdwan and Rajshahye Divisions. Not more than a few drops fell in the eastern border of Behar.

Even if the showers in various parts of Bengal did not suffice to improve the rice, it is admitted that they may benefit the sowings for the cold weather crops. On the whole, it may be said that in the last three weeks the prospects in Bengal generally have a little improved, while in Behar and the northernmost part of Bengal there has been nothing to mitigate the drought, and the failure of the hope of rain has so far verified gloomy anticipations.

The latest Weekly Report of the weather and crops is sent with this narrative.

21. It is at present not possible to give an accurate estimate of the loss of crops through drought. Some answers to the Circular, No. 70, dated 13th October, above (paragraph 7) referred to, have been received, but their contents have not yet been sufficiently digested. Suffice it now to say that, "roughly speaking," extreme failure of crops will probably be confined to—

(1.) All the districts of the Pâtna Division;

(2.) All the districts of the Bhaugulpore Division, except the Sonthal Pergunnahs;

(3.) The districts of Dinagepore, Rungpore, Bograh, and parts of Rajshahye, Maldah, and Moorshedabad in the Rajshahye Division.

In other districts there will be short crops, but in the districts above named the whole yield of all the food-crops of 1873–4 are estimated to be (unless copious rain falls at a very early date) less than three-eighths of the yield of an ordinary average crop, and relief works on a more or less extended scale will be required soon. There are other districts or parts of districts where the crop has been short, and where relief works may be eventually required; such, for instance, as the Maunbhoom district, much of the Burdwan Division, and some limited portions of the Presidency Division. But in all these districts it is hoped that the harvests all round will give half an ordinary year's yield. In Dacca, Mymensing, and Tipperah the crop is still reported much below an average, but it is not probable that the agriculturists will be reduced to want. Sylhet, Chittagong, Noakhally, Backergunge, and Orissa have fair average crops, and will, as usual, have a large exportable surplus, which might be diverted to other districts of Bengal. Already intelligence has been received that Assam, which usually imports, is now exporting rice to Bengal. It may be noted that the population of tracts (above noted) where the failure of crops will be extreme is about 25 millions.

22. The above is a brief review of the general action taken by the Government of Bengal in face of the impending scarcity of food. Some minor measures remain to be noted. The temporary abolition of all road toll-bars and tolls on ferries which can in dry weather be crossed by a ford or causeway has been ordered; while, where boats must be used, the tolls are to be reduced to the lowest tariff which will remunerate the boat-men. Further, the Government has put a steamer and flats to ply in the Ganges from Kooshtea to Rajshahye; has ordered a small light draught steamer, with flats, to ply on the inland waters of Rajshahye; and has directed the formation of bullock trains on certain traffic routes in Rajshahye for the carriage of railway material and of food-grains to depôts. Various minor road works which it is unnecessary to particularize have been sanctioned in different districts. On other occasions when parts of Bengal have been afflicted by famine, the want of subordinate native establishments, such as exist in other Indian provinces, had been greatly felt. The Lieutenant-Governor had made some attempt to supply this want in his scheme for subordinate establishments lately sanctioned by the Government of India. He now warned local officers that the new establishments should be fully utilised in works connected with the impending scarcity.

23. In regard to the food-supply of the distressed districts, His Excellency the Viceroy has laid down the general rule that Government must trust to the trade and to the improved means of communication for the natural flow of food from other parts of India to make up the deficit in Behar and Northern Bengal. At the same time His Excellency has authorised the Lieutenant-Governor to arrange for supplying and storing food at centres of relief works where many labourers are likely to be gathered together, and where the local supplies must be insufficient to bear any extra strain. The Government of India is operating in the Burmah and other markets outside India, while the Government of Bengal and its officers are buying some grain and contracting for much more to be stored at centres in the distressed districts for use on relief works. The restrictions on the manner of procuring these supplies are that the grain must be brought from a distance outside the distressed districts, and that Government officers must work through the local traders as far as possible. As yet an expenditure up to almost 23 lakhs of rupees (230,000*l.*) has been sanctioned for this object; but it is expected that Bengal officers will not expend this large sum for some time. The sources of supply are expected to be Backergunge, Sylhet, Chittagong, and Orissa for rice, and Northern and Central India for wheat and other grains. Arrangements for storing these supplies are at once to be made at selected centres near the larger relief works.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, the 14th November 1873.

No. 431BC, dated Simla, the 28th October 1873.

RESOLUTION—By the Government of India, Public Works Department.

The Governor-General in Council has learned with deep regret that the prospects of the crops in parts of Bengal are such that it will no doubt be necessary shortly to find work for the people as a means of relief. Where such relief becomes an urgent necessity, works must be undertaken for the purpose, if there are no well considered projects already under execution, or in such a state of preparation that they can be at once set in hand.

2. The parts of the country reported to be in the most urgent need are the Patna Division and the Rajshahye Division.

3. In the southern part of the former of these tracts, the Soane Canal project is in course of execution, and the Lieutenant-Governor of Bengal is authorized to extend active operations at once to all the branches where relief works are required, working on the rough estimates where detailed estimates are not ready. But where there are detailed estimates for works sufficiently near, such works should be preferred to those for which estimates are not yet ready.

4. In order to strengthen the engineering staff of the Soane Canals, the Government of the North-Western Provinces will be requested to hold in readiness a Superintending Engineer and the establishment of the Eastern Ganges Canal survey, to proceed to Behar on the requisition of the Government of Bengal, and the Government of the Punjab will likewise hold in readiness the engineers of survey division of the Baree Doal Canal.

5. In the northern part of the Patna Division there is no large project in course of execution, and works, if required, must be selected from local projects, unless the lately deferred scheme for the revision of the Gunduck Embankment (Bengal Government letter No. 4640, dated 13th September, 1873) should be found a suitable source of employment.

6. In the Rajshahye Division, the Northern Bengal Railway project has lately been completed, and was referred to the Secretary of State for sanction in the Government of India's despatch, No. 204R of the 15th instant. In anticipation of the approval of Her Majesty's Government, the Governor-General in Council is now pleased to sanction the immediate commencement of work on this railway. To strengthen the engineering staff, the greater part of the engineers now employed under Mr. Collet in surveying for the projected Western Rajpootana Railway will be withdrawn and attached to the Northern Bengal Railway.

7. Such funds as may be required for the Northern Bengal Railway and for relief works, and such additional funds as may be required for the more active prosecution of work on the Soane Canals, should be applied for at once by the Government of Bengal. For the Railway and the Soane Canal works, the funds will be assigned under the extraordinary grant; for the other works not classed as loan works, the charge will fall on the provincial revenues, or, if necessary, on the imperial revenues of the year.

8. In the spring of 1869, when great scarcity existed in Upper India, the Government of India considered it right to endeavour to equalize the supplies of food-grains over a large area by arranging with the Guaranteed Railway Companies that they should lower their rates for the carriage of such grains to ⅛th pie per maund mile (which was believed to be approximately the actual cost of carriage), and charge the loss that the railways would thus incur to the Government. It may possibly be again necessary to resort to this measure in some parts of the country; and should this be the case, the Government of India will be prepared to incur the same liability. In this view the Consulting Engineer to the Government of India for Guaranteed Railways at Calcutta should be directed to place himself forthwith in communication with the Government of Bengal, and to do everything in his power to give effect to such instructions as he may receive from the Lieutenant-Governor. The Governor-General in Council will await an expression of His Honor's opinion on this point before taking final action in the matter.

9. In making provision for this possible contingency, the Governor-General in Council relies on the hearty co-operation of the representatives of each Railway Company, and feels that the Government may rest assured that this will be given.

10. For further instructions for general guidance, the Governor-General in Council desires that the attention of officers in the Public Works Department may be drawn to the Resolution of the Government of India in the Public Works Department, No. 248–59J of 24th September, 1868, which should be republished with the present Resolution.—Chapter XIIIA of the Public Works Department Code contains a revision of the rules originally published with the Resolution of 1856.

Government of Bengal in the General Department.

" " " Public Works Department.
Consulting Engineer for Guaranteed Railways, Calcutta.

ORDER.—Ordered that the above Resolution be communicated to the Governments, Departments, and Officers named in the margin for information and guidance.

And to the Financial, and Agriculture, Revenue and Commerce Departments for information.

Also, that these proceedings be reported to the Secretary of State and published in the "Gazette of India."

C. H. DICKENS, Colonel, R.A.,
Secretary to the Government of India.

A. St. L. B.

RESOLUTION.

Statistical Department.

Calcutta, the 3rd November 1873.

Read—

A Resolution of the Government of India, Public Works Department, No. 431 B.C., dated the 28th October 1873, on the subject of the provision of work in these Provinces for the people who may be thrown out of employment by the expected failure of the crops in many districts.

1. The Lieutenant-Governor is pleased to direct the publication of this Resolution.

2. Orders for carrying out the instructions of the Government of India in regard to the Soane Canal and Northern Bengal Railway works will be issued in the proper departments.

The Gunduck Embankment Scheme is one which involves very difficult considerations, but it will be again carefully examined.

The proposed lowering of the railway fares has been arranged.

3. As regards works other than those above mentioned, the Lieutenant-Governor has received full authority to undertake such relief works as may seem to be necessary in various parts of the country. His view is that, to render effectual aid to the people, it is of all things most necessary that work should be offered in good time, so that the existence of public works may be known to the people at large, and those who stand in need of work may find their way to the work, and be suitably provided for, before the greatest stress comes. All experience shows that work is wanted to avert starvation rather than to save people already half-starved and unfit for work, and that it takes time to draw to public works people who are not accustomed to labour for hire. In this view, in case of reasonable apprehension of scarcity, we can hardly begin too soon.

4. The Lieutenant-Governor also believes that there can be no so sure test of the state of the country—no barometer, as it were, by which the condition of the people can be better gauged—than the degree to which they seek employment on public works. As such works are found more and more to attract classes usually self-supporting, so we may judge that there is want in the country; that is, provided that this test is established in sufficient time.

5. It is impossible yet to tell the degree to which there may be scarcity in the country. We yet trust to the mercy of Providence to avert the worst. But there can be no doubt that unless there is some very decided improvement in present prospects, there will be such shortness of crops that as soon as all hope of further employment in watering crops still alive, and sowing cold weather crops, comes to an end, the need for employment will be much greater than usual. The immediate course, then, which the Lieutenant-Governor has thought best, is to extend and enlarge the scope of the usual district works undertaken at this season in various parts of each district. He has already settled schemes of such works with the Commissioners of Patna and Bhaugulpore, and has authorized the local officers to undertake them and carry them on, wherever and whenever there is a demand for employment. In every part of the country, where the conditions seem to be such as to render the need of employment probable, works will be opened and employment offered. It will not be attempted in such cases to draw together foreign labour by any extraordinary means, but all labour locally offering will be accepted. The works (so far as beyond ordinary means and requirements) are undertaken in order to give labour: we do not seek labour for the sake of the works. The local officers have been assured that if the labour thus employed absorbs their local means, these will be supplemented from the general treasury.

6. General instructions, in the spirit of those given to the Commissioners of Patna and Bhaugulpore, have also been given by the Lieutenant-Governor to the Commissioners of Rajshahye and Burdwan, and all Commissioners are now authorized to act in the spirit of these instructions wherever there may be need of such measures.

7. The Northern Bengal Railway runs through districts where there has been the greatest failure of rain, and where there is the greatest apprehension regarding the crops; but the people of those districts are wholly unaccustomed to labour for hire, and it may be doubtful whether they will go far from their homes for work till they are very hard pressed indeed. It may be a question, then, whether we can rely on a single line of railway for the relief of that country generally. Deeming that roads connecting the various parts with the railway—feeder roads as they are usually called—are a necessary part of the railway system, the Lieutenant-Governor proposes to spread more widely the opportunities of employment by undertaking at the same time roads leading to the principal railway stations. The civil authorities will at once set themselves to devise the lines which will best subserve the traffic of the country, and the engineering staff of the Northern Bengal Railway will be requested to lay out and superintend these lines, which may connect the railway with the Berhampooter river system on the one side, and with the Mahanuddee on the other.

8. The note of the Lieutenant-Governor, published in the Supplement to the *Gazette* of the 10th September 1873, explained His Honour's views regarding the great importance of improving the means of communication between the populous districts of the west and the insufficiently-peopled districts of the east, and pointed to a scheme of roads from west to east. The north-eastern portion of the Tirhoot district, and the north part of Bhaugulpore, by which such roads would pass, is the very country where the people will be most in need of employment, and these roads should certainly be undertaken at once. Durbhangah may be taken as the point of departure from roads already made, of the great Behar populations which tend to the east

in search of labour. Fortunately Mr. Stevens, the able and energetic Engineer of the Durbhangah Estate, is well acquainted with this country, and has already devised the lines of road which he thinks the best. The Lieutenant-Governor has arranged with the Commissioner of Patna and Mr. Stevens, that the latter officer should lay out two lines from Durbhangah to the Koosee river, one in the direct line to Purneah, and the other by Natpore to the north towards Titaliya. The Commissioner of Bhaugulpore is to arrange for the junction of these two lines with Purneah and Titaliya. From Purneah the present metalled roads leads to Dengraghat on the Mahanuddee; whence to Dinagepore a line of road is already marked out, which will be taken up as a relief work. From Titaliya the road to Julpigoree may be improved, and thence there is a line by Cooch Behar to Berhampooter. By these lines, and others in connection with the Northern Bengal Railway, complete means of communication from west to east will, it is hoped, be established north of the Ganges. Further to the south, the line from Rajmehal to Dinagepore should also receive attention.

9. In Burdwan a work already discussed, viz., the connection of the Damoodah with the Kana Nuddee, has already been put in hand, partly in the hope of obtaining an immediate supply of water, and partly in order to give employment.

In this same part of the country there has been much complaint of the want of good tanks for drinking water, of petty drainage channels, and such like improvements. There can be no doubt that petty works of this kind are at least as useful as larger works, and they certainly bring employment more effectually to the homes of the people. But, on the other hand, it would be impossible for Government to undertake and superintend such works of local improvement on private property. The Lieutenant-Governor has, however, instructed the Commissioner to ascertain whether it might be arranged that private landholders should undertake such works, Government, if necessary, advancing the money on the security of the estates. He feels sure that if the upper classes feel the duties of their position, such an arrangement should be gladly accepted by them, and be very feasible.

10. The Lieutenant-Governor feels sure that he may trust to the zeal and energy of the local officers to give effect to these orders, and that, whatever need may arise, they will not be found wanting. He feels that he can count on the thorough assistance of the European settlers. He would also express the earnest hope that the officers of Government will have the aid and co-operations of the native land-holders, and generally of those classes of natives whose wealth, influence and position may enable them to contribute to the duty of assisting their poorer fellow-countrymen. The most effective work cannot be done without that assistance.

Ordered.—The copy of this Resolution and of the Resolution of the Government of India referred to above, be forwarded to all Commissioners for information and guidance. Spare copies are forwarded for communication to all civil officers.

Also, that copies be forwarded to the Public Works Department of this Government for the issue of the necessary orders for carrying out the instructions of the Government of India in regard to the Soane Canal, and for any further action that may be required.

Also, that copies be forwarded to the Superintending Engineer, Northern Bengal Railway, for information and guidance.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Offg. Secretary to the Govt. of Bengal.

Circular No. 73.

Copy forwarded to the Commissioner of

By order of the Lieutenant-Governor of Bengal.
R. Knight,
Asst. Secretary to the Government of Bengal.

Calcutta,
The 3rd November 1873.

No. 3,545.

From the Officiating Secretary to the Government of Bengal in the Statistical Department to the Under Secretary of State for India.

Scarcity and Relief.

Sir, Calcutta, dated 21st November 1873.

Under instructions from his Excellency the Viceroy, the Lieutenant-Governor directs me to forward copies of the second Weekly Narrative,* regarding

* Up to 21st Nov. 1873.

the failure of crops and the anticipated scarcity in Behar and parts of Bengal. The first Narrative was submitted on the 14th current under cover of my letter No. 3450.

I have the honour to be,
Sir,
Your most obedient servant,
C. BERNARD,
Offg. Secretary to the Government
of Bengal.

SPECIAL NARRATIVE of the DROUGHT of 1873 from 15th November to 21st November 1873.

1. The last Narrative gave a brief account of the drought and circumstances connected with it down to the 14th November. The present Narrative continues that account down to the 21st November, and also supplements it with some information which either had not been received, or, if received, had not been prepared for publication on the former date.

There has been no change in the weather. No rain has fallen in the districts where distress is anticipated, nor is there now any prospect of a fall. The cold weather seems to have set in everywhere, and in the ordinary course no rain is to be expected till the latter end of December or the beginning of the year when rain is not unfrequent. This absence of rain has a double effect—first, the rice crops continue to wither away; second, the sowing of the spring crops is hindered. A copy of the last weekly rain and crop returns is sent with this Narrative, but it is necessary to explain that they are for the most part only brought down to the 15th current (in some cases by telegraph down to the 18th current), while the above remarks describe the weather to date of writing, viz., the 21st November. Speaking however generally, it may be said that the returns for the 15th and 18th apply also up to the 21st November. It will be observed that Orissa, the eastern seaboard districts, and Sylhet, are still favourably reported on.

2. Prices have not risen so much as might have been expected. In no district have they yet reached famine rates, though they are of course very much higher than they were at the same time of last year. During the week under report some districts show a rise and some a fall in the price of the commoner food-grains. At Patna rice has risen from 21 seers to 13 seers to the rupee as compared with last year, but as compared with last week's return, it has fallen from 12 to 13 seers. The price of rice at Calcutta had not up to date of last report risen extravagantly as compared with last year. To-day, however, it is necessary to report that a rupee will only buy 12 seers of common rice in the Calcutta market, whereas at the corresponding date of last year it bought over 18 seers. At Dacca rice is quoted at double its price in ordinary years. It may be noted here that during November 1865, the last year of great scarcity, prices of common food-stuffs stood on the whole higher than they stand to-day. A return of prices-current in the different districts for the week ending November 15th, is annexed to this Narrative.

Up to date of writing, no news of any very great general rise or fall has come to hand, but it is right to mention that the reports from the head-quarters of each district may not exactly represent the state of things in interior and not easily accessible parts. The coarse millet called murwa is stated to have been selling in the extreme north of Bhaugulpore at 31 seers, whereas it is quoted at 16½ seers for the district. These prices, however, are sometimes very nominal. A gentleman reports, that in an outlying part of Bhaugulpore, he could not purchase 10 maunds of rice, while in one day in a certain village market in Purneah, rice, which sold in the morning at 14, rose by the afternoon to 8 seers. The return for Purneah district is 12 seers. A circular was issued on the 15th November, copy of which is annexed, insisting strongly on the importance of submitting careful and trustworthy returns of prices-current during the present crisis. When prices are subject to sudden and violent variations, it is difficult to say what the ruling price is, but all that care and attention can do to eliminate error is being done.

3. Some inquiries have been made into the movement of food-grains which have taken place in these provinces during the last few weeks. The result of these

inquiries is collated in Appendix A. It cannot be said that the result is very encouraging. It is not such as the rise in prices would lead one to expect. Indeed, in face of the daily consumption of food by the 67 millions of these provinces, the circulation of grain assumes very small proportions. The population of the Patna Division alone would consume on famine allowances 150,000 maunds of food-grains daily.

4. At paragraph 7 of last week's Narrative were stated the terms in which the Lieutenant-Governor had in October last asked for a special weekly report regarding the condition and prospects of the crops, and of the food-supply in each district. Replies have now been received from almost every district. One set of these replies is sent herewith, in accordance with the instructions conveyed in paragraph 31 of the Government of India Resolution of the 7th November. With future narratives it is proposed to send only reports from the distressed districts, and any other reports of special interest and importance. But as the replies to Circular No. 70 give a view of the prospect of affairs over the whole country, they are submitted for all districts so far as they have been printed. Replies for the few remaining districts will be submitted with next week's Narrative.

The district reports are very unequal in clearness and fullness, some of them, notably that from Bhaugulpore, are very distinct; while from districts where the sub-divisional system has not yet been fully introduced, the information is imperfect. The estimates offered by the district officers are confessedly rough and imperfect, and do not pretend to arithmetical accuracy. It must be borne in mind moreover that farmers, when they speak of "a full average crop," really mean a bumper crop, such as is very seldom harvested; and therefore a three-quarter crop (or twelve-anna crop, as it is called,) is in reality a good average yield. In one point most of the replies are more or less incomplete, namely, regarding the comparison between the crops, the prices, and the general out-look of the present year with 1865. The Lieutenant-Governor attaches great importance to this comparison, for according as the prospect of the present year is better or worse than 1865, we shall know whether to expect merely high prices, keen distress, and some starvation among the very poor, or a severe famine affecting a large section of the population.

Appended to this Narrative * is a note reviewing the district reports upon the prospect of the crops. The general result of that review may be summed up as follows :—

* Appendix B.

ESTIMATED OUT-TURN of the FOOD CROPS of 1873–74.

In the littoral districts of Orissa and Bengal, including the southern border of the delta, population 11 millions.	From three-quarters to a full average crop.
In the lowlands of Western Bengal, the seaboard excluded, population 3½ millions.	About one-half of the yield of a full average year.
In the central delta districts, population 7 millions.	From one-half to three-quarters of a full average year.
In Northern Bengal, population 7 millions.	One-quarter to one-third of a full average crop.
In Eastern Bengal, population 7½ millions.	From one-half to two-thirds of a full average crop, except in Sylhet, where there will be a full crop.
In the up-lands of Bengal and Chota Nagpore, population 7 millions.	From one-half to three-quarters of a full average crop.
In North Behar, population 11 millions.	One-quarter to one-third of a full average crop.
In South Behar, population 8 millions.	One-quarter to one-third of a full average crop.
In Assam and the hill districts, population 3½ millions.	Three-quarters of a full average crop.

Thus, the districts of the lower delta of the Ganges, the littoral districts, and Sylhet (with a population of about 13 millions), are the only parts of the country where there will be an average crop. Over the greater part of Bengal proper (containing about 28 millions of souls,) there will be, it is hoped, from half to three-quarters of a full average crop; while in North Bengal and Behar (containing a population of 26 millions) the yield of the food-crops is estimated to be from one-quarter to one-third of full average years. As yet we do not know what the food-stocks may be. It may be hoped that Northern Bengal, which is ordinarily an exporting tract, must have considerable stocks from previous years, for we find that in the other exporting districts (Sylhet, Backergunge, and Orissa), considerable old stocks are this year being brought to market. But some of the Behar districts ordinarily export other produce and import a portion of their food-supply, and in such districts we can hardly hope that stocks of food are retained largely either in the hands of dealers or of growers. It would be unavailing to offer any estimate of the number of tons of food which are short, and which will have to be supplied; but so much may be assumed that, if an average food-crop would have carried the people of Behar and North Bengal on till next October, and would have left them a small surplus stock, then in the present year, when they have probably less than half of the annual yield, they must either eat very much less, or must supply the deficiency from reserves or from outside. The districts which have one-half the usual crop or more will manage to feed themselves one way or another, though relief works may be required for landless labourers in some parts of them. It is for the Behar and North Bengal tracts that the Lieutenant-Governor is most anxious. Very much, however, in regard to these districts will depend upon the fate of the cold weather food-crops.

In the last Narrative it was mentioned that before the departure of His Excellency the Viceroy from Calcutta, the Lieutenant-Governor had again proposed to stop the exportation of food-grains to foreign ports from Bengal, had asked for a famine credit of 50 lakhs to begin with, and had solicited more definite instructions as to the extent of the preparations he was to make, to meet possible, but not certain, distress. The nature of the answers returned to the Lieutenant-Governor was briefly indicated. Full and specific replies have now come to hand, and are annexed to this Narrative (Appendix C).*

No. 2980, dated 12th November 1873, from the Secretary in the Financial Department.

No. 3003, dated 13th November 1873, from the Secretary in the Financial Department.

Memorandum of Proceedings at a meeting held at Government House, Calcutta, on the 10th November.

* Pages 17 to 24.

6. The general principles and policy to be followed in providing against famine having been settled by the Government of India, it remains to describe how they have been carried out by the Government of Bengal. Many orders in the spirit of those subsequently formulated had already been issued demi-officially and otherwise in anticipation of the issue of official orders. The Lieutenant-Governor had already, on the 11th of November, caused a demi-official letter to be addressed to the Commissioners of Patna, Bhaugulpore, and Rajshahye, directing them to commence the purchase of grain for use on relief works. They were told that the grain must be purchased from a distance, and that operations must, as far as possible, be carried on through the ordinary traders. They were warned to make preparations for storing their purchases at convenient sites. In order to leave the Calcutta market open, they were told not to purchase in that market if they could avoid doing so. They were also directed to look up, and where possible take measures to improve the means of transport, and to prepare to make advances of money in assistance of trade and private landed improvements.

Immediately on receipt of the official orders of the Government of India, definite orders were promulgated in the circular instructions of the 17th November hereto annexed (Appendix D).† The Lieutenant-Governor hopes that this circular set forth clearly and precisely the present policy and action sanctioned by the Government of India. It is begged that reference may be made to this paper for a full exposition of the course now being pursued.

† Page 45.

In paragraph 30 of the Resolution of November 7th, the Government of India called attention to the subject of emigration from distressed districts, and since the publication of that Resolution the Commissioner of British Burmah has telegraphed to say that he can make immediate arrangements for receiving large numbers of emigrants. The Landholders' Association of Calcutta and others interested have been addressed on the subject of emigration to Assam and Cachar, and have been asked to make any suggestions they can for promoting it on a large scale. Copy of the letter to the Association has been sent to the Commissioner of British Burmah, and he has been asked whether employers of labour in Burmah would contribute to the cost of conveyance of emigrants.

The rules for making advances to landlords and tenants to enable them to improve their properties under Act XXVI. of 1871 are under revision with a view to the relaxation of some of the existing restrictions on borrowing.

7. So far of orders issued. In Appendix E.* will be found an account submitted by the Irrigation Department of measures already taken on the Soame Canal works. It may be well to mention that though the Soane canals were by no means ready for use as irrigation channels, yet by dint of most strenuous exertions on the part of Mr. Levinge and his officers, water has been let into them, first on the left bank of the Soane and more recently on the right bank, and 69,000 acres of the thirstiest lands in Behar have been irrigated during the months of October and November 1873. The water was given gratis, because our appliances were incomplete, the necessity was great, and we had absolutely no means of measuring up and charging water-rent on the irrigated lands. The canal works, new and old, will give plenty of labour to the destitute classes over large areas of the Patna, Gya, and Shahabad districts. From the Cossye canals in Midnapore irrigation has begun and 34,000 acres have been watered; water rents are being charged, but the penal charges against those who take water late in the season have been suspended. Unfortunately as the irrigation was extending, the volume of water in the Cossye diminished greatly; hence only a small portion of the lands on account of which application for water is made can be irrigated. In Cuttack during the dry weeks at the end of September the ryots came to the canal officers clamouring for water, and water for 1,500 additional acres was leased. But a timely downpour of the rain came and saved the crops; and nothing more was heard of any demand for increased irrigation facilities.

Major Lindsay has proceeded to Dinagepore to commence operations. A memorandum by him on the Northern Bengal Railway and the orders thereon are appended (Appendix F).†

Extra engineering establishments have already been appointed for famine relief works in Bengal, amounting to a total of 30 executive and 35 subordinate officers. Their destinations have not as yet been all settled, but they will be employed as they arrive on the three great imperial works already sanctioned and on the provincial works ordered in Circular No. 80 of the 17th November, according as their services may be required.

As regards the orders issued for provincial works, the Commissioners of Patna, Bhaugulpore, and Rajshahye have, in accordance with their instructions, been making purchases of grain to feed the labourers where necessity arises. No return has yet been furnished of the amounts purchased. Arrangements have been made by the Lieutenant-Governor for buying in the Calcutta market through a private firm about 80,000 maunds of rice for storing in the Patna and Bhaugulpore Divisions. In Orissa three lakhs of maunds, about 11,000 tons, have been contracted for at the favourable rate of Rs. 2-12-0 per maund delivered in Calcutta during December, January, and February. Consignments from Burmah and Madras, for which the Government of India have arranged, are expected to reach a total of 10,000 tons. For the receipt, unloading, and despatch to the threatened districts of these supplies, special arrangements have been made under the superintendence of Mr. G. Toynbee, C.S., who was employed on similar duty in Orissa in 1866-67. 50,000 maunds of rice have already been despatched or are at the date of writing under despatch from Calcutta to the Commissioners of Patna and Bhaugulpore and the Superintending Engineer of the Soane canals, and arrangements have been made for the immediate despatch to the same destinations and to the Commissioner of Rajshahye of other consignments as they are received from those who are purchasing on the part of Government. To-day, the 20th November, a steamer carrying about 900 tons of Government rice from Burmah is reported to have arrived in the Hooghly. If the rice is fit for immediate use it will be sent for storage at once at relief works in the distressed districts.

Intelligence has been received of the arrival at Goalundo of the steamers and flats ordered up to work on the Ganges and the inland waters of Rajshahye.

It has already been reported that the district and local officers, civil and engineers, are actually making preparations on the spot for the commencement of the relief works. As this Narrative goes to press, demi-official information has been received that work has already commenced upon the Northern Bengal Railway feeders and upon the district roads in Dinagepore. One thousand men are said to be actually at work.

From the Soopole sub-division of Bhaugulpore information has just come to hand that work has commenced under the immediate supervision of the newly appointed Superintendent of relief works.

* Page 52.

† Page 53.

The Manager of the Hutwah Estate commenced making a road as a relief work in October, and finds that at rates somewhat below the market rates his work is eagerly taken up.

Each of the Commissioners of Patna, Bhaugulpore, and Rajshahye has been provided with speciel assistance on account of work connected with scarcity and relief, while to almost every district an extra officer, exclusive of engineers, has been added to the civil staff.

8. On some few minor points it has been found necessary to issue special orders. There was some reason to doubt the complete accuracy of the rainfall returns of past years filed in the Office of the Meteorological Reporter. A circular has accordingly been issued, calling upon all district officers to compare the returns sent to them from the central office with any materials they may have in their own offices, to supply omissions and to correct errors. In addition to the weekly return of the state and prospects of the cold weather crops, and the degree to which people might be expected to find support from them, ordered by Circular No. 70 of the 13th October, the officers of the Behar districts have been further desired to submit a special and more particular report on the same points in the first week in December. All district officers have been directed to add to the returns, under Circular No. 77, a precise comparison of the present condition of their district, with its condition at the corresponding period of 1865.

The Opium Agent of Behar has been ordered to facilitate the sowing of food-crops in lands where it is ascertained that the poppy sowings have failed, and to defer the repayment of the advances made on account of the lands so re-sown till the crops have been gathered. The Lieutenant-Governor has also fully approved the action of the Board of Revenue in giving the Opium Agent of Behar authority to make advances on account of the digging of common unmetalled wells, wherever he thinks it advisable, and has urged further action in this direction. In the Lieutenant-Governor's opinion the digging of such wells should be encouraged to the fullest extent; as, in addition to securing a crop, work will be provided for the labouring population.

9. In paragraph 18 of the Resolution of the Government of India of the 7th November, it was desired that the levy of the road cess might be postponed in any district or portion of a district where the Lieutenant-Governor might consider that the cess-payers were in distress. The Lieutenant-Governor has been in correspondence with Mr. Schalch, the Senior Member of the Board of Revenue, on the subject of the suspension of the road cess. The Lieutenant-Governor observes that although high prices may be expected to prevail everywhere, the agriculturists who may have even a moderate or short crop which has not wholly failed, will have a compensation in these high prices; and till the failure is extreme they suffer far less than the landless classes. It is therefore very necessary to discriminate between those cases in which an extreme failure has involved all classes in a common distress, and a moderate or partial failure in which the labourers and non-agriculturists chiefly suffer, and in which rents are paid without very heavy remissions.

Taking the distressed districts as defined in paragraph 2 of the Circular No. 80, dated 17th November (Appendix D.)* the Lieutenant-Governor has instructed the Commissioner of the cess districts in Behar, which are classed as wholly distressed, that if he is satisfied that all hope of a good rubbee crop is so completely gone that it is inevitable that great distress and difficulty will be felt by the body of the cess-paying ryots, he may postpone wholly the collection of the road cess till 1st October 1874, and at once notify this to the people at large by every means in his power.

* Page 45.

To the Commissioners of Rajshahye and Burdwan, the Lieutenant-Governor has said that if in any portions of their road cess districts or in any particular estate they believe that the cess-paying ryots are reduced to present distress and rents are not realised, the cess may be suspended. The Commissioners are to use their discretion so as neither to remit the cess unnecessarily nor to press the people too much where they are really reduced to distress.

10. The Commissioner of Bhaugulpore having telegraphed to officers under the North-West Government asking them to purchase grain on his account, which they declined to do without special authority, it has been arranged that all orders on the North-West Provinces shall be made through the Commissioner of Patna, and a special officer has been named by the Lieutenant-Governor of the North-West Provinces through whom orders may be executed. The Lieutenant-Governor has

laid down distinct rules regarding the purchase of food otherwise than through the local trade, in a memorandum of which copy is appended (see Appendix G.)* * Page 56.

The Lieutenant-Governor has been obliged to take exception to the tone lately adopted by the Commissioner of Bhaugulpore. It seemed to the Lieutenant-Governor that the Commissioner took a too strongly coloured view of the imminence of famine in the north of the Bhaugulpore district, a view not altogether justified by the reports of his subordinates. A copy of the Lieutenant-Governor's remarks on the Commissioner's letter is annexed hereto (Appendix H.)† † Page 57.

11. The Lieutenant-Governor has received offers of assistance and co-operation from the Maharajah of Burdwan and from Khajeh Ashanoollah in his own name and that of his father, the well-known Khajeh Abdool Gunny, C.S.I., of Dacca. Khajeh Ashanoollah has already commenced to lay in a store of grain with a view to issuing it at cost price should a time of scarcity arrive.

12. The Native Press have taken a very gloomy view of the situation. They are not unanimous as to the time when distress may be expected to commence, but they agree in declaring, as do most of the native gentry, that very small food-stocks are now held. They advocate very strongly the stoppage of exportation.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Offg. Secretary.

Calcutta,
The 21st November 1873.

Appendix D. to foregoing Narrative.

Circular No. 80.

SCARCITY AND RELIEF.

From C. BERNARD, Esq., Officiating Secretary to the Government of Bengal, to all COMMISSIONERS of DIVISIONS, and to all MAGISTRATE COLLECTORS.

SIR,
Calcutta, the 17th November 1873.

Government of India Resolution, dated 7th November 1873.
Government of India, letter No. 3,003, dated 13th November 1873, with minutes of a discussion at Government House.

I AM directed to forward copies of the papers marginally noted, being the orders of the Government of India in regard to the measures which the Government of Bengal and its officers may properly take to help the country and the people through the impending scarcity and distress.

2. The orders of the Government of India being appended to this letter in full, the Lieutenant-Governor does not deem it necessary to go again over the whole ground embraced by those instructions; and he will only now state briefly how matters appear to stand, and on what special points immediate action or further report is required from local officers.

Sufficient replies have come in to Circular No. 70, dated 13th October last, to show that, roughly speaking, extreme failure of crops will probably be confined to—

(1.) All the districts of the Patna Division.
(2.) All the districts of the Bhaugulpore Division, except the Sonthal Pergunnahs.
(3.) The districts of Dinagepore, Rungpore, and Bograh, and parts of Rajshahye, Maldah, and Moorshedabad, in the Rajshahye Division.

In other districts there will be short crops, but in the districts and parts of districts abovenamed the whole yield of all the food-crops of 1873–74 will, unless copious rain falls at a very early date, probably be below a six-anna crop all round; and relief works on a more or less extended scale will be required soon. There are other districts or parts of districts where the crop has been short, and where relief works may be required a little later if not now, such for instance as the Maunbhoom district, much of the Burdwan Division, and some limited portions of the Presidency Division. But in all these districts the harvests all round are expected to give an eight-anna crop; and though food will be dear, there will, it may be hoped, be no general and complete failure of the food-supply. For the present then, and for the purposes of these orders, the tracts named in the first part of this paragraph will be treated as the distressed districts. At the same time the Commissioners of Burdwan and Chota Nagpore should watch narrowly whether large portions of the Burdwan Division and the Maunbhoom district may require to be brought within this category. Some relief measures will no doubt be necessary in these tracts where there is a large labouring population, many of whom may be without employment as soon as the rice harvest is over.

3. The policy indicated by the Government of India is briefly as follows:—

Firstly.—Government will look to the natural operations of trade to import the food required to fill the deficit in the local supply in the districts where the crop has failed. By way of facilitating this traffic, the Government has reduced by one-half the railway grain rates, and has also ordered the temporary abolition of all road toll-bars, or tolls on ferries which can in dry weather be crossed by a ford or a causeway. The tolls on ferries where boats must be used to ferry rates across are to be reduced to the lowest tariff that will remunerate the boatmen. Further, the Government has put a steamer and flats to ply on the Ganges from Kooshteah to Rajshahye, and has ordered a small light-draught steamer with flats to ply on the inland waters of Rajshahye. All that local officers have to do is to see that neither at ferries, nor at railway stations, nor at ghâts, nor on rivers, are any unauthorised difficulties placed in the way of, or dues levied upon, the transport of grain, and that the roads are put in order, and every facility given for traffic.

4. In places likely to be in want where there may not be traders of sufficient means and in sufficient numbers to import food to fill the deficit in the food supplies, or where for any reason the natural flow of trade is slow and difficult, the Government is ready to aid and promote the natural trade of the country by making advances of money, either—

(*a*) To zemindars, planters, or others under paragraph 26 of the Government of India resolution of the 7th November 1873, on condition that they will import grain from a distance and sell it as near as possible at cost price, all expenses included.

(*b*.) To traders and others of a safe and responsible character, who will take the money at a moderate interest of 6 per cent. per annum, and will engage to import grain from a distance without any conditions as to the rate or manner of their selling it.

The Lieutenant-Governor delegates to district officers in the distressed districts the power of making such advances, where necessary, up to a limit of Rs. 2,000 to any one person; and to Commissioners in those districts the power of sanctioning advances up to a limit of Rs. 10,000 to any one person. Larger advances may be specially sanctioned, or a larger discretion may be allowed on a representation of the circumstances.

In the former class of advances an undertaking must be taken from the person receiving the advance that he will sell the food purchased to his distressed neighbours as nearly as possible at cost price, and that he will ~~repay the advance without interest~~ before the 31st December 1874, or will produce full and complete accounts to show why Government should forego any portion of the repayment.

In the latter class of advances it will be necessary merely to stipulate that the supplies will be drawn from districts beyond those to which the scarcity extends, and for repayment of the principal and interest by the end of 1874 or any earlier date that may be arranged. It will also be desirable to stipulate for the occasional inspection of the grain invoices (chalans) of such dealers in order to verify that they really do import their grain from a distance.

The Lieutenant-Governor has full confidence that district officers will know what persons can be trusted to act fairly by Government and by the people in respect of advances of these kinds. In regard to all advances for grain, the Lieutenant-Governor thinks it essential that it should be a distinct stipulation that the purchases should be made and the grain imported at a very early date to be specified, so that the means of carriage now existing may be utilised to the utmost. If the purchasers are allowed to delay, and the despatches do not come till February or March, all the difficulty which the Lieutenant-Governor apprehends from a block of carriage will probably arise and the advances will do very little good.

5. Secondly.—Government recognises that many of the labouring classes, and of all those people who have neither money nor credit, will as soon as the reaping of the rice crop and sowing of the cold weather crops have been completed or abandoned, and before the prospects of the spring crops have declared themselves, be unable to earn money or wages. Such people will probably before very long come upon relief works, if only we have a sufficient number of works spread over the country to give them labour near their homes as soon as they are ready to take it. The Government undertakes the relief of distress in this form, either directly by public works, or indirectly by advancing money to responsible persons who will undertake beneficial, local, and private works.

6. Already there have been begun in the distressed districts,—

(*a*.) The two new branches of the Soane Canal in Shahabad, while the old branches already in progress are being carried on in Patna and Gya.

(*b*.) The Gunduk embankment in Sarun and Chumparun.

(*c*.) The earthen embankments of the Northern Bengal Railway in the Rajshahye, Bograh, Dinagepore, and Rungpore districts.

These three are works for which the Government of India will provide or advance the funds.

Farther, the Lieutenant-Governor at his recent interviews with the Commissioners of Patna, Bhaugulpore, and Rajshahye, has sanctioned the immediate commencement of work at as many points as possible, on—

(*d*.) The series of North Ganges emigration roads which are to lead from Sarun, Tirhoot, Monghyr, and Bhaugulpore, through the Purneah, Maldah, and Dinagepore districts, to Rungpore, Bograh, and the Berhampooter; and thence to Assam, Cachar, and other eastern districts beyond the Berhampooter which are in want of labour.

(*e*.) A variety of local roads in the Patna and Bhaugulpore divisions which the Lieutenant-Governor approved in conference with the local officers.

(*f*.) Local roads in the Rajshahye division which the Lieutenant-Governor has authorized the Commissioner and Mr. Robinson to commence at once at their discretion, according to the necessity of the case.

Work has been already commenced in the Burdwan division on—

(*g.*) The new cut from the Damoodah into the Kana Nuddee, by which it is hoped to procure a supply of water for the present season, as well as to make a great permanent improvement.

The Lieutenant-Governor has moreover given directions to prosecute—

(*h.*) Road fund roads generally throughout the country which the local authorities have been desired to press on wherever they are wanted for the purpose of giving employment to people thrown out of work. The Lieutenant-Governor has promised that in such cases, whenever the works get beyond the means of the local funds, aid will freely be given.

7. Further details of the works to be undertaken will be settled as soon as possible.

The general statements of relief works which have been already prepared in compliance with the orders of Government contained in Circular No. 27, dated 19th June 1872, are being printed for circulation; and by a selection from, and, if necessary, addition to these, it may be hoped that sufficient employment will be everywhere provided.

8. In regard to the preparation for, and commencement of, relief works wherever they are required, it may be well to repeat here the orders passed by the Lieutenant-Governor in his note on Patna affairs, dated the 29th October, to the following effect:—

"In this view I have told the district officers that they should lose no time in commencing ordinary earthwork on roads, &c., at as many places as possible. I am glad to find that their attention has been already given to the point, and they have generally work of some kind ready which can be advantageously undertaken without delay. This they will do, giving the ordinary wages of the country. And by the aid of their general information, and the index afforded by the works in hand, they will judge of the necessity for more extended works and for food relief in each part of the country. I have told them that as soon as the demand for labour exceeds the resources of their local funds, money for works, where relief is necessary, will be supplied without stint. The great thing is that they should prepare beforehand, and peg out (by a centre line only) roads and other works on which relief labour may be expended to the permanent advantage of the country.

"The Commissioner will occupy himself in settling the works in the various districts that may best be undertaken. I have authorized the entertainment of special men for the design and superintendence of works."

9. His Excellency the Viceroy has been good enough to promise for temporary employment in Bengal and Behar as many engineers and competent young military officers as can be spared. These young officers will be available for directing relief works in the distressed districts. Meantime the local officers should, as far as possible, peg out the lines of road and set them going. The simple forms of account in which the district road fund works are kept will suffice for the relief works.

10. The Lieutenant-Governor would wish to receive from the Commissioner, as soon as they can be sent, lists of the local relief works commenced or proposed in each distressed district, with memoranda of (*a*) the additional establishment to be entertained upon relief works, and (*b*) the probable monthly expenditure upon the works, supposing the people to flock freely to them. After the list has been sent the Lieutenant-Governor would wish to have, in the weekly narrative described below, an account of the relief works *prepared* and *actually begun* in each district. Simple forms of return showing the operations at each relief work will shortly be circulated as was done in 1868.

11. Thirdly.—The Government recognises that, if it collects large bodies of people together on relief works, it must provide food for them; that if the ordinary traders do not supply sufficient food close at hand, the Government must either pay the labourers partly in grain, or provide food for them to buy. We must not throw the support of a large body of labourers upon an impoverished tract where the food supplies barely suffice for the ordinary population. In fulfilment of this obligation the Government and its officers are laying in supplies of rice and other grain, which will be forwarded as soon as possible to places of storage near relief works in the distressed districts.

The restrictions placed on Government officers in obtaining these supplies is, *first*, that they should, as far as possible, operate through the trade; *secondly*, that they must get grain for such storage from a distance; and, *thirdly*, that they must not store grain except at centres of relief works where the local supply cannot be depended on to suffice for the wants of the labourers.

12. As long as local supplies are pretty cheap and plentiful, it will be best to establish and house close to each relief work dealers who will sell on their own account with or without advances. When the local rates for grain come to something like famine rates, fall below say ten seers per rupee, the Government must supply food. It would then be advisable to hire bunneahs or weighmen to sell on Government account next door to the works. It is certainly, the Lieutenant-Governor believes, better to pay the labourers in cash, and to let them buy what they want next door, rather than actually pay their wages in grain. Colonel Baird Smith in his report on the famine of 1861, truly points out that much inconvenience may be caused by paying wages in kind to labourers who are driven to barter at a disadvantage their grain for salt, pepper, earthen pots, and such other necessaries as they are obliged to procure. It is a very simple operation to give each man the pice he has earned, and let him take as much or as little as he likes in grain at the Government store close by.

13. The first thing to be done in regard to storing grain by the local officers is to select places and sites for storehouses at relief works; to hire or construct temporary storage-houses; to determine to what railway or riverside stations Government grain should be consigned from Calcutta or elsewhere; and above all, to ascertain and arrange the means of transporting the grain from those stations to the works. Local officers should notify to Government as soon as possible the places selected for railway and river stations to which Government grain for relief works should be consigned, the points chosen for storage, the steps taken to prepare storehouses, and the arrangements for carriage which they make or have in view.

14. When Government grain has been delivered at stations on the railway or rivers, this question of transporting the grain to the places where it is to be used will remain the most important and difficult of all. The Lieutenant-Governor is aware that Commissioners and district officers in the distressed districts are considering this question, and he would wish to have an early and most careful report upon—

(*a.*) The means of transport from the nearest railway or riverside station to the centres of relief works or distress; whether the communications are liable to interruption from the weather or any other cause; and in what way the means of transport could be increased, if necessary.

(*b.*) The roadside stations and other places where fodder for cattle should be collected to aid transport.

15. The Lieutenant-Governor cannot too much repeat that very special attention is necessary to the need for testing and perfecting our transporting agency and applicances at as early a date as possible. He desires to point out how very much easier transport will be during the next two or three months, when roads are not choked up and fodder is abundant, than in the hot season when there may be a rush and a panic, when the weather will be unfavourable, when forage will be very scarce, and when cattle will be dying. Sir George Campbell's great wish is to see all possible means of carriage to places where grain will be wanted, fully utilised and drawn together from all available sources at once, so that Government may be in the best position when emergency comes. So far as the common weal is concerned, it comes to much the same whether the transporting agency is used by private persons or by public officers. If the private traffic is quite fully using and drawing together all possible means of carriage, well and good; we need not seek to interfere with such a traffic. If not, the Government officers will have to promote the transport of grain to places where it will be wanted both by advances for importation, and by importing for relief works. In some way we should attract and use fully all possible means of carriage to the distressed tracts.

16. Fourthly.—The Government cannot avoid facing the probability that eventually, if events turn out unfavourably, it may become necessary in many places to distribute charitable relief to the old, to children, to persons in reduced health, and to others who may be unable to do a full day's work. This must be done as soon as the necessity really arises. This business of gratuitous relief will be entrusted to relief committees in each district or sub-division, or part of a sub-division.

17. His Excellency the Viceroy, after consulting the Lieutenant-Governor and his officers, has decided that the appointment of relief committees for the purpose is, speaking generally, not, so far as we can see, necessary at present. But a discretion is left to local officers to start committees and begin relief arrangements in any tracts where such a measure may at any time prove emergently and clearly necessary.

When it is evident that such relief must be given in any district, the Magistrate will call a meeting of Native and European gentlemen who may be willing to serve on relief committees; he will nominate branch committees under the sub-divisonal officers or other fit persons; he will raise such private subscriptions as he can obtain; and will report his action to Government and to the Commissioner. The Government will at once make to every relief committee a grant equal to the amount of its private subscriptions, and may, when distress goes very far, be still more liberal. If a relief committee requires grain for its relief houses, before it can import for itself, the Magistrate will have authority to advance all the grain he can spare from the Government stores collected for labourers on relief works.

A collection of the orders of Government issued in previous years of distress, regarding the time and manner of relief, with forms in which accounts should be kept and rendered, have been compiled, and will be digested and circulated in continuation of the present orders, with instructions applicable to the present time.

18. Meantime, though as regards charitable relief we are not to commence active operations it is most necessary to prepare all the necessary machinery for establishing relief houses and for giving such relief (short only of collecting grain specially for the purpose), so that we may be fully prepared if the necessity arrives. His Excellency the Viceroy specially dwells on the need for doing this at once.

District officers in distressed tracts will accordingly consider immediately and carefully report at what places relief committees may eventually have to be appointed; they will have to prepare beforehand lists of gentlemen who will serve on those committees. They must especially mark out the places and sites at which the necessary sheds, godowns, and other accommodation for relief houses will be required if the scarcity should unhappily merge into famine. Each district and sub-divisional officer should prepare, and have by him for future use, a map of his district or sub-division showing the proposed sites for relief centres. They should provide for three grades of famine, thus—for comparatively mild famine there would be a few relief centres at large places or in specially impoverished tracts; if distress becomes keener, places of relief will have to be more numerous; and if unhappily the very worst comes over large tracts, the number of relief centres will have to be largely increased so as to be within reach of all. The sites for relief stations for each grade of distress should be distinguished on the district officer's map by a different mark. These sites, it should be borne in mind, must be selected after careful local inquiry, and then entered on the map; they must not merely be marked on a map without knowledge of the ground. Complete plans should be drawn out showing the establishment and arrangements that will be required at each relief house as it is opened, and as far as possible men should be selected, and all that can be thought of by way of anticipation should be planned out so as to be ready to begin effectively the moment the necessity arrives.

19. Fifthly.—The Government wishes to enlist municipalities, landholders, and others in the work of providing labour in the distressed districts. A credit of ten lakhs of rupees has been made to the Bengal Government, from which minor loans of this kind can be granted for these objects. Larger loans will be referred to and speedily disposed of by the Government of India. Municipal bodies cannot, as the law stands, spend municipal money on poor-houses or on relieving the necessity of their poor. But if any municipality in the distressed districts has ready any scheme for drainage, embankment, or water-supply, or for opening out new streets and roads, such as will give labour to unskilled workmen, the Lieutenant-Governor will be very ready to consider any proposal for making a loan to such municipality under the Local Public Works Loans Act. Chairmen of municipalities must bear in mind the several heads of information required regarding applications for such loans, as set forth in the rules published at page 1218 of the *Calcutta Gazette* of the 29th October 1873. Already the Lieutenant-Governor has granted a large sum from provincial funds over and above the original grant towards the Burdwan city waterworks scheme. The Dacca waterworks scheme and the Gheor Canal loan in the same district will, it is hoped, be very shortly sanctioned. The Chuprah city embankment scheme is a type of the work that might usefully be kept in hand on the present occasion.

20. Where no schemes for works of this kind are ready or are required, then the Lieutenant-Governor suggests that many municipalities and townships should take advantage of the drought and abundance of labour to cleanse, deepen, and otherwise improve the public tanks, wells, or other sources of public water-supply within their boundaries. For such an object loans could be granted, and the labour so afforded could be of the very best kind for relief works. The Lieutenant-Governor is considering whether in any points the ordinary rules can be relaxed, and orders on the subject will, if necessary, be issued.

21. As yet the system of advances for improvements on the land (what are called in other parts of India tuccavee advances) has not obtained much in Bengal. Recently the Lieutenant-Governor has received a report from Maunbhoom that zemindars and villagers in that district had already drawn out in small sums some Rs. 5,000 for tuccavee advances, and that more money was wanted. Reports from Bancoorah, the Sonthal Pergunnahs, and other districts, also say that the ryots and villagers generally have had the need for water-storage brought home to them very keenly this year, and that they are anxious to prosecute and extend petty works of this kind during the present year. In the Burdwan and Hooghly districts the need of arrangements for the storage of good water and the drawing off of bad water has long been recognised both by Government and the people.

22. The Lieutenant-Governor particularly wishes that all such works should be promoted, and that landholders and villagers should be encouraged to take out Government loans therefor, especially in the districts of the Burdwan Division. The rules for making agricultural advances were published at page 826 of the *Calcutta Gazette* of the 9th July 1873. Some Bengal officers have pointed out that the rules are cumbrous, and require too much detailed supervision of works for practical enforcement at a season like the present. The Lieutenant-Governor intimates that, in accordance with the permission given him by the Government of India, he will shortly issue instructions showing how far the provisions of the rules quoted above may be relaxed.

23. The Government further promises that it will be ready to defray a portion, not more than one-third, of the cost of petty village works (executed with Government loans during the period ending in July 1874) which directly improve the drinking water-supply of the people, or are shown to be of direct advantage to the general public, in any of the distressed districts, or in any part of the districts of Burdwan and Hooghly. The full loan will stand against the borrower in the Government books until the work is done; when it shall have been reported upon by Government officers, found to be good, and to contribute directly to the water-supply or general well-being of any village or tract, the Government will write off a sum not exceeding one-third of the loan as the Government share of the outlay.

24. It will be for district and sub-divisional officers to make known as far as possible the readiness of Government to grant these loans on favourable terms for village works and land improvements. They are at the same time reminded that under Rule 19, page 828, of the *Calcutta Gazette* of the 9th July 1873, the Commissioner and the district officers have authority to sanction such loans with reference to superior authority up to a limit of Rs. 500 and Rs. 5,000 respectively. If the Commissioner of any distressed division can point out any particulars in which the Tuccavee Loan Rules (above cited) may at the present juncture be advantageously relaxed, the Lieutenant-Governor will be most ready to consider any recommendation in that regard. The Commissioner of Burdwan has been already asked to prepare suggestions on the subject. Sir George Campbell's belief is that in some districts (especially those where the ground undulates, like Bancoorah, Beerbhoom, and Gya,) the people will be

glad to take tuccavee loans if only the intentions of Government are known to them, and if responsible Government officers give them the money promptly in full, and do not let it filter through a number of subordinate officials with many delays and difficulties.

25. Meantime, for advances for works of the kinds described in the foregoing paragraphs 19 to 24 the Lieutenant-Governor has assigned a credit of—

Three lakhs to the Patna Division.
Two „ Bhagulpore „
Two „ Rajshahye „
Three „ Burdwan „
One „ Chota Nagpore „

Each Commissioner will notify to his district officers, and will report to Government, how much of the divisional grant he makes available for each district of the division.

For the purchase of grain for relief works and advances to private persons for the purchase of grain, under the instructions conveyed in paragraph 4, a liberal credit has already been given to the Commissioners of Patna, Bhagulpore, and Rajshahye.

26. In regard to the promotion of emigration to the tea districts or to other parts of the country where population may be sparse (paragraph 30 of the Government of India Resolution, dated 7th November), the Lieutenant-Governor will issue instructions hereafter.

27. The Lieutenant-Governor does not wish to burden divisional and district officers with the obligation of furnishing more reports and returns than can possibly be helped. He is glad to know that officers will do their very best, whether they are called upon to report or not. But still the Lieutenant-Governor, the Government of India, and the public must be kept informed as far as possible of what is being done, of what money is being spent, and of the state of the country generally. I am accordingly to request that a weekly narrative may be sent from each district on Mondays, bringing the account of affairs all over the district down to the latest information known at the head-quarter station on that day. The writing of this narrative had better be entrusted to one of the best officers at head-quarters, but of course the Magistrate, if he is present, will add or insert such remarks as he may see fit, and the narrative will give his views and be written in his behalf. A copy of such narrative should be sent to the Commissioner, unless he is on the spot and sees fit to dispense with its transmission. For the present a temporary clerk on Rs. 60 a month may be added to the Magistrate-Collector's office of each distressed district for the conduct of correspondence regarding the scarcity. Copies of each narrative will be sent to the Commissioner and Magistrate-Collector concerned from the Bengal Secretariat, as soon as they are printed, so as to facilitate reference to previous reports and to obviate repetition.

23. The heads on which the weekly narrative should touch are—

NARRATIVE OF SCARCITY AND RELIEF IN DISTRICT FOR THE WEEK ENDING SATURDAY THE

(A.) *State of the Country.*

Abundance or scarcity of supply in the bazaar.

Kind and price of grain selling at one or more specified principal marts.

Any information obtained regarding the amount and kind of grain believed to be in stock in the hands of zemindars, traders, ryots, and others.

Rainfall, if any. State of the crops. Condition of the people. Actual facts as to any *known* cases of misery and starvation. Grain thefts or robberies. Condition of any special tracts.

(B.) *Relief Works.*

Progress in marking out or opening relief works, each work being specified; number of labourers thereon; supply of food thereat; condition of the labourers, mode of payment, and rate of wages; arrangements for tools, &c.

(C.) *Transport of Food.*

Approximate account of private food supplies come into the district from outside during the week. Sufficiency or otherwise of means of transport. Steps taken to improve transport agency and appliances. Existence of a block at any station or point on transport routes. Working of any special transport trains or other agencies. Requirements in respect of transport, and arrangements for meeting them.

(D.) *Storage of Government Grain at Relief Works.*

Places of storage selected. Construction of storage houses or golahs. Arrangements for their custody and administration. Amount of food-grain received. Amount sent out. Return of empty bags. Sufficiency or otherwise of stocks for Government purpose. Fresh arrangements in progress for getting more grain.

(E.) *Advances to private Parties and their Results.*

Advances for purchase and storage of grain, &c. Advances to municipalities for works, and description thereof. Advances to private parties for land improvements, and description thereof.

(F.) *Charitable Relief.*

Actual relief operations commenced, if any.

Arrangements made in preparation of the machinery of charitable relief by way of precaution as above described (paragraph 18 above).

(G.) *Financial Results of the Week.*

Total expenditure from the district and sub-divisional treasury as shown in last narrative.

Detail of the above total:—

Expenditure during the Week under report.

On disbursements to engineers or out-officers in charge of—

Relief work________________________
Relief work________________________
Relief work________________________
Relief work________________________
Relief work________________________
Relief work________________________
Relief work________________________

On purchase of food, particulars being stated.
On disbursements to officers in charge of transport arrangements.
Name transporting agent.
Payment on account of establishments at storage golahs.

On account of Advances for purchase of Food.

Total of advances made during the week to trustworthy residents for purchase of grain.
To traders for purchase of grain.
To municipalities.
To zemindars and others for land improvements.
Total of the week's expenditure—
(*a*) Final payments made.
(*b*) Advances repayable.
Total.
Grand Total to end of the week.

The first weekly narrative should be despatched on Monday, the 1st December, and show the expenditure up as nearly as possible to that date. Subsequent narratives would touch upon the facts only pertaining to the week under report. It will be observed that the narrative is merely for the information of Government, and is not to be a channel for asking sanction to additional establishments or expenditure of any kind.

28. Forms of accounts and register will shortly be forwarded for—

(1.) Relief work expenditure.
(2.) Food purchase expenditure.
(3.) Transport expenditure.
(4.) Grain storage expenditure.
(5.) Charitable relief or poor-house expenditure.

Commissioners of Divisions and special Relief Commissioners, wherever appointed, will have power to sanction the commencement of work on any roads or other relief work which has been approved by Government. In case of any sudden local emergency they may, when they deem it necessary, sanction commencement of work even though the particular work is not yet in the list of approved relief works; and an emergent discretion in such cases is also given to district officers, subject to weekly report of each sanction, to authorise the entertainment of—

Subordinate engineering or overseer establishments;
Grain transport and reception establishments;
Grain storage establishments;

provided that all appointments constituted under these orders are strictly temporary and subject to Government confirmation. In case any person is entertained on a salary exceeding Rs. 100 per mensem, an immediate report is to be made for sanction.

29. I am to sum up the instructions now conveyed, to which attention is specially drawn, thus:—

Para. 2.—The "distressed districts," as Government now believes them to be, are defined.

Para. 3.—Officers are enjoined to see that no removable obstacle remains in the way of private grain traffic.

Para. 4.—Money advances to private parties under two separate sets of conditions are authorised to promote private importation of food to the distressed districts.

Para. 8.—Local officers are desired to push on the preparation of relief works in as many parts as possible of the distressed districts.

Para. 10.—Statements of extra establishments required for, and probable expenditure on relief works, are asked for from Commissioners.

Paras. 11–12.—The views of Government as to storage of grain and its sale at relief works are stated.

Para. 13.—Officers are directed at once to select sites, and to prepare storage for reception of Government grain.

Para. 14.—Report is called for regarding the means of transport in the district and its improvement.

Para. 15.—The need for early testing of transporting agency is enjoined.

Para. 18.—Officers are directed to prepare plans of arrangements, and machinery for relief committees and relief centres, and to report through the Commissioner.

Paras. 19–23.—Loans to municipalities and landowners and others for permanent improvements are to be promoted, and the terms on which these loans are obtainable should be made known to the people.

Para. 25.—Grants are made to each division to cover their advances.

Para. 27.—A weekly narrative is to be sent direct from Government from each distressed district.

Para. 28.—Authority is given to Commissioner to sanction works, and to authorise, temporarily, establishments for grain storage, transport, and relief work, within certain limits, and subject to weekly report.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Appendix E. to foregoing Narrative.

Note on Operations of the Irrigation Department in the Distressed Districts.

South Behar.

The work which was in progress on the Soane Canal before there was reason to fear that there would be a season of scarcity was on the following branches:—

The Western Main Canal, 22 miles in length.
The Arrah branch, 63 miles in length.
The Eastern Main Canal, 8 miles in length.
The Patna branch, 80 miles in length.

Two distributaries had been commenced, but very little work done on them.

The weir at the head of the canal, the Western Main Canal, and the Arrah branch were in such a state that water could be admitted. Consequently, as soon as intelligence was received of the want of rain, the Superintending Engineer was directed (on 24th September) to admit water, and to irrigate as well as he could without distributaries, and to make no charge for the water.

The water was admitted on the 3rd of October, and irrigation commenced from the Main Western Canal. On the 18th the Arrah branch was opened, and water reached the 20th mile on the 14th, and has subsequently been carried to the 30th mile.

Up to date about 69,000 acres have been irrigated from these canals.

On the eastern bank of the river, owing to the head sluices having been sanctioned a year later than on the western bank, work was not so far advanced, and it was only on the 15th November that it was possible to pass a small quantity of water into the channel through the lock.

Two of the distributaries, the Seanwunk and the Beheea, had been laid out and commenced; only very little work had been done, but by massing labour on them they have been pushed on, and used most satisfactorily for the distribution of the water.

All drainage channels and watercourses were also utilized.

To give work for the people, it has now been decided to widen to 100 feet the portions of the Main Western and Main Eastern Canals, which had only been dug to the full required width of 60 feet, and to push on the—

Buxar branch - - -	45 miles
Doomraon branch - -	40 „
Beheea „ - - -	30 „
Kunteya „ - - -	21 „

the designs for which were ready, and they are being lined out accordingly.

The Chowsa branch will also be put in hand shortly.

A map is attached showing the lines of canal, from which it will be seen that work will be provided by this means over a large extent of country in the three districts of Patna, Gya, and Shahabad.

Arrangements are also being made for importing grain to feed the workpeople. (I cannot give number of labourers this week, but have arranged to do so next week.)

NORTH BEHAR.

Arrangements are being made for commencing work on embanking the Gunduck River for 58 miles in length in the Chumparun district and for 95 miles in the Tirhoot and Sarun districts.

HOOGHLY DISTRICT.

The Collector and Commissioner reported that it was advisable to open the head of the Kana Nuddi, an old branch of the Damooda, which had been closed by embankments for the purpose of supplying water for drinking and irrigating the winter crops. This has accordingly been commenced, and 1,263 men are now employed on the work; the workmen are, however, of the ordinary labouring classes. The Collector estimates that this work may, if promptly completed, save 1,00,000 maunds of food-grain which would otherwise be lost. The whole cost of the work is estimated at Rs. 10,000.

MIDNAPORE.

Before the failure of the rains, about 15,000 acres had been irrigated from the canal in this district. When it was found that rain did not fall, a great demand for water arose, and 34,000 acres had been irrigated up to the 15th instant. Unfortunately the water in the river failed, the discharge being only 300 cubic feet per second instead of 1,000 cubic feet, which is the usual quantity at this time of the year. Otherwise much more would have been irrigated.

The completion of the distributaries of this canal and some embankments which are required will furnish work for those requiring relief.

ORISSA.

About 5,500 acres had been irrigated from the canals in this district before the rain failed.

A demand arose for water and the area was increased to about 7,500 acres, when heavy rain fell and stopped the demand.

There is much work for labourers in this district on two ranges of the canal which are in progress, and in completing embankments and distributaries, should any necessity arise for finding employment for them.

GENERAL.

Several other irrigation projects at present suspended are being examined with the view of commencing them, should the necessity become more urgent.

H. W. GULLIVER,
Officiating Chief Engineer.

The 20th November 1873.

APPENDIX F. to foregoing Narrative.

No. 300, dated Fort William, the 11th November 1873.

From Major J. G. LINDSAY, R.E., Officiating Superintending Engineer, Northern Bengal (State) Railway, to the SECRETARY to the GOVERNMENT OF BENGAL, General Department.

I HAVE the honour to submit, for the approval of His Honour the Lieutenant-Governor, a memorandum of the arrangements I propose making for carrying on the works of the Northern Bengal (State) Railway during the next few months.

NORTHERN BENGAL (STATE) RAILWAY.

MEMORANDUM OF PROPOSED ARRANGEMENTS.

I UNDERSTAND His Honour's instructions to be that every endeavour is to be made to have as much work as possible ready for the people to begin at as soon as they feel the want of it, and that the more the work is distributed the better it will be, so that the people need not have to travel long distances to get work.

No endeavours are to be made to attract labourers from the western or other districts, but the work is to be kept in reserve, as it were, until necessity arises. I propose at present to concentrate the engineering staff between Sultanpore and Bagdogra, north of Durwanee, sending one Executive Engineer to look after the work on the Dhaparee road. I have detailed the Engineers along this length, and hope that by the 25th they will all be in their places and at work. I cannot expect the Rajpootana Engineers to be at Dinagepore before that date.

I have two offices of account at present in working order, and propose only to open one other at present. The Executive Engineer in charge of the work along the Dhapan road must have a separate office, but he will be so near Calcutta that I anticipate no difficulty in starting it. I have desired Mr. Luff, a 2nd grade Executive Engineer, to report on the present state of the bar at the Oorasagen River, and to suggest any possible means of keeping a channel open. He will do this before taking up his work on the Dhaparee and Nattore road. The Executive Engineers in charge of the two divisions between Sultanpore and Bagdogra have been instructed to mark out the side widths, and take over the land on the railway as fast as possible. Two of the senior men have been detailed to report on and mark out feeder roads. Work will be extended north and south as the marking out of the line becomes completed. As to my own movements, I hope that all preliminary arrangements will be completed by the 19th, when I leave for Dinagepore, where my camp is or will be. I shall reach Dinagepore on the 22nd, and after meeting and giving verbal instructions to the Engineers who meet me there, I shall join the Commissioner and Mr. Robinson, who will be somewhere near, and again discuss the question of feeder roads.

My head-quarters during the season will be at or near Parbuttipore, on the 20th mile of the Dinagepore and Rungpore road.

I would advise the immediate construction of a temporary line of telegraph from a point opposite Kooshtea to Julpigoree, with a branch to Rungpore. I consider that, supposing the railing was to be constructed under ordinary circumstances, the telegraph should be made at once, as it leads to economy in construction and management. Now that communication with the centre of the famine-affected districts is of such paramount importance, the laying of the wire should be commenced without delay. I would suggest that the Telegraph Department should be requested to organize at once two construction parties, one to begin at Kooshtea, the wire, &c. being conveyed by the Eastern Bengal Railway, and the other at Dinagepore, the material going to Rajmehal and thence by carts to Dinagepore. Clerks, who will have work in the Executive Engineers' offices, can be specially engaged to work the instruments. We should require nine stations.

In order to facilitate the transport of grain to the famine districts, I think that attention should first be given to the roads from Caragola and Rajmehal to Dinagepore, and to the best means of communication from the Brahmapootra River to Nattore and Hijlee. As regards the line from Rajmehal to Dinagepore, I would suggest that, besides making it as practicable as possible for wheeled traffic, a regular bullock-train service might be organized. It can be used in the first instance for the transport of telegraph wire and railway material, and, should an emergency arise, it can be used in conveying grain. Should it happily not be required for the latter purpose, the carts and cattle would be of use in the construction of the railway, and would be withdrawn for that purpose.

The Caragola and Dinagepore road would be of no use for the leading of railway material, but if it is necessary to send large quantities of grain along that line, one of the Carrying Companies, Bird and Co. for instance, would, I am sure, readily undertake to arrange a train.

The road should in the meantime be made practicable for cart traffic.

In addition to general approval of the arrangements above sketched out, I beg to request sanction to the formation at once of train services from—

Rajmehal to Dinagepore,
Dhaparree to Nattore,

and a temporary line of telegraph from Koostea to Julpigoree, with branches to Dinagepore and Rungpore. I would also ask for sanction to any improvements that can be made in the line of water-carriage from the Oorasagur to the Jaboona and Atrai rivers.

J. G. Lindsay, Major, R.E.,
Officiating Superintending Engineer, N. B. S. Railway.

The 11th November 1873.

No. 3,412.

From the Officiating Secretary to the Government of Bengal in the Statistical Department, to Major Lindsay, R.E., Superintending Engineer, Northern Bengal (State) Railway.

Scarcity and Relief.

Sir,
Calcutta, the 13th November 1873.

I am directed to acknowledge the receipt of your letter, No. 300, dated 11th November, forwarding a Memorandum of the steps you propose to take, and the measures you recommend for beginning the Northern Bengal Railway works in the distressed districts north of the Ganges.

2. The Lieutenant-Governor accepts your statement of his views as correct, namely, that your engineers should "have as much work as possible ready for the people to begin at, as soon "as they feel the want of it, and that the more the work is distributed the better it will be." To this statement of the wishes of Government, I am to add the suggestion (which fell from the lips of His Excellency the Viceroy at the meeting at Government House on the 10th current) that the railway works proper should be kept as much as possible for the able-bodied workmen who will labour by the piece; while on the feeder roads might be employed the people who are

less able to do a full day's work, and who will have to be paid separate daily wages, either in money, or in grain, or in both.

3. Your plan of work seems in brief to be—

(*a*) That two executive divisions will be at once established, and work begun on a length of about seventy miles north of Sultanpore, the northerly border of the inundated (or jheel) country. The engineers are at once to mark out the side widths, and to take over the land from the two Deputy Collectors who have been told off for the duty of taking up the land. You will take care that where there is a crop on the ground it is allowed to ripen.

(*b*) That one executive engineer shall at once proceed to inspect the mouth of the Oorasagor river; and that he shall, if he sees his way to deepening the channel over the bar at reasonable expense, arrange for such deepening under your orders; and that he shall then take up the work of forming the railway bank along the line of the Dhapparee and Nattore road.

(*c*) That two of the senior of your executive engineers have been told off to survey, mark out, and report upon feeder roads, in consultation with Mr. W. Le F. Robinson and the civil officers.

(*d*) That you yourself hope to be at Dinagepore by the 22nd November, where you will meet Mr. Robinson, and decide upon the feeder roads to be at once begun in consultation with him; and that your own head-quarters will be throughout the season at or near Parbuteepore, half-way between Rungpore and Dinagepore.

The Lieutenant-Governor fully approves your scheme for prosecuting the work. He has asked the Government of India to give you a preliminary credit of three lakhs for railway works. Funds for feeder roads will be given to your engineers by Mr. Robinson, or, under his orders, from the district or famine grants. The Lieutenant-Governor presumes that before you leave Calcutta you will organize arrangements for getting up tools and other material from Calcutta. As you are aware, the Lieutenant-Governor has arranged to have a steamer and flats running between Kooshtea (or Goalundo) and the best landing places on the north bank of the Pudda; and also for a light draught steamer (the *Flame*) working with two small flats on the inland waters. These steamers will serve the requirements of your line as well as the grain trade which is expected to spring up.

4. The special arrangements which your note urges upon the very early attention of Government are—

(*a*) The immediate construction of a line of telegraph from a point opposite Kooshtea to Dhapparee, and from Dhapparee onwards to Julpigoree, with branches from Parbuteepore, both to Dinagepore and Rungpore. You recommend that the Electric Telegraph Department be moved to organize at once two parties, one to begin work opposite Kooshtea, and the other to begin at Dinagepore, carting their material from Rajmehal to Dinagepore.

(*b*) That the road from Rajmehal to Dinagepore should be at once put in order for wheeled traffic, and that a regular bullock train should be established thereon for the transport of railway material, telegraph material, and, if necessary, of grain.

(*c*) That the roads from Caragola and Rajmehal to Dinagepore should be made at once practicable for carts.

(*d*) That a bullock train service should be formed for the road from Dhapparee to Nattore.

(*e*) That express sanction be given to your incurring any reasonable expenditure for improving the lines of water communication.

5. The Lieutenant-Governor will at once ask the Government of India to* move the Telegraph Department to begin the line of telegraph in the way you propose. The telegraph officers will decide (and you are requested to consult with them on this point *before* you leave Calcutta) whether the line should not be led from Jagotee junction to a point opposite Dhapparee, along the line selected for the branch railway, and whether it will not be as expeditious and cheaper to make the line permanently on Hamilton's standard at once.

* N.B.—Since this letter was written, His Excellency the Viceroy has given orders that the telegraph line shall be at once begun by two parties.
C. B.

6. Mr. Robinson is already having the road to Dinagepore, from a point on the Ganges wherefrom communication with Rajmehal is easy, improved. The Lieutenant-Governor quite approves of a train of bullocks and carts being formed on this road. Mr. Robinson will arrange this in communication with yourself; the bullocks and carts of the distressed country should be employed as far as possible, and the Government of India will be asked to lend for the management of this service European and Native employés of the Post Office, who may have had experience on the Purneah and Darjeeling road. The accounts of expenditure on and earnings by this train will have to be kept distinct. It will probably be best to employ native carts of the country, and not to attempt to introduce heavy ammunition wagons or Post Office "cranchees" on the cutcha road from Rajmehal to Dinagepore.

7. The road from Rajmehal to Dinagepore is an important link in the Lieutenant-Governor's scheme of emigration roads from Behar to Doobree, and orders have already been given for putting it into order. The Commissioner of Rajshahye will be reminded of its importance. Mr. Robinson will also inquire and consider whether a road from Caragola to Dinagepore would have any superior advantages. A bullock train can be organized, in the same fashion as on the

Dinagepore road, from Dhapparee to Nattore; as this will be a short line, Mr. Robinson will perhaps be able to manage this through a native agency at Nattore. Its accounts should be kept distinct from the railway and relief work accounts. A paper charge should be made by these bullock trains for all work done for your department, or for the relief department, or for the Telegraph Department; such charges being supported by vouchers for the work done.

The Lieutenant-Governor has already (paragraph 3 above) intimated his approval of your expending a reasonable sum on improving the water routes on the Oorasagor, or on other inland waters which may serve your works.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 3,413.

Copy, with copy of Major Lindsay's letter and note, forwarded to the Commissioners of Bhaugulpore and Rajshahye, and to Mr. W. LeF. Robinson at Dinagepore. Attention is drawn specially to—

(1) The need for early works on the the Dinagepore roads from Rajmehal and perhaps Caragola.

(2) The best steps to be taken for establishing a bullock train service on the Dinagepore and Nattore roads.

(3) The need for settling at early date with Major Lindsay on what feeder roads his engineers should first break ground.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta,
The 13th November 1873.

Appendix G. to foregoing Narrative.

Arrangements for Food-supply.

We have arranged and announced to all the world that we are to buy grain for labourers on relief works, and I have much urged that, to the extent of the carriage now available and not used fully by the private trade, we should import and store on the spot for this purpose with the least possible delay.

I am afraid, however, that we may get into confusion through the operations of various local officers, and would therefore lay down as follows:—

1. When we say that the thing is to be done as much as possible through the trade, we mean, in the first instance, the trade of the division or district of the officer to whom the order is given. All officers should, to the utmost possible extent, operate through their own local traders, and arrange that these men should transport the grain to the spot where it is wanted, or the nearest point that can possibly be arranged. No direct Government transport should be undertaken that can be avoided. The local traders may get the supplies wherever they find best, provided only they come from a distance. I wish no restriction put on them. They will best know where to go and how to convey the grain. What is necessary is that in all contracts they should be bound down to early delivery. This last is essential.

2. When local officers are wholly unable to work through their local traders, they must not send orders to a distance at their discretion. We must systematize business of that kind. I think the sources of food-supply to which we must look may be roughly divided as follows:—

1. Calcutta and the neighbourhood.
2. Eastern Bengal.
3. North-Western Provinces and Central Provinces.

My present wish is that any special orders which the local traders cannot arrange for should be sent to these quarters, somewhat in the reverse order to that in which I have written them. Since we may trust to the Calcutta trade to do all that the demand renders profitable, and all considerable local traders in our districts have Calcutta connections, I should like the Behar officers to get their Government supplies as much as they can from the North-Western Provinces first and then from Eastern Bengal, and the Rajshahye officers from Eastern Bengal, before they indent on Calcutta.

3. To prevent clashing in the North-Western and Central Provinces, I have proposed that all purchases from thence (other than through our own local dealers) should be made through the Commissioner of Patna only (he supplying Bhaugulpore), and that a North-Western Provinces officer should be placed at his disposal, who will ascertain the kind of grain most

available, the best place to buy, and will arrange with the North-Western Provinces dealers to send Chumparun. M. A. Colvin, C.S., Allahabad, has been nominated for the purposes.

4. I should like the Commissioner of Dacca to make a similar arrangement for Eastern Bengal, employing an officer for the purpose. Orders, which local dealers in Behar and Rajshahye cannot execute, might then be executed through him.

5. It must be clearly understood that Chittagong is not a large producing district, but a mere port of foreign export for Noakhally, Tipperah, and South Backergunge; therefore orders should, as a rule, not be sent to Chittagong. What we want is to draw rice *away* from Chittagong, not to draw it to Chittagong. If it once gets there, either it will be exported, or we shall have to pay exorbitant prices to get it back from the export firms.

6. When officers are unable to get supplies either from Western or from Eastern Bengal, they must indent on Calcutta. All such indents should be addressed to Mr. Toynbee, C.S., Bengal Office, who is now in charge of that department. To comply with them he will openly buy from the various firms, according as he can make the best bargain.

7. These rules will not be strictly obligatory on Court of Wards' officers, but I should like them to follow these lines as far as possible; especially as regards employing the local dealers first, if they possibly can.

8. In cases in which grain is got from a distance otherwise than through local dealers, the distant merchants will no doubt be unable to manage the local transport from the railway or river station to the works, and here will probably be the greatest difficulty. I think that direct Government arrangements should be avoided as much as possible, and effort should be made to get contractors, large or small, or even owners of carts to undertake the transport at contract rates. Certainly, I would avoid all attempt to put on the roads either carts or camels or anything else the property of Government till the whole of the indigenous carriage has been drawn out and used to the very utmost.

G. CAMPBELL.

The 19th November 1873.

Circular No. 83.

Copy forwarded to all Commissioners of Divisions, to district officers of distressed districts, to Messrs. Barton and Davies of Goalundo, and Hewitt of Patna.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Offg. Secy. to the Govt. of Bengal.

Scarcity and Relief,
The 20th November 1873.

APPENDIX H. to foregoing Despatch.

No. 23PS, dated Calcutta, the 18th November 1873.

From C. BERNARD, Esq., Officiating Secretary to the Government of Bengal, Statistical Department to the COMMISSIONER of BHAUGULPORE.

I AM directed to reply as follows to your No. 537, dated 16th November 1873, in which you bring to notice the condition of Soopole and Western Mudheypoorah in the Bhaugulpore district, give your opinion that in those sub-divisions a state of actual famine is not very far distant, and suggest remedies.

2. The Lieutenant-Governor observes that the statements of the Collector of Bhaugulpore, neither in his very careful reply to this office Circular No. 70, dated 13th October 1873, nor in the extracts from his letters submitted with your letter under reply, are such as to support the highly colored tone of your present letter, nor at all to suggest the probability of immediate severe famine. Indeed, the Collector's account of Mudheypoorah is better than the Lieutenant-Governor had expected, and even as regards Soopole, it appears that there has been some considerable yield from the bhadoi crop. Mr. Taylor distinctly states that rice is still being exported in considerable quantities from Soopole, and that murwa is actually selling exceedingly cheap in the north of his district, viz. at 31 seers to the rupee.

3. Under these circumstances the Lieutenant-Governor cannot but think that it is to be regretted that you should have made suggestions which he is constrained to call far too wide and vague. I am to remind you that you have already received ample authority to open relief works to any amount if necessary, to import grain for the labourers, and to make advances for private import. It seems to the Lieutenant-Governor that when you ask that something may be done at once because the roads are in a bad state, you merely propose what the authority already given to you amply enables you to do without further reference to superior authority. At any rate, there is every reason why you should at once proceed to put the roads in order, and arrange the means of transporting grain for relief works, as the Lieutenant-Governor believes that you are in fact energetically doing.

4. If it is still the case that, as Mr. Taylor states, export of grain is going on from the tracts where distress is apprehended, you should buy on the spot for your works so far as practically to stop further considerable export.

5. In regard to the immediate supply of grain to your division, I am to remind you that 19,000 maunds of rice is already under despatch on your account. In addition to this, as you have been informed by telegraph, 50,000 maunds will be sent by rail to you as soon as you intimate that you can receive and transport it. This should be arranged at once.

6. I am to invite your attention to the positive orders of the Government of India, that Government officers are not to import grain for supply of the general public, but to leave such operations to the trade. I am to repeat that in the Lieutenant-Governor's opinion the report of the Collector of Bhaugulpore is very far from giving reason for making an exception to those orders in favour of that district.

7. You will already have received this office Circular No. 80 of 17th instant. The Lieutenant-Governor desires that you will carefully study the instructions contained in it and act upon those instructions fully. Specially you should be careful that in future all your reports and suggestions may be clearly and systematically arranged in accordance with the principles which the circular lays down. You will not fail to observe what full powers are given you for relief works and advances wherever they may become necessary. If you have any doubt or difficulty on any point you may refer it, but the reference must be specific. As regards charitable relief, you will see that in case of actual necessity you have power to commence operations in the manner pointed out.

No. 3684.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL in the Statistical Department, to the UNDER SECRETARY OF STATE FOR INDIA.

Scarcity and Relief.

Sir, Calcutta, dated 28th November 1873.

IN continuation of my letter No. 3545, dated the 21st November 1873, and under instructions from His Excellency the Viceroy, the Lieutenant-Governor directs me to forward copies of the third weekly* Special Narrative regarding the failure of crops and the anticipated scarcity in Behar and parts of Bengal.

* Up to 28th November 1873.

I have the honor to be, Sir,
Your most obedient servant
C. BERNARD,
Officiating Secretary to the Government of Bengal.

SPECIAL NARRATIVE of the DROUGHT of 1873 in BENGAL, from 22nd NOVEMBER to 28th NOVEMBER 1873.

(1.) THE general prospects of the season, as disclosed in the latest reports, are perhaps a little better than previous reports might have led us to fear. Many of the reports and opinions now given are results of actual inspections by experienced European and Native officials, fully qualified to observe and to weigh what they see; others are still not what they should be. Especially it may be noted, that the state of the spring crops, which had in many cases more or less germinated were sown, is better than it had been supposed to be, and gives better prospects of their surviving if later rain falls. In the Patna, Bhaugulpore, and Rajshahye Divisions, the late rice crop, the main staple of the country, is said to be as bad as it had been previously feared to be. It is hoped that if rain comes in December, the spring crop will not be permanently injured by the insects which are said now to infest the wheat fields, for the young plants will shoot up again.

In regard to the stocks of food in the hands of the people, the Commissioner of Patna reports the determination of the ryots of Tirhoot not to sell their grain consequent on their remembrances of the suffering of 1866. He adds that one of the chief causes of the great distress in 1865-66 was the total depletion of stocks, caused by the ryots being tempted by the high prices to break in on their stores of grain. In Orissa, it is believed that since the famine of 1866 the people have been much more provident, and that they have now good stocks.

A note by the Lieutenant-Governor is appended,* comparing the prospects of the present year, as far as they are known, with the condition of affairs in 1865, and previous to the great famine of 1770.

* Appendix A., page 63.

(2.) There has been no rain. The following note by the Meteorological Reporter shows that the weather is not altogether such as is usual at this time of year: "During the past week (and indeed since the rains ceased) the general direction of the wind has been more or less easterly. This is not usual in November. The average direction in this month is north-north-west, that of the land wind; whereas north-easterly winds, such as we have had of late, are in great measure diverted winds from the south. As a consequence, there has been more cloud about the sky than is usual at this time of year, and during the last day or two the sky is quite over-cast, looking more like rain than has been the case for many weeks past. There has been a very small rise in the barometer the last two days, but in Calcutta rain falls with a barometer rising after its depression." Rain at this time of year would be unusual; but as long as other meteorological phenomena remain anomalous, we may perhaps still hope for anomalous rain. The weekly weather and crops return is enclosed.

(3.) From the weekly return of prices-current enclosed herewith, it will be seen that, though in some districts they have fallen, generally there is an upward tendency. The new rice will soon be in the market. Two districts, Bancoorah and Midnapore, already quote new rice at a lower figure than old rice.

These quotations can hardly be considered to afford very stable hope, for in 1865–66 prices fell during the winter months, and rose again after February. The lowest rate for the commonest kind of rice is to-day in Calcutta Rs. 3-7 per maund.

A short note showing the movement of food-grains, since the date of last Narrative, is added in Appendix B.

(4.) The difficulty of transporting large quantities of grain in this country being apparent, the Lieutenant-Governor has thought it necessary to urge upon the Government of India the necessity of now laying in such stores as are likely to be required for relief works before pressure arises, and while means of transport are available. Such importations of grain as can be obtained he would, as far as possible, make now. If all our supplies should come together, he anticipated a ruinous block. Letter No. 28P.S., dated 22nd November, in which the Lieutenant-Governor submitted this and some other points for the consideration of the Government of India, is hereto appended. (Appendix C.)*

* Page 66.

In view of the great need for testing and using, at as early a date as possible, the means of transport from railway stations and rivers into the interior of the distressed districts, the Lieutenant-Governor has despatched from Calcutta to Patna ghât for the Gunduk embankment,—to Rajmehal, Kooshtea, and Goalundo for the Northern Bengal Railway works,—and to Arrah and Buxar for the Soane Canal works, all the foreign rice which has come to Calcutta on Government account; and he has, as above mentioned, urged that further importations of grain from beyond the sea should be hastened.

As it was the wish of the Government of India that rice bought by the Imperial Government should, for the present at any rate, be stored at imperial works, the Lieutenant-Governor was very desirous to buy a certain amount of grain in Bengal for storage on local works. Immediately on receiving His Excellency the Viceroy's final orders, Sir George Campbell began to buy rice as quietly as possibly through an agent in Calcutta, and he also caused inquiries to be made in Dacca, in the Backergunge district, and at Chittagong, where prices were at that time (early in November) said to be low. The agents employed in Calcutta and Bengal assured the Lieutenant-Governor that, in the then delicate state of the market, it would not be possible for Government to buy largely without raising the price greatly and to some extent paralysing private trade. From Dacca and Backergunge advices were received that the surplus stocks of last year's rice were finding their way to Calcutta and elsewhere; that it would be possible to buy only in dribblets, and that there was no mart at which Government could secure a large quantity of grain at one time.

From Chittagong it was reported that rice for export came into market with the high tides once a fortnight only from Noacolly and Backergunge, that there was little or no exportable surplus in Chittagong itself, and that large orders for rice could be executed only by European firms, which held large orders for export beyond the sea at high prices, and would sell to Government only at those prices. For a small parcel of rice (only 1,300 maunds) which was loaded on the Government steamers transferred for service in the Rajshahye Division, Government had to pay three rupees a maund, or very nearly the rate then ruling in Calcutta. * The chief European exporting firm themselves stated that they had deliberately run up the price a rupee a maund at the last fortnightly arrival of rice-boats with the view of attracting boats from the rice districts. The Lieutenant-Governor felt that, as Chittagong was after all only a back-door for the export of Bengal rice, he had better not buy there for Government, and thus attract to Chittagong the surplus of Noacolly and Backergunge, most of which might, under ordinary circumstances, be attracted by the Calcutta prices, and would be carried along the canals and inland rivers to the Calcutta market. The officer charged with buying rice for Government at Goalundo and Kooshtea reported that there were no large stocks to be bought anywhere, but that a healthy private trade was going on between East Bengal and Rajshahye in small boats, from which rice was eagerly bought by the residents along the rivers. He earnestly represented that if Government were to intervene as a large purchaser this trade would be paralysed. It thus seemed clear that Government could not buy rice largely in the interior of Bengal without disturbing the natural flow of the trade, and keeping it away from Calcutta dealers who would supply the distressed districts. The Government agent in Calcutta had for similar reasons exercised similar caution, and had up to the 24th November bought only 30,000 maunds of rice for Government in Calcutta. The Lieutenant-Governor, however, saw that it was absolutely necessary to get a certain quantity of rice in Calcutta for immediate despatch to local works, and he has therefore during the last week bought 140,000 maunds more of Bengal rice in Calcutta at the current rates; more than half this quantity has been despatched or is now under despatch for storage on local works in all these distressed divisions, and the remainder the Lieutenant-Governor is keeping in reserve for compliance with future emergent indents from the distressed districts. Sir George Campbell hopes that this supply will keep the transport agency at work until the Orissa* rice comes into Calcutta, and the grain ordered from the North-Western Provinces comes into the Behar districts. We have been advised that the first despatch of Balasore rice will reach Calcutta before the 7th December.

In regard to the price at which rice has been laid in, it may be noted that the rice bought in Calcutta will stand the Government in from Rs. 3-3 to Rs. 3-15 per maund; that the Orissa rice will be delivered at the jetties in Culcutta at Rs. 2-12 per maund; that the Burmah rice will cost from Rs. 2-11 for the first batch to Rs. 3-2½ for the latter batches. The rice, wheat, maize, barley, millet, and other grains, of which about 125,000† maunds have been ordered, mainly from Northern India, for delivery in Behar, will stand the Government in from Rs. 3 to Rs. 4 a maund all round at the railway and river stations in Patna and Behar. It may thus be roughly stated that up to the present date (28th November) about six lakhs of maunds‡ of grain have been bought or ordered by the Government of Bengal and its officers; that three-quarters of this amount will be delivered in the distressed districts before the end of December; and that this grain will cost the Government about Rs. 3¼ per maund all round.

(5.) In letter No. 3004, dated the 14th November 1873, from the Secretary to the Government of India in the Financial Department, attention was called to the subject of providing fodder for cattle during the months of scarcity. On the routes where it is expected bullock trains may be organized the local officers are to form depôts of fodder.

It is well known that roots and vegetables form an important food-staple in this country, and in times of scarcity they, in some measure, supplement the failure of grain. Local officers have been directed to promote vegetable cultivation, and, where advisable, to buy seeds for distribution.

In letter No. 3249, dated November 24th, the Government of India asked for information regarding the plan devised by the Government of Bengal for the distribution of rice imported from beyond sea, and the places where it is proposed to store it in readiness for actual consumption. In reply the Lieutenant-Governor detailed the arrangements which had been made for transporting foreign rice for storage at the Gunduk embankment, and on the Northern Bengal Railway works, and also what had been done in connection with the supply of the Soane Canal

* See paragraph 7 of last week's Narrative.

† *Note.*—30,000 maunds of Indian-corn have been ordered by the Commissioner of Bhaugulpore from the North-Western Provinces; 30,000 maunds of barley; 30,000 maunds of millet, &c., from the North-Western Provinces, and 25,000 maunds of rice by the Commissioner of Patna; and 10,000 maunds of rice from Backergunge by the Commissioner of Rajshahye.

‡ About twenty-two thousand tons.

Works and local relief works. Copy of this letter, No. 3626, dated November 25th, written in reply to the Government of India, is added hereto in Appendix D.* Particular attention is requested to this letter, as it contains information which is necessary to complete this Narrative.

* Page 67.

(6.) The orders already issued calling for information and reports from local officers being contained in many different circulars, some original, some supplementary, it has been thought advisable to circulate a precise list of them. Accordingly, circular No. 87, dated November 24th, has been issued, reviewing previous orders, and defining exactly what reports are required from local officers, reducing them to the lowest possible limits, and requiring a fortnightly instead of a weekly Narrative. Copy of this circular is annexed.

In circular No. 80, dated November 17th, paragraph 7, it was stated that the answers received to circular No. 27 of June 1872, which called for lists of works which might suitably be undertaken in times of scarcity, would be printed and circulated, so that Divisional and District Officers might have by them lists of the roads and other works which have been selected, estimated for, and kept as possible relief works. Copies of these lists have now been circulated to officers of distressed districts in order that they may know not only what is proposed in their own districts, but also what is proposed in neighbouring districts. In circulating these lists, the Lieutenant-Governor made certain remarks which are contained in letter No. 3569, dated November 22nd, annexed hereto.

The rules for making advances to landlords and tenants to enable them to improve their properties under Act XXVI of 1871 have been revised. The chief points in which restrictions have been relaxed are these—

I. Certain preliminary formalities which cause delay, &c., are dispensed with.

II. Stamp and process fees are no longer required.

III. Sub-divisional officers who were not before allowed to make advances can now do so up to a limit of Rs. 250 in each case; and the Collector's limit has been raised from Rs. 1,000 to Rs. 5,000.

IV. No interest is charged for advances under Rs. 500 during the first year.

In the case of loans to Municipalities, the rules under Act XXIV of 1871 have also been revised, and the Government may now authorize a loan and the commencement of work, and may advance money in anticipation of the formal publication of the application as required by the standing rules.

It was noted in the last Narrative that the Opium Agent of Behar had received authority to make advances for the construction of common unmetalled wells. The Lieutenant-Governor has wished to extend the operation of this order to ryots who have not agreements to cultivate opium, and has authorized the Commissioners of Patna and Bhaugulpore to make advances for wells outside the provisions of Act XXVI of 1871, and to employ the officers of the Opium Department in making the necessary arrangements.

Letters containing these orders are annexed in Appendix E.

The Commissioner of Burmah has made a definite offer to employ six thousand men on public works for six months, intimating that, on the expiry of that period, he can give the emigrants land to settle upon, and that he will also contribute something towards the cost of their transport. The Commissioner of Patna has been addressed on the subject of emigration to British Burmah, and has been asked whether the people would go, and how he would propose to organize such emigration.

As regards emigration to Assam, it has been pointed out that coolies cannot be expected to find their own way up the Brahmaputra river, the navigation of which is so difficult for native boats. It is therefore under consideration whether it would not be possible to place a Government steamer on the river to carry emigrants from Dhoobree, where the system of roads devised to promote emigration from North Behar to Assam abuts on the Brahmaputra. The Commissioner of Patna has issued orders that grain shall be supplied to emigrants on the line of march at cost price by the officers employed in the construction of the roads from the stores placed at their disposal for relief works. These orders had become necessary, as it was ascertained that laborers who had started from the Sarun district on their annual migration in search of work to Northern Bengal had returned to their homes alarmed at the high cost of living on the road. Every facility will be given for emigration from Northern Behar through Northern Bengal to Assam. Offers for coolies have already been received from planters.

It was mentioned in a former Narrative that the rates of freight charged for food-grains on the railways had been reduced to one-eighth of a pie per mile. It has now been found necessary to exclude all food-grains from the Upper Provinces and Behar, consigned to stations below Luckeeserai and Bhaugulpore, from the operation of the reduction, inasmuch as advantage was taken of it by exporters and others to carry grain away from the districts in which it is most wanted.

In a Resolution, dated 27th November, herewith enclosed, the Lieutenant-Governor prescribes the procedure to be followed in applying for, and prosecuting relief works.

(7.) Various circular orders have been issued by the Lieutenant-Governor since the date of last Narrative. As it is very important to obtain as accurate information as is available regarding the extent of food-stocks still remaining in the country, he has directed district officers to make special inquiries as to the stocks held both by grain dealers and by individual ryots, and to submit the information they may procure with their weekly Narratives.

In order to supplement the ordinary establishments, the Lieutenant-Governor has invited pensioners to resume work during the present emergency, receiving extra allowances proportioned to the work that may be allotted to them.

It has been found necessary to issue some further instructions as to the nature of the information regarding the cold weather crop which is to be submitted with the district Narratives. Local officers have been reminded that the cold weather crops, in their early stages, possess a wonderful vitality, and if they germinate in the least, can well wait for rain at Christmas or later.

Enquiries have been made as to the time occupied by native boats in navigating the Ganges from Goalundo to Patna at various times of the year, and the facilities for, or difficulties in, navigation, and the Commissioners of the distressed tracts have been ordered to report specially on the means of transport available in their divisions.

(8.) Some reports have been received from the Commissioners since the date of the last Narrative. The scheme for connecting Northern Behar with Assam by a system of roads through Northern Bengal has, so far as the Patna Division is concerned, been finally settled. The works have not actually been commenced on this scheme, but the lines have been pegged out and all arrangements for beginning have been made. From another report submitted by the Commissioner of Patna, it appears that, with the exception of the case of the Hutwah estate, in the Sarun district, mentioned in a former Narrative, relief works have already become necessary only in one corner of the Patna district, where a new road has been commenced. With these two exceptions no relief works properly so called have as yet been opened in Patna Division, but the annual repairs to the district roads are being pushed on. It is satisfactory that the Commissioner is able to report that as yet no symptom of increase of crimes has shown itself.

A few other points are worthy of note in connection with the Patna Division. It was ordered that local officers should, where possible, effect the purchase of grain for relief works through local traders. It has been found impossible to persuade the grain dealers of Behar to undertake any import business. Even the large dealers of Revelgunge on the Gogra declare that they cannot take up an import trade from the North-West Provinces; it is not their custom, and they do not understand it. The attempt to import grain through local dealers may be said to have so far failed.

Some Collectors have complained of requisitions for carriage for troops being made at a time of so much pressure. The matter has been separately reported to the Government of India.

It is reported from the Behar sub-division of the Patna district that the petty grain-dealers in the small villages have shut up their shops, and that people who want to buy have to go to the town of Behar to do so. This difficulty has been in some measure overcome by itinerant dealers, who have taken to perambulating the country with loaded bullocks with imported grain, selling their grain from the sack's mouth.

The Commissioner of Bhaugulpore has submitted his proposals for relief works with a list of roads, on some of which work has actually commenced, while others are kept in hand till necessity for opening them shall arise. He has also chosen places as food depôts and possible relief centres. His plans have been provisionally sanctioned. It was noted in the last Narrative that work had been commenced in the Soopool sub-division of Bhaugulpore; the satisfactory intelligence has since been received that laborers do not come forward freely. In Monghyr one road has been started as a relief work, and the people have taken the work up willingly, though not in large numbers.

The Commissioner of Bhaugulpore also has failed in his efforts to purchase food through local traders.

It was mentioned in the last Narrative that works had been opened in the Rajshahye Division. Some details of works in progress in Dinagepore and Rajshahye have since been received demi-officially. On the subject of purchasing grain through local traders, the Commissioner of Rajshahye remarks: "I must say from "all I have been able to learn the people who trade for export will not take up an "import trade, and few have the capital to do so. They say it is not their custom, "that they do not understand the business or know the markets."

The steamer "Teesta" is waiting at Kooshtea for her flats, which have left Calcutta and are being towed round by the steamer "Sir William Peel;" the steamer "Flame," with the flats loaded with rice which she brought from Chittagong, has left Goalundo for the Oorasagur river.

(9.) The India General Steam Navigation Company having offered their flotilla for the purpose of promoting trade in grain, and having asked Government to bear half the cost of transport, as it does in the case of Guaranteed Railways, the Lieutenant-Governor has asked for particulars regarding the routes the steamers would take, and the rates of freight the Company would charge.

It has been arranged to lay down at once a line of telegraph to Julpigoree from Kooshtea along the line chosen for the Northern Bengal Railway.

(10.) The British Indian Association have addressed the Lieutenant-Governor on the subject of the impending scarcity. The Association is inclined to take a somewhat gloomy view of the prospect before us, and suggests various measures which it hopes the Government will take in hand. It does not say what measures it intends to take itself as representing the landholders of Bengal; nor does it suggest what measures should be taken by landholders generally for the relief of their tenants. It strongly advocates the prevention of the export of grain. The Lieutenant-Governor's reply is annexed (Appendix G.)

By order of the Lieutenant-Governor of Bengal,
Calcutta, C. BERNARD,
the 28th November 1873. Officiating Secretary to the Government of Bengal.

APPENDIX A. to foregoing Narrative.

NOTE.

IN the absence of any reliable information about stocks, and seeing the want of precision in our information about the yield of present crops, I have thought that a comparison with former years of scarcity would be the best index to our chances for the future. I believe, however, that the only years in respect of which we have any information admitting of comparison are 1769–70 and 1865–66. In regard to the former our information is necessarily very imperfect. In regard to the latter we accurately know the result, but we do not know with any accuracy the yield of the crops which led to that result. This is nowhere brought together in any detail. A good deal of information may, however, be gleaned here and there; and that is being done. Our inquiries are not complete, but I note what I can draw from the information we have so far got.

In all Bengal failures the immediate cause has been not so much general want of rain as the premature cessation of the rains. That was so in 1769 and 1865, and is so in 1873.

We know nothing of Orissa in 1769–70 (it was not then British). That was, as is well known, far the worst part of the country in 1865–66; in 1873 it is good. We must treat Orissa as abnormal.

As regards all other parts of these provinces, we may state the conditions which usually prevail. The south-eastern sea-board, Backergunge, &c., and the extreme east, Sylhet and Cachar, have never been known to fail through want of rain (when they suffer it is from floods); the other eastern districts—Dacca, Mymensing and Tipperah—though failure of rain may cause short crops, have never failed very disastrously from this cause.

In Central and Western Bengal, failure of the rains has produced scarcity and famine, but I should say that the failure has never been so extreme as in the northern districts.

Failure of the rains especially affects the districts of Northern Bengal and Behar lying along e foot of the Himalaya, where the rainful is generally large, where rice is the chief product, but here the particular phase of the monsoon which causes these disasters seems always to lead to an extreme diminution of the rainfall. This was especially the case in 1769 and 1873, and to a less extreme degree in 1865.

All Behar, being dry, suffers more from drought than Bengal. It has generally happened that two successive short years have produced scarcity in Behar; whereas I do not find the record of two successive years of great drought in Bengal.

In comparing the years of failure of rain and consequent scarcity, I will take—

1. The season of failure.
2. The antecedent circumstances which mitigated or aggravated it.
3. The succeeding circumstances which may mitigate or aggravate it.

Orissa, I have said, we must put aside as following no rule yet ascertained. It may be considered, as regards Bengal, a country beyond sea, the communication being by sea.

Taking then Bengal and Behar, the course of the season of 1769 seems to have been very like that of 1873. There was much failure of rain and of the crops in Central and Western Bengal, extreme failure in North Bengal and Behar, only a certain shortness of crops in the eastern districts, and no failure on the south-eastern seaboard.

In 1865 the failures in Central, Western and Eastern Bengal taken together may have been about equal to that in the present year. I should not yet like to say confidently which was worst; in neither year was or is the failure in these tracts of the most extreme character. In 1865 the failure in North Bengal and Behar was not so bad as the extreme failure of 1873.

On the whole, we cannot say with any precision that the season 1769 was worse or better than that of 1873: we have not sufficient information; the one somewhat resembles the other; but we may fairly hope that 1873 is not so bad as 1769.

1865 was on the whole not so bad as 1873, North Bengal and Behar being certainly worse in the latter year.

Coming now to the antecedent circumstances I feel quite unable to estimate the effect of exportations and jute-growing on the prospects of modern years as compared to those of the last century, and I must confine myself to other circumstances.

It is clear that in Behar and parts of Northern Bengal a previous bad year had preceded that of 1769–70. The rains had much failed in 1768 in Behar and the North Bengal districts; there was already serious distress in Behar early in 1769, and severe famine in July and August of that year. Rice was scarce in Calcutta in August 1769, so that it was found impossible to get two ship-loads for Madras; and very great alarm soon ensued.

1865 was also preceded by a short year in Behar; 1864–65 was certainly a bad year there, though a good year in Bengal, except where the cyclone and floods had done damage.

1873 suffers under no such disadvantages; the last year's crops were fair in Behar and good in Bengal, especially so in Northern Bengal.

As regards then the antecedent circumstances (export and jute apart). 1769–70 was much worse situated than 1865–66, and 1865–66 was worse situated than 1873.

Coming again to the succeeding circumstances, I find that the failure of the rains of 1769 was followed by a prolonged drought throughout the cold season of 1769–70 and the early part of the hot season, which greatly aggravated the evil.

Some showers mentioned in February seem to have been very limited and partial, for later in the season (9th May 1770) it is officially reported that not a drop of rain had fallen in most of the districts for six months. There was no good rain till the end of May.

In 1865–66, on the other hand, Behar and Bengal were, as I believe, saved from a much worse calamity than actually occured, by cold weather rains. There was very little rain up to end of December, but in January and February there was an unusual quantity all over the country in both Bengal and Behar, so much that the only complaints were injury from its excess and from the hail which accompanied it in some places. Throughout Behar the official accounts show (even though the November statements had been quite as gloomy as those we now receive) that the rubbee, there so important a crop, was quite a good one, except in limited tracts destroyed by hail. It should be noted, however, that though the valuable rubbee crops of Behar sufficed for rent and revenue, and probably pulled the Behar ryots through, they did not suffice to relieve the labouring classes, who, owing to dearness of prices, continued to suffer more than ever. In Bengal the demand for Orissa in 1866 probably told much on prices, and the rates were, for a short time before the new crop came in, such as must inevitably have led to severe and widespread famine, if they had continued long.

Seeing then how much the famine of 1770 was aggravated by want of cold weather rain, and how much Behar and Bengal were saved in 1866 from the extremity of famine by good cold weather rains, I more and more incline to believe that our fate still very much depends on the weather of the next three months. The cold weather crops, though comparatively small in quantity, especially in Bengal Proper, might just turn the scale. Rain at that season would provide fodder for beast as well as some food for man, and would enable vegetables, &c., to be planted, and make the country altogether much easier.

To take the worst which may be possible, though I hope not probable, viz., that so far the season of 1873 is as unfavourable as that of 1769, I think it is clear that the antecedent scarcity caused the failure of 1769–70 to be felt in a way which would certainly not have happened to the same degree after years of plenty. There remains farther this consolation that the dearth of 1873–74 may yet be mitigated by two things which did not mitigate the dearth of 1869–70, viz., cold weather rain, and importation of food. The first depends on Providence, the second on ourselves. I have from the first urged the stoppage of exportation from the rice-producing tracts of British India to foreign countries, and importation to Bengal. The first measure has not been considered desirable; the second, I continue to urge strongly. And I put it as strongly that these importations should be immediate. They will certainly be wanted, whatever happens,—whether want of cold weather rain leads to actual famine, or cold weather rain reduces the misfortune to scarcity. And if supplies come now, while carriage and fodder are available, we shall both store food for our labourers before the strain comes, and draw out all our resources in the way of carriage; whereas if they do not come till later, the public and private demand for means of transport coming together, when the weather may be unfavourable and forage scarce, there will probably be a ruinous block.

FARTHER NOTE.

In comparing the different years, we must bear in mind what was brought out clearly from the official records of the India Office in the "Further Report" on the Orissa famine, that severe and terrible as was the famine of 1770 in its immediate effects, it has been very much exaggerated in the statements which have gone down as popular history, representing great part of Bengal as having then relapsed to a state of jungle, from which it did not recover for generations. So far from this being the case, the land revenue of 1771 was actually higher than it had ever been before, and continued to prosper and increase. It is clear then that the dearth of 1770 was not so great as to prevent the next crop being sown or to destroy the productive power of the country.

I note the following information regarding the season 1769–70.

It has been said that Behar was in fact in a state of famine before the rains of 1769 commenced. When they did come they were very late and scanty, and ceased very early. In October 1769 that province was described as "distressed beyond conception," rice was at 10 seers per rupee, and there "were dreadful apprehensions of general famine."

As regards Bengal it is specifically stated on 26th August 1769: "In all the districts north-" ward of Nuddea the crops of rice will be very short indeed, and there is every prospect of a " dreadful calamity which God in His infinite mercy avert." There was little rain in September, and none in October, in most parts of the country.

In November 1769 the Collector-General of Calcutta thus sums up the season:—

"In the southern quarter or low lands of the province they have been fortunately blessed " with some rain, but to the northward the drought has been so severe as to occasion a total " loss of the rice crop in some places and the greater part of it in others;" and on 23rd of the same month the Bengal Government, reporting to the Court of Directors, speaks of "the " drought which has prevailed all over the country, such as the oldest inhabitant does not " remember."

On the other hand, on 4th February 1770, we find this report, after mention of remissions of revenue in Behar: "In Bengal we have not found yet any failure in the revenue or stated " payments."

Up to this time the greatest distress had been in Behar and the northern districts of Bengal; but soon after it became very severe in the Calcutta and Burdwan districts, and especially in Moorshedabad. From May to August 1770 the famine in the southern districts was more severe than in the northern. These northern districts were reported to be greatly relieved by the beginning of July (how it does not appear), but at this very time rice in Moorshedabad reached the rate of 3 seers per rupee, and the distress over a large part of Southern Bengal was awful—quite like that in Orissa in 1866. It was not till September that relief came with the new crops.

The land revenue was not then under any long term settlement leaving a large margin of zemindars' profit; it was collected in a precarious way from year to year, and remissions on account of failure of crops were part of the system. The statement of the revenues in the famine years and subsequent years is certainly somewhat astonishing after the dreadful descriptions of the famine and loss of life. But here is the official statement of the land revenue realized by the Company as taken from the accounts of the Board of Revenue at Moorshedabad—

	Sicca Rs.	As.	P.
1768 - - - - - -	1,52,54,856	9	4
1769, the year of failure of rain which produced the famine - -	1,31,49,148	6	3
1770, the year of famine and mortality -	1,40,06,030	7	3
1771 - - - - - -	1,57,26,576	10	2

It is admitted, however, that the revenue of 1771 was raised to a point higher than ever known before by somewhat harsh measures. The season being plentiful, heavy extra cesses were laid on the ryots who remained to make up for those who had run away.

On the whole, I think that taking together the various passages which we can glean from the reports regarding this famine, and balancing the somewhat conflicting evidence afforded by the accounts of the severity of the famine on the one hand and the collection of revenue on the other, we may fairly judge that the season of 1769 was in itself a good deal worse than that of 1873; and that, taking into consideration the previous scarcity (which certainly brought on panic, dearth, and famine far earlier in 1769 than in the present year), we may be pretty confident that the whole situation in those days was much worse than at present, and that we have not now reason to apprehend so great a calamity.

Compared to 1865, if the present season is somewhat worse (it certainly is worse in North Bengal and Behar), we are at the same time free from the disadvantage of a previous bad year in Behar, and may still hope that we shall not fare worse on the whole.

The last accounts just received seem to show that in some districts the crops are turning out rather better than was expected.

At the same time we must bear in mind that in Orissa the season 1865–66 had been preceded by prosperous years, only depleted by voluntary exportations, and that the failure of the autumn crops of 1865 in that province did not appear to be greater than is now reported from great part of Bengal and Behar. Yet severe famine resulted. Also, that in the southern districts of Bengal the season 1769–70 was not preceded by bad years or by scarcity other than that induced by exportations to the north and to Madras; that failure of crops in these districts in 1769 was not absolute; yet the result was what has been stated. Notwithstanding comparatively favourable antecedents, the degree of famine which occurred for a time in South Bengal in 1770, and in Orissa in 1866, was probably greater than was ever experienced anywhere in India within historical times. Bearing these things in mind, then, notwithstanding our more favourable estimate of the present situation, we cannot be without anxiety, and must not relax precautionary measures.

G. CAMPBELL.

Calcutta, the 25th November 1873.

APPENDIX C. to foregoing Narrative.

No. 28. PS.

From C. BERNARD, Esquire, Officiating Secretary to the Government of Bengal, to the SECRETARY to the GOVERNMENT of INDIA, in the Financial Department, dated Calcutta the 22nd November 1873.

Statistical Department.—Scarcity and Relief.

SIR,

THE telegram copied in the margin* has passed between the Lieutenant-Governor and the Viceroy. With reference to the request contained in His Excellency's telegram asking the Lieutenant-Governor to give by letter his reasons for anticipating such a block, I am now to explain those reasons.

* Rice being shipped weekly from Burmah, explain further by letter your apprehension of block as to time and place, also amount of purchase you have made, and expect making.

2. When the rice of the coming harvest is reaped in December and the early months of next year, it will come into the market from all quarters at once—from Backergunge, from Orissa, from places beyond sea, Burmah, and Madras, &c. At the same time grain will be imported from the North-West Provinces and Central Provinces. All these operations will take place at a time when, if there is not rain, forage will be exhausted, cattle dying, and roads bad. And soon after the weather will become hot. The Lieutenant-Governor fears that if under these disadvantages it becomes necessary to transport large consignments of grain, amounting to 50,000, 100,000, or even 200,000 tons, we shall not be able to do it.

3. In the meantime very little, comparatively, is doing. As regards facility and certainty of transport, every maund carried now is, the Lieutenant-Governor thinks, worth half a dozen waiting for carriage later. Besides there is the advantage of drawing out and preparing means of transport before pressure comes by creating a demand for it.

4. The Lieutenant-Governor would gladly buy rice in Bengal at once for the sake of utilizing the means of transport now lying idle, and storing grain; but wherever the Government goes into the market, it is met by the cry that no large quantities can be purchased without wholly disturbing the market. This is certainly the case in Calcutta, the principal market of these parts. His Honor would not object to paying an enhanced price, indeed he thinks it would be well worth while to do so; but the immediate result of largely raising the price by Government operations would undoubtedly be to stop the private internal trade which, if not now very large, is still considerable and wholesome. The last trade to be stopped by such a rise of price would be the foreign trade, because people who come to Bengal for rice want a quantity only obtainable here. Their agents have orders, and will carry them out, buying rice in spite of a rise, and will send it out of the country unless the Government buys it back from them at an utterly exorbitant price. The less country dealers, in whose hands the internal trade is, are, on the other hand, more limited and cautious; they none of them know what is going to happen. As long as the price of grain in Bengal enables them to make a profit by carrying it to Behar, they carry it; but if the Government causes a sudden rise of price, their agent's limit will be passed, and all their operations will be stopped. For these reasons the Lieutenant-Governor feels that he cannot in the present state of the Bengal grain market attempt to buy very largely in it.

5. But in the North-West Provinces the Lieutenant-Governor would buy largely at once. Ordinarily there is little grain trade from the North-West Provinces to Bengal except in wheat. Trade in joworee, bajree, and the other commoner food-grains of the North-West Provinces would be comparatively new, and that the Lieutenant-Governor thinks should be taken up largely and at once. So also in Burmah, where the principal trade is an export trade, we need not dread deranging that trade. If we go into the native markets and buy at once it will be clear gain. To delay I am to submit is not only unfortunate, from the point of view of transport, but will let the rice get into the hands of the export firms, who will only sell it back to us at exorbitant prices.

6. The Lieutenant-Governor is aware that very large quantities of grain may not be obtainable at once in the Burma markets, but he has understood that the Chief Commissioner of British Burma could get very considerable quantities *before* the next harvest. At any rate I am to say the Lieutenant-Governor is quite clear that all the grain that comes in now is worth far more than it would be if it came later, and further, that if all our supplies come together there will be, as he has said before, a ruinous block. He would much like to have rice from beyond sea for immediate despatch to Government relief works.

7. There is one point on which the Lieutenant-Governor would ask leave to submit his opinion. If rice in any large quantity should be ordered from Burma, then the question of freight from Burma to Calcutta will arise. Up to a certain limit freight could no doubt be engaged by the Chief Commissioner. But the Lieutenant-Governor has been informed that very much of the Burma rice goes away to Europe in Italian and other vessels, which could not readily be diverted to Calcutta. Again, sailing vessels will probably occupy more than 30 days in going and coming between Calcutta and Rangoon, whereas steamers could do two trips each way per month. It is understood that there are rarely many steamers open to engagement at the Burma ports, whereas at the present moment freights in Calcutta are very low, and the Lieutenant-Governor has been advised that it might be possible for Government to engage steamers at very reasonable rates to make trips between Burma and Calcutta during the next three or four months, and that later this would be much more difficult.

I have, &c.
(Signed) C. BERNARD,
Officiating Secretary to the Government of Bengal.

APPENDIX D. to foregoing Narrative.

No. 3249, dated Fort William, the 24th November 1873.

From R. B. CHAPMAN, Esquire, Secretary to the Government of India, Financial Department, to the Honourable C. BERNARD, Officiating Secretary to the Government of Bengal.

REFERRING to my letter No. 3012, dated 13th November, I am directed by the Governor-General in Council to request that, with the permission of the Honourable the Lieutenant-Governor, you will, as soon as possible, report, for the information of the Government of India, the plan which the Government of Bengal has devised for the distribution of the rice imported from beyond seas, and the places where it is proposed to store it in readiness for actual consumption.

No. 3626.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, in the Statistical Department, to the SECRETARY to the GOVERNMENT of INDIA, in the Financial Department.

Scarcity and Relief.

SIR, Calcutta, dated 25th November 1873.

WITH reference to your letter No. 3249, dated 24th November, I am directed to submit that, under present arrangements, the rice imported* from beyond the sea is sent up-country for storage at imperial works only. It was understood that foreign rice should not be sent to the Soane Canal for storage, as the Government of India hoped to be able to fill the stores there from the North-Western Provinces. Accordingly, foreign rice is being sent for storage at the Gunduk embankment, and on the Northern Bengal Railway works only.

* 14,402 bags of 225 lbs. to 230 lbs. each have arrived in Calcutta up to date, per steamers *Dacca*, *Chaldea*, *Moulmein*, and *Mahratta*. Regarding the unlading, &c.

2. Rice intended for storage on the Gunduk embankment is sent by railway to the Patna Ghat Station, and thence by country boat up the Gunduk to places of storage. As yet only a few thousand bags have gone, and they can hardly have got far on their way towards storing places in Sarun and Chumparun. Reports have not yet been received of the sites selected for store-houses on the Gunduk works, or of the erection of store-houses; but the Lieutenant-Governor has every confidence that the storage will be done properly and in good time, and he sent off the rice at once, so that the means of transport might be utilised at once, and rice be stored on the works as soon as possible. Mr. Bayley has secured storage room at the Patna Ghat Station in case rice has to wait there for boats.

3. Rice intended for storage on the Northern Bengal Railway works is at present being sent by three different routes, namely,—

(1.) To Goalundo by the Eastern Bengal Railway, and thence in boats up the Oorasaugor to store-houses which are being made at Sultanpore and Nowgong on the Jamoona and Atrai rivers. The small steamer *Flame* with her two barges started from Goalundo some days ago up this river with a cargo of rice.

(2.) To Kooshtea by the Eastern Bengal Railway, and thence by native boats to the Oorasaugor as before; at Kooshtea the Lieutenant-Governor has placed the *Teesta* steamer with two flats to carry rice between Kooshtea and the mouth of the Oorasaugor, or else between Kooshtea and Godagiree, at the mouth of the Mahanuddee. As yet we have not ascertained for certain how the *Teesta* can best be employed; but Mr. Molony, the Commissioner of Rajshahye, anticipates that as small boats (of 200 to 400 maunds only) can go up the Mahanuddee and Oorasaugor, the *Teesta* and her flats will have to ply between Kooshtea and the mouths of these rivers.

(3.) By railway to Rajmehal, and thence by cart from the opposite side of the river to the Northern Bengal Railway near Dinagepore. Major Lindsay, who recently went to Dinagepore, wrote that there was carriage on that road, and wished to have it tried; so 5,000 maunds of rice are being sent to Rajmehal to Major Lindsay's forwarding agent there. We do not yet know how these three routes will answer, nor can the Lieutenant-Governor say for certain that store-houses have yet been prepared. But Mr. Molony, who is in Dinagepore, is arranging all these matters, and in a few weeks time we shall know how the several routes answer. Meanwhile each route is receiving a practical trial as soon as possible.

4. As yet no foreign rice has been sent to the Soane Canal for storage, but a certain amount of Indian rice (5,000 maunds a week) was being sent until the receipt of your instructions mentioned above. Mr. Levinge, the Superintending Engineer, was preparing store-houses at Buxar and at other places on the works.

5. In case the Government of India may desire to know what arrangements are making for storing grain on local relief works, I am to explain that as yet Government grain has been sent—

(1.) To Caragola, opposite Sahebgunge, on the railway, whence it will be transported by carts to Dengraghat, where a store-house has been made on the Mahanuddee. Six hundred carts were collected at Caragola for this grain some days ago, and some of them must have started on their first trip by now.

(2.) To Bhaugulpore Railway Station, whence it will be carried across the river, and then taken on carts to Soopole and Mudheypoorah, the two northern subdivisions of Bhaugulpore. The Commissioner reports that on the route he can carry 10,000 maunds a week. Some 5,000 maunds have already been sent to him, and the carriage in this direction has still to be tried. The Superintendent of Works was at Soopole a few days ago, and will have arranged for store-houses.

(3.) To Luckeserai Station, whence it will be transported in carts to storing places in the south of the Monghyr district to store-houses on the works there. As yet we have not heard the result of the consignment of rice sent to Luckeserai.

(4.) To Monghyr Station, whence it will be carried across the Ganges to works in Northern Monghyr. Some 2,000 maunds went to this station a few days ago; the results are not yet known.

(5.) To Raigunge on the Mahanuddee, as the northern corner of Maldah, and on the border between Dinagepore and Purneah. The grain for the store-house here, which is to be a large one, goes to Kooshtea by railway, and thence by steamer and boat up the Mahanuddee.

6. It will be seen that this Government and its officers are trying as many available routes as they can. As yet the local officers write very confidently from Behar that they will be able to provide locally as much carriage as is required. From Dinagepore, too, it is said that there will be plenty of carts available. But it is at present too early to say how far the transport arrangements succeed or fail.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 534 of 1873.

Government of India.—Financial Department.

Expenditure.—Miscellaneous.

To His Grace the Duke of Argyll, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, Fort William, the 5th December 1873.

We have the honor to transmit special narrative of the drought in Bengal for the week ending 5th December.

2. From all the information we have received up to date, our general impression is that the prospect in the districts affected by drought is not at all worse than that indicated in previous despatches.

3. The operations of the general grain trade are active in many parts of the country, though they have not apparently attained anything like their maximum degree of activity, and are in some directions less advanced than might have been expected. Meanwhile a stream of food-supply is setting in towards the districts likely to be distressed, and signs are manifest that the trade is preparing for operations on a scale commensurate with a period of considerable distress.

4. The exportation of food grains from the ports of Bengal has greatly diminished as compared with the average of former years, and has now become comparatively small.

5. The prices of food grains have not perceptibly increased; they are generally steady; in some cases they have even manifested a downward tendency. So far as as they may be taken as an index of commercial opinion, it would not seem that apprehensions have as yet become urgent or serious.

6. We continue to receive good accounts of the harvests and crops from other parts of India beyond the provinces under the Government of Bengal, with the exception of the eastern and south-eastern portions of the North-Western Provinces and Oudh. In some parts of the North-Western Provinces especially, which are in in immediate communication with Behar by rail, the autumn harvest and the spring crops promise extremely well.

7. No rain has fallen in Bengal or Behar since the last advices. The weather has, however, been constantly cloudy during the past week. From such appearances there is hope that the winter rains will not be withheld.

8. We incline to the view that the extent and character of the distress in Behar and parts of Bengal will much depend on the winter rains. If they shall be propitious, the spring crops in Behar and Bengal will not be so deficient as we now fear that they may be. There will be good supplies of food obtainable from the North-Western Provinces. If these rains shall fail, then the spring harvest in Behar must be extremely deficient, and the surplus food obtainable from the North-Western Provinces would be much less than what we now hope for.

9. A month must yet elapse before the result of the winter rains can be known. By the beginning of January we shall see whether the benefit of those rains is to be vouchsafed to the country or not. If it be not, there will be urgent need of measures for averting or mitigating the severe and protracted distress which would otherwise be certain to occur; and the Government of India is preparing for the due and timely adoption of such measures. Provision has been already made for the distress which is to be apprehended, even though the winter rains should not fail.

10. We believe that the foresight and energy of the Government of Bengal will be found worthy of your Grace's approval, and that the local officers in the tracts affected are fully alive to the requirements of their position. The Government of India will, in consultation with the local Government, anxiously anticipate the eventualities of the scarcity and distress, and will be prepared to give immediate authorization to whatever measure may be found necessary. Meanwhile the provincial authorities have been directed to act on their own authority whenever and wherever the need of such action may be manifest.

11. An estimate has been received from the Lieutenant-Governor to the effect that grain should be placed by Government within the reach of the distressed districts by the end of January enough to provide food for 5 per cent. of a population of 25 millions for three months commencing from 1st February; it being assumed from experience of past occasions and from general considerations that this proportion may, despite the operation of trade, come on the hands of Government for employment on public works or for relief. We are in communication with the Lieutenant-Governor as to the best means of securing the due amount of such provision, and we have assured His Honor of our cordial support. The Lieutenant-Governor, however, adds that the data for such an estimate are necessarily defective. And we bear in mind that possibly the proportion of the population may prove greater than that taken in the above estimate.

12. The provision first made under orders of the Governor General amounts to 80,000 tons of grain from beyond sea to Bengal, of which we know already that 69,000 tons are in due train for arrival. The quantity already ordered or intended to be ordered in India by the local Government amounts to 38,000 tons, or 1,034,444 maunds. These quantities amount to 80,000 plus 38,000, or 118,000 tons in the aggregate, which might sustain 5 per cent. of the population of the districts affected for a longer period than three months; or might sustain more than 5 per cent. for three months.

13. Whatever additional provision may be deemed necessary will receive our immediate attention; and our constant thought is given to the calculation of the full extent of the liability which may devolve on the Government in event of the worst anticipations of the scarcity being unhappily realized.

14. The immediate question, however, respecting the provision required by the Lieutenant-Governor during January next, as just described, relates to the timely arrival of a sufficient portion of the total supplies ordered. In this respect we are concerting plans with the Lieutenant-Governor. The ten thousand tons as first ordered by the Governor General from Burma and Madras are arriving in due course, and will certainly be in time. We are arranging with the Chief Commissioner of Burma for the despatch to Bengal of as much more grain as he can obtain at a reasonable cost before the end of December in the Burma markets. Out of the 600,000 maunds or 22,000 tons already purchased by the Government of Bengal, five-sixths will arrive during January. And such quantities as may be purchased in the North-Western Provinces can also arrive during that month.

15. The Government of the North-Western Provinces has, at the request of the Governor General, nominated an officer of standing and experience to assist the Bengal authorities in negociating purchases of grain in those (the North-Western) Provinces. Some doubt having arisen (as noted in the special narrative) as to the functions of that officer, we are giving such instructions as will obviate any difficulty, as we are anxious that the purchases should be made within the time desired by the Government of Bengal.

16. A complete and effective staff of executive officers is being collected from other parts of India for the prosecution of the works on the Northern Bengal State Railway, which operations are now being actively commenced. Similarly, the staff on the Soane Canal works has been augmented and strengthened. The officers for executing the Gandak embankment scheme are arriving at their stations. We hope soon to learn that very large numbers of labourers are being usefully and profitably employed on these several imperial public works.

17. The early commencement of local relief works in the several districts has been ordered. Some labourers have already offered themselves, but we have not yet heard of large numbers having come forward.

18. We have made it clear to the Bengal authorities that the supplies of grain purchased by the State are to be for the payment of labour employed on public works, imperial or local. If hereafter any portion of those supplies shall be handed over to Committees for Relief, the Public Works Department will receive credit for the value.

19. We are taking steps in our account department to ensure that the cost of these supplies shall be properly distributed between the imperial and local heads of expenditure.

20. We have communicated with the authorities of the Guaranteed Railway Companies in the Bengal Presidency, in order to satisfy ourselves that they will be able to convey the requisite quantities of grain both for the trade and for Government, and their resources in respect to rolling stock are found to be very considerable.

21. The effects of the orders issued by the Governor General for reducing the rates for carriage of edible grains to the affected districts, on the East Indian, the Eastern Bengal, the Punjab and Delhi, the Oudh and Rohilcund lines and a portion of the Great Indian Peninsula line in the Central Provinces—are, we are assured, producing, and are likely still further to produce, excellent effect.

22. There is reason to fear that while the transport of grain by rail, and by river, may prove comparatively easy, the transport inland by country carriage may prove difficult. The local officers appear to consider the country carriage to be sufficient for the present. The attention of the Government of Bengal has been directed to this important subject; and special arrangements have been made for the conveyance of grain for the public works. The Governor General has had under his consideration the possibility of utilizing the agency of the Commissariat Department for organizing either camel or bullock trains for the carriage of grain for the public works during those months when pressure is most likely to be felt. We are prosecuting inquiries with this object.

23. The orders given by the Governor General for advances being allowed to landlords and others for purchase of grain for distribution at fair prices, under certain conditions, are already beginning to produce good results.

24. We regret to find that the terms offered by the Chief Commissioner of Burma for the transport of emigrants from Bengal to Burma are deemed so insufficient. We have just received a reference on the subject from the Lieutenant-Governor to which our immediate consideration will be given.

25. We understand that the Local Legislature of Bengal is considering the possibility of further facilitating emigration from Bengal to Assam. We are not at present able to say more upon this point.

26. After consulting the Lieutenant-Governor we consider that the time has not quite arrived for forming a Central Relief Committee in Calcutta. We shall be ready to form such a committee immediately on occasion arising.

27. Our notice having been attracted to a letter addressed by the British Indian Association to the Government of Bengal, comprising an estimate of the consequences of the scarcity more unfavourable than that as yet formed by us, we have asked the Association for such facts and data as they may be able to adduce in support of their view, as we desire that no effort should be spared in order to form the best anticipation possible regarding the difficulties which may lie before us.

We have the honor to be,
My Lord Duke,
Your Grace's most obedient and humble Servants,
(Signed) R. TEMPLE.
" B. H. ELLIS.
" A. HOBHOUSE.

FOURTH SPECIAL NARRATIVE of the DROUGHT of 1873, from 29th November to 5th December 1873.

(1.) The prospects of the late rice crop have not perceptibly changed since the date of last Narrative. In the districts previously described as distressed districts there is no improvement; in other districts where the harvest has commenced the actual outturn has been found to be rather better than was anticipated. This is the case in the Burdwan Division. So in Dacca, Furreedpore, Pubna, and Tipperah the outturn is somewhat better than the local officers estimated, though not perhaps better than the forecast given in the Narrative for the week ending November 21st, Appendix B. The prospect of the spring crop is perhaps, on the whole, rather better this week. In the Behar divisions the area sown down is not so much less than usual as was at one time stated; sowing is said to be still going on in places; the crop has, contrary to expectation, germinated fairly well for the most part; what is above ground is looking healthy; and though the cloudy weather has brought insects, which are reported to be doing damage, with rain a fair outturn may be looked for. In Bengal no great improvement in cold weather crops can be reported. It is perhaps satisfactory that the prospect is not worse than it was a week ago. But in Bengal, as has been before remarked, the spring crop is not a very important item in the food-supply of the people. The weekly returns of rainfall, weather, state and prospects of the crops up to November 29th are herewith enclosed (Enclosure 1).

(2.) Cloud has been the chief characteristic of the weather since last Narrative. On one or two days very slight showers fell, but so slight as to be inappreciable. The Meteorological Reporter says: "The weather remains cloudy and promises "rain, but as yet none has fallen in Calcutta beyond 0·13 inch on the 28th and "29th November. The barometer fluctuates but little, and the mean pressure is "about the average of this time of year. The winds remain light and easterly "below, while sheets of cloud drift up from the south-west. There is still no "sign of the land wind from the north-west, the regular wind of the season." Since this was written there has, however, come on a strong and cold north wind. Cloud without rain is by no means conducive to the advantage of the agriculturist at this season. It breeds insects and blight in both the late rice and spring crops. It will be observed from the weather and rainfall returns enclosed herewith that the very slight rain referred to by the Meteorological Reporter was confined to a few places, and was always so small as to have no appreciable effect.

(3.) Although the new rice is now beginning to come into market, prices have not fallen, either greatly or generally, since last week. They cannot now be said to be lower than they were at the same time in 1865. In the distressed districts they are, if anything, rather higher; in other districts they are, on the whole, neither higher nor lower. The Calcutta market is undoubtedly easier than it was last week; the commonest sort of rice which was quoted last week at Rs. 3-6 to Rs. 3-9 being now obtainable at Rs. 3 to Rs. 3-8; but this may perhaps be due in some degree to the withdrawal of Government from the market. The weekly return of prices-current of food-grains is enclosed herewith (Enclosure 2). A note on the movement of food-grains during the week is submitted in Appendix A.

(4.) In paragraph 4 of the last Narrative reference was made to a correspondence with the Government of India, in which the Lieutenant-Governor had urged the necessity of pressing forward at once the importation of food. In reply the Government of India, while considering the supply of food provided to be sufficient for the moment, requested that an estimate of the probable quantity of grain required for local purposes, as duly authorised, might be submitted, and accordingly, in letter No. 46 PS, dated December 2nd, the Lieutenant-Governor has laid before the Government of India a statement of the grain that has been bought or ordered; of the amount he still hopes to secure before the end of January; and of the amount he would ask the Government of India to procure from beyond the sea so as to be delivered before the same date. This preliminary statement of our immediate requirements shows that in Sir George Campbell's opinion we ought to have 18,75,000 maunds* of Government grain in Bengal before the end of January next; that with that amount me may hope to feed for the first three months the people likely to come on our relief works or into our relief houses; that before the end of January, and before the proposed supply shall have been exhausted, we shall be able to tell what is the promise of the spring crops, and how far the chances are increased or diminished that we shall have to combat a severe famine over a large area. Copies of this correspondence are annexed in Appendix B. * Page 76.

Meanwhile, since the despatch of last Narrative, Sir George Campbell has bought no more grain in Calcutta in addition to the 6,00,000 maunds therein stated to have been bought or ordered. As then explained, the state of the Calcutta market is so delicate, that any Government operations thereon paralyse private trade. Barely 40,000† maunds more have been ordered by local officers. The Lieutenant-Governor is hoping to arrange for the purchase of some 4,00,000 maunds additional. He would especially like to obtain some of the cheaper grains (especially jowaree) which have just come into the market from the North-Western Provinces. But the arrangement is not yet concluded; there is some doubt about the procedure through which this Government is, according to the orders of His Excellency the Viceroy, bound to operate in making purchases in the North-Western Provinces, and the officer nominated by that Government has not felt able to execute the orders of the officers of this Government in the form in which they were put.

The Government grain which has reached Calcutta up to date has been pushed forward to railway and river-side stations in the distressed districts. Up to the evening of Thursday (the 4th December) 38,186 maunds of Burmah rice, and 84,134 maunds of Indian rice have been despatched to the interior, as shown in Appendix C. The S.S. *Dacca*, with 9,000 bags of rice from Burmah, is now in the river. About 84,000 maunds of the Indian rice bought in Calcutta is either under delivery or else is stored in Calcutta warehouses as a reserve for despatch to districts whence emergent indents may be forthcoming. The first instalments of the Orissa rice bought by the Government of Bengal have arrived: three native sloops, carrying about 5,000 maunds of Balasore grain, have come into the Hooghly, and four more sloops have left Orissa. The Chittagong rice bought by the Commissioner of Patna has come into Calcutta, and is being despatched up the East Indian Railway. The first despatch of barley and other grains bought by the Commissioner of Patna from the North-Western Provinces has arrived at railway stations in Behar. Some of the grain ordered by the Court of Wards for its works has already reached Durbangah, while much more is on its way to Durbangah and Hutwa, large estates in the districts of Tirhoot and Sarun.

(5.) The work of transporting the grain into the interior from the railway and river-side stations has already begun, and the Lieutenant-Governor has much pressed on his officers that this should be carried out without delay. Places for storage have been selected, and warehouses are being built on the Soane Canal works, at two places on the Gunduck Embankment, and in most of the distressed districts of the Bhaugulpore and Rajshahye divisions. Though the sites for storehouses (golahs) have for the most part been selected, still no new storehouses are actuallly yet finished,* but several have been rented. Some stores will be filled before others, and so there would be no object in submitting to the Government of India a bare list of places which have been selected for storehouses until proceedings have got a little further.

---

* About 70,000 tons.

† 20,000 maunds are under despatch from Delhi to the Bhaugulpore Division, and the rest is being brought from Eastern Bengal by the Commissioner of Rajshahye.

For the Patna Division the Commissioner has as yet only indicated the works on which he would establish store-houses. He has indicated also the routes by which grain is to be taken to each tract, and he has actually despatched grain by boats and by carts to three different tracts where he expects distress to occur soonest. The Commissioner of Patna (Mr. Bayley) is at the time of writing travelling from district to district of North Behar, and is arranging the storage places and means of transport with the district officers. The Commissioner of Bhaugulpore has gone further, and has submitted maps showing for each district the relief works to be undertaken in the first instance, those to be held in reserve, the sites for storehouses and probable relief centres in each district; and a subsequent report has explained that to begin with grain will be despatched to and stored in the more important store-houses near which relief works are likely to be soonest wanted. The Commissioner of Bhaugulpore has already sent several thousand maunds of grain across the Ganges from the railway, and has despatched the whole on carts to places in the north of Bhaugulpore and Purneah. He has also despatched smaller quantities on carts from the Luckiserai station to places in the poorer tracts to the south-west of Monghyr.

From the Rajshahye Division we have very complete reports regarding the sites chosen for storage of grain on the Northern Bengal Railway works, on feeder roads, and on the North Ganges emigration roads. In Appendix D. is given a list of these storage places, with the amounts to be stored at each, and the routes selected for reaching the stores. The Commissioner (Mr. Molony) reports that if distress deepens, the number of store-houses may have to be increased, and the number of maunds to be stored must be larger; he notes also that he will have to select some storage places in Rungpore; but for the present the Relief Commissioner and the district officers have in the Rajshahye Division to work up to the lines laid down by Mr. Molony and approved by the Lieutenant-Governor.

(6.) In connection with the Burmah rice a serious practical difficulty has arisen from the fact that all Burmah rice is packed in bags containing over two hundred weight. The coolies who unload the steamers and load the railway trucks, as well the coolies at Goalundo and Kooshtea, have found great difficulty in loading and unloading these bags. The local officers have represented that transhipment and transport of these heavy bags into small carts and small boats in the interior will be very difficult. When the first consignment of large bags came, the Lieutenant-Governor represented that they could not be carried on pack bullocks. As it appears that smaller bags cannot be had in Burmah, the Rangoon authorities have been asked, through the Government of India, to pack only two maunds in each bag, however big. Meanwhile the Lieutenant-Governor is having one maund bags made at all the jail factories for the purpose of packing any rice that may have to be re-bagged.

Over 5,000 bags (about 14,000 maunds) of Burmah rice, which came by the S.S. *Arabia*, held what is called "cargo rice," that is, about one grain out of every five has the husk on it, while the remaining four are almost fully husked. As the Lieutenant-Governor wishes to send rice into the interior as quickly as possible, the consignment has been despatched to the works in Behar. Meanwhile a few bags have been kept, and experiment is being made as to the best way of preparing the rice for consumption. It will probably be found that coolies and their families will be able to prepare the cargo rice for food easily enough.

(7.) At paragraph 6 of the second Narrative and at paragraph 6 of the third Narrative mention was made of the fortnightly reports which officers of distressed districts are to submit to Government; and in Appendix D. to the second Narrative were given the heads on which such reports were to touch. The reports from six districts (bringing the history of affairs down to the 1st December) have been received; one of the reports (an excellent one from Bhaugulpore) has been printed* in time to go with the present Narrative, and is sent as a specimen. This report shows very fully what is being done in this and other districts; copies of other similar reports will be submitted with next week's Narrative. Meanwhile the Lieutenant-Governor is glad to acknowledge that the local officers are actively and intelligently giving effect to the orders of Government. The district reports just received show that the Civil Officers are most carefully watching the condition of the people; that they are preparing, or have prepared relief works in the worst tracts; that they have prepared some store-houses for Government grain, and are preparing work; and that they are forwarding to the interior all the Government grain which has yet reached them without any hitch or hindrance so far.

---

* The great domed granary built at Patna after the famine of the last century, occasional storehouses at P.W. stations, at excise distilleries, at studs, at the *ganja* storehouses in Rajshahye, and other Government establishments are being used wherever they exist; and at places like the Patna river-side station storage room has been rented, but for the most part temporary storage houses have to be built, and are being built.

* Enclosure 3.

(8.) The letter from the British Indian Association, to which reference was made in paragraph 10 of the last Narrative, contained a statement that the Government would have upon its hands the task of feeding 60 millions of people. At the request of the Government of India the Association has been asked to give the materials on which its statement is based.

The offer of the Chief Commissioner of British Burmah to contribute Rs. 5 a head towards the expenses of conveying emigrants to that province has been considered by the Lieutenant-Governor. It is found that it would cost much more than Rs. 5 to convey each emigrant from the distressed districts only as far as Calcutta, and the Government of India have been informed that in the opinion of the Lieutenant-Governor the proposal made by the Chief Commissioner is wholly inadequate. It has been proposed to put on a Government vessel to ply between Calcutta and Rangoon, taking down emigrants, if they should offer, and returning with rice: Letter No. 3649, dated 26th November, to the Secretary to the Government of India, in the Financial Department, herewith enclosed,* refers to this subject.

* Page 77.

(9.) Of the Soane Canal Works, we learn that the establishment for the new branches have now nearly all joined, the land is being taken up, and the storehouses for grain have been commenced. Upwards of 8,300 men are at work on the head-works at Dehree, and 5,400 on the Arrah Canal. From the western main canal 463 villages, aggregating 261 square miles, have received water; it is estimated that the area actually irrigated is 104,000 acres. It was before reported that water was let into the eastern main canal on the 15th November. Entering in a volume of 300 cubic feet a second, it speedily filled the eight miles of canal already excavated, and passing from the canal into an old watercourse, twelve miles in length, which has served as an excellent distributary, it eventfully flows off into the Poonpoon river. It was admitted into the canal too late to be of much use for irrigation purposes at the upper end, but there is some prospect of the water thrown into the Poonpoon coming in useful for the cold weather crops.

Of the Gunduck Embankment scheme, it is reported that most of the officers detailed for the work have been sent up to commence operations.

Of the Kana Nuddee in the Hooghly district, we learn that three-fourths of the work has already been completed. Some 1,395 men have been daily employed on this work during the last fortnight, and it is expected that water will pass through the cutting on the 10th instant. The opening of this channel will, the Collector anticipates, save about 100,000 acres of root and spring crops.

Of the Northern Bengal Railway, Major Lindsay reports that his stores are on the way up by rail to Rajmehal, and that he is organising a bullock train for their conveyance into the interior. He says that the earthwork on this line will probably give employment to 100,000 people, if that number were to come on the works.

(10.) The reports which have reached Government regarding the actual commencement of relief works, and regarding the number of laborers on these works, are not complete; but neither on the canal works, nor on the local works in the south of the Patna Division, has there been as yet any large influx of laborers belonging to agricultural classes. The Commissioner, who was on tour in North Behar, wrote, under date the 1st December, that the works in Tirhoot were attracting none but the usual laboring classes. It has been stated in demi-official letters that distress is already apparent in Chumparun and Sarun; but until particulars are received, the Lieutenant-Governor is unable to say what form the distress has taken. The Manager of the Hutwa estate has to-day brought word that 15,000 people (men, women, and children) are employed on the district and local works in Sarun. About one-third of these are employed on the Hutwa estate at rates of wages averaging 1¼ anna per diem per head; but a considerable proportion are people who would be employed on district works at this season in ordinary years. From all sides it is reported that harvesting of what rice there may be, as well as rubbee sowings, is going on, and that in consequence labor does not largely come to the works. From the Bhaugulpore Division official accounts have not yet been received of the number of persons on works in the several districts; but the Bhaugulpore fortnightly report speaks of 1,000 work people being employed on one set of roads in the north of the district; and a demi-official letter speaks of about 7,000 people being on the road works in Monghyr, south of the Ganges alone. In the Rajshahye Division work-people are said to be coming to roads in the Dinagepore district, in the north of Rajshahye and in Maldah, and it is stated that the ryots of the highland known as the Burrind in Rajshahye are coming on the works; but as yet the information on this point is imperfect.

(11.) During the week under report the Lieutenant-Governor has issued, in the Public Works Department, full instructions for the guidance of officers engaged in relief works. Copy of that circular is appended. (See Appendix E.)

(12.) It has been recorded in a former Narrative that the Government had entered into contracts for the supply of rice from Orissa, the price agreed upon being for delivery in Calcutta. The British India Steam Navigation Company having largely raised their rates of freight, the contractors have represented that they will have difficulty in fulfilling their engagements, and have suggested that Government should put a steamer on the line to take freight at the old rates. The Lieutenant-Governor has represented the matter to the Company's Agents in Calcutta, and, if necessary, he will address the Government of India more specifically upon the subject.

(13.) The Commissioner of Bhaugulpore asked for a further immediate provision of 1,50,000 maunds of grain in addition to the 1,50,000 maunds already allowed to him; the Lieutenant-Governor declined for the present to grant a further credit until he has received more precise information regarding the distribution of the rice already arranged for. The same Commissioner has been recommended to lay out some portion of the money allotted to him in the purchase of grain in the Sonthal Pergunnahs or other places whence export of that grain is said to be now going on.

The division of Burdwan has not been fully classed as a distressed tract. At the request of the Commissioner sanction has now been given to the commencement of relief works in the districts of Burdwan, Beerbhoom, and Bancoorah. In Midnapore, however, the Lieutenant-Governor has thought it unnecessary to sanction at present the grants applied for, there being a good crop in the greater part of that district. The Kana Nuddee excavation in Hooghly was sanctioned more for the sake of its immediate use for irrigation purposes than as a relief work.

(14.) The planters of Northern Behar are coming forward in numbers for advances for purchase of grain under paragraph 4, clause (a) of Circular No. 80. In the Chumparun district it is understood that a committee has been formed by the planters and the Superintendent of the Rajah of Bettiah's estate; and subject to the sanction of principals, a large sum has been subscribed for the purpose of importing grain and selling it at cost price.

(15.) From the Rajshahye Division it is reported that Baboo Luchmiput Sing, Bahadoor, a wealthy Marwari banker and landholder, has suspended his rents, made arrangements for storing grain, and otherwise provided against the approaching scarcity. The Lieutenant-Governor has published the account of this gentleman's liberal proceedings in the *Gazette*, with the expression of his strong approval.

By order of the Lieutenant-Governor of Bengal,

H. LUTTMAN-JOHNSON,
Additional Under-Secretary.

Calcutta,
The 5th December 1873.

APPENDIX B. to foregoing Narrative.

No. 3402, dated Fort William, the 29th November 1873.

From R. B. CHAPMAN, Esq., SECRETARY to the GOVERNMENT of INDIA, FINANCIAL DEPARTMENT, to the SECRETARY to the GOVERNMENT of BENGAL, STATISTICAL DEPARTMENT.

I AM directed by the Honorable the President in Council to acknowledge receipt of your No. 28PS of the 22nd instant,* regarding the reasons for anticipating a block or accumulation of grain for the distressed districts awaiting transport.

2. His Honor the Lieutenant-Governor may rest assured that the importance of avoiding such block or accumulation is fully recognised by the Government of India.

3. Information has been received to the effect that the grain purchased by the Government of India in ports beyond the limits of Bengal is being shipped with all practicable expedition. The Government of Bengal has been authorized to expedite, in such manner as it may deem best, the despatch of such surplies up-country as soon as they shall arrive in Calcutta; reporting thereafter as soon as possible the plan of local distribution for the information of the Government of India. A preliminary report from the local Government on this subject has been already received and will be separately acknowledged.

4. The supply thus provided is as much as the Government of India deems necessary to be provided at this moment for the principal Public Works in the distressed districts, according to present estimates, and subject to such modification of estimates as the course of events may induce us to make.

5. If the Government of Bengal should find difficulty in obtaining within its own provinces supplies sufficient for the local works, the Government of India would be prepared to assist in obtaining additional supplies from other places. But from the Special Narrative for the week ending on the 28th November, it would appear that the Lieutenant-Governor has arranged for the purchase of 600,000 maunds in all, equal to 22,040 tons; of which about 120,000 maunds are to come from the North-Western Provinces, and the rest from Bengal and Orissa. It would appear that His Honor does not contemplate further purchases at present. And it may apparently be hoped that out of the above total of 600,000 maunds, about two-thirds will reach the central station of the distressed districts before the beginning of January.

6. The Government of India would however desire to receive an estimate of the probable quantity of grain required for the local purposes as duly authorized, and of the amounts to be obtained from Bengal and from other provinces respectively. Such estimate would, in the first instance, be framed upon the best data now available, and would be subject to modification hereafter, as events may develop themselves.

7. It is satisfactory to observe that the Lieutenant-Governor has been able to effect the purchases through firms of good standing, which procedure is, in the opinion of the Government of India, preferable to the employment of an individual agent, which latter course would be open to objection.

8. I am to acknowledge with thanks the useful suggestions conveyed in the 6th paragraph of the letter under acknowledgment regarding freight between the Burmese ports and Calcutta. The matter has received and is receiving the attention of the Government of India, in communication with the Chief Commissioner of British Burmah.

9. So far as concerns the transport by rail to the stations in the distressed districts, the Government of India trusts that there will be no difficulty. The apprehensions of the Government of India are directed towards the prospect of despatching the grain from the railway stations into the interior of the country. This important subject will doubtless engage the constant attention of the local Government.

* See page 66.

No. 46PS, dated Calcutta, the 2nd December 1873.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, STATISTICAL DEPARTMENT, to the SECRETARY to the GOVERNMENT of INDIA, FINANCIAL DEPARTMENT.

WITH reference to paragraphs 5 and 6 of your letter, No. 3402, dated 29th November 1873, I am directed to submit a preliminary estimate of the Government grain which the Lieutenant-Governor would wish to have available for the distressed districts before the end of January next. Sir George Campbell considers the materials for forming such an estimate of our probable requirements are very uncertain and insufficient. Still, as he understands that the Government of India desires the local Government to submit such an estimate, he directs me to report as follows.

2. As a preliminary arrangement the Lieutenant-Governor would wish to have in the distressed districts or in depôt ready for them before the end of January 1874, sufficient Government grain to supply five per cent. of the inhabitants of those districts for a period of three months. These districts contain about 25 millions of people; one-twentieth of this

population (at the rate of two-thirds of a seer per head per day) would consume 1,875,000 maunds of grain in the three months:—

	Maunds.	Maunds.
The Government of India have already ordered from beyond sea, deliverable in January, 10,000 tons, or say		270,000
The Government of Bengal hopes to have by the end of January:—		
From Calcutta and the Eastern Districts	400,000	
„ Orissa	200,000	
„ the North-West Provinces	350,000	
		950,000
Balance to be provided		655,000
Total		1875,000

The Lieutenant-Governor would recommend that this requirement be met by the Government of India's providing this balance by ordering a further immediate despatch of 25,000 tons of grain from beyond the sea. All this further consignment should be delivered in Calcutta, as early as possible, and no part of it later than the end of January, and the Lieutenant-Governor would arrange for its despatch to the interior as promptly as possible.

3. If all this quantity of grain could be provided, then we should probably be in a condition to prevent starvation, and to alleviate keen distress wherever it might occur up to the end of April 1874, on the supposition that there will be only very severe scarcity and very high prices. By the end of January, and at any rate long before the 1,875,000 maunds were consumed, we should know how the spring crops were turning out, and should have better means of judging how far the scarcity was likely to deepen into a severe famine; and the Government of India should be able to order up from Burmah as much as might be thought necessary of the abundant new crop which the Burmese are said to be expecting.

4. It is hardly too much to say that, if we have a bad famine approaching to the Orissa famine in severity, over very large tracts, we shall after January want more grain that the Government of India could give, or than it would be possible for the local officers to distribute properly throughout the distressed districts. For the present, therefore, the Lieutenant-Governor would not offer any estimate of the Government grain required in Bengal before the 31st January 1874.

5. With reference to paragraph 4 of your letter, No. 3402, dated 29th November, I am to explain that the preliminary estimate now submitted, includes all requirements for imperial and local relief works as well as for relief-houses.

No. 3649.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL STATISTICAL DEPARTMENT, to the SECRETARY to the GOVERNMENT of INDIA in the FINANCIAL DEPARTMENT.

Scarcity and Relief.

SIR, Calcutta, dated 26th November 1873.

WITH reference to your endorsement No. 3264, dated 25th November, on the telegram from the Chief Commissioner of Burmah regarding the number of emigrants he would take, I am to submit copies of the papers marginally noted.

Letter to Landholders Association, Calcutta and Debrooghur, No. 3517, dated the 19th November 1873.

Letter to Chief Commissioner of Burmah, No. 3504, dated the 19th November 1873.

Letter from Commissioner of Patna, with enclosure, No. 7F, dated 21st November.

Letter to Commissioner of Patna, No. 3647, of to-day's date.

2. It will be seen that the Chief Commissioner is ready to contribute only five rupees towards the cost of transporting each able-bodied working man to Burmah. This proposal is, the Lieutenant-Governor thinks, wholly inadequate; the expense would be very much larger, and if British Burmah is to be populated, at least a fair share of the expense should be debited to that province. It seems to the Lieutenant-Governor that if the people who now go to Burmah are to be permanent immigrants, some of them at any rate must take their families. He fears that the cost of each emigrant from the distressed districts down to Calcutta will be at least five rupees a head; and he is inquiring as to the cost of sending emigrants by mail steamer, or on board the Government vessel, the *Cæzarowitch*, which could bring back a return cargo of rice from Rangoon. A further report shall be made as soon as the probable cost of each emigrant to Rangoon is more exactly ascertained. Meanwhile, the Lieutenant-Governor would be glad to know the views of the Government of India upon the subject and whether His Excellency the Viceroy in Council would be willing to incur, in behalf of each emigrant, a charge which may amount to, say, Rs. 20 or 25.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

No. 3517.

From the Officiating Secretary to the Government of Bengal, in the Statistical Department to the Landholders Associations of Calcutta and Debroogurh.

Scarcity and Relief.

Sir,

Calcutta, the 19th November, 1873.

I am directed to invite your attention to the marginal extract from the orders issued by the Government of India regarding the impending scarcity of food in Bengal.

Para. 30. It is to be hoped that, in the populous tracts visited or threatened by distress, unemployed laborers may emigrate to places where food is in comparative plenty, where a special demand exists for their labour, where culturable waste abounds, such as the tea districts, the Doars, the provinces of Assam and of British Burmah. If it be found possible for the Government to facilitate such emigration, directly or indirectly, the Governor-General will be glad to receive any suggestions which the Lieutenant-Governor may be able to make.

2. The Lieutenant-Governor would ask your Association to favour the Government with any suggestions as to the best mode of promoting immigration to the districts during this exceptional season, and as to the terms on which tea planters may be willing to bear part of the cost of importing immigrants and agree to receive laborers. The Lieutenant-Governor's present view is that immigrants, who may be assisted by Government during the present year, should not be expected to enter into an agreement for more than 12 months from the date of their arrival in the tea districts. At the end of that period they should be allowed to look about them, and make up their minds whether they will stay in the tea districts either as tea coolies, or as ryots on the large surplus of culturable lands which exists in those districts.

3. The Lieutenant-Governor is unable to say at what cost Government Agents may be able to march emigrants across to Dhoobree if they come from North Behar, or to send them by railway and steamer if they come from Western Bengal. But he fears that the cost could not be under 15 to 30 or 40 rupees a head according as they go to near or distant districts and he would wish to know whether tea planters would find it worth while to pay one half of the cost of carrying up to a limit of Rs. 10 per head, if they get one year's agreement from each Government emigrant. Further, up to what limit would the planters of each labour district care to take coolies at these terms.

Seebsaugor.
Lukhimpore.
Durrung.
Cachar.
Nowgong.

4. Copies of this letter will be forwarded to the Commissioners of Assam and Dacca, and to the Deputy Commissioners of the five districts above named for expression of opinion. The Deputy Commissioners will be asked to invite a certain number of representative planters in these districts either to meet and discuss the matter, or to communicate respectively their opinions and suggestions to Government in this department. The Lieutenant-Governor does not mention Darjeeling as a tea district to be operated upon under these orders, as the Labor Act does not apply to the Darjeeling district, and that district is well within reach of voluntary emigration.

5. As any course of action that may be adopted must be decided upon by the 15th January at latest, I am to ask that replies to this letter may be furnished by the end of December next.

6. It may be well to mention that the Chief Commissioner of British Burmah has suggested that relief funds might very usefully be expended in sending down emigrants to Burmah, where labour is always much in demand, where families might be put down in agricultural settlements. The Chief Commissioner considers that perhaps twenty or thirty thousand immigrants could be readily absorbed into British Burmah in a single season.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 3,504.

From the Officiating Secretary to the Government of Bengal, in the Statistical Department, to the Secretary to the Chief Commissioner of British Burmah.

Statistical Department.

Sir,

Calcutta, the 19th November 1873.

With reference to the Chief Commissioner's telegram of the 14th current to His Excellency the Viceroy, I am directed to forward copy of a letter which the Lieutenant-Governor has caused to be issued to representatives of the tea planting interest on the subject of promoting emigration from Bengal and Behar during the coming season of distress.

2. I am to enquire whether employers of labor, or any of the Government departments of British Burmah would be disposed to bear a share (up to say Rs. 10 a head) in the cost of conveying emigrants from Bengal to Burmah. I am further to enquire whether able-bodied single men (as suggested in the Honorable Mr. Eden's telegram), or families would be the most acceptable immigrants to Burmah.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 7F, dated Bankipore, the 21st November 1873.

From S. C. BAYLEY, Esq., COMMISSIONER of PATNA, to the SECRETARY to the GOVERNMENT OF BENGAL, STATISTICAL DEPARTMENT.

I HAVE the honor to forward, for the information of Government, the accompanying copy of a letter, No. 230 of the 18th instant, from the Collector and Magistrate of Sarun, reporting that numbers of people who had lately emigrated from his district are returning owing to their inability to pay for the high price of food on the route. The matter is a serious one, but it is too late now to do much to remedy it. As the ordinary season for emigrating is passing by, I have directed that food depots be laid in along the line of route, and be sold to emigrants at cost price. The officers in charge of the works under Mr. Stevens, Executive Engineer, Raj Durbhangah, might be expected to do this. I would urge the speedy issue of the orders contemplated in regard to facilitating emigration to Assam, &c.

No. 230, dated Chuprah, the 18th November 1873.

From J. S. DRUMMOND, Esq., OFFICIATING COLLECTOR and MAGISTRATE of SARUN, to the COMMISSIONER of PATNA.

I HAVE the honor to report that I have been informed that numbers of people who had lately emigrated from this district, intending to proceed to Cooch Behar and Assam, are now returning owing to their inability to pay their expenses in consequence of the high price of food prevailing on the route. I was told by a planter that 300 of such persons had so returned on his own Dehat alone.

2. As it seems very desirable that measures should be taken to facilitate emigration as much as possible, I beg to report the circumstance with a view to such action as the Government may think proper to take in the matter.

No. 3,647.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, in the STATISTICAL DEPARTMENT, to the COMMISSIONER of PATNA.

Scarcity and Relief.

SIR, Calcutta, the 26th November 1873.

WITH reference to the correspondence published in to-day's (26th November) *Calcutta Gazette* regarding the promotion of emigration from the distressed districts. I am directed to enquire whether you and your magistrates could find any considerable number of men, or of families, in your division who would emigrate to British Burmah.

2. The Chief Commissioner of British Burmah has intimated that he can employ six thousand able-bodied men on public works, at Rs. 9 a month, for six months; that he can after that give them land to settle upon, and that he can contribute towards the cost of their transport.

3. The Lieutenant-Governor wishes you to ascertain whether single men or families from Sarun or elsewhere would be likely to accept these terms. They will, you observe, be bound to work on public works for six months only, and then will have open to them one of the dearest labour makets of British India, where the wages of an ordinary coolie are generally Rs. 10 a month and upwards, and where food is in ordinary years very cheap. The Lieutenant-Governor apprehends that even if men and families are willing to go, some organization—something like the coolie sirdar system—would be required for collecting and managing the emigrants; and he would be willing, if you found it necessary, to consider any proposal you might make for allowing any coolie sirdar who produced one hundred emigrants ready to go to Burmah eight annas per emigrant. Intending emigrants would have to be examined by the Civil Surgeon, so that very weakly men or men suffering from disease should not be sent. One blanket would have to be given to each emigrant.

4. The Lieutenant-Governor has no authority as yet to spend public money on thus promoting emigration to Burmah; and each emigrant will certainly cost a considerable sum to transport. The journey by boat and rail to Calcutta from Sarun and the blanket will be at least five rupees. Meanwhile, and until the orders of the Government of India can be received, I am to ask you to inquire and report how far the people are willing to emigrate to Burmah; what organization and what expense you would recommend in Behar to promote such emigration.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

W. E. B.

DEPARTMENT OF AGRICULTURE, REVENUE, AND COMMERCE, No. 2 C.

To His Grace the Duke of Argyll, &c., &c., India Office.

Lucknow,
My Lord Duke, 6th December 1873.

Enclosure A.

I have the honour to enclose, for Your Grace's information, a copy of the reply which I have made to an address which was presented to me by the Municipality of Agra on the 24th ultimo, as it was made after careful consideration and expresses the views of the Government of India upon the scarcity in Bengal.

Your Grace will observe that the statement of the position of affairs was taken from the Circular addressed by the Lieutenant-Governor of Bengal to the local officers of that Province on the 17th November.

Enclosure B., given on p. 63.

Having, with the assistance of Sir Richard Temple, carefully examined the reports of the scarcity of the years 1865 and 1866, we came to the conclusion that the circumstances of the present year were, on the whole, not worse than those of the same period in the year 1865, and I thought it desirable to mention this in order to give to the public the best information in our power as to the probable extent of the scarcity. It has been a satisfaction to me to find subsequently that the Lieutenant Governor of Bengal has arrived (as Your Grace will observe from the enclosed copy of a Note written by His Honour) at the same conclusion after an independent examination of the facts of 1865 and of the prospects of this year.

The Lieutenant Governor mentioned in his Note his desire that the importations of rice for the relief works should be pressed on as much as possible. Steps have been taken to arrange this, and I understand from Sir Richard Temple that supplies are rapidly being pushed forward to the districts affected by the scarcity. The importance of being somewhat in advance of the demand upon us, in order to prevent a future block of the means of conveyance is fully recognized by the Government.

In reply to the address, I recapitulated the measures taken by the Government, which were explained in the Resolution of the Government of India of the 7th November, and further in the excellent Circular issued by the Lieutenant Governor on the 17th.

All the measures to provide against the effects of the drought which the Lieutenant Governor has recommended have been adopted, with the exception of the prohibition of the export of food grain.

The reports that I have received of the out-turn of the last crop, and the prospects of the spring crops in the North-Western Provinces, with the exception of the Benares Division, are very satisfactory, and all the information that I have been able to collect since I left Agra confirms me in the belief that the opinion of the Government of India, that the deficiency of the food supply of the districts affected by the drought will be met from the resources of India, is correct.

The latest reports from Bengal will have been forwarded to Your Grace by Sir Richard Temple from Calcutta. He informs me that, in the opinion of the Lieutenant Governor, it is not advisable to establish a Relief Committee in Calcutta before the middle of December.

I have the honour to be,
My Lord Duke,
Your Grace's most obedient, humble Servant,
NORTHBROOK.

Enclosure A. to foregoing Despatch.

The following Address was presented by the Municipality of Agra to His Excellency the Viceroy, at the Thomason Hospital, Agra, on the 24th instant:—

May it please your Excellency,—the Municipal Commissioners of Agra desire to express, on the part of the Municipality, their grateful thanks to your Excellency for the honour you have conferred upon the community by visiting the ancient city of Agra.

The advent of your Excellency at this time has been the source of extreme gratification to all classes of the people, and, although it was with regret that the intimation of the postponement of the great Durbar was at first received, the philanthropic motives which guided your Excellency in the adoption of this measure have now been fully appreciated.

The Municipality have learnt with extreme regret the imminent prospects of great distress, and even famine, in certain district of the Lower Provinces of Bengal, and they beg to express their anxious desire to do what in them lies in aid of any measures of amelioration and relief which may be proposed by Government.

They would also desire to convey their special thanks to your Excellency for the great interest you have shown in the welfare of the Native community by your visits to the several educational and benevolent institutions in the city and station, and for your liberal contributions to the funds of such of them as stood in need of this assistance.

In bidding your Excellency a grateful farewell, the Municipality would venture to express the hope that at no distant period they may again be honoured by the presence of your Excellency in the ancient and renowned city of Agra.

His Excellency the Viceroy replied as follows:—

I am much gratified by your loyal address, and I shall take care to inform Her Majesty the Queen of the distinguished manner in which you have welcomed me to Agra as her representative, particularly by the magnificent illumination of the memorial of old times which adorns the neighbourhood of this city.

I regret that it was necessary to postpone the Durbar which I had intended to hold, for I fear that the postponement has occasioned some disappointment.

I have, however, been able to receive many of the Princes and Chiefs of Rajpootana and Central India, as well as the Rajahs and other distinguished subjects of the Queen in these provinces, who have most of them either themselves shown their loyalty to Her Majesty by services in times of danger, or whose fathers or relatives have rendered such services.

The reason for which I decided to postpone the Durbar is, that about a month ago, after all the arrangements had been made, I received information of a serious failure of the crops in the Province of Bengal, as distress threatened a large population I thought that it would be inopportune to hold Durbars either here or at Lucknow. I am glad to learn that my motives are understood by those who expected to attend the Durbar.

The Municipality of Agra have naturally expressed their deep interest in the welfare of their fellow-countrymen in Bengal. The city of Agra is a great centre of trade, and desiring to give every publicity to the acts and opinions of the Government, I gladly take this opportunity of informing you what we consider the extent of the scarcity is likely to be, and what measures have been taken to alleviate the distress which must follow from a serious failure of the harvest.

The position of affairs is as follows. The winter rice crop has seriously failed in the whole of Behar, and in the Division of Rajshahye. Moreover, in some parts of these districts the want of rain has interfered with the sowings for the rubbee crop. In other districts of Bengal there has been a partial failure of the rice crop; but the deficiency of the food supply is expected to be confined to Behar and the Division of Rajshahye.

The Government is fully impressed with the grave responsibility which rests upon them, and we have taken, without delay or hesitation, measures in order to anticipate distress. Our aim and object is to prevent, so far as possible, the loss of the lives of any of Her Majesty's subjects.

We have complete and reliable information of the present state of affairs, and in framing our measures we have had the advantage of the experience of former years in which the crops have failed in the same parts of India. The scarcity of the year 1865 was not confined to Orissa; the excellent report of Mr. F. Cockerell shows that there was a great failure of the rice crop in Behar and Rajshahye in that year. The whole population affected by the scarcity in the year 1865 was, in number, about the same as that which will probably be affected by the scarcity this year, namely, about 24 millions. The scarcity of 1865 came after a failure of the crops in 1864, whereas in this year this scarcity has come after several years of good crops.

The price of rice in Behar and Rajshahye, in the months of October and November 1865, was higher than it has been in the same months of this year. On the whole, as far as our present knowledge goes, it may reasonably be assumed that the scarcity of this year will not exceed that which took place in the years 1865 and 1866; indeed, it may be less, if the rains of the winter and of the next summer should be propitious.

The measures that we have taken have been announced in the Resolutions of Government.

The persons who suffer first in a time of scarcity are those who labour for hire. For this class and for any others who may require to be employed, the Government will provide work not only on large public works, but on smaller works as much as possible in the neighbourhood of their homes.

The people of India are distinguished for their liberality in maintaining their relations who are unable to work, and also by their charity to those who are in distress; but in times of scarcity they cannot be expected to meet the larger demands which will be made upon their liberality, and persons unable to work will often be without the means of subsistence.

Wherever such distress may appear, the Government will, with the help of the influential inhabitants of each locality, give the requisite assistance.

The time has not yet come for distributing relief of this kind, but every preparation has been made for commencing the distribution whenever and wherever it may be required.

It is seldom that misfortune is altogether unaccompanied by alleviating circumstances. Distress in any part of Her Majesty's broad dominions never occurs without proving how closely the British Empire is bound together. No more striking example could be produced than the present occasion. As soon as the telegraph conveyed the news to England of the failure of the harvest in Bengal, we are told that the city of London hastened to show sympathy with the people of Bengal by proffering substantial aid for the relief of the distress. This sympathy and generosity will be gratefully appreciated throughout the whole of British India. I am sure that you have rightly interpreted the feelings of the people of India in being the first to tender assistance to your fellow-countrymen in Bengal, if the necessity should arise.

The most severe distress in former years has been felt in places remote from the common highways of trade. In order to provide for such places, we have calculated, with the aid of the local officers, the probable number of persons who may be brought on the hands of Government in order to measure the extent of our liability, and we have purchased and ordered large quantities of grain, which will be sent to those parts of the country where there is likely to be a deficiency in the supply of grain for those persons.

All the practical suggestions, without any exception, which were made by the present Lieutenant-Governor of Bengal and the other officers, who inquired into and reported on the scarcity of 1865, have been followed by the Government, and we have also derived great advantage from experiences gained from the North-Western Provinces in the year 1868 and 1869, where, under the wise administration of Sir William Muir, a period of great scarcity was successfully dealt with.

Having made the extensive provisions which I have described, the Government have no reason to doubt that the food which may be required for the supply of the general population who are able to take care of themselves will be met from other parts of India. The district of Backergunge, in Bengal, where a large quantity of rice is produced beyond what is required for the consumption of its population, and the whole division of Orissa, have good crops this year. Burma has one of the largest rice crops ever known. In these North-Western Provinces, with the exception of a small portion to the east, and throughout Madras, Bombay, and the Punjab, the harvests have been excellent.

We believe that, as upon previous occasions, the present deficiency among a population, which does not exceed one eighth of the whole population of the couutry, can be supplied.

I have good reason to know that the trade is very active here and elsewhere. The Government have helped, by lowering the rate of carriage on the railroads, and will help further by organizing means for the transport of grain from the railroad to those parts of the country where supplies may be required.

We are convinced that no better general means can be found for distributing the food supplies of a country at a time of scarcity than the free action of trade.

We have, therefore, no intention of interfering with that freedom, and we have consequently declined to interpose for the purpose of regulating prices, or to take the serious step of prohibiting the export of food grains. The Customs returns from Calcutta show that the exports of rice have greatly diminished owing to the rise of prices. During the last two months the exports have been only 17,500 tons, while in October and November 1872 they were 46,275 Tons. the quantity exported lately has been inconsiderable in reference to the general amount of available supplies. While, as I have said before, we have no intention of interfering with the freedom of trade, we supplement the action of trade by special measures, if circumstances should arise in which such action is likely by itself to prove inadequate to the necessities of any part of the country.

I have had the advantage of recent personal communication with the Commissioners of the affected districts. They have the full confidence of the Government, and I am satisfied that they will do their duty. All their suggestions have been adopted, and they have received power to act on their own responsibility in case of emergency.

I hope, moreover, before I return to Calcutta, to visit some of the relief works, and again see the officers in charge of the divisions affected by the drought. Such personal communication give me a greater knowledge than I can obtain from written reports.

You will gather from these free observations, on the position of affairs and the measures which we have taken, that although there is good cause for anxiety, there is every reason to believe that the Government and the people will, by the blessing of Providence, be able to cope successfully with the difficulties that lie before us.

Gentlemen, you have mentioned in your address the visits that I have paid here to your different institutions. It has given me great pleasure to take advantge of my visits to various parts of the country in order to see the institutions that exist in different cities, and I think I may fairly congratulate the city of Agra upon the conditions of their institutions. It was especially interesting to me to visit the poor houses in Agra, in which it appears that a considerable amonnt of distress is relieved with kindness and economy. The Government of India, as you are aware, take a great interest in the development of municipal institutions. Although I speak in the presence of Sir William Muir, I cannot refrain from observing that we have viewed the measures taken by His Honour for the development of those institutions with particular approval. It appears that these Provinces are, so to speak, taking the lead in regard to municipal government. It is true that the development of the system must be a work of time, and some failures must be expected to occur at first, but the success already obtained appears to me to promise much for the future. It is of the greatest advantage to have a free expression of opinion from the natives of India who undertake to manage their own municipal affairs. When I say this, it is for the sake of adding that these municipalities of the North-western Provinces, of which yours is one of the principal, must consider that they are on their trial —that they are indeed a sort of model to which the rest of India is looking. I am sure that this consideration will have its due weight with you in inducing you to manage your affairs with wisdom, and to show that local self-government may before long acquire a firm basis in this couuntry.

Gentlemen, I have only to say in conclusion, that my visit to Agra has been a very agreeable one, I feel much indebted to you and to all those who have contributed to render it agreeable, and I wish you heartily farewell.

No. 15 of 1873.

Government of India.

Department of Revenue, Agriculture, and Commerce.

Agriculture and Horticulture.

To His Grace the Right Honorable the Duke of Argyll, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, Calcutta, the 12th December 1873.

We have the honor to transmit the special narrative of the drought in Bengal for the week ending 12th December.

2. There has not been any change of importance in the general situation since the date of our last despatch to Your Grace on this important subject.

3. The weather has been frequently cloudy at Calcutta during the past week. Rain has fallen in the Bay of Bengal extending to the Chittagong coast, where it is reported to have done more harm than good. No rain, however, fell during the week in the interior of Bengal up to the 11th. On the 11th there was rain at Calcutta and in some of the surrounding districts, but being somewhat unseasonable it possibly may do harm in some respects, while doing good in other respects. The rain does not, however, seem to have at all extended to the Province of Behar.

4. On the whole, the hope that the winter rains may be vouchsafed to the country derives some encouragement from the appearances of the weather. The opinion that our prospects from the commencement of 1874 must greatly depend on these rains, is gaining strength more and more.

5. The winter rice harvest is being reaped in Bengal, Behar, and Orissa. The yield, so far as we yet know, is perhaps slightly better than the anticipation. The same remark is applicable to the rising spring crops.

6. There has been some fall in prices of food-grains generally during the week. This is attributed to the incoming produce of the winter harvest, consequently it is expected that the range of prices may continue comparatively moderate for some time. A considerable rise may possibly not occur till nearly the middle of January. The temporary decline of prices may tend to quiet the public mind among the native population. We do not, however, place any reliance on the symptom in respect to the forecast of the consequences of the drought. Experience on previous occasions shows that even on the eve of scarcity a slight accession of supplies may cause prices to fall and maintain them on an apparently moderate scale until the crisis arrives, when they begin rapidly to rise.

7. Our general view, therefore, as to the anticipation of the future and the large measures of precaution which ought to be prepared, as explained in our last despatch, remains unchanged.

8. There is no change in the accounts of the harvest and crops from other parts of India which are fairly good, except that in the eastern part of Oudh, the reports which were previously unfavorable are somewhat worse. We apprehend that if the winter rains should fail, the distress in Behar may extend to the adjoining districts westward of that province.

9. In the North-Western Provinces generally, however, there is still hope of obtaining considerable supplies of food. About 100,000 maunds of grain have been already purchased there on behalf of the Bengal authorities, and 250,000 maunds more are about to be purchased immediately on the same account.

10. We are glad to find that the Government of Bengal has arranged for distributing the Government grain supplies among the various stations in the districts affected, where the various public works, imperial and local, are to be carried on. It is hoped that these supplies will for the most part be ready at their various destinations before the end of January, before the activity of the country traffic commences.

11. The aggregate of these supplies, thus to arrive during January and February, as provisionally arranged on the recommendation of the local Government, amounts to 1,960,000 maunds, or 72,000 tons, of which 38,000 tons will be obtained in India, while 34,000 tons are to be obtained from the supplies (80,000 tons) previously ordered by the Governor-General for Bengal from beyond sea. Of the 34,000 tons 10,000 have arrived or are arriving from Burma and Madras; then

7,000 tons in December and 10,000 tons in January are promised from Burma; and 9,000 tons are expected within this period from Hong-Kong and Saigon. Thus, unless some unforeseen disappointment should occur, the supplies from beyond sea ought to be in time.

12. The quantity of 72,000 tons above stated is to be taken as part of the 118,000 tons mentioned in the 12th paragraph of our last despatch. Thus, besides the 72,000 tons which may be regarded as the preliminary provision, there is a provision of 46,000 tons from beyond sea already made.

13. These arrangements are irrespective of any provision which may yet have to be made in view to the difficulties which may beset us during next spring and summer, and which probably will arise if the winter rains shall fail. We have received representations from the Government of Bengal as alluded to in the Narrative regarding the ultimate liability which may devolve on the State, and the provision which may have to be made for that. These ulterior considerations are receiving our best attention, and we hope to be prepared accordingly.

14. There has been no marked activity in the transport of grain by the trade during the week. The transport by rail up-country from Calcutta has indeed been comparatively slack. There is a larger quantity than usual of grain being sent by river in native craft, but still not so large as to be remarkable. The navigable canals, however, in the neighbourhood of Calcutta are bringing in large quantities of grain week by week.

15. We have received from the Lieutenant-Governor a schedule of the temporary establishments of the various grades in the civil branches which are likely to be entertained by reason of the scarcity, and we have given a provisional sanction to these proposals.

16. We are in communication with the Government of Bengal, the Chief Commissioner of British Burma, and the British India Steam Navigation Company regarding the transport by sea of emigrants from the distressed districts to Burma. But until distress shall begin to be keenly felt, it hardly seems probable that any large number of intending emigrants will offer themselves.

17. We observe from the Narrative that the local officers still consider that the supplies of country carriage are, for the present, tolerably abundant. But bearing in mind that, as the season advances, there may be deficiency in this important respect, we are considering the practicability of arranging country carriage from a distance for the transport of grain for the imperial public works in the distressed districts, during the months when country carriage is most likely to run short.

18. There are no signs as yet of general distress in the districts affected. In some few places considerable number of laborers are being employed on public works, but the relief works have not yet become general. We are not able to state exactly the full number of laborers for whom employment can be found on all the works, both imperial and local; but our calculations sustain the hope that these works will be such as to afford, in event of need, useful and productive employment for a considerable portion of the laboring population. Our close attention is being, and will be given, to the organization of the works with this view.

We have the honor to be,
My Lord Duke,
Your Grace's most obedient, humble Servants,
NORTHBROOK.
R. TEMPLE.
B. H. ELLIS.
ARTHUR HOBHOUSE.

FIFTH SPECIAL NARRATIVE OF THE DROUGHT OF 1873, FROM 6TH DECEMBER TO 12TH DECEMBER.

1. It was noted in the last Narrative that in some districts the outturn of the late rains rice crop had proved to be better than had been estimated by the local officers. Further information shows that this comparatively favorable result of the harvest is more general than at date of the last narrative was certainly known, in spite of the blight and the plague of insects induced by the cloudy weather. In the Dacca, Chittagonge, and Orissa Divisions, the yield will probably be fully up to what was anticipated in paragraph 4 of the Narrative of the 21st November. In certain districts of Western Bengal the outturn of late rice may even exceed that estimate.

In the distressed districts no improvement is reported now that the commencement of the harvest enables the local officers to give a more accurate opinion.

As regards the spring crops, there is little to report. Further information confirms what was stated in the last Narrative, that the area laid down in these crops is by no means so small as was at first supposed. In some parts of Purneah it is stated half as much grain as in ordinary years is planted with these crops; while in Sarun and some other districts, on the other hand, some of the usual spring crop lands are unsown. Generally in Behar these crops, where sown, seem to have germinated fairly well, and are holding out against the drought with characteristic vitality. This, however, cannot last very much longer without rain. In Bengal the prospect of the the cold weather crops is still very bad. The weekly rainfall, weather, state and prospect of crops return bringing our information down to December 6th and December 9th for some districts * is enclosed herewith. Since that date no change in the prospect has taken place till the partial rainfall of the 11th, which will be noticed below.

* Enclosure 1.

2. The weather has become colder, but it is still strange. The dewy nights and foggy mornings usual at this time of year are absent. The sky has remained cloudy, sometimes clearing, but the clouds returning again and again till at last a little rain has fallen in the districts about Calcutta. The meteorological reporter writes:—"During the past week the weather has been of the same character as in the two or three previous weeks; north-easterly winds, a good deal of cloud, a moderate temperature, and a steady pressure, varying but little. During the last day or two there has been more cloud than before, and rain is now (morning of 11th) falling steadily." The rain referred to produced up to the evening of the 11th ½ an inch at Calcutta and Hooghly, and 1·38 inches at Burdwan. Unhappily, however, the last telegraphic reports give no news of rain in Behar, where it is most wanted. As regards the rain which has fallen in this neighbourhood, the collector of Hooghly says—"Bad for the rice; good for the cold weather crops;" while the Deputy Collector of Burdwan broadly says—"Will do more harm than good." No doubt in the purely rice districts rain at this critical harvest time is a doubtful benefit, but it may be hoped that this report is more gloomy than the fact. To-day the weather still looks as if there might be more rain.

3. The fall in prices expected with the harvest of the rice has not been very marked. In Calcutta as well as in the interior the tendency is to a fall, but the quotations are not on the whole much lower than they were last week. The difficulty of giving in a tabular statement a correct idea of the prices current in the various districts has been before commented on. In the distressed districts prices are somewhat higher in the interior of the districts than the quotation given in the return. In the other districts the reverse of this is the case. The Commissioner of Bhaugulpore writes that while in the Monghyr bazar the price of common rice has never risen above 12 seers to the rupee, a gentleman travelling in the interior has been paying at the rate of 10 seers for the same grain. On the other hand, the Collector of Nuddea says that the coarsest rice may be obtained at 13¼ seers per rupee throughout his district, while his return of prices current gives 12¼ seers. So in parts of 24-Pergunnahs 18 seers is obtainable, and the laborers on the Kana Nuddee, on the borders of Hooghly and Burdwan, get 16 seers in the neighbouring bazar. Comparing present prices with the average of all December 1865, we find they are higher now than they were then in Northern Bengal, and also slightly higher in Behar. In other parts they are, on the whole, neither higher nor lower than they were in December 1865.

4. The usual note on the movement of food-grains is appended.* It may be well here to note that in spite of the high prices ruling in the Calcutta market, 24,950 tons of freight lying in the river was, on the 8th December, under contract for the export of rice to various ports. It is expected that the high prices will not prevent the export of a further quantity of 30,000 tons to the Persian Gulf.

* Appendix A.

5. It was noted in paragraph 4 of the last narrative that the Government of India had called for an estimate of the probable amount of grain required for local purposes, and that in reply to this call the Lieutenant-Governor had asked that a total of 1,875,000 maunds of food-grains might be purchased and stored before the 31st January. The Government of India, while thinking that ⅔rds of a seer per diem per head, inclusive of women and children, is rather a large famine allowance, have however sanctioned the requisition on the ground that it is well to leave some margin. The Lieutenant-Governor has taken the opportunity to explain that in

asking to have a three months' supply for 5 per cent. of the population in hand by the end of January, his view was that with such a supply the Government would be in a position to take further necessary action in January in case the spring crops fail or the area of scarcity extends.

In letter No. 3834, dated December 6th, the Lieutenant-Governor instructs the Commissioners of distressed divisions and other officers as to the distribution of the food-supply sanctioned by the Government of India. Copies of this correspondence are annexed in Appendix.*

* Appendix B., page 90.

Some difficulty had arisen regarding the procedure to be followed in making purchases of grain in the North-West Provinces through the officer nominated by the Lieutenant-Governor of those provinces for the purpose. This difficulty has now been arranged, and in letter No. 53 PS, dated 6th December 1873, the officer nominated (Mr. A. Colvin) has been fully advised regarding the purchases he is to make.

The Lieutenant-Governor's proposals regarding extra civil establishments to be entertained for work in connection with scarcity and relief have been submitted to the Government of India in letter No. 3888, dated 11th December, copy of which is enclosed.*

* Appendix C., page 92.

6. The Government of India having been pleased, as above stated, to approve the Lieutenant-Governor's proposal, that 18,75,000 maunds of Government grain should be provided by the 31st January, the Lieutenant-Governor has made arrangements for completing the share of that amount (about one-half the whole) which has to be provided from Bengal and the North-Western Provinces. Since the despatch of last Narrative it has been ascertained that the arrangements made by the Commissioners of Patna and Bhaugulpore for grain from the North-Western Provinces will secure the delivery in those divisions of about 2,00,000 maunds of grain by the 31st January next. There remains, according to the estimate sanctioned by the Government of India, 1,50,000 maunds to be obtained from the North-Western Provinces, and the Lieutenant-Governor has indented on Mr. A. Colvin, the officer who has been placed at his disposal for the purpose by the Government of those provinces, for the purchase of this amount, asking that one-third may be wheat, one-third barley, and one-third jowaree (*holcus sorghum*). This letter is enclosed.* The Lieutenant-Governor has put limits † of price, beyond which Mr. Colvin is not to go, but has expressed his hope that the grain may be got below the limit fixed. Out of the 4,00,000 maunds to be provided from Calcutta and the eastern districts, about 1,60,000 maunds had already been bought before the despatch of last Narrative. The Lieutenant-Governor hopes to arrange for getting 1,00,000 maunds from Eastern Bengal; and he has issued an invitation calling for tenders for the delivery of 1,50,000 maunds in Calcutta. All this grain is to be delivered at different dates before the end of January, and most of it will, the Lieutenant-Governor hopes, be by that time actually stored in or in transit to the interior of the distressed districts. If the Government of India should be able to supply the additional 24,000 tons of grain from beyond the sea in time, we may hope that the whole amount required (18,75,000 maunds) will be in our possession before the end of January.

	Mds.	Mds.
The Government of India have already ordered from beyond sea, deliverable in January, 10,000 tons, or say - -		270,000
The Government of Bengal hopes to have by the end of January—		
From Calcutta and the eastern districts -	400,000	
„ Orissa - - - -	200,000	
„ the North-Western Provinces -	350,000	
		950,000
Balance to be provided - - - -		655,000
Total - -		1,875,000

* Enclosure 3.

† For wheat, Rs. 3-12 per maund; for barley, Rs. 3-4 per maund; and for jowaree, Rs. 3-0 per maund.

7. In Appendix D is shown the total amount of Government grain sent up-country up to the present date. It will be seen that 181,500 maunds have been despatched upwards. All arrivals of rice are despatched promptly as they come; the only delay has been in the despatches of certain quantities of Calcutta rice which is shut up in city store-houses, and can only be got out gradually. All rice that comes in ships is unloaded and sent off without any delay whatever, and without causing, up to the present date, any block on the East Indian Railway, or any inconvenience to private traders. Messrs. Bird and Company, the landing and forwarding agents, who contracted to do the loading and unloading work at very reasonable rates, have great command of labor, and have done the work hitherto right well.

A quantity of grain from up-country has also been received by the Commissioner of Patna, but the exact account of these receipts has not yet reached this Government.

8. Regarding the progress made in forwarding grain from the railway stations to the interior, our information is not quite complete. But taking the places to which Calcutta grain has been forwarded in the order given in Appendix D, we may say that the grain from Patna Ghât is being sent off in native boats to Gobindgunge on the Gunduck embankment and to Revelgunge for distribution in the Sarun district nearly as fast as it arrives; from Barh it is under despatch by carts from the opposite side of the Ganges to Seetamarhee in the north of Tirhoot. The Magistrate of Bhaugulpore reports that there is no delay in forwarding to Soopole, in the north of his district, all the grain sent to Bhaugulpore. The Caragolah and Sahebgunge rice has all gone forward for storage at Dengraghât and Kudba in Purneah. The Lukiserai consignments have already reached their destination in the south of the Monghyr district. The Rajmehal consignments laden on 500 carts are on the way to the Northern Bengal Railway, and Major Lindsay the Superintending Engineer, reports to-day that some of it has already reached Parbuttipore, the place of storage. From Kooshtea the Government steamer and flats are carrying away all rice arrivals regularly to Godagaree at the mouth of the Mahanuddee. The rice from Goalundo is going forward less rapidly; it has to take a long journey by boat in more or less shallow rivers and channels. The steamer "Flame," which went up as a pioneer, has not yet come back; boats of the requisite draught are collected but slowly. Still the rice is moving on gradually, and the Commissioner (Mr. Molony) expects that its despatch will soon be expedited. From all sides except Goalundo the local officers universally report that the carriage of the country suffices to carry all the Government and all the private grain importations. The carriage facilities of the districts will, however, soon be tested much more severely, and the Lieutenant-Governor will anxiously await the results of such testing.

9. Major Lindsay, Superintending Engineer of the Northern Bengal Railway, has to-day come to Calcutta to lay his plans and estimates before the Consulting Engineer to the Government of India. He reports that engineers have been distributed along the line from Durwanee in the north of the Rungpore district down to the swampy lands in the Rajshahye district; work is being absolutely begun, and it is arranged that all the able-bodied Boona coolies (the "navvies" of this part of India) now at work on local roads should be transferred to the railway works, while the local roads can be kept for the destitute poor of the districts. As yet there is no great demand for employment. Major Lindsay has set aside three of his engineers to undertake (from local relief funds) feeder roads to the railway stations on the middle length of his line; two of these roads have actually been begun. It is hoped that the Government of India may grant permission for Major Lindsay to begin making and burning bricks for the masonry work, as the brick-fields will give much labor to the people.

10. It was arranged that the district and divisional Narratives from the distressed tracts under Circular No. 80, of 17th November, should be submitted in alternate weeks, *i.e.*, fortnightly. The district Narratives down to 29th November, together with the Resolutions of Government upon them, are submitted herewith.* The information contained in them has been to a great extent anticipated in the Narrative of 6th December. The Narratives of two Commissioners, bringing the history of affairs down to the 6th December, have now come to hand. They are for the most part reviews of the district Narratives for the fortnight ending November 29th. Premising then that these reports do not give the history of affairs beyond 29th November, the following is a brief synopsis of their contents:—

* Enclosures 4, 5, 6.

A.—State of the Country.

There is as yet no general scarcity of food at the high prices quoted. In Northern Chumparun, however, parts of Rungpore, Eastern Rajshahye, and South-Eastern Purneah, food may be said to be already scarce. Every effort has been made to obtain information regarding the stocks held, but the information obtained is admittedly unreliable. The enormous area of the country, the suspiciousness of the people in regard to such inquiries, make it very difficult to ascertain with accuracy the amount of food in store. In the absence of statistics we must rely upon the opinion of persons who have means of judging. The general outcome of the opinions given by local officers is that the stocks held are small, not more than equal to a three months' supply. This is corroborated by the fact that the new rice is in some places already coming into consumption.

The condition of the people is generally satisfactory, the tracts mentioned above where food is already scarce being excepted.

There have as yet been no cases of extreme misery and starvation other than such as occur in ordinary years, nor have grain thefts yet become common.

B.—Relief Works.

Various new roads have been marked out, and work has been commenced both upon new roads and upon the repairs of old roads. The supply of food is at present sufficient without recourse to Government stocks. As a rule, employment is not in very great demand, but in parts of Sarun, Monghyr, Purneah, Rajshahye, and Rungpore, the demand is brisker than in ordinary years. The condition of the laborers is good.

Some difficulty has arisen about payment for work. The system of petty contract usually adopted is not considered suitable to relief works. On the other hand, payment to individuals entails large establishments. Matters are being adjusted in accordance with the principles determined at the meeting at Government House, 10th November (see page 2 of the memorandum in Appendix C to the second Special Narrative).

C.—Transport of Food.

The supplies of Government grain now going forward will test the means of transport. The local officers as yet anticipate no great difficulty, and are making arrangements for the transport of the consignments of which they have received advices.

D.—Storage of Government Grain.

Places of storage have been selected, and the construction of storage houses has been commenced where suitable accommodation could not be otherwise provided. Arrangements for the custody and administration of these storage houses are being made. Government grain is already beginning to arrive.

E.—Advances to Private Parties and their Results.

With the exception of the planters of North Behar, private parties have not come forward very actively for advances either for trade or for land improvements.

F.—Charitable Relief.

No actual relief operations have been commenced, nor have preparatory arrangements been made except in Maldah.

Some further crop reports for December, under Circular No. 70 of the 13th October, have come to hand, and will be collated in the next Narrative, when they have been received from all districts.

The answers to Circular No. 77 of the 13th November, asking for a special report comparing the present year with 1865–66, have not yet all come in. It is hoped that the result of these reports may be forwarded with the next Narrative. So far the general result tends to show that in most districts the autumn crops of the present year are worse than in 1865. This is certainly so in Behar and North Bengal.

The subject of emigration is still under consideration. The gentlemen who have applied for laborers for Assam and Cachar have been told that it is not probable that definite arrangements can be made till after the 15th January. Meantime the new Labor Transport Act actively engages Legislative Council. The British India Steam Navigation Company have offered to convey coolies from Calcutta to Rangoon at Rs. 12 a head exclusive of food on the voyage.

11. From the Soane Canal works we learn that the area under irrigation is still extending in the Shahabad district, 12,000 acres having been added since last report. On the eastern side the water, which was described as having reached the Poonpoon river, has advanced 56 miles down that river, bursting some bunds which had been thrown across it. The means for distributing this water supply are very incomplete, but the Magistrate of Gya is making every exertion to render them more efficacious.

Arrangements are being made for storing grain at 11 places on the works on the western side of the Soane, and at four places on the eastern side.

Some 17,000 laborers are now employed on the canal head works and on the Arrah canal. No return of those employed on the eastern side has come in. The canal officers agree with the district authorities in reporting that there is no special demand for labor on the Soane works at present.

No report has yet been received that work has begun on the Gunduck embankments.

Owing to the difficulty in working caused by percolation from the Damooda the Kana Nuddee has not been opened as it was expected it would be on the 10th. It will probably be opened on the 15th. Here again there is no great demand for labor, 500 men having left the works during the week. The daily average is now only 890 in place of 1,390 last week.

Till the harvest and cold weather sowings are completed or abandoned there will not be much demand for employment.

12. The Commissioner of Patna having represented that the saltpetre makers of Northern Behar are among the poorest of the population, and suffered badly in former times of scarcity, the Lieutenant-Governor has ordered the suspension for the present of Act XXXI. of 1861, and the employment on relief operations of the establishments appointed under that Act for the detection of illicit salt manufacture by saltpetre makers. The same Commissioner proposed to confine exemption from tolls on roads to carts laden with food-grains, to the exclusion of wood, indigo, and other produce. It was not thought advisable to make the distinction suggested.

The Commissioner of Bhaugulpore was told that if exportation was going on in his division, he might fairly purchase in the local market so much as would practically put a stop to the export of grain. He, however, showed cogent reasons against the appearance of Government as a buyer in local markets, and the matter has been left to his discretion.

The Commissioner of Chota Nagpore having represented the peculiar position of the district of Singbhoom in his division, he has been allowed to store some grain there. The relaxations of rules under Act XXVI. of 1871 (see paragraph 6 of the Narrative of 28th November), have been extended to the division of Chota Nagpore.

The Commissioner of Orissa does not feel any anxiety regarding the ability of the parties who have contracted to deliver rice in Calcutta to Government to obtain freight. The British India Steam Navigation Company have explained that the former low rate charged by them of 8 annas a bag from False Point was an exceptional one, put on with a view to encourage trade. Trade having arisen, they think themselves now justified in charging ordinary rates. The Company have offered freight to Government on favorable terms.

The India General Steam Navigation Company have offered to run their steamer, the "Pioneer," to Balasore with flats to bring up rice if she can get a certificate from the Master Attendant. This, if found possible, will greatly facilitate the import of rice from Northern Orissa.

It has already been mentioned that the planters of Northern Behar have come forward freely for advances for purchase of grain. The Commissioner of Patna acknowledges the zeal they have shown in promoting and supervising the relief works. The Lieutenant-Governor cordially agrees with the Commissioner in his eulogy of the conduct of the planters at this critical time.

The Committee, which was referred to in the last Narrative as having been organised in Chumparun for the purpose of importing grain and selling it at cost price, has commenced operations. Some of the subscriptions promised by the local agents have not been sanctioned by their Calcutta principals, but it is confidently anticipated that the owners in England will support the local agents.

By order of the Lieutenant-Governor of Bengal,
H. Luttman-Johnson,
Additional Under-Secretary to the Government of Bengal.

Calcutta, 12th December 1873.

APPENDIX B. to foregoing Narrative.

No. 3550, dated Fort William, the 6th December 1873.

From R. B. CHAPMAN, ESQ., Secretary to the Government of India, Financial Department, to the SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I AM directed by the President in Council to acknowledge your No. 46[*] of the 2nd current, forwarding a preliminary estimate of the requirements of grain by the Government of Bengal.

2. The Government of Bengal propose to provide grain for 5 per cent. of a population of 25 millions for 3 months, from beginning of February to the end of April, at the rate of two-thirds of a seer per day, or 18,75,000 maunds, and hope to place within reach of the distressed districts by the end of January 9,50,000 maunds, leaving 6,55,000 maunds, or 24,000 tons, to be provided by the Government of India from beyond sea.

3. The President in Council is inclined to regard the estimate of two-thirds of a seer per head per diem as high. Half a seer or 1 lb. per head, including women and children, would seem to be sufficient. It is probable, indeed, that a lower estimate would be taken by some authorities. At half a seer, then, the amount to be provided would be 14,00,000, say 14 lakhs of maunds, instead of the 18,75,000 maunds (18¾ lakhs) mentioned in your 2nd paragraph.

4. Bearing this in mind, the President in Council has to consider the quantity of 9,50,000 maunds, which, according to your 2nd paragraph, the Government of Bengal propose to purchase and to have ready by the end of January.

5. It is in the first place to be observed that this amount includes only 2,00,000 maunds out of the 3,00,000 ordered by the Government of Bengal from Orissa, leaving 1,00,000 to come on during February, as is seen from the narrative for the 21st November. Thus, the total proposed for the three months is brought up from 9,50,000 to 10,50,000 maunds (38,500 tons).

6. Looking to these considerations, the President in Council believes that the present estimate of requirements leaves some considerable margin beyond what would be calculated on the assumed data as absolutely essential to security. There are, however, advantages in allowing such a margin; and on the whole the President in Council thinks he is justified in sanctioning the proposal to procure such quantities by the end of January as the Government of Bengal may deem necessary within a present limit of 9,50,000 maunds.

7. As correctly observed in your 2nd paragraph, the Government of India have ordered 10,000 tons, or 2,72,222 maunds, which will arrive from beyond sea by January.

8. The Government of Bengal now request that a further quantity of 24,000 tons may be obtained from Burmah by the end of January. The Chief Commissioner of Burmah has been requested to send additional quantities of grain (within a certain maximum limit) as soon as possible. The President in Council is not prepared to state whether this order can be executed to the extent of 24,000 tons by the end of January, but every endeavour will be used for this end. Probably some considerable quantity will be sent in time. If there should be any difficulty in this respect, the Government of India will take such steps as may be necessary, bearing in mind the estimate of requirements as just sanctioned.

9. If, however, the whole of the 24,000 tons should not arrive before the end of January, it will certainly arrive well within the period of the three months, beginning with the 1st February.

10. And it is to be borne in mind that quantities of grain in excess of the 24,000 tons have been already arranged for by the Government of India. These quantities will arrive before April, and may be regarded as constituting a provision in addition to the preliminary provision now proposed by the Government of Bengal.

11. The President in Council duly observes that the Lieutenant-Governor regards the present estimate of requirements as necessarily defective. As soon as any revised estimate can be prepared by the Government of Bengal, the President in Council will be glad to receive it, and immediate attention will be given to it on receipt.

12. I am to state, in conclusion, that the Government of India are anxious to anticipate the eventualities of the threatened scarcity to calculate beforehand the full extent of the difficulties that may be before us, to concert with the local Government the best preparations that can be made, and to afford to His Honor the Lieutenant-Governor the fullest and most cordial support in giving prompt effect thereto.

No. 3889.

From the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL in the Statistical Department, to the SECRETARY to the GOVERNMENT OF INDIA, Department of Agriculture, Revenue, and Commerce.

Scarcity and Relief.

SIR, Calcutta, dated 11th December 1873.

I AM directed to acknowledge the receipt of the Financial Secretary's letter No. 3550, dated 6th December, in which is conveyed His Honor the President in Council's sanction to the Lieutenant-Governor's proposal that a total supply of 18,75,000 maunds of Government grain should be provided for the distressed districts of Bengal by the 31st January. Sir George Campbell will carefully bear in mind the views and wishes expressed at paragraphs 11 and 12 of the letter under reply; he notes also that (as stated in paragraph 10) quantities of grain in excess of the provision now asked for have been ordered from beyond the sea.

2. There is, however, one point on which the Lieutenant-Governor would ask permission to offer further observations; and one other matter on which he would solicit orders.

First. Paragraph 9 of the letter under reply mentions that in any case, the balance to be provided from beyond sea (about 24,000 tons) will certainly arrive well within the three months from February to April next. The Lieutenant-Governor did not reckon the three months' supply to be from February to April. He fears we cannot reckon that our grain supply now sanctioned will remain intact until the end of January. We are sending it up-country as quickly as possible, and it may be drawn upon before the end of January in some of the more distressed tracts. On the imperial works it will probably come early into use; and it is possible that much more than 5 per cent. of the population of the districts now reckoned as distressed may require assistance before the end of April. The Lieutenant-Governor desires me to submit that when he framed his preliminary estimate, his wish was to have a full three months' supply for 5 per cent. of the distressed population in the country before the end of January. He very strongly feels that if we get no favorable rain in December and January, and the spring food-crops fail us, we may have to import food from Burmah and elsewhere to the utmost during the remaining months from January until the south-west monsoons set in. If the scarcity should threaten anything approaching the famine of 1865 in Orissa, or the famine * of 1770 in Bengal, we shall want much greater supplies than we have now proposed. If the prospects before us appear to be worse before the end of January, we shall then be able to hurry up rice from Burmah. The Lieutenant-Governor always has before him the terrible possibility, which was so unhappily realized in 1770, that the area of distress may extend; that food may be required in Central and Western Bengal. If such a disaster should come we could only cope with it, even partially, by having already stored in the present distressed area a considerable supply of food.

3. It must, the Lieutenant-Governor would mention, be remembered that absence of December and January rain imports more or less failure of the spring crops over the North-West Provinces except on irrigated lands, and in such a case Behar could hardly hope further to supply itself very largely from the North-West.

4. If we have the supply mentioned by the Lieutenant-Governor in hand by the end of January, we may hope to be able, if occasion requires, to bring in much more food during the remaining months, and to distribute it before the rains set in. Beyond a total of say 200,000 tons we can hardly hope, as things are now arranged, to make distribution in the present distressed area by Government agency before the rainy season begins. But if distress should extend to, and Government grain should be required in, Central and Western Bengal, we could distribute by river, rail, and road a very much heavier amount; indeed we could, if need arose and circumstances permitted, probably distribute usefully over Lower Bengal the whole Burmah rice crop of 1874, and more if we could only get it. If, however, our proposed quantity of 70,000 tons is not provided or nearly provided by the end of Jauuary, we shall, if necessity should unhappily arise, find it very difficult indeed to distribute before the rains as much food as would be required.

5. It must be remembered, moreover, that carriage of grain will be cheaper and easier down to February than it can be at any later season, and therefore, whether we have to provide a further large supply or not, it will be in the end more economical to get the proposed 70,000 tons into the distressed districts before the 15th February, even though the prime cost of Burmah rice from the last crop be a trifle higher than the cost of the new rice crop will be in February.

As a very experienced officer in one of the distressed districts remarks, the Lieutenant-Governor is firmly convinced that in any case, whether the extremity of distress is eventually reached or not, it is absolutely necessary that we should have a stock of grain in hand in the distressed districts, and he thinks that the quantity now sanctioned cannot be there too soon.

6. On all grounds, therefore, whether of economy or of general policy, Sir George Campbell would very strongly urge that no effort and no expenditure (within reasonable limits) be spared to produce the delivery in Calcutta of the 24,000 tons asked for from beyond the seas before the end of January next.

7. It may perhaps be right for the Lieutenant-Governor to mention now (with reference to paragraph 3 of the letter under reply) that Burmah cargo rice loses a considerable portion of its weight when cleaned for food. If, as will probably be the case, most of the 25,000 or 30,000 tons of Burmah grain will be "cargo rice," about one-eighth of its weight will be unfit for human food; and in every estimate of the food-supply available, that one-ninth must be deducted from the gross weight of the Burmah rice available.

8. The second point on which the Lieutenant-Governor would solicit orders is, whether this Government is at liberty to send rice from beyond the sea for storage on local works. Hitherto, in obedience to the rule that the Supreme Government was to procure grain for imperial works, and that the local Government was to provide grain for local works, the Lieutenant-Governor has been sending all the Burmah and Madras grain to the three * imperial works. But, as will be seen from the annexed † circular order, the Lieutenant-Governor has had to distribute two-thirds of the present and expected Government grain to places outside the imperial relief works. The

---

* The records of 1768–70 make it clear that over a part of the famine area the distress, starvation, and deaths of 1769–70 were the result of the failures of a single year.

* Soane Canal.
Gunduck Embankment.
Northern Bengal Railway.

† Circular No. 3834, dated 6th December, with enclosure.

imperial works will barely employ 200,000 or 250,000 people, however they may be pressed on; and if the worst comes the Government will have many more mouths to feed than four or five hundred thousand. Seeing that grain from across the seas forms one-half of the provision sanctioned up to the 31st January, the Lieutenant-Governor would ask permission to distribute this grain both to imperial and to local works, according to the scale which he has set forth in the letter appended. He will take care that the accounts are kept as far as possible separate; and this separation will be so much the easier, as the Burmah rice is readily distinguishable from any of the Indian kinds.

9. I am to sum up what has been said in this letter—

(1.) By submitting that the Lieutenant-Governor very earnestly hopes that no effort may be spared to get the extra 24,000 or 25,000 tons of grain from beyond the sea into the country by the 31st January at latest;

(2.) By soliciting permission for this Government to store, when need arises to use, rice from beyond the sea on local as well as on imperial works.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

APPENDIX C. to foregoing Narrative.

No. 3888.

From the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, in the Statistical Department, to the SECRETARY to the GOVERNMENT OF INDIA, in the Financial Department.

Scarcity and Relief.

SIR, Calcutta, 11th December 1873.

I AM directed to acknowledge receipt of your letter, No. 3325, dated 26th November, asking this Government to submit statement of the various temporary appointments relating to the scarcity which are being or are likely to be created in the Civil Department, and which will need the sanction of the Government of India, and also desiring to have some approximate estimate of the cost likely to be incurred on account of the scarcity.

2. As regards this last, I am directed to say that the Lieutenant-Governor will separately address the Government of India. In my letter, No. 46PS, of 2nd December,* was submitted an estimate of the preliminary supply of grain which the Lieutenant-Governor desires to lay in before the end of January, viz., 1,875,000 maunds. If we take the price of the grain delivered in the distressed districts to be on an average Rs. 4 per maund, the total charge for that grain in the present year, 1873–74, will be Rs. 75,00,000 (750,000*l.*). As regards other items consideration is necessary. Supposing an equal quantity to be purchased in February and March, the cost in 1873–74 for grain purchased would be 1,500,000*l.*

Page 76.

3. The establishments to be eventually entertained will of course depend on the degree of scarcity which may accrue, and the extent of the measures eventually undertaken. Meantime I am desired to submit the following detail of the establishments which the Lieutenant-Governor has entertained or proposes shortly to entertain. His Excellency the Viceroy and the Government of India have been pleased to express an opinion that, in accordance with the advice of the Orissa Famine Commissioners and with the experience of other Governments which have had to combat famines, very full and sufficient provision should be made for strengthening the district and divisional staff of the distressed tracts, and for enabling the local Government to control and direct, and to give an account of what is being done. In this view the Lieutenant-Governor has estimated for a sufficient addition to his Secretariat Staff, for a strong Central Relief Committee when the time comes, for a Relief Commissioner or other competent deputy to each Commissioner of a distressed division, and for at least two extra officers to each distressed district. He has not asked for extra allowances for the district officers or for any superior officers; but he has asked for special allowances (to include all travelling allowance) in behalf of the officers who are to assist the Commissioners and also nine of the special officers posted to each district for relief work. Schedule A. appended to this letter shows the total monthly cost of these officers to be Rs. 26,748. Into this sum is reckoned the full salary of officers from the North-Western Provinces, of the special officers posted to divisions, and of the officers attached to the Central Relief Committee or to the Government head-quarters. But in the case of officers taken from the civil staff, the police or other departments, and specially posted to districts for relief work only, the proposed extra allowances only are debited to the "Scarcity."

The Lieutenant-Governor proposes to class the officers employed to assist the district officers in four grades, receiving respectively Rs. 500, 300, 200, and 100 per mensem, which is to cover travelling, and other expenses.

4. The Lieutenant-Governor thinks it will suffice to reckon that two or three months charges for these officers will fall into the accounts of 1873–74, and that six months charges will fall into the accounts of 1874–75. Some of these establishments may not be absolutely required until February 1874, or even later; but some again have been employed since the beginning of

November and December 1873. According to this estimate the total cost for these establishments may be—

	Rs.
In 1873–74 (two months charge) - - -	53,496
In 1874–75 (six months charge) - - -	1,60,488

5. If the proposals made in Schedule A, or any modification thereof, be sanctioned, the Lieutenant-Governor would ask permission to employ officers within these limits as occasion may arise, with the proviso that he may employ fewer men in the higher grades and more in the lower grades, so long as the total estimate is not exceeded in any month without further sanction.

6. Secondly. The Lieutenant-Governor anticipates that we may expect to require extra clerks and accountants, and also storekeepers, guards, and peons for grain store-houses, or at places for the collection of grain consignments, as per Appendix B. The total cost of these establishments, as at present estimated, is Rs. 11,075 a month:—

	Rs.
Two months of this charge for 1873–74 - -	22,150
Six „ „ for 1874–75 - -	66,450

7. The Lieutenant-Governor would not be understood to say that the total charges for relief expenditure on civil offices of all kinds will come within the figures now offered; but he would hope to keep it within this amount for the present at any rate, and provided that the area of distress does not very greatly extend.

8. In regard to—

(*a*.) The possible relief works expenditure,

(*b*.) The possible expenditure for purchase and transport of grain,

the Lieutenant-Governor will hereafter make some attempt at an estimate. For the present, however, the Lieutenant-Governor merely submits the appended schedules shewing that—

	In 1873–74.	In 1874–75.
(1.) Civil appointments may cost Rs. 26,748 a month, or -	51,496	1,60,488
(2.) Clerks, storekeepers, and petty officials may cost Rs. 11,075 a month, or - - - -	22,150	66,450
Total -	73,646	2,26,938

The Lieutenant-Governor apprehends that he may have to ask the Government of India to set aside a competent officer of the Account Department to take charge of all the accounts of rice purchase, rice transport, extra establishments, and all "scarcity" expenditure not chargeable to public works. This officer should work in the Accountant-General's Office, under the Accountant-General, in concert with the Secretary to this Government in the Relief Department. If some such small separate office of account can be organised and relief expenditure of all kinds can be audited and brought to account as it occurs, very great future trouble to officers and possible loss to Government will be saved. In the Orissa famine, for want of some such arrangement, over a lakh of rupees on one account alone had to be written of as unexplainable or irrecoverable. Probably, if an officer of the Financial Department could be made available, the whole cost of the audit and accounting establishments would not exceed Rs. 500 or 600 a month.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 17 of 1873.

Government of India.

Department of Revenue, Agriculture, and Commerce.

Agriculture and Horticulture.

To His Grace the Right Honorable the Duke of Argyll, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, Calcutta, the 19th December 1873.

We have the honor to transmit the special narrative of the drought in Bengal for the week ending the 18th December.

2. As might, at this particular season, be expected, the general situation remains without any material change since our last despatch.

3. The weather has been clear, rainless, and cool, and thus has been seasonable.

4. The prices of food-grains continue comparatively low, by reason of the harvesting now in progress in all the provinces under the Bengal Government. The outturn appears in some places better, and nowhere worse than the anticipation.

5. But the general and probably well-founded opinion is that in Behar the promise of the spring harvest considerably exceeds the first expectation. If the winter rains shall prove propitious, that source of food-supply may yet afford a fair yield.

6. The accounts of the crops from the other parts of British India continue favorable, with the exception of the eastern and south-eastern portions of Oudh and the North-Western Provinces.

7. In general terms, it may be stated that distress has not yet begun to show itself in the districts affected by drought. Whatever symptoms of such distress may be perceptible are but slight and partial. The laborers employed in large numbers on the public works are mostly from those classes which ordinarily resort to such employment. Though preparations are made for organizing district relief committees, the occurrence of actual need is awaited before active operations are commenced. For the same reason we defer the formation of a central relief committee.

8. We still incline to the view that the position of the provinces under the Government of Bengal is not worse in 1873 than in the corresponding period of 1865. The Lieutenant-Governor's opinion affords some support to this view. But it will be seen from a letter among the enclosures of this narrative that he regards the failure of the present year as more widespread, and the crops in the distressed districts worse in 1873 than in 1865. If Orissa be excluded from the comparison there might be some foundation for this opinion. But if Orissa be included, as it ought to be, in the comparison, then the whole facts, as yet known to us, do not justify us in considering either the failure more widespread, or the crops worse, in the provinces under the Government of Bengal now than 1865. In a case of this description, however, new conditions may develope themselves, and we shall continue to be on the watch for any facts which might induce us to modify our present opinion.

9. We bear in mind that a decisive opinion regarding the extent and character of the distress can hardly be formed until the end of January. Meanwhile all the requirements of the Lieutenant-Governor have been met, and additional precautionary measures which seem to us to be advisable in order to meet the distress if it should become more serious have been taken.

10. The amount of grain required to arrive by the end of January for the public works in the districts affected by drought (72,000 tons as given in paragraph 11 of our last despatch) is on its way to its proper destination from places in India or from beyond sea, and will doubtless be in time.

11. During the last week there has been a greater degree of activity than before in the grain trade.

12. We observe with satisfaction that the narrative shews emigration towards the Assam and the tea districts to have begun.

13. We forward a copy of a letter addressed by the Governor General to the Government of Bengal, stating the impressions he derived from his recent visit to Behar.

14. We believe that the proceedings of the Government of Bengal and of its local officers in the very important matters arising out of the drought are such as to merit the approbation of Her Majesty's Government.

We have the honor to be,
My Lord Duke,
Your Grace's most obedient, humble Servants,
(Signed) NORTHBROOK.
" R. TEMPLE.
" B. H. ELLIS.
" H. W. NORMAN.
" A. HOBHOUSE.
" E. C. BAYLEY.

Note.—On the receipt of this letter from the Government of India, the Duke of Argyll addressed a Despatch to the Viceroy in Council, dated 23rd January 1874. *See* page 52 of the Abstract [Command Paper, 933 of 1874.]

SIXTH SPECIAL NARRATIVE OF THE DROUGHT OF 1873, FROM 13TH TO 18TH DECEMBER.

The last Narrative contained intelligence of a fall of rain. This rain fell generally over the lower delta and littoral districts, which did not require it. It extended also to Burdwan on the west, and Kishnaghur on the north. It does not appear to have done much harm to the ripening rice; it has not been heavy enough for that: and it has done some good to the spring crops. Unfortunately there has been no rain in the distressed districts, where it is urgently required. Since the rain fell, the weather in Calcutta has been more seasonable, brighter and colder, with northerly winds and dewy nights. The genuine cold weather seems now to have commenced, though even now it is not so cold as it usually is at this time of year.

2. With the exception of the improvement in the spring crops in certain tracts where rain has fallen, as noted above, there is no change to chronicle this week in the prospect of the crops. The improvement on the estimated outturn of the winter crop said to be shown in certain districts is not contradicted; in much of the Bhaugulpore and some parts of the Purneah districts the late rice crop now being harvested is turning out on the whole better than had been anticipated.

In Behar the spring crops still hold out against the drought surprisingly well; if rain falls they will still give a fair outturn. The crop reports for the week ending 13th December are enclosed.*

* Enclosure 1.

3. There has been a slight fall in prices in some districts, but not such a fall as was anticipated on the new rice coming into the market. What was said last week of this month's prices, as compared with those ruling in December 1865, holds good this week too. The prices-current for the week ending 13th December is enclosed.† The usual note on the movement of food-grains is appended.‡

† Enclosure 1.
‡ Appendix A.

4. While the last Narrative was under despatch, His Excellency the Viceroy was on a visit to the Soane Canal works, where he met the local officers. He was pleased to express his approval of what had been done, and of what was doing, in the distressed districts, and at the Soane works. His Excellency's orders § have been communicated to the local officers under cover of a letter No. 4033, dated to-day, copy of which is submitted. Copy of His Excellency the Viceroy's orders,* and of the reply of this Government, are also appended to make the Narrative complete.

§ Appendix B.
* Page 98.

It was noted in the last Narrative that the Lieutenant-Governor had submitted to the Government of India proposals for the employment of extra civil establishments on preparations for meeting possible famine. The Lieutenant-Governor's proposals have been sanctioned, and the extra establishments have been distributed. It has been left to Commissioners to decide what extra ministerial and police establishments will be necessary within certain limits; but the Lieutenant-Governor has directed that every economy should be exercised, and that no extra establishments should be entertained until they are absolutely necessary.

The arrangements for promoting emigration from the distressed tracts are progressing; it is said that from the Sarun district, at any rate, very many families of the farm-laborer and such like classes are ready to emigrate. If the arrangement is finally made they will be started in batches of 70 to 100 persons, and will be provided with food from the Government stores on their route. It is possible that before very long some batches of emigrants will have started for the Assam tea gardens viâ Durbhangah, Nathpore, Titalya, Julpigoree, and Dhoobree. At Dhoobree a depôt will be formed for receiving the emigrants, whence they will be carried on steamers and flats to Upper and Central Assam. The presence of cholera at Goalundo and on the banks of the Megna makes it specially desirable to avoid the Calcutta and Goalundo route. For Burmah, emigrants may be collected either in Behar or in Western Bengal, or in both, if the necessary arrangements should be made.

5. Paragraph 6 of the last Narrative stated the amount of grain which was, under the orders of the Government of India, to be provided in the country before the 31st January. It has now been made almost certain that the whole of the required amount will be secured; the North-western Provinces' officer (Mr. A. Colvin) has engaged to send the full amount we have ordered through him, and it is understood that the supply to be obtained from across the sea by the Government of India

is almost secure. An assignment of the supplies coming from the different sources has accordingly been made to the several distressed divisions, care being taken to distribute the supplies so as to involve no avoidable railway or other carriage. Copy of the orders making that distribution will be found in Appendix C. It will be seen that a reserve of 375,000 maunds has been kept in hand to meet possible requirements in Western or Central Bengal, or to supplement the allotments to remote or specially indigent tracts.

6. Government grain from Madras and Burmah has continued to come in, and is still arriving. Further shipments from Saigon, Burmah, and Madras have been advised. The rice bought in Orissa is coming in slowly; the first sloop-load of rice was rather inferior in quality, but the subsequent arrivals have been fair enough and up to the sample. Some 40,000 maunds of mixed grains, bought from the North-Western Provinces on Government account, have arrived in Behar, and the supplies from this source are coming in steadily. It has not been found convenient to make any large purchases in Eastern Bengal; and the Lieutenant-Governor has felt the less regret at this result, because the surplus of these districts is mostly finding its way to Calcutta. When the present harvest shall have been gathered, the Lieutenant-Governor would hope to collect in Eastern Bengal any further supplies needed for the Rajshahye division, and to send them by the Megna and Berhampooter to their destination.

7. The precise price at which Government grain is being laid down in the distressed tracts cannot yet be stated; but the North-Western Provinces grain delivered in Behar will probably stand us in about Rs. 3 a maund all round, including bags; the Burmah rice will cost somewhat more than this at Calcutta; and the Orissa rice will cost somewhat less than Rs. 3 per maund. The rice bought in the Calcutta market has proved to be the dearest grain which has yet been bought. Yesterday (Wednesday, the 17th December,) was the last day for the receipt of tenders for the supply of 150,000 maunds of rice in Calcutta; tenders for as much as 267,000 maunds have been received, and the Lieutenant-Governor has accepted tenders for the full amount required at rates ranging from Rs. 3-4 to Rs. 3-15-6 per maund, inclusive of bags.

8. The table in Appendix D shows that 61,700 maunds of rice have been despatched from Calcutta to the interior. The Government of India has been pleased to permit the Lieutenant-Governor to send Burmah or Madras rice to local relief works, on the ground that the supply from across the sea will very much more than suffice for the imperial works. The despatch of grain from stations on the East Indian Railway to the interior is going on with satisfactory rapidity; the Patna district Narrative, to-day received, shows that up to the 14th December the Magistrate-Collector had received at the Patna and Barh stations—

	Mds.
Burmah rice - - - - - -	21,975
Bengal rice - - - - - -	41,521
Mixed grains from the North-Western Provinces -	35,070
Total - -	99,566

and that he had despatched to store-houses in the Chumparun, Tirhoot, and Sarun districts 65,027 maunds, besides sending 2,000 maunds to a distressed tract in the interior of his own district. From Bhaugulpore detailed information up to the present date is not available; but the Magistrates of Bhaugulpore and Caragola have notified that they can carry across the Ganges to the north of their districts all the grain that has yet come, and as much more as is sent, up to 20,000 maunds a week. The despatches to the Rajshahye Division are not going on so rapidly from Goalundo and Kooshtea; but Mr. Toynbee goes up there at the end of the week to see if matters can be expedited. Meanwhile we are loading at Calcutta a steamer and two flats with Bengal rice for Kaligunge and Chilmaree on the mouth of the Teesta.

9. The fortnightly narratives from distressed districts for the fortnight ending November 29th were submitted with the last narrative. Those for the fortnight ending December 13th will be submitted with the next Narrative. The Commissioners' fortnightly narratives submitted in alternate weeks with the district narratives were also alluded to in the last Narrative. That from the Commissioner of Patna

for the fortnight ending December 8th is submitted herewith, as it contains somewhat later information.* The only point of which notice need be taken here is that the Commissioner is of opinion that the Government importations are checking private trade. An intelligent native gentleman of the Patna Division approvingly writes: "The arrangements made by Government for storing grain for supply when needed have gone far to assure the people there will be no want." The Commissioner is doing his best to inform the people of the intention of Government to expend its stores of grain in payment for work, and he has been authorized, if he thinks necessary, to make a further attempt to buy through the local trade in order to promote importation.

* Enclosure 3.

10. A review of the further reports for December, under Circular No. 70 of the 13th October, is added hereto.* It shows, perhaps, on the whole, that things are a little more promising than the review of the reports for November (*see* Appendix B. to the Narrative of November 21st) made them out to be. But no material alteration can be made either in that review, or in the very brief synopsis of it contained in paragraph 4 of the Narrative of November 21st. In the review of the January reports a definite statement will be possible as to whether the outturn has exceeded the estimate or not.

* Appendix E.

11. A review of the opinions given by district officers of the extent of the loss of crops in 1873, as compared with the loss in 1865, is also appended.* It must be remembered that this review does not take into account the fact that the harvests which preceded 1865 were worse than those which have preceded 1873.

* Appendix F.

It may be noted that as yet this year actual distress has not shown itself anywhere, nor is there any very brisk demand for labor; while in 1865 in some parts distress had shown itself in October.

12. From the Soane Canal works we learn that the area irrigated in the Shahabad district now amounts to 121,751 acres. In the Gya district 2,959 acres have been irrigated from the Patna Canal in 68 villages. The total area irrigated up to date on this branch is estimated at 3,732 acres; it is believed that ultimately it will be found that a far greater area has been irrigated. A plentiful supply of water has been sent down the Poonpoon river, so much so indeed, that some of the dams constructed for irrigation across the river have burst and a large tract of country has been flooded. Measures have been taken to control the water. The Collector of Patna says some 5,000 acres have been irrigated from the Poonpoon.

The daily average of labor employed during the week on the canal works was 20,000. This is an increase on last week's average, and is said not to be due to scarcity. The work in the Buxar division has now fairly been begun, an average of 1,226 laborers having been employed during the week. No difficulty is experienced in the supply of food, and the laborers show no appearance of distress. Most of the laborers are doing task-work under contractors.

From the Gunduck it is reported that little has been done during the week beyond the commencement of repairs to existing embankments and the alignment of the new embankments. The officers have only just arrived at their stations.

An accident has unfortunately delayed the opening of the Kana Nuddee. The rain of the 11th December caused a fresh in the Damoodah river, which destroyed part of the dam, thereby rendering it impossible to admit water into the excavation till the dam had been repaired.

13. With reference to paragraph 9 of the last Narrative, it has been pointed out by the Government of India that the Lieutenant-Governor is competent to sanction such a work as the commencement of brick-making on the Northern Bengal Railway. He has accordingly directed Major Lindsay to proceed with the brick-making, but has, at the same time, warned him against going to any great expense in leading by land coal or other materials which might be more cheaply carried by boat during the rainy season.

14. It was mentioned in the last Narrative that the India General Steam Navigation Company had proposed to run their steamer, the "Pioneer," with flats to Balasore to bring up rice. Unfortunately the marine authorities have been unable to grant the steamer a certificate.

The British India Steam Navigation Company have replied to the representation made to them regarding their action in raising their rates of freight from Orissa to Calcutta. They say that they formerly carried cargo at abnormally low rates in order to attract traffic. Now that regular rates are freely offered, they think themselves justified in taking them. At the same time, they made the offer to carry Government rice at rates 30 per cent. below the rates named in their postal contract with Government. They have now been asked to put on a special steamer at low rates to carry rice from the Orissa ports to Calcutta.

15. At the instance of the Commissioner Rs. 1,00,000 have been allotted to the Presidency Division for expenditure on advances for land improvements. The extension to this division of the relaxations of the rules under Act XXVI. of 1871, detailed in paragraph 6 of the Narrative of the 28th November, is under consideration.

16. The additional executive and assistant engineers applied for by the Bengal Government on the 16th November have most of them arrived; but several of them having been transferred to the Irrigation Department, the General Department is still short of men. A further application has accordingly been made to the Government of India.

Tools suitable for relief works in the Calcutta and Madras markets have been bought up, as well as all that could be procured in the North-Western Provinces, and arrangements have been made for a weekly supply from Madras, North-Western Provinces, and other localities. Bombay is also supplying its quota.

It is at present estimated that 1,40,000 hoes and 60,000 pick-axes, in addition to the tools in the possession of the agricultural classes of the distressed districts, will be required for relief operations, and arrangements have been made to procure this number by the middle of March next. Returns, however, of probable requirements of tools have been called for from the Commissioners concerned.

17. In accordance with the instructions of the Government of India, this Narrative is despatched on Thursday instead of on Friday, and will be so despatched in future.

By order of the Lieutenant-Governor of Bengal,
H. LUTTMAN-JOHNSON,
Additional Under-Secretary to the Government of Bengal.

Calcutta, 18th December 1873.

No. 604, dated Fort William, the 16th December 1873.

From A. O. HUME, ESQ., Secretary to the GOVERNMENT OF INDIA, Department of Agriculture, Revenue, and Commerce, to the SECRETARY to the GOVERNMENT OF BENGAL, Scarcity and Relief Department.

I AM directed by His Excellency the Viceroy and Governor-General to acquaint you, for the information of His Honor the Lieutenant-Governor, with the impressions which His Excellency has derived from his recent visit to Behar.

2. After leaving Allahabad, Lord Northbrook went by rail to Mogulserai, and from thence to Sasseram and Dahree, where the head-works of the Soane Canal are situated. He then proceeded to the Behea Station, and returned to Calcutta by the Loop Line. In the course of this journey His Excellency has had the opportunity of passing through a part of Behar, in which the worst scarcity is anticipated, and of conversing with Mr. Bayley, the Commissioner of Patna, Messrs. Alexander and Palmer, the Collectors of Shahabad and Gya, Mr. Eyre, the Deputy Magistrate of Sasseram, Mr. Levinge, the Superintending Engineer of the Soane Circle, Messrs. Thomson and Fox of Behea, Messrs. Molony and Barlow, the Commissioners of Rajshahye and Bhaugulpore, Mr. Taylor, the Collector of Bhaugulpore, and others.

3. Lord Northbrook is glad of this opportunity of expressing his entire approval of the general arrangements ordered by Sir George Campbell in his excellent circular of the 17th November and subsequently, as well as of the manner in which they have been carried out. His Excellency feels entire confidence in the ability of the local officers to execute the orders of Government and to cope successfully with any difficulties which may arise. The energy, the thorough mastery of the details of the subject, and the anxiety not to omit any possible precaution to provide against famine, displayed by all the officers with whom Lord Northbrook came in contact, deserve His Excellency's highest commendation.

4. Lord Northbrook would be much obliged to the Lieutenant-Governor to convey the thanks of the Government to Mr. Levinge, who, when he heard early in October that the rice crop was in danger from drought, immediately made temporary arrangements for opening some branches of the Soane Canal which were incomplete, and has thus already supplied with water, 120,000 acres of land, upon some of which the rice crop has been saved; whilst upon all there is a prospect of fine winter and rubbee crops His Excellency has directed that the Lieutenant-Governor shall be furnished with a copy of Colonel Rundall's observations upon the progress of the works, and he requests that His Honor will authorise the commencement of the western main canal as soon as the necessary arrangements can be made by Mr. Levinge.

5. The general prospects of the country embraced within the three Commissionerships, which include the whole area of distress as defined in the Lieutenant-Governor's circular of the 17th of November, appear to His Excellency to be unchanged, with the exception that

in Behar there is more land sown for "rubbee" than was at first supposed, and that the actual condition of the "rubbee" sowings is reported to be generally satisfactory. In these particulars the situation is certainly somewhat better than was anticipated a month ago. Lord Northbrook found that several high authorities had arrived at the same conclusion as the Government of India and Sir George Campbell (in His Honor's note of the 25th of November) that the present condition of affairs is, on the whole, much the same as it was at the same time in the year 1865.

6. When at Fyzabad Lord Northbrook saw Lieutenant-Colonel Hankin, Commanding the 4th Bengal Cavalry, which regiment had just arrived from Segowlee, having marched through the north of the district of Champarun, a part of the country as to which Mr. Bayley feels some apprehension; His Excellency was glad to hear that there were then no signs of distress. Colonel Hankin, who with great forethought took every opportunity of ascertaining the condition of the country through which he passed, has furnished Lord Northbrook with his observations, a copy of which will be sent for Sir George Campbell's information.

7. The Commissioner of Patna explained to His Excellency in detail the arrangements which he has made both as to local relief works and as to the storing of grain in convenient places. These will all in due course be reported by the Commissioner himself to His Honor. It will be sufficient for His Excellency to say that Mr. Bayley appears to have carried out the orders and intentions of Government with great judgment and ability. The number of centres in which grain is already stored or will be stored is large, and it may confidently be expected that when Mr. Bayley's arrangements are complete,—as they will be before any serious distress can arise,—every portion of his division will be within easy reach of some Government food depôt, from which officers in charge of Public Works, or Relief Committees, if it should be found necessary to establish them, will be able to draw supplies. Lord Northbrook himself saw considerable quantities of rice stored at Dehree, which is 60 miles distant from the nearest railway station.

Time did not permit of the Commissioners of Rajshahye and Bhaugulpore explaining to His Excellency the whole of the details connected with their relief works and storage of food, but from short conversations His Excellency gathered that they had made arrangements very similar in character to those of Mr. Bayley, and equally satisfactory.

8. Arrangements for local transport were reported to be in progress. The Commissioner of Patna and his subordinate officers have already provided largely for the transport of food, and were not under any anxiety that the means at their disposal would prove inadequate to meet their requirements.

9. No relief works, properly so called, have yet been found necessary in the Patna Division, although throughout the scarcity-stricken districts every preparation has been made to start them whenever and wherever they may be required. The number of persons employed on the Soane Canal works has recently somewhat diminished, owing to the employment of laborers in gathering the harvest; all those who were employed at the time of His Excellency's visit were ordinary contract laborers.

10. The preparations for the organisation of Relief Committees have been generally postponed until the more urgent work connected with the storage and transport of grain has been completed.

The local officers in the Shahabad district expressed some doubt as to whether it would be possible to organise Relief Committees properly without increased European agency. Perhaps this requirement may have been met by the schedule of temporary establishments which has been already sanctioned by the Government of India; but should this not be the case, any representation which His Honor may think fit to make as to the temporary employment of more officers, with a view to the supervision of Relief Committees, will receive His Excellency's immediate attention.

11. His Excellency was glad to learn that the zemindars in the Shahabad district are applying for advances, and Mr. Bayley speaks in the highest terms of the assistance which the planters are rendering to him in the neighbourhood of their homes.

12. Almost all the local officers expressed considerable anxiety as to the sufficiency of the supplies of fodder, and some expressed apprehension as to the supply of water for cattle. His Excellency understands that this subject is receiving the attention of the Lieutenant-Governor with a view to every possible precaution being taken to obviate so serious a calamity as great mortality amongst the cattle.

13. The Commissioner of Bhaugulpore brought to Lord Northbrook's notice the probability that certain classes of cultivators might be unable to obtain sufficient credit to carry them through the time of scarcity, but would not resort to public works or apply for relief in any other form, and suggested that advances of money or grain might be made to them, to be recovered afterwards with interest.

It is the obvious and natural duty of the landlords under whom such cultivators hold to do their utmost to assist them in passing through this temporary difficulty. The issue of advances of public money to any zemindars for this purpose should be held to come within the authority already given by the Government of India in respect to advances, and where apprehension is felt that this class will experience distress which cannot be otherwise met, it will be the duty of local officers to point out to zemindars the action which they should take, and the manner in which Government is prepared to assist them. The instructions contained in the circular letter addressed by His Honor's directions to the Commissioners of Patna and Bhaugulpore of the 24th November with respect to advances for the digging of wells appear to His

Excellency to be very judicious, and might perhaps be extended with advantage to other purposes. Lord Northbrook does not doubt that, on such communications being made to them, zemindars will either make advances to such cultivators from their own funds, or accept with alacrity the assistance offered by Government for this purpose; but if these expectations should not be realised, and difficulty is found with regard to the security for advances made directly to cultivators, His Excellency is ready to consider whether some legislative provision should not be made to the effect that their landlord shall stand security for the re-payment.

14. His Excellency endeavoured, whilst in the North-Western Provinces, to obtain the most trustworthy information both as to the prospects of the winter crops in those provinces and as to the surplus stores which are available for export. As regards the winter crops, there is every appearance of an unusually abundant yield in most parts of the North-Western Provinces. It is difficult, if not impossible, to state in figures the amount of surplus stores available, but the autumn crop has been a large one, and there was a remarkable concurrence of opinion amongst all whom His Excellency consulted, including Sir W. Muir, the district officers, and the best informed grain-dealers, that in any case a large quantity of grain will be available to meet the deficiency of the crops in Behar.

15. All the information which His Excellency received tended to show that private trade is active, and that large quantities of grain have been and are being sent to the distressed districts from the North-West and the Punjab. It is of great importance that no check should be put upon the operations of private traders by the importations of grain on Government account, and the Commissioner of Patna and other local officers in Behar pressed upon His Excellency the desirability of doing nothing to shake the confidence of grain-dealers in their ability to find a market for imported food-grains.

16. The position which Government occupies in respect to food-grains which have been or will be imported into the distressed districts cannot be too widely made known. The stores of grain laid in by Government will not be brought into competition with the general supplies of the trade, but will be used for the maintenance of the work-people employed upon Government relief works, and as depôts upon which Relief Committees, should it become necessary to call such Committees into existence, may draw.

Bearing in mind the large number of persons in need of relief for whom food may be required, the fact that many tracts of country which are threatened with scarcity are remote from railway stations, the difficulty which may be experienced in throwing grain in adequate quantities at a short notice into those tracts of country, and the determination of the Government to take ample precautionary measures in order to obviate mortality from starvation, His Excellency decided and announced in the Government Resolution of November 7th, that it would not be sufficient to rely upon the ordinary action of trade to meet these contingencies. Steps have accordingly been taken to secure sufficient food for the full number of persons who, judging by the experience of the past and the estimates of the Lieutenant-Governor and of the responsible local officers as to the future, may be compelled to resort to relief works or require gratuitous relief.

It will be seen that Government relies to a great extent on private trade to supplement any deficiency in the food supply of one part of the country from the surplus of another part; but at the same time, as an insurance against the inability of the operations of trade to meet the expected demands in certain places, stores have been purchased, in order to secure a reserve of food for that portion of the people who may be thrown on the hands of the Government or of the Relief Committees. Some part of these stores are already available in the districts threatened with famine, and the remainder will be available by the time they are required.

17. All the officers who were consulted by His Excellency were of opinion that the orders issued and precautions taken by Government were adequate.

18. The future prospects of the country greatly depend upon the timely supply of the rain which usually falls about Christmas; and, although the prompt action that has been taken must greatly mitigate the severity of the calamity which threatens the affected districts, there is still every reason to press forward to completion the measures which have been decided upon, and to watch carefully the signs which indicate the approach of actual distress throughout the whole Province, in order that any additional measures may be adopted which altered circumstances may require. Lord Northbrook is satisfied that the Lieutenant-Governor and the local officers are fully alive to these circumstances.

No. 4033.

From the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, in the Statistical Department, to the SECRETARY to the GOVERNMENT OF INDIA, Department of Agriculture, Revenue, and Commerce.

Scarcity and Relief.

SIR, Calcutta, dated 18th December 1873.

I AM directed to acknowledge the receipt of your letter No. 604, dated 16th December, and to express the Lieutenant-Governor's gratification that His Excellency the Viceroy has been pleased to accord approval to the arrangements made by this Government and the Commissioners and officers of Behar at the present crisis. I am to submit copy of the letter under which the orders of His Excellency have been communicated to the local officers. With reference to the concluding sentence of paragraph 4, I am to say that regarding the Western Soane Canal works the Lieutenant-Governor will address the Government of India separately.

2. In regard to the remark that the prospects of the country at the present time do not differ greatly from the position at the same period of 1865, it must be understood to be the Lieutenant-Governor's opinion that the failure of the present year is much more widespread than in 1865, but the latter year having been preceded by bad seasons, while the crops of 1871–72 were good, it is possible that the country may be now in no greater danger than it was then; but there can be no question that the crops of 1873 have, at any rate in the distressed tracts, been worse than those of 1865.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 18 of 1873.

Government of India.

Department of Revenue, Agriculture, and Commerce.

Agriculture and Horticulture.
Famine.

To His Grace the Right Honorable the Duke of Argyll, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, Calcutta, the 26th December 1873.

We have to report that we have for the present directed that the Special Narrative of the drought in Bengal be submitted fortnightly instead of weekly as heretofore. If the course of events shall hereafter indicate the expediency of collating information at shorter intervals than a fortnight, the submission of the weekly narrative will be resumed. By this opportunity, therefore, we do not transmit any narrative.

2. This arrangement will not interfere with our immediate treatment of any case which may be referred to us by the local Governments.

3. We desire, however, to represent to Your Grace in general terms, that in respect to the consequences of the drought, the situation is unchanged.

4. In Bengal, and in most parts of Northern India, the weather has, during the past week, continued clear and cool. At some places in the north there have been showers, and in Behar there has been some very slight rain. In Eastern and South-Eastern Oude, however, there has been a moderate and seasonable fall of rain, which will be highly beneficial, as it has occurred in some of the localities where it was most needed. As regards the prospect of the winter rains generally, we are not yet able to report anything.

5. On an examination of the local reports of the crops in Bengal and Behar transmitted from the districts to the local Governments, we find the outturn of the winter ("Amun") rice harvest to be in some places slightly better, in others slightly worse than previous reports, the net result being much the same.

6. These reports, too, enable us to test further the previous calculations of the probable area of distress in the event of winter rains failing, and the probability does not seem to exceed the anticipation already made.

7. There are fluctuations in the prices of food-grains and differences between the range of prices in various localities. But there has been no appreciable decline in prices since the first fall consequent on the incoming of the winter harvest. Nor, on the other hand, are there as yet any signs of the rise which is apprehended as likely to occur after the winter harvest shall have been garnered.

8. The internal grain trade of the country is active between the North-West Provinces and Behar, but not so active in regard to the despatch of rice up-country from Calcutta.

9. We continue to receive satisfactory accounts of the despatch and arrival of the grain order to Bengal from beyond sea. The steamers of the British India Steam Navigation Company are proving of much use in the conveyance of these supplies.

10. The local preparations to meet distress wherever or whenever it may arise are in due train of preparation; but Relief Committees have not been announced, and are not proposed to be announced, until distress shall begin to show itself, which is not the case as yet.

11. We are in correspondence with the Local Governments concerned regarding the terms of despatching emigrants from Bengal to Burma, also regarding the employment of natives of Behar on the Canal Works of the North-Western Provinces.

12. We are considering the practicability of immediately laying down tramways from Patna to Gya and from Moozufferpore in Tirhoot to Hajeepore on the Ganges, with special view to facilitating the transport of grain.

We have the honor to be,
My Lord Duke,
Your Grace's most obedient and humble Servants,
NORTHBROOK.

No. 2 of 1874.

Government of India.

Department of Revenue, Agriculture, and Commerce.

Agriculture and Horticulture.

Famine.

To His Grace the Right Honorable the Duke of Argyll, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, Calcutta, 2nd January 1874.

We have the honor to transmit copies of the special narrative of the drought in Bengal for the fortnight ending the 1st January 1874, and its enclosures.

2. We believe that these papers will be found to contain much matter of interest, as shewing that the local Government and the local authorities in Bengal are energetically yet judiciously applying themselves to the circumstances, according as the results of the drought become developed.

3. Since our last despatch to Your Grace the general situation remains without essential change. If there be any difference at all, it is slightly for the worse.

4. There has not been any more rain in the North-West Provinces since the 26th ultimo (the date of our last despatch). In Oudh there has been rain, described by the Chief Commissioner as general: so much so as to remove for the present the anxiety which had been felt regarding that province. There have been some slight showers in parts of the Patna, the Bhagulpore, and the Rajshahye Divisions, which have done some little good, and which may probably be followed by refreshing dews. But this rain has by no means satisfied the needs of the cultivators, and the want of moisture for the rising spring crops becomes felt with increasing severity. Otherwise the crops are as yet promising: and it is now manifest that the sowing and germination of these crops have been much better than was anticipated when the alarm of scarcity first arose. No signs are as yet apparent of the winter rains. There is yet time for them to come during the current month (January), by the end of which the fate of the spring harvest in Behar—that is how far it will be saved or lost—will probably be known.

5. Prices, despite various fluctuations, are on the whole stationary, the winter rice harvest having been reaped with an outturn much the same as the anticipation. In some places, however, they do shew a tendency to rise, and any such symptom at the present time when the new rice crop has just come in, is a presage of coming distress.

6. The area of distress may possibly extend somewhat in the Burdwan and in the Presidency Divisions beyond the anticipations entertained up to the date of recent advices.

7. Relief works are increasing in extent and in number at various places. The laborers who attend these works are numerically considerable perhaps, but do not at all approach the numbers whom we expect to see employed if distress shall become general.

8. The comparatively greater attendance of laborers on these works is the only sign of incipient distress which is perceptible as yet. And it has not been yet found expedient to commence operations through relief committees anywhere.

9. Among the papers now forwarded there will be found much evidence on the part of district officers as to the activity of the grain trade in the interior of the country.

10. The supplies ordered by the Government of India from beyond sea are duly arriving. A copy is forwarded herewith of a letter* written by our direction, acknowledging the services of the British India Steam Navigation Company in carrying these supplies. The measures for storing and distributing in the interior of the country the stores, whether ordered by the Government of India or by the Local Government, are advancing under the direction of the Lieutenant-Governor.

No. 696, dated 27th December 1878, page 120.

11. Among the enclosures of the narrative there is an important letter received from the British Indian Association, written in compliance with our request that they would state the reasons and the facts which induce them to form an apparently more unfavorable anticipation than that which the official accounts warranted. The reasoning of the Association, proceeding from native gentlemen of so much experience, is highly interesting and important. In respect to facts, however, as observed by the Lieutenant-Governor, the Association rely mainly on the official reports, and do not adduce any counter facts at all, and hardly any new facts. This circumstance may be taken as a corroboration of the official reports. For if any evidence of an opposite character were obtainable, the Association would be in the best position to obtain it. We are not prepared to affirm the general propositions made by the Association, which indeed are very general in their terms. The possible grain resources of Bengal itself—that is the known exportable surplus of certain districts, such as the rice delta district of Backergunj, and even to some extent Orissa—do not seem to have been thought of in sufficient detail. As regards the stocks in North-Western India, the Association form a much less favourable estimate than that repeatedly given by the best native authorities in that part of the country. We are, however, considering most carefully and practically the arguments urged by the Association, and other cognate arguments, in order that we may be prepared to make immediately any arrangements which our well founded anticipations may dictate. And we hope by the end of the current month to be in a position to present a more complete estimate of our ultimate anticipation. Meanwhile our preparations for meeting a degree of distress which may be considered very high, according to experience of past famines in India, have been arranged and ordered, and are in course of active execution.

12. Your Grace will observe that the Appendix G* to the narrative contains confidential letters which were not complete as transmitted by the Government of Bengal and which we have completed.

* Page 115.

We have the honor to be,
My Lord Duke,
Your Grace's most obedient and humble Servants,

NORTHBROOK.

SEVENTH SPECIAL NARRATIVE OF THE DROUGHT IN BENGAL, FROM THE 19TH TO THE 31ST DECEMBER.

Under instructions from the Government of India, the periodical Narratives are now to be fortnightly instead of weekly, the present is the first fortnightly Narrative.

2. During the whole fortnight the weather in Central and Western Bengal has been clear and bright. The complaint that insects were doing great harm to the crops has ceased almost everywhere. There was very slight rain at Patna and in parts of the Chota Nagpore country on the 21st December, but the fall was not sufficient to affect the rain gauge or to do any appreciable good. On the 28th December a little rain fell in Behar and in one or two parts of the Rajshahye division; we have not yet heard exactly how far the rain extended. The amount registered on the several rain gauges is given in the margin as far as it is known. Letters from the Relief Commissioner's camp in Dinagepore speak of rain doing good, and of more rain being expected. From Sylhet and Gowhatty telegrams speak of slight rainfall only. The rain in Bhaugulpore and Purneah will do some good to the young spring crops; even the very light rain in Western Behar may do good and help the dews. In Seetamarhee the rain will do good, but there the breadth put down with spring crops happens to be smaller than in the south of the district. It is as yet too soon to say whether this rain makes a material difference to the general prospects of the year. The Lieutenant-Governor has every hope that we shall have a moderate spring crop, if the dews continue and if we have more rain. But the spring crop will not greatly improve the condition of purely rice tracts like Northern Tirhoot, Soopole, Dinagepore, and Bograh.

Rainfall of the 28th December.

Patna Station Barh „ Behar „	from 0·10 to - - 0·25	of an inch.

3. There has been no material change in the state of the crops. The rice crop, which is now nearly reaped, has not turned out better than was expected at the time of the last Narrative, unless, perhaps, in parts of the Bhaugulpore district. The Magistrate-Collector speaks (see Enclosure 5) of the rice crop in places being better than had been expected; indeed, with the exception of the Soopole sub-division, where it is very bad, the rice crop of the Bhaugulpore district is now reported to be half of an average crop. From the other distressed districts no improvement can be reported in regard to the outturn of the late rice; but the spring crops appear to be still healthy in most places; only in some of the tracts north of the Ganges, where the total rainfall of the season was extraordinarily deficient, do they seem yet to have suffered much. Regarding the area put down with spring crops, no new information has been received. Copies of the rainfall and crops reports for the weeks ending on the 20th and 27th December are appended.

4. Prices are in some districts lower and in others higher than at the time of despatching the last Narrative. The fluctuation in prices has for the most part been comparatively small; in Mymensing the price of rice has risen from 16 to 14 seers per rupee; in Rungpore, from 15 to 11¼ seers per rupee; in Burdwan, from 15¾ to 14 seers per rupee; and in Calcutta, from 13¼ to 12 seers per rupee. These are the only serious rises of price during the fortnight. In the Patna and Bhaugulpore divisions there has been very little change in prices. In North Behar, where keen distress is anticipated, Indian-corn is nowhere dearer than 16 seers per rupee, and in most places it is considerably cheaper, and the south-east corner of Purneah is the only tract from which prices are reported to be as low as 10 seers per rupee for the food of the common people. Food is reported to be sufficiently abundant in the bazars everywhere, except in the Purneah tract aforesaid. The prices-current statements for the weeks ending on the 20th and 27th December are enclosed; it will be seen that nowhere have prices yet reached famine rates. A Native Inspector of Schools, who has just been on tour in Rungpore, reported to-day that his servants had been paying 3½, 4, and even 5 Rs. per maund (equal to 8 seers per rupee) for common rice; but it may probably be taken that the published prices-current represent fairly well the rates at which food in moderate quantities can be got at any of the larger marts in the district.

It is noteworthy that no unusual number of grain thefts or robberies is reported from any of the distressed districts. With future Narratives will be submitted, as per instructions from the Government of India, a table showing the number of thefts, robberries, and dacoities for each distressed district during the month, as compared with previous years.

5. A short note on the internal and external trade in food-grains has hitherto been added as an Appendix to the Special Narrative. It may not be out of place to give here a general outline of the course of the grain trade since 1st November.

The external trade first merits attention. Since November 1st up to December 30th, the exports of rice from Calcutta to ports other than Bengal ports have amounted to 920,482 maunds, while the imports from beyond Bengal have amounted to 68,969 maunds. Some 2,00,000 maunds of grain imported for Government have not been cleared at the Customs house. These imports consist almost wholly of Government grain; the exports are wholly on private account. From Chittagong there was exported between November 1st and December 15th 260,000 maunds rice and paddy to ports outside Bengal, while the imports were nil. During the same period some thousands of maunds were exported from the Orissa ports out of Bengal, but accurate returns up to date have not been received.

Of other food-grains the exports from Calcutta to non-Bengal ports were, between November 1st and December 30th, as follows:—

Wheat	- 99,766 maunds	Gram	- 54,864 maunds.
Pulse	- 86,687 „	Miscellaneous	13,000 „

Telegraphic advices show that export from Chittagong beyond Bengal still continues. Some 1,00,000 maunds were so exported between the 15th and 27th December.

The trade between Calcutta and Chittagong and the Orissa Ports is not external trade, as those ports lie in Bengal territory. The imports of rice into Calcutta from those ports have been, since 1st November up to 30th December, 151,601 maunds. Taking round numbers, 57,000 tons of food-grains have been exported by sea from this presidency against 10,000 tons imported up to the date of the latest advices since November 1st. Export is still going on briskly, but large Government imports are now arriving.

Next comes the internal trade to Calcutta. That port is supplied by the East Indian Railway with wheat and pulses. The Ganges also brings down small quantities of these grains; at this time of year the Nuddea rivers being closed, this Ganges traffic proceeds to Calcutta by way of the Gorai and the Eastern canals. Rice comes into Calcutta in large quantities from the districts on the south-west by the Ooloberiah Canal and the river Hooghly. It also comes in by boat and cart from the districts on the north-west. From the south-east, it comes in by various water-ways in small boats; but the largest supply is by way of the Eastern canals from the east. None of the three railways carries any rice to Calcutta. The East Indian Railway brought in 245,591 maunds of food-grains other than rice in November. Of the November arrivals, 62,814 maunds were from stations below Buxar, for the most part in the Behar Division. There passed down the Ganges between 1st November and 23rd December, 111,095 maunds wheat and 38,649 maunds gram, consigned from the Behar division to Calcutta. This trade found its way to Calcutta by the Gorai and the Eastern Canals. The Eastern Canals brought into Calcutta, between November 1st and December 30th, 8,86,000 maunds food-grains, chiefly rice. The supplies from other sources have not been registered.

Chittagong is supplied by boat from Noakhally, Tipperah, and Backergunge. The Orissa ports are supplied from their own neighbourhood by small boats.

Of other internal trade in food-grains, that on the East Indian Railway is most conspicuous. Since November 1st, this railway has poured large supplies into Behar both from Calcutta and from the North-West. The total consignments from the North-West Provinces and the Punjab to stations in Behar amounted, between the 1st November and the 20th December, to 4,22,486 maunds, while between November 1st and December and December 30th 8,05,100 maunds of rice were despatched to those stations from Calcutta. The stations in the neighbourhood of Calcutta have also despatched a good deal of rice to the stations in Behar. Chandernagore has sent 70,000 maunds since November 1st. Of this trade on the East Indian Railway a considerable proportion is on Government account. The total weight of grain carried into Behar by the East Indian Railway from both ends was thus about

13,00,000 maunds for November and the greater part of December, besides 4,00,000 maunds despatched from Howrah and Chandernagore in October.

At two places on the Ganges, the upward trade is registered—at Goalundo at the junction of the Ganges and Brahmapootra, and at Sahibgunge, where the hills of Western Bengal abut on the river. There is a small upward trade in rice past Goalundo. This trade dissipates itself in the districts between Goalundo and Sahibgunge. It amounted between 1st November and 20th December to 1,28,000 maunds. There is also a small upward trade, chiefly in pulses, past Sahibgunge. A very small amount of rice finds its way to Behar by this route at this time of year. The figures of this upward trade past Sahibgunge are, for the period between 1st November and 23rd December, pulses 1,05,000 maunds and rice 88,000 maunds. Both the rice and the pulses come chiefly from Moorshedabad and Rajshahye.

The operations of Government have developed a small trade in rice on the Eastern Bengal Railway from Calcutta to Kooshtea and Goalundo.

The consumption of food in these provinces is estimated to be over one million maunds a day, to which large total the amount of food moved bears a very small proportion.

The above is a review of the grain trade so far as anything definite is known of it. There is also much grain of which we have no information. We know nothing definite of the importations now said to be going on into the Rajshahye division.

6. Since the submission of last Narrative very large consignments of Government grain have reached Calcutta and the distressed districts. Nearly all the 1,50,000 maunds bought in Calcutta on public tender has been delivered and despatched up the country. Burmah and Madras rice is now coming in very rapidly; about 7,000 tons have been delivered up to date, and 4,000 or 5,000 tons more are now in the river. Appendix A. shows that during the fortnight under report 2,16,861 maunds of Government rice have been despatched from Calcutta to the distressed districts. Several ships, with Government rice from Madras, Burmah, and Saigon, have arrived during the last week, and as yet unloading and despatch from Calcutta by railway and steamer have kept pace with the arrivals. The first despatch yet made by river steamer left Calcutta during the fortnight, 20,000 maunds having been taken by river steamer from Calcutta to Kaleegunge and Chilmaree, in the Rungpore district, at the rate of 7 and 7½ annas per maund for the whole trip.

7. Exact figures of the arrivals of Government grain from Northern India are not yet available; but about 65,000 maunds of up-country grain (barley, peas, and wheat), had arrived in the Patna division by last accounts, and about 40,000 maunds in Bhaugulpore division: 12,000 maunds of rice, bought by the Commissioner of Rajshahye in the markets of Eastern Bengal, were on their way to the north of the Rajshahye division. The distribution of the grain to storehouses in the interior of the distressed districts is going on in earnest. By the last accounts about—

1,20,000 maunds have been despatched from stations on the railway to places in the interior of the Patna division.

1,10,000 maunds have been despatched from stations on the railway to places in the interior of the Bhaugulpore division.

85,000 maunds have been despatched from the stations of Kooshtea and Goalundo on the Eastern Bengal Railway to places in the Rajshahye division.

Special effort is being made to carry grain as quickly as possible to storehouses in the north of Chumparun, Tirhoot, Bhaugulpore, Purneah, Dinagepore, and Rungpore, where distress is likely to be worst, and to which the routes of access are least easy. Already reports have been received of considerable quantities of Government grain having been stored in the interior of the districts of Chumparun, Sarun, Tirhoot, Monghyr, Bhaugulpore, Purneah, Rajshahye, and Dinagepore. The precise amounts which have reached their destination are not here given; but the stream of grain transport has now, after some difficulties and occasional stoppages, fairly and steadily begun, and we may hope that it will continue so long as the season remains favorable. The Commissioner of Patna reports that he can now despatch 60,000 maunds of grain to the interior weekly, and that he hopes to do more before long. The rivers are unhappily everywhere low; boats of small burthen only can ascend the inland rivers, and these boats cannot be had in sufficient numbers. The Patna Commissioner's last narrative (Enclosure 9), and Mr. Luff's log of his cruise in the "Flame" (Enclosure 10), advert to or exemplify the tediousness and difficulty of boat journeys this season. Both in Behar and in Rajshahye the local officers seem to be more and more disposed to trust to carts rather than boats for carriage to places off the very great rivers. It is remarkable how much the facilities for water carriage have fallen short of our expectation. On the 28th December the Commissioner of Patna wrote:—"I cannot get boats enough of the size necessary for the Gunduck voyage, and am sending all over the place for them. I hope to get some from Benares and from the Soane. We can only use on the Gunduck boats of 100 maunds burden."

8. Over and above the receipts of Government grain in the distressed districts, very large quantities of grain have been ordered and are actually being imported for estates under the Court of Wards and by Indigo Planters and others who have taken advances from Government for the purpose. The Hutwa and Durbhanga estates, which are in the heart of the distressed tracts of the Sarun and Tirhoot districts, are importing 1,00,000 and 1,20,000 maunds of grain respectively. Much of this grain is already arriving.

9. Places for storage of grain are everywhere being hired or built. In this matter there is no delay whatever; and the tendency is for officers to make their storehouses more numerous as they learn more of the state and prospects of the country.

10. At page 4 of the Narrative of the 21st December, it was stated that three lakhs of maunds of grain had been contracted for in Orissa at the comparatively favorable rate of Rs. 2¾ per maund delivered in Calcutta. The Commissioner of Orissa had been authorised to make agreements for the supply of a certain amount more, provided the sellers would put it down in Calcutta at the same rate and at an early date. He (the Commissioner of Orissa) has now reported that he has secured 1,27,000 maunds more Orissa rice, nearly the whole of which is to be delivered before the end of January. 25,000 maunds of wheat from the Nerbudda Valley have been arranged for at Rs. 2-11 per maund, inclusive of bags, but exclusive of railway hire to the distressed districts. This wheat will be consigned to Bhaugulpore; it is to be delivered in weekly instalments, and the last instalment is to arrive before the middle of February. This consignment will for the present take the place of certain grain bought through the Deputy Commissioner of Delhi, which is turning out badly, and regarding which correspondence is going on. The Commissioner of Dacca has notified the execution in Eastern Bengal of an order he had given for 20,000 maunds of grain before purchases were suspended; he has been instructed to send this rice in boats by the Megna and the Berhampooter to such marts in the Bograh district as the Commissioner may indicate.

11. So far as this Government is informed, the grain ordered or purchased up to date for the distressed districts of Bengal is as follows:—

Government of India's Orders.

	Tons.	Mds.
First order of 5,000 tons from Madras and 5,000 tons from Burmah - -	10,000	2,70,000
Second order of 40,000 tons to be purchased in Burmah up to the end of May, as per Government of India's letter No. 584, dated 13th December 1873 - -	40,000	10,80,000
Her Majesty's Secretary of State's order for 20,000 tons from Saigon and Hong-Kong, as per Government of India's letter No. 680, dated 25th December - -	20,000	5,40,000

Government of Bengal's Orders and Purchases.

	Tons.	Mds.
Bought in Calcutta up to the end of December	11,851	3,20,000
Ditto by the Commissioners of Divisions	11,000	2,97,000
Ditto from the Nurbudda Valley	2,407	65,000
Ditto do. Orissa	15,813	4,27,000
Ditto do. the North-Western Provinces through North-Western Provinces Government officer - -	5,481	1,50,000
Total	116,552	31,49,000

Out of this total about 70,000 tons will, it is believed, be in the hands of Government in this country before the end of January. Intimation * has been received from the Government of India that steamers carrying about 24,400 tons of foreign rice may be expected to reach this country before the end of January next; but it is believed that much of this quantity is a part of the 70,000 ordered by the Government of India as per the above table. So far as the Lieutenant-Governor is aware, the total amount of grain purchased and ordered up to date does not exceed 130,000 tons at the outside. The Lieutenant-Governor is now anxiously considering the question how much more grain he ought to ask for when the supply sanctioned up to the end of January shall have been completed; if the grain has to come from across the sea it must be ordered soon, for any grain that is bought must be delivered and stored in the districts before the rainy season sets in. Sir George Campbell hopes to submit his views upon this matter within a few days' time. Meanwhile he has submitted to the Government of India his view that the rice from Burmah or elsewhere ought all to arrive before the 10th May at latest, inasmuch as transport of grain to the interior will be almost impossible when once the rains have fairly begun.

* Agriculture, Revenue, and Commerce Department letter No. 620, dated 18th December 1873.

12. Copies of the district narratives for the fortnight ending on the 13th December, and of the narratives furnished by the Commissioners of Patna and Bhaugulpore, are enclosed. From these reports the following general result may be noted here:—

A.—State of the Country.

Actual distress is reported from one part of Chumparun only, and the features of the reported distress are not yet fully known. It is said that actual distress will probably be felt in part of Tirhoot within a month; and from Bograh report has been received that prospects are now graver than was at first supposed. The people generally are said to be more hopeful than they were in November; and this hopefulness is in part due to the measures Government is taking. The fear is that, if prices keep low and private importations slacken from an undue confidence in the power of Government to meet all requirements, the result might be disastrous. The district officers are doing what they can to explain the intentions of Government as widely as possible; but it can hardly be hoped that the people will not exaggerate the importance of the action taken by Government. In the Burdwan and Hooghly districts only do the local authorities consider the early appointment of relief committees necessary; in these districts there is a large laboring population always little above a bare living.

B.—Relief Works.

13. In the Sarun, Monghyr, Tirhoot, Bhaugulpore, and Dinagepore districts, considerable bodies of men are employed on relief works. Elsewhere the number of persons on the relief works is small; scarcely any people are yet coming to the feeder roads prepared for their reception in the Northern Bengal Railway country. The great majority of the work-people everywhere belong to the ordinary laboring classes, who are very few in Northern Bengal. The returns of laborers are not complete, but in round numbers—

10,000 were daily employed in Sarun.
4,000 „ „ in Tirhoot.
5,000 „ „ in Monghyr.
3,000 „ „ in Bhaugulpore.
3,000 „ „ in the Rajshahye Division.

Correct returns of the laborers in each district will, in course of time, come in from the Public Works Department, but as yet the returns do not come in regularly.

14. Food is everywhere obtainable on the works, either from petty dealers who set up shops there, or at neighbouring markets. It has not anywhere been necessary to distribute or sell Government grain on relief works. Questions having arisen regarding the rates at which, and the circumstances under which, Government grain should be sold on relief works, and the Lieutenant-Governor has issued orders (Appendix B.) explaining that some discretion is left to Commissioners as to the price at which they may sell grain on works, but that, in the Lieutenant-Governor's opinion, Bengal rice ought not to be sold cheaper than ten seers per

rupee, maize, barley, Burmah rice being sold proportionately cheaper. The Lieutenant-Governor was unable to accept a suggestion of the Patna Commissioner's, that the price of grain and the rates of wages on Government works should be varied from time to time so as to agree with the prices of food for the time being in the neighbourhood of the particular works. He prefers the plan of selling the Government grain at prices within the limit at which coolies on ordinary wages can support themselves.

15. Schedules of roads and other undertakings proposed for relief works have been received; and the preparation of roads and other works is everywhere going on. The Lieutenant-Governor deemed it right to draw attention to the fact that, while roads and waterways may be prosecuted as relief works from district funds and from such additional grants as the Government may from time to time make, tanks and other landed improvements must be done by landholders themselves from advances under the Act; while river embankments and water-courses must be brought under the new Embankment Act (VI. of 1873) in the regular way. He explained that, if it was necessary that tanks and such like works should be undertaken as relief works, and if it was clear that the landholders would not take advances for the purpose from Government, then the question of ways and means for such expenditure must be faced, and special application must be made. Meanwhile, Commissioners have discretion to proceed with such works if actual necessity arises. General attention has also been called to the Embankment Act, recently become law, and the district officers have been instructed to take steps for bringing the new Gunduck embankments under the law. Copies of the orders on these subjects will be found in Appendices C and D.

C.—TRANSPORT OF FOOD.

16. Regarding private importations several local officers express a fear that their amount has decreased. The Magistrate-Collector of Shahabad explains that the prices now ruling in his district do not leave any margin for profit on importations from Calcutta. This is no doubt the case, but the prices in the North-Western Provinces are still much below Behar prices, and considerable private importations from the north still continue, as has been seen from paragraph 5 (above) on movement of grains. The planters of Behar are continuing to import considerably. Co-operative Associations have been formed at Moorshedabad and Pootea (Rajshahye district) for importing grain and selling it at cost price (see enclosure 11); at Pootea a general reduction of prices is said to have been thereby effected; the Government is giving and will give to such Associations any support it can. Certain zemindars of the Rajshahye division asked the Government to import rice for their estates and sell it to them at cost price; the Lieutenant-Governor considered that it would be better to refer these gentlemen to dealers in the Calcutta market, and to promise that the Government transport officers and appliances would give every help in forwarding any grain they might buy to its destination. As yet they have not given any orders to the Calcutta dealers. At Appendix G* will be found copies of the correspondence which has passed with the Government of India regarding the effect of Government importations on prices and in facilitating exports; these papers are appended to make the Narrative of the fortnight complete.

* Page 115.

17. The distribution of the Government grain to the storehouses in the interior, and especially to the remoter tracts away from railways and rivers, is perhaps the most important work we now have in hand, and it is engaging the most earnest attention of our officers. It may be well to offer here some brief details of the routes and modes of traffic now being tried. Taking the several districts in order, we have—

Patna.—This district stretches along the Ganges and the railway; storage of grain can be done easily here last of all. But a few thousand maunds have been sent by cart to store-houses in the interior; means of carriage are said to be ample, and there is no anxiety about this district.

Gya.—The different parts of this district are being supplied from the Bukterapore, Patna, and Bihta stations of the East Indian Railway. From the first-named station, grain goes on pack-bullocks to the eastern and less fertile parts of Gya. From the other two stations grain goes on carts by the Patna and Gya metalled road, and by unmetalled roads which are fairly good. As yet the despatches of grain to Gya have been about 35,000 maunds. The Lieutenant-Governor is somewhat anxious about the Aurungabad (extreme western) part of the district, and has asked the

Commissioner to consider how the wants of that tract can be most easily met. He has suggested supplies from the North-Western Provinces viâ the Grand Trunk Road.

Shahabad.—In this district depôts are arranged on the several works, and are to be supplied from five different railway stations. Grain has only now begun to be despatched to this district, most of which is very accessible, except only the Bhubooah sub-division, where distress is likely to be keenest, and to the requirements of which the Lieutenant-Governor has drawn very special attention. The tract will probably be supplied from the Grand Trunk Road.

Soane Canal Works.—The Superintending Engineer at present takes 5,000 maunds of grain a week, and carts it to store-houses as it comes.

Up to the present date there has been no block in South Behar, and the district officers are quite confident of being able to get quite as much carriage as they require.

Tirhoot.—The supply of this district is at once more important and more difficult than the South Behar districts. Grain is being despatched by three routes—namely, from Patna Ghât station by boat to Hajeepore, and thence by cart to storage places in the centre of the district; from Barh station to Chumpta Ghât by boat, and thence by cart up to Durbhanga, Mudhobanee, and Seetamarhee; from Monghyr station up the Kosee and Ghugree rivers to a place eight miles from Durbhanga, whence the grain is carried by carts into northern and western Tirhoot. A fourth route, the Chota Gunduck, which, in ordinary years, is navigable up to Rooshra, had to be abandoned because the water in the river was so low. As yet only 15,000 to 20,000 maunds have reached the Tirhoot district; as 2,50,000 maunds have to be stored there before the end of January, and the store-houses are mostly in the northern and north-eastern sub-divisions, the Lieutenant-Governor is not satisfied with the progress of grain transport in Tirhoot. He is aware that Mr. Bayley is doing what he can to secure greater progress, and he has begged that other matters may be postponed to the urgent necessity of getting grain up at once into the remoter tracts of Tirhoot. The district officers speak of abundance of carts being available, but the transport across the river and its sands causes delay, and as yet the stream of grain transport has not flown so largely into Tirhoot as the Lieutenant-Governor had hoped.

Sarun.—This district is situated on the river and within easy reach of the railway. 25,000 maunds have been sent to Revelgunge on the Ganges and to places of debarkation on the Gunduck, and is in transit on carts to the marts in the interior; more is on its way.

Chumparun.—Forty-eight thousand maunds have been despatched by boat to this district, chiefly for the Gunduck Embankment works. Some of this has begun to arrive, and a little has been moved on to storehouses on local works in the interior, but the transport by boat is very slow; it is difficult to get a sufficient number of small boats to carry all the grain that is wanted at the present season when big boats cannot move up the rivers; and the Commissioner is trying how it will answer to cart 10,000 maunds from the Ganges up to Chumparun, into which district 2,50,000 maunds have to be sent before the end of January.

Monghyr.—Transport is going on very promptly by cart from stations on the chord line and from Luckiserai into the parts of Jumooee, regarding which there is cause for anxiety. There is no hitch here. The despatches of grain to storehouses in the trans-Ganges sub-division of Monghyr has also gone on smoothly.

Bhaugulpore.—The parts of Bhaugulpore regarding which there is most anxiety are those far north of the Ganges. The magistrate has been able to send away across the river all the grain that has come to him, and by the middle of December more than 17,000 maunds had actually started from the river-side in carts for the extreme north of the district. The Magistrate-Collector expects to be able to carry all the supplies of Government grain without difficulty.

Purneah.—The district has drawn its supplies as yet entirely from the Sahebgunge station, and there has been a block at the ferry and station. The railway ferry steamer can only carry a limited amount of cargo, and for some days the Purneah carts could not even carry away that much. A special officer is now posted at Caragola and Sahebgunge, and he is getting the grain across in native boats as fast as he can. More carts also are collected to carry the grain from the Ganges into the interior. The Magistrate-Collector is going to essay the Mahanuddee route, and see if he cannot get up grain from Godagaree, by boat up to Barsooe, in the south-east of the district. As yet the Purneah grain transport arrangements are by no means complete.

Rajshahye Division.—The arrangements for sending grain to Maldah, Rajshahye, Dinagepore, and the North Bengal Railway works are all part of one scheme. Grain is sent by the Eastern Bengal Railway to Kooshtea, whence it is taken by Government steamer and flat and dropped at Dhaparee, Rampore, Beauleah, and Godagaree. From Godagaree it is carried by boat to Maldah and Raigunge; from Maldah and other marts on the Mahanuddee it goes by cart to Gazole, and from Raigunge the Khurbah depôt is supplied. Some 5,000 maunds were sent from Rajmehal by cart to Dinagepore, but that route was tedious and costly. From Goalundo the river route by the Oorasagor, Burrul, and Atrai was tried, and some 20,000 maunds have gone by that route. But the rivers are low, boats of the proper draught are few, and the papers herewith enclosed (enclosure 10) show the difficulties in the way. By making a transhipment depôt up the Oorasagor, this route will still be worked, but Major Lindsay has decided also to try two other routes, from Rampore Beauleah and Dhaparee, partly by land and partly by inland streams. From 60,000 to 70,000 maunds are already either stored in these districts, or are in boats on their inland waters, or in carts going up towards the northern store-houses.

Bograh.—This district is being supplied with grain purchased in Eastern Bengal, and sent up the Berhampooter in native boats. The requirements of Bograh have only lately become emergent, and its supply will be thrown in without great difficulty.

Rungpore.—Grain from Eastern Bengal and Calcutta is on its way to Kaleegunge and Chilmaree at the mouth of the Teesta, both by boat and by steamer. Part will be carried up the Teesta in boats to the ghâts opposite and above Rungpore; part will be carted to the store-houses in the interior from Kaleegunge. Carts and boats are being collected for the internal carriage; the district officer does not anticipate difficulty, but his arrangements have yet to be tested.

D.—STORAGE OF GOVERNMENT GRAIN.

18. Store-houses in most districts have been rented, or have been lent by zemindars at most of the places decided upon; at others store-houses are being built. The places at which, and the quantities in which grain is to be stored for each work, have for the most part been settled. If only we can get the grain to the sites selected, the store-houses will be ready.

E.—ADVANCES TO PRIVATE PARTIES.

19. In Behar few zemindars have as yet come forward to take advances for landed improvements, and the planters had taken advances largely for grain purchases before the date of last Narrative. In Patna, however, three or four landholders have taken advances for making temporary wells for irrigation. In the Burdwan division the zemindars seem very anxious to effect landed improvements, and the Commissioner has received applications for Rs. 34,800 advances from one district alone. It is hoped that the money will be promptly given and well spent. Advances of money to zemindars who may desire to help their ryots with small loans have been authorised, but have not yet been made. At the instance of the Commissioner of Bhaugulpore, the period for repayment of these advances has been prolonged to the end of 1875 (see enclosure 12).

F.—CHARITABLE RELIEF.

20. No charitable relief has yet been organised, though in some districts small sums had been placed at police out-stations for succouring travellers or chance strangers who may be destitute. During the next month it may be necessary to form relief committees in some districts.

21. Hitherto the Government has not wholly recognised that the area of immediate distress extends beyond Behar and part of Rajshahye. During the last fortnight the Lieutenant-Governor has been induced, by reports which have reached him, to accept officially the fact that relief works will probably be required in parts of the Burdwan division, especially in the Burdwan and Hooghly districts, in parts of the Sonthal Pergunnahs, and in part of Nuddea. Burdwan and the western districts possess, more than any other districts of Bengal, a large laboring population; the well-to-do ryots ordinarily keep farm servants; the epidemic fever of the last few years has reduced the morale and the vital energy of the people; and we certainly shall have to provide work and perhaps relief, in parts of Burdwan and

perhaps Hooghly. In part of the Sonthal Pergunnahs too there has been some failure of crops; the people are not rich, and the Commissioner considers works absolutely necessary in the north-western corner of the district. Nuddea was in 1865-66 the district of Bengal where the scarcity was worst; already there are threatenings of distress in the Meherpore sub-division, and the Lieutenant-Governor has been obliged to promise to aid the district committee when their funds fall short. The committee has very wisely arranged to spend their available funds on undertakings which will give the best work to the people of the tracts where distress is most likely to appear. The Lieutenant-Governor does not anticipate that any immediate distress in these districts will be as keen as it may be in parts of Behar and Rajshahye; but he has been obliged, to provide against the contingency of distress, to urge the preparation of sufficient works, to promise extra funds, and to grant these districts the most favorable terms for advances for landed improvements. If unhappily it should hereafter prove that grain must be imported into these districts by Government, such importation will be comparatively easy, for these districts lie upon railways, navigable rivers, and metalled roads. Copies of the Burdwan and Presidency Commissioners' reports will be found in enclosures 7 and *7a*.

Colonel Dalton's report upon the prospects of his division (enclosure 6) gives his view of the state of affairs after he had made a tour through Singbhoom, Maunbhoom, and parts of Lohardugga. The Lieutenant-Governor has the utmost confidence in Colonel Dalton's judgment and foresight, has accepted all Colonel Dalton's recommendations, and has suggested that very special steps be taken to promote importation of grain into Palamow, a tract which unfortunately suffered keenly in 1869. The way in which the villagers and headmen in the Singbhoom and Maunbhoom districts are prosecuting village works of improvement under the guidance of the Deputy Commissioners is most satisfactory. The Lieutenant-Governor has no anxiety for any part of this division except the Palamow Sub-division.

22. The Government of India has been pleased to attach two more Assistant Engineers and four more Public Works subordinates to Bengal, and they have been sent off to work in the distressed districts. The first batch of 8,000 tools from Madras is being landed; and it is hoped that, owing to the Chief Engineer's timely arrangements, all Commissioners will be supplied with as many tools as they want before the press comes on the relief works.

23. The Irrigation Department reports that 3,195 additional acres have been irrigated with Soane canal water, making in all 128,890 acres in the Shahabad and 8,365 in the Gya district. This is independent of the benefit done by letting Soane water into the Poonpoon Nuddee, whence some little irrigation is practised by the Patna ryots. The landholders along the new channels have, wherever water could be spared, filled their tanks with Soane water. Messrs. Thompson and Mylne, zemindars of Beheea, report that in this way about 2,300,000 cubic feet have been stored against the coming dry season. The daily number of laborers employed on the works has risen from 20,000 (paragraph 12 of last diary) to 26,951; most of the laborers are imported, and the Executive Engineer reports that "one-fifth are from the neighbourhood of the works where the people stand out for higher wages." Supplies of food are plentiful and tolerably cheap, about 12 seers for the rupee.

The work on the Gunduck embankment in the Sarun and Tirhoot districts employs 972 laborers daily. Land is being taken up for the upper embankment in the Chumparun district.

The Damooda water was let into the Kana Nuddee on the 27th December, but it is as yet too soon to hear what good it is doing to the crops; 978 laborers were employed daily on this work during the fortnight. On the Midnapore and Hidgellee canals the number of laborers is increasing.

24. The Lieutenant-Governor has recommended that a regular emigration agency should be opened in Calcutta for promoting emigration to Burmah, and has submitted a sketch of the establishment that would be required. The Magistrate of Sarun reports that many families have registered themselves as ready to emigrate if only their passage and expenses be paid, but it is not clear yet that these men are willing to go across the sea to Burmah. In regard to emigration to Assam, some correspondence has passed with the Landholders Association (Appendix E), in which the Association lay stress on the unsuitability of Hindustanee (Behar) coolies for work in Assam tea gardens. Reports have also been received from the Assam tea districts to the effect that the tea planters have mostly arranged for their supply of coolies for the present season, that they do not like paying Rs. 10 a head for

coolies who are only to be under a one year's engagement, and that in a dear year like the present they fear to add to the mouths they will have to feed, especially as during their first year coolies are not so useful as during their second and third years. It seems as if it would not be for the interest of the Behar emigrants or of the Assam planters to send men from the famine-stricken districts to the comparatively unhealthy gardens in the backwoods of Seebsaugor and Luckimpore. The Government will perhaps be able to comply with indents of planters in the more open districts of Nowgong and Durrung, where some of the planters are quite ready to receive Behar emigrants. Any other immigrants beyond the requirements of these two districts will find ample employment on the public works of Lower Assam.

The Deputy Commissioner of Julpigoree has requested that surplus population of the distressed districts may be settled in the Dooars below the Bhútan Hills, where there is ample waste land ready for the plough. He has been asked for details of his proposal, but for the present the Lieutenant-Governor is not prepared to recommend heavy expenditure in planting cultivating colonies of emigrants on Government wastes.

25. The Landholders' Association represented that delays in settling the waste land sale rules prevent tea planters from extending their industry and finding employment for immigrants to the extent they might otherwise wish. Their representation on this matter has been laid before the Government of India, to whom the waste land sale rules, as finally re-arranged under the orders of His Excellency the Viceroy in Council, were submitted on the 31st October last.

26. The Opium Agent reported that the poppy fields in Shahabad promised well; he recommended that the January advance on the expectations of the crop should be raised from Rs. 4 to 8 per beegah of poppy land; and he asked permission to extend the same concession to the opium ryots of other districts where the expectations of the opium crop were equally good. The Agent observed that the ordinary Rs. 4 advance always went, according to the custom of the country, to pay the zemindar's rent, and that the ryots would want some advances for themselves to carry them through the present hard season. The Board supported the Agent's proposals, to which the Lieutenant-Governor agreed. Seeing that the land is taken up by the opium crop, it is satisfactory, from a revenue point of view as well as from the ryot's stand-point, that the promise of the crop in Shahabad is so good as to warrant these extra advances. Report has not yet reached Government of the extent to which it was found safe to extend the concession to other opium districts.

27. By way of making the state of the food markets in Behar and Bengal known in distant marts, a weekly telegram of the rice prices is now sent from Calcutta to the Chief Commissioner of Burmah; and a telegram is sent every three days from Patna and Bhaugulpore to Allahabad giving the price of food-grains for publication in a daily newspaper there.

28. As Burmah rice, and especially "cargo rice" are not ordinarily eaten by the people of Behar and Bengal, careful experiments were made in cleaning, dressing, and digesting Burmah rice. The results (see Enclosure 13) were, on the whole favorable; and there seems no reason why Burmah rice should not become acceptable to the people of Bengal, when they are accustomed to its preparation and use.

29. Among the events of the fortnight may be reckoned the liberal offer made by the Ranee of Bobili, in the Madras Presidency, of 40,000 maunds of paddy for distribution in the famine districts. The Lieutenant-Governor has heard of the liberality with which Rajah Jotendro Mohun Tagore has directed the remission, not merely the suspension, of Rs. 40,000 out of Rs. 90,000 the rental for this year of his Midnapore estates.

30. Among special schemes which have been discussed during the fortnight for relief works, or for aiding the transport of grain, may be mentioned—

(*a.*) A new plan for leading a channel behind the old embankment on the Gunduck river; this scheme is distinct from that for making an irrigation channel behind the new embankment. This scheme is rather costly; but if it can be shown that it will answer for irrigation and navigation, the Lieutenant-Governor would be prepared to consider it. Meanwhile, the Engineers are investigating its merits as fast as possible.

(*b.*) The suggestion that a tramway should be laid upon the Gya and Mozufferpore roads to promote the speedy transport of grain, more especially during the coming rainy season. The Lieutenant-Governor has long had under consideration the great advantage to be gained by laying rails on the Gya road over which an enormous pilgrim traffic passes every year. The trade route from Seetamarhee and Mudhobanee in the Northern Tirhoot towards Hajeepore is in ordinary years very large, and might pay for the cost of a light railway.

The Lieutenant-Governor, however, had much doubt whether, by any exertions whatever, it would be possible to do anything in the way of laying rails on either of these roads in time to be of use during the present crisis. The matter seems to turn upon whether the Government of India can spare from its stock now in this country rails and rolling stock enough for either or both of these lines. If the material must be got out from Europe, the rails could hardly be laid before the autumn. The matter is now receiving very careful consideration at the hands of Colonel Dickens and Mr. Leonard. Behar could hardly have two more valuable boons than these two railways.

31. With Appendix F. to the third Special Narrative was submitted copy of correspondence in which the Committee of the British Indian Association offered their estimate of the prospects of the country and their views of the action Government ought to take. The Government of India was pleased to invite the Association to state the grounds of their belief that the prospects were more serious than the Government had supposed; and the Committee have furnished a full and careful statement of the case as it appears to them from the papers which have been published. The Lieutenant-Governor considers that a careful analysis like this, coming from gentlemen who have a very large interest in the land of Bengal, is valuable and entitled to weight; at the same time it will be observed that the Association had relied mainly on official intelligence, and had not laid stress on any special sources of information. The Association's letter will be found in Appendix G.

32. The suggestion made by this government that the transport of grain by the river steamers of the India General Steam Navigation Company should be promoted by Government paying part of the freight has, after some correspondence, been finally disposed of by the Government of India who have deemed it unnecessary to grant any such concession.

33. The British India Steam Navigation Company have agreed to lay an additional steamer on the berth between False Point and Calcutta, at reasonable rates of freight for grain, if the Government would provide a hulk whereon freight could be collected. Accordingly the Lieutenant-Governor has, after consulting the Master Attendant, directed that a hulk shall be hired at reasonable rates and taken down to False Point. This hulk, with the help of the Government hulk "Deva" and the Government flat "Ghazeepore," will be able to stow a full cargo of rice for one of the Company's steamers. The Company have been told of the arrangement which has been made, and asked to put a steamer on the berth as soon as they learn that the hulk is ready. As there was also much want of freight from Balasore and Chandballee to Calcutta, the Lieutenant-Governor has, at the Master Attendant's suggestion, put a Government brig, the "Guide," to carry rice supplied by Government contractors between Chandballee and Calcutta. She will be towed up and down the Hooghly by a Government steamer, and will charge the same rates as the S. S. "Celt" now on the berth. A small charge for warehousing on the flat at False Point will be made, but the charge will not quite cover the cost of the arrangement. The extra steamer and the "Guide" working continuously will, it may be hoped, be able to bring away to Bengal all the Government rice contracted for in Orissa, and also a good deal of private rice which has been bought for the Calcutta market. Without some help of this kind, it seemed doubtful whether the Orissa surplus could get to Bengal before the monsoon locks up the Orissa coast.

34. In some parts of the country there is already complaint that drinking water is scarce. The Lieutenant-Governor believes that, independently of the drought, this want of drinking water is one of the great needs of rural Bengal; even where water is to be had, its quality is often bad, and is one great cause of the bowel complaints which recent inquiries have shown to be so common in Bengal. At Appendix H. will be found copy of the orders in which the Lieutenant-Governor has drawn special attention to this important matter.

By order of the Lieutenant-Governor of Bengal,
H. LUTTMAN-JOHNSON,
Additional Under-Secretary to the Government of Bengal.

Calcutta, 1st January 1874.

APPENDIX G. to foregoing Narrative.

[CONFIDENTIAL.]

No. 605.

GOVERNMENT OF INDIA,

DEPARTMENT OF AGRICULTURE, REVENUE, AND COMMERCE.

To the SECRETARY to the GOVERNMENT OF BENGAL.

SIR, Fort William, the 16th December 1873.

IN addition to my letter* of this date, conveying the general impressions which Lord Northbrook received on his journey to Calcutta, I am directed to make some further observations for the consideration and guidance of the Government of Bengal.

2. This letter is marked "confidential" in order that its contents may not be made public. In dealing with the difficulties before us, questions may arise upon which there may be some difference of opinion as to the precise action to be adopted, and upon such questions it is necessary that free official communications should pass between the Government of India and the Government of Bengal. At the same time it is very undesirable that such matters should be publicly discussed, and so an erroneous impression be conveyed to the public that the Government of India and the Lieutenant-Governor are not cordially acting together for the purpose of mitigating the effects of the scarcity. Lord Northbrook regrets to observe that some topics of this nature have already been publicly discussed, and he desires, as far as possible, to avoid this for the future.

3. Lord Northbrook has observed that in the resolution issued by the Lieutenant-Governor on the 3rd instant, which appears to be very well adapted to guide the officers who will have to supervise relief works, it is provided that rice or other food shall be sold to the people employed upon relief works when the market price rises higher than the rate of 10 seers per rupee.

His Excellency thinks that this rule may probably give a correct indication of the price of rice which in many parts of the distressed districts would show sufficient scarcity to make it desirable that the Government stores should be opened for the supply of people engaged upon relief works, or, in other words, that the wages of the labor so employed should be partly paid in grain. He understands, however, from the local officers that it may happen, especially in Behar, where rice is by no means the only ordinary food of the people, that the rate fixed may not be a good practical test. For instance, Lord Northbrook found, on recently passing through Shahabad, that while the general price of rice in the district was 13 seers per rupee it was 9½ seers in one small market in consequence of some accidental cause, and a like circumstance was mentioned to him by the Collector of Gya.

His Excellency is therefore of opinion that some latitude should be allowed to the local officers in acting upon this part of the instructions contained in the circular.

4. It appears to be very desirable that experiments should be speedily made in the use of Burmese rice, in order to ascertain how it can be best made palatable to people who are only accustomed to the use of the Bengal article. Mr. Levinge, who was in Orissa when the Burmese rice was introduced there, informed Lord Northbrook that it requires to be boiled twice in order to be brought to the same condition as Bengal rice.

His Excellency would be glad to have early information as to the result of any experiments upon Burmese rice which may be made in the places to which it has been sent. Its successful use seems to depend very much upon the care and management of local officers when it is first introduced.

5. Lord Northbrook would suggest, although the matter may have already been considered, that when laborers are drafted from a distance to the larger relief works apart from their families, some arrangement should be made whereby they may be able readily to send them remittances of cash.

6. An opinion was expressed to His Excellency that the enquiries made into the stocks of grain in the hands of traders have had a disquieting effect, as indicating some intention on the part of Government to interfere for the purpose of regulating prices. His Excellency is aware that officers have been instructed by Mr. Bernard's letter of the 19th November that their enquiries should not be in such detail as to be deemed inquisitorial, or tend to alarm the people, but he doubts if sufficient attention has in all cases been given to this warning.

7. In the latest famine narrative His Excellency observes the following paragraph:—

"The Commissioner of Bhaugulpore was told that if exportation was going on in his division he might fairly purchase in the local market so much as would practically put a stop to the export of grain. He, however, showed cogent reasons against the appearance of Government as a buyer in local markets, and the matter has been left to his discretion."

His Excellency is glad that the Commissioner has not entered the market with the object of checking the ordinary course of the local trade.

So long as the purchases which the Lieutenant-Governor has proposed to make, and which have been authorised by the Government of India, are incomplete, it will be open to His Honor to buy locally through the agency of the trade, if it should be considered desirable, with regard to prices and the state of supplies, to depart from the general course agreed upon, that purchases

P 2

---

* Page 98.

should mainly be made from outside; but any purchases made, not on general grounds, but for the special purpose of preventing the free transit of grain from one district to another, would be contrary to the policy which the Government of India has enjoined, and likely to occasion very serious difficulties if allowed generally at the discretion of local officers.

8. I am to add that, while Lord Northbrook is satisfied with the precautions taken to meet distress in that part of the country where the crops have principally failed, he feels some anxiety less distress should break out in parts where there has been less or no failure, owing to the increase of prices and the consequent export of food grains. This consideration leads to the conclusion that the condition of all parts of Bengal requires careful watching, and that the whole of the available supplies should not be localized, but as the quantity of Government purchases at our disposal increases, part at any rate should be kept in reserve; and he is glad to observe from the Lieutenant-Governor's letter of the 6th instant that His Honor proposes to establish such a reserve.

I have the honor to be, Sir,
Your most obedient servant,
A. O. Hume,
Secretary to the Government of India.

No. 4119.

From the Officiating Secretary to the Government of Bengal, in the Statistical Department, to the Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce.

Scarcity and Relief.

Sir, Calcutta, dated 23rd December, 1873.

I am desired by the Lieutenant-Governor to submit to the Government of India some explanations and remarks suggested by paragraph 7 of your letter No. 605, dated 16th instant, in which with advertence to certain instructions of this Government, you state that His Excellency the Viceroy is glad that the Commissioner of Bhaugulpore has not entered the market with the object of checking the ordinary course of the local trade, and express the view of His Excellency that, while it will be open to this Government to buy locally through the agency of the trade, if this should be considered desirable with reference to prices and the state of supplies, it would be objectionable and contrary to the policy which the Government of India has enjoined that such purchases should be made for the special purpose of preventing the free transit of grain from one district to another. Your letter also notices that the general course agreed on is that purchases should mainly be made from outside the distressed districts.

2. The instructions of this Government which gave occasion to these remarks, as quoted by you from the narrative of 12th instant, were thus stated: "The Commissioner of Bhaugulpore was told that if exportation was going on in his division, he might fairly purchase in the local markets so much as would practically put a stop to the export of grain."

3. I am desired to explain that, in pursuance of the policy settled by the Government of India that grain should be stored to feed the laborers employed on relief works, it was arranged that the Commissioner of Bhaugulpore should procure, or the Government should procure for him, a certain quantity of grain for use on such works; and the Lieutenant-Governor's view was that, what he may call, the natural and primâ facie course under ordinary circumstances would have been to buy in the local markets, so long as those markets afford an adequate supply. Sir George Campbell considered that the resolution to import from more distant markets was a departure from the ordinary course, due to the apprehended local scarcity, and that a return to the local markets was not a special interference with free trade, but a return to the ordinary course of free trade. Now, it is quite certain that there has been a very considerable export of food-grains from the Bhaugulpore district. It seemed to the Lieutenant-Governor, if he may so express it, unnatural that while private dealers were exporting grain, we should be importing it to the same localities. In one of the Bhaugulpore Magistrate's letters it was gravely stated (whether truly or not the Lieutenant-Governor cannot say) that the cartmen were especially willing to carry Government grain to the distressed parts in the north of the district, because they expected to get return loads of grain to bring back from thence. This did seem to the Lieutenant-Governor to be a sort of reduction to the absurd.

4. The course, then, which the Lieutenant-Governor took was in his view simply this. He said in effect to the Commissioner: "You have authority to buy supplies of grain within certain limits; in the apprehension of scarcity in Bhaugulpore we had settled to get these supplies from a distance; but as it now appears that an export of food-grains is going on from Bhaugulpore, we authorise you to buy in the local market till you come to the point of price when your purchases have rendered it unprofitable to export." Sir George Campbell thought that, on the strictest principles of free trade, that was a fair and proper test, and he hopes that His Excellency the Viceroy and the Government of India will not deem that he has substantially departed from the course which they have enjoined.

5. The Lieutenant-Governor has thus particularly dwelt on this question not so much on account of its great importance as regards the particular case of Bhaugulpore, as because it opens a much larger question with respect to all Bengal and Behar. What was taking place in Bhaugulpore is, in fact, now taking place on a much larger scale in regard to the export and

import of grain by sea. Very large quantities of the food to which the people of Bengal are accustomed and which they like are now being exported, while smaller quantities of food, to which they are not accustomed and which they do not like, are being imported by Government. The ships taking away the rice of a Bengal cross in the Hooghly other ships bringing up the rice of Burmah and Saigon. The Lieutenant-Governor understands that there is now in the port of Calcutta a greater demand for freight for rice, and better prices are obtained for carrying away that article than for any other article whatever. Probably ships are the more readily obtained to bring foreign rice to Calcutta because they will obtain good freight rates for carrying away Bengal rice, following no doubt in this respect the same commercial instincts as the cartmen of Bhaugulpore.

6. Now Sir George Campbell must venture to say that, in this state of things also, there is to his mind something unnatural. These questions of high economy have not been left to his discretion, and he trusts that he is honestly carrying out the policy enjoined on him by the Government of India. But he confesses that he has great difficulty in seeing his way to use the discretion with which he is vested within that policy, so that his action should fully tally and harmonise with it, and there should be no effects not anticipated and provided for.

7. Looking to the greatness of the interests involved, Sir George Campbell thinks it right to state frankly that there has been growing in his mind grave apprehensions lest it should prove that the different parts of our policy in regard to the food supplies do not harmonise, and lest possibly, if things should turn out unfortunately, evil may result. To speak plainly, Sir George Campbell's apprehension is this. It has occurred to him that consistently to follow out the ordinary free trade laws of supply and demand is a course which has its advantages—very considerable advantages; that, on the other hand, to follow, under such emergent circumstances as the apprehension of very widespread famine, an opposite course—viz., to interfere with free trade by stopping the export of food-grains, securing the maximum supply which the country affords, and then importing as much more as possible and sending it to the places where it is most needed—that course has its advantages; and to his mind advantages more considerable than the other. His fear is that to follow a middle course, neither leaving things to the laws of supply and demand on the one hand, nor stopping the export of food on the other, may lead to this, that one set of forces militate against and neutralize the other, and we gain nothing whatever, but may rather lose on the whole.

8. When the Lieutenant-Governor first recommended the stoppage of exports he was, he admits, under the impression that we must trust principally to Burmah for assistance, and that the rise of prices would reduce Bengal exports to a comparatively small amount. He pressed again the prohibition of exports from Bengal almost as much in view to the moral effect on the people of this country as for the quantity of grain which it would secure. It turns out, however, that the export from Bengal is larger than he had thought possible. Taking the 1st November as the date from which active measures were commenced, it appears that from that date up to the latest dates for which we have returns, 40,559 tons of food-grains were exported from Calcutta and Chittagong to places beyond this Presidency, while about 4,500 tons were imported. From Orissa we have no exact returns to a late date; but if the export from thence has not been as large as at one time seemed probable, it has only been checked by large Government purchases. The exports above mentioned have taken place in the dull season of the year, before the new autumn crop has come into the market. At present the export from Calcutta is particularly active. There are now European ships in the river engaged, it is understood, to carry away about 20,000 tons, a quantity which will no doubt much increase as the season goes on; and it is estimated that in the next few weeks Arab and other country ships will carry away about 20,000 tons to the Gulf and other Asiatic ports.

9. It appears that there is every prospect that the quantity of food-grains exported from Bengal in the present season will very far exceed the whole quantity which the Government has arranged to import, and private persons have imported, or are likely to import. In fact the private import has been almost nil, and there is no likelihood that it will be considerable.

After all that is being done, the food supply of the country will be much less than if the Government had simply prohibited exports and had imported nothing.

10. The apprehension which has lately been growing in Sir George Campbell's mind is, that in truth the imports and arrangements to import on the part of Government may, by keeping down prices, have been a main cause of the export. He has begun to fear that it may be possible that Government imports without the prohibition of exports may do more harm than good. The imports facilitate and increase exportation by cheapening rice in the Bengal markets.

11. It is a well-recognized fact that in all these matters the action of Government has an effect quite disproportioned to the actual magnitude of its operations. Sir George Campbell has long believed that in the height of a famine the quantity of grain which Government could throw in, by allaying panic and bringing out private stores, eases the people and the country to a degree far beyond the actual food supplied. He has not the least doubt that, so far, the action of Government in respect of both the import from beyond sea and the import into distressed districts has had a very great effect in averting present distress and enabling the people to live. If we were so far advanced in the season that the end of the scarcity and the advent of fresh supplies could be foreseen with some certainty, this would be an unmixed good. But this is not now the case, and the very grave question arises, "if present comparative ease is attended with no increase of the general food supply of the country but rather by its diminution through

exports, may not the present advantage be purchased at the risk of future calamity, in case the need of the country should at any time get beyond the power of the Government to meet or allay?"

12. There then arises the question which has more than any other perplexed Sir George Campbell, and caused him extreme anxiety and doubt. According to the principle which he has suggested in the case of Bhaugulpore, the correct course would be to buy in the country till the price is such that export is unprofitable, Government imports being diminished in proportion. But while this may possibly be a practicable and a right course in regard to a single district situated as is Bhaugulpore, Sir George Campbell fears that it would not be possible, as regards the country at large, without producing great immediate suffering. The action of Government having, as before observed, an effect disproportioned to its actual extent, there can be no doubt that the attempt to make very large purchases in this country on the part of Government would have disturbed the market enormously and very greatly enchanced prices. It appears that the export trade is the last to be affected by mere enhancement of prices. Merchants have their orders for distant countries; in many of these countries rice is rather a luxury than a necessity; and freight and other charges remaining the same, the prime cost of the article less affects the whole price than in the case of consumers in this country. The exports would not be stopped by mere enhancement of prices without reaching prices which must cause severe famine in this country. Any effect of that kind the Lieutenant-Governor has hitherto striven to avoid; he has made purchases very carefully and thrown very limited demands on any particular market. He has not felt that it would be right to incur a certain present evil to avoid the risk of a future possible evil, even though it might unhappily turn out that this future evil is of far greater magnitude. But he feels that this is a most difficult dilemma, in respect of which he would be glad to receive advice and instruction from the Government of India.

13. Sir George Campbell thinks it right to state the doubts which oppress his mind on the question whether Government imports, unaccompanied by prohibition of exports, may not in the end do more harm than good.

Whatever we may say as regards our importing for relief works only, there is no preventing the people from entertaining a grateful belief that we are making arrangements to feed them in case of famine. So long as the general food supply suffices this is good; but if the result is that more is exported than is imported and the food supply eventually fails it will be a great evil.

14. The Government has not been able to obtain,—it is, the Lieutenant-Governor fears, impossible that it should obtain, reliable information regarding the stocks existing in the country. The Lieutenant-Governor must, however, say that the difficulty he has experienced in making very moderate purchases in any quarter except Orissa has caused him to be apprehensive that the reserves may not be large. It is hardly intelligible whence comes to Calcutta so much rice as is exported from that place. Certainly there cannot now be very large stocks about Calcutta; we have failed to find such stocks in the eastern districts; and if a large share of the crop now beginning to come in from the littoral districts is exported, it is hard to say what reserves we shall have.

15. The fear is lest the action of Government should beget a false confidence, lest confidence should beget large exports, and lest a catastrophe might follow later in the season. The Lieutenant-Governor still hopes that by the blessing of Providence this will be averted, but it would not be right that he should refrain from stating to the Government of India the doubts and apprehensions which he feels. His Excellency the Viceroy in Council will no doubt, on a review of the whole case, direct the machinery of Government for the best.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

CONFIDENTIAL.

No. 710, dated Calcutta, the 30th December 1873.

From A. P. Howell, Esq., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to the Secretary to the Government of Bengal.

I am directed by the Governor-General in Council to acknowledge your letter No. 4119 of the 23rd December regarding the purchases of food-grain in the Bhaugulpore district.

2. The explanation given in the 3rd and 4th paragraphs of your letter regarding these purchases is regarded by His Lordship in Council as generally satisfactory. It appears that there were ample quantities of grain in the markets of the Bhaugulpore district, consequently there was no objection to this article being purchased locally. As the Lieutenant-Governor justly observes "the natural course, under ordinary circumstances, would have been to buy in the local markets, so long as these markets afforded an adequate supply."

3. But while communicating this general approval, His Excellency in Council must advert particularly to the effect of the instruction given by the Lieutenant-Governor to the Commissioner, as described in your 4th paragraph, namely, "we authorize you to buy in the local

market till you come to the point of price when your purchases have rendered it unprofitable to export."

4. I am to state that, in the opinion of His Lordship in Council, the view above stated is wrong in principle, as being an attempt to regulate prices and to interfere with the grain-trade, upon the activity and resources of which the food-supply of the people must mainly depend in event of scarcity occurring. It will doubtless be in the recollection of the Lieutenant-Governor that any attempt of this nature, whether the attempt be direct or indirect, is expressly prohibited by the instructions of the Government in India.

5. The Governor-General in Council now requests that the Government of Bengal will be good enough to take this opportunity of again instructing the local officers that they are to carefully abstain from interference for the purpose either of regulating prices or of preventing or checking the exportation of grain from one district to another.

6. I am next to advert to the concluding part of your 12th paragraph, where the Lieutenant-Governor asks for advice and instruction from the Government of India in respect to the purchases of rice in Bengal and Northern India to be made locally by the Government of Bengal. But the Governor-General in Council observes that the amount of these purchases has been, for the present, limited by the letter No. 3560, of the 6th December, and desires that the amount therein sanctioned may not be exceeded without previous communication with the Government of India. It is believed that local purchases have been or are being arranged fully up to that limit. If this be so, then further instructions do not seem to be necessary. But if in fact any purchases remain to be made within the limit, His Lordship in Council would be glad to receive a special report, on the receipt of which any instruction which might be required from the Government of India would be immediately given.

7. I am to convey the thanks of His Lordship in Council for the general remarks offered by the Lieutenant-Governor in your letter under acknowledgment on the subject of prohibiting exportation of food-grains by sea. But the information on which these remarks are based is, in several respects, evidently imperfect. And the Governor-General in Council deems it sufficient to state that the Government of India have no intention of altering the policy which has been already laid down, and which has received the approval of Her Majesty's Government.

8. The Governor-General in Council agrees with the observation in your 11th paragraph, "that the action of Government has an effect disproportioned to the actual magnitude of its operations;" and His Lordship in Council has noticed the influence on the people produced by the purchases of grain by Government. Great carefulness should be exercised in the explanation of the views of Government. The Governor-General in Council therefore requests that the fortnightly special narratives of the drought may not be published by the Government of Bengal until these papers, prepared in the form in which the local Government proposes to publish them, shall first have been submitted to, and approved by, the Government of India.

9. In connection with the general question of the purchase and distribution of grain, I am desired to call the attention of His Honor the Lieutenant-Governor to paragraph 3 of the letter from this office, No. 605, dated the 16th instant, relating to the principle on which the Government stores are to be used, and expressing some doubt as to the propriety of the ruling, that food is to be sold to the people employed upon relief works when the market price rises higher than ten seers for the rupee. This principle is of such vital importance, extending as it ultimately will to all the local relief committees, that the Government of India is anxious to know what general instructions the Lieutenant-Governor proposes to issue respecting it, in view to their being carefully considered and decided in conference with His Honor previous to publication.

10. Lastly, I am desired to ask for early information, in detail, as to what progress has been made in forming the Government depôts of grain, in opening the lines of communication with them, especially to the more isolated points of each district, in preparing the organization of relief committees, and in forming the best approximate estimate of the probable demands upon each relief centre.

No. 704.

From A. P. HOWELL, ESQ., Deputy Secretary to the GOVERNMENT OF INDIA, Department of Agriculture, Revenue, and Commerce, to the SECRETARY to the GOVERNMENT OF BENGAL.

Agriculture and Horticulture. Famine.

SIR, Calcutta, the 30th December 1873.

I AM directed to draw the attention of the Government of Bengal to the fact that your letter No. 4119, of the 23rd December, was not marked "confidential," as it ought to have been, in as much as it was in reply to the Governor-General's letter No. 605, which was marked confidential.

2. I am to request that your No. 4119 may be duly marked confidential, and that great care may be observed in marking as confidential all letters which are of a confidential nature.

3. I am further to explain that the Government of India understands and expects that when a letter is marked confidential, it will not only be withheld from publication, but will also be made known only to those particular persons who may be necessarily concerned to know it.

4. Such letters will of course be placed on record, but will be recorded in a manner consistent with the observance of the precaution just mentioned.

I have, &c.
(Signed) A. P. HOWELL,
Deputy Secretary to the Government of India.

No. 696, dated the 27th December 1873.

From A. O. HUME, ESQ., C.B., Secretary to the GOVERNMENT OF INDIA, to MESSRS. MACKINNON, MACKENZIE, AND CO.

With reference to the telegram from Mr. Mackinnon, of the 7th instant, and the subsequent correspondence that has taken place on the subject between this office and your firm, I am directed to convey to you the cordial acknowledgments of the Government of India for the very liberal concession made by the British India Steam Navigation Company to facilitate importation of rice into the distressed districts of Bengal.

2. This communication will be reported to the Right Honorable the Secretary of State for India.

No. 3 OF 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.
Famine.

To His Grace the Right Honorable the DUKE OF ARGYLL, K.T., Her Majesty's Secretary of State for India.

MY LORD DUKE, Calcutta, the 9th January 1874.

IN continuation of our previous despatches regarding the drought in Bengal, we desire to report the progress of affairs during the past week.

2. The winter rains have not yet fallen; there have been partial and slight showers in some of the Behar districts, but not enough to do any real good.

3. The spring crops, on which attention and hope are now fixed still continue to promise well in most districts. In some districts, however, they begin to show signs of withering. And everywhere they stand absolutely in need of rain within the next fortnight.

4. Prices are slightly rising in many places. On the whole, the anticipated tendency to rise of prices is generally manifesting itself.

5. It is now nearly certain that at the best there must be distress for several months in portions of Behar, especially in the populous district of Tirhoot. The extent of the area of distress will be enlarged or contracted according as rain may be vouchsafed or withheld during the next fortnight. At the worst, the distress may extend over many parts of the whole Behar Province, and may break out in some parts of the Bengal Province.

6. We trust that our arrangements for importation of rice from beyond sea, together with the amount already purchased in India, will be found adequate to meet the worst of the contingencies above stated. Quantities are coming in regularly by steamer: 24,000 tons have already arrived at the port Calcutta, and 25,000 more will arrive before the end of the current month.

7. Our immediate attention is being given to the transport of the Government supplies of grain into the interior of the country. The railway carriage will, we trust, prove adequate for all demands, whether by the Government or by private trade. It certainly will meet fully the requirements of Government grain transport We wish we could express a similar confidence in the sufficiency of the country carriage in land, which is being arranged for by the district officers under the direction of the local Government. We have not yet been able to obtain from the local Government such information as would enable us to form an accurate

judgment on this very important point. We have repeatedly from time to time since November last drawn the Lieutenant-Governor's attention to this subject. And we have again forcibly impressed on His Honor the importance of timely arrangements being made. We hope soon to have more specific assurances than we possess at present. The Lieutenant-Governor has now accepted the offer which we made some time ago of assistance from the Commissariat Department. And we have accordingly arranged for such assistance being immediately rendered.

8. The time has now come for calling into active operation in some districts the organisation of relief committees. This organisation is not indeed so fully or completely advanced, throughout the districts affected, as we had hoped to find it by the present date. But the attention of the local Government has been urgently drawn to this matter also.

9. We have ordered preliminary measures only to be taken for constituting a central relief committee, as after consulting the Lieutenant-Governor we have decided to postpone for some few days an appeal to the public for subscriptions, that is, until distress has begun to declare itself to some appreciable extent, which is not the case at present.

10. We still await the receipt of a general report from the local Government of the relief works proposed in the several districts. These works have been commenced in several places; but nowhere are they largely attended save in the Sarun district.

11. Large numbers of laborers are employed on the Soane canal, but most of them belong to those classes who would seek this kind of employment under any circumstances. We have authorized the immediate commencement of the western main branch of this project, in addition to the portions previously undertaken. The Gandak embankments and also the Northern Bengal State Railway works are proceeding gradually, being attended only by those whose regular profession is labor. It was at first feared by us that the scantiness of the winter harvest would greatly diminish work in the fields, and so throw much labor out of employ. This fear, happily, seems not to have been realised.

12. We have now finished our considerations of the projects for light railways or tramways between Hajipur on the Ganges opposite Patna, and Mozufferpur, the capital of Tirhoot district, and between Patna and Gya. But after consulting the Lieutenant-Governor, we find that either the work could not be done in time, or that it would occupy resources needed for other operations relating to the scarcity, or that it would not subserve the purposes of relief. We therefore fear that these projects cannot advantageously be undertaken.

We have the honor to be,
My Lord Duke,
Your Grace's most obedient and humble Servants,

NORTHBROOK.

No. 5 of 1874.

Government of India.

Department of Revenue, Agriculture, and Commerce.

Agriculture and Horticulture.

Famine.

To His Grace the Right Honorable the Duke of Argyll, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, Calcutta, the 16th January 1874.

We have the honor to forward the special narrative of the drought and scarcity in Bengal for the fortnight ending the 15th January, together with its enclosures.

2. Since our despatch of the 9th current to your Grace, on this subject, there have been slight and partial showers at some places in the Patna, Bhaugulpore,

and Rajshahye divisions. Some benefit will be produced, but the general prospect of the spring harvest has not materially improved. In some parts of the districts concerned this prospect continues fair, in other parts it is indifferent and even bad.

3. In the districts of the North-West Provinces and Oudh which adjoin Behar, there has been some rain; and excepting only the southern portion of the Mirzapore district, no apprehension seems now to be felt of any general distress in that quarter.

4. There has been a slight increase of prices in some places.

5. Some distress is manifesting itself in Northern Behar, and the Commissioner of Patna reports that, as we had anticipated, the distress in North Tirhoot will be severe. Excepting in Sarun, where the Lieutenant-Governor has enjoined increased activity on the part of the local officers, the relief works are reported to be sufficient to meet the existing demand.

6. In respect to supplies of grain for relief works and relief operations, we have made arrangements to secure such supplies arriving in Bengal and Behar from month to month, in quantities sufficient to meet the highest estimates that have been made of the demand for these important purposes. Among the enclosures of the narrative will be found the confidential letter from the Government of Bengal on this subject of the 5th current. We take this opportunity of appending the confidential letters addressed to that Government in reply, bearing date 6th and the 12th current.

7. We have engaged an adequate amount of steam tonnage for the service relating to these supplies, for the months of February, March, and April, and we shall be able to engage similar tonnage for the months subsequent to April.

8. We have received additional evidence of the ability of the railway companies to carry the daily quantities of grain likely to be despatched by Government in addition to that which will be sent by the trade.

9. The activity of the trade is shown by many of the facts mentioned in the enclosures of this narrative. And the condition of the local money market affords further proof to the same effect.

10. We are not yet free from the anxiety expressed in our despatch of the 9th regarding the conveyance of the Government rice into the interior of the districts. The Lieutenant-Governor expresses confidence in the sufficiency of the means at the disposal of the local officers to distribute the supplies to the extent of the allotments among the several localities. We trust that this confidence may be justified by the result. Despite the efforts which have been made by the local Government and its officers, considerable accumulations of grain still exist at several of the railway stations awaiting transport into the interior. The enclosures of the narrative show that the Lieutenant-Governor is fully alive to the importance and urgency of the matter. Before proceeding further we await the receipt of the detailed returns relating to this subject which we have called for.

11. We hope soon to hear of relief committees having been formed and being in active operation wherever required. We await the submission by the local Government of the rules under which the work of these committees is to be conducted. The final preparation of these rules will be expedited.

12. We enclose a copy of the record of the proceedings at a conference which we held with the Lieutenant-Governor on the 8th current.*

* Page 147.

13. It has been thought advisable to encourage Zemindars to assist their people during the scarcity, and we have notified that in cases where the Zemindar may be in temporary difficulty from rendering such assistance, the land revenue demand may be postponed for a time. A copy of our letter to the Government of Bengal on the subject is appended.*

* Page 154.

We have the honor to be,
My Lord Duke,
Your Grace's most obedient and humble Servants,

NORTHBROOK.

ARTHUR HOBHOUSE.
E. C. BAYLEY.

CONFIDENTIAL.

EIGHTH SPECIAL NARRATIVE OF THE DROUGHT IN BENGAL, FROM THE 1ST TO THE 15TH JANUARY.

THE weather has been for the most part cold and bright, colder than is usual even at this time of year, but it has been varied by a short change to unusually warm weather accompanied by showers in some parts of the country, after which it has again relapsed into clear cold. When the last Narrative was despatched intelligence had just been received of a slight rainfall in Behar on the 28th December. This rainfall extended to Northern and Eastern Bengal as noted in the margin. There was again a better fall at Patna on the 12th instant amounting to ·39. No intelligence has been received of this rain having extended elsewhere in the Patna division, but on the 12th there were slight showers at Monghyr and Bhaugulpore amounting to ·06 and ·07 inches respectively. At Burhee it drizzled on the afternoon of the 12th, and at Purneah they had an occasional drizzle on the same date. As there was rain at Dacca and Furreedpore (·19 and ·35 respectively) on the night of the 12th, and at Goalpara on the morning of the 13th, there is some hope that the fall may have extended into Northern Bengal. As this Narrative goes to press intelligence is received by telegraph of slight rain having fallen in Tirhoot, and at Arrah at the same time. These falls do not amount to much, but at the present crisis it is some satisfaction to be able to record that there are even indications of rain. The latest accounts of the spring crops show that they are still clinging to life. Where considerable rain has fallen they have of course been to a great extent saved for the present. A little rain goes a long way with these crops. The Collector of Patna considers himself safe of getting an outturn of half of an average year, and with a few more seasonable showers he will do better still. Generally in Southern Behar the aspect of affairs, so far as the spring crops are concerned, is still hopeful. In the north of the Patna Division, however, the prospects are still very unfavourable. Much has been done by petty irrigation in Sarun and Patna, and by canal irrigation in Shahabad and Gya. In the Bhaugulpore Division the accounts of the spring crops are still very hopeful.

Dinagepore - - -	·32

Mymensingh - -	·66
Sylhet - - -	·07
Cachar - - -	·89
Tipperah - - -	·12

There seems reason to fear that in parts of the Patna Division distress is approaching. The last accounts, however, do not show that it is rapidly increasing. In Sarun "the numbers on relief works are increasing." In Chumparun people "are largely employed on relief works." In Tirhoot there is "distress in some villages." From other distressed districts the condition of the people is still reported to be good. The crop returns for the weeks ending January 3rd and January 10th are enclosed. (Enclosure 1.)

2. Prices of common food-grains have changed very little during the fortnight under report. In some districts there has been a rise and in some a fall, and the number of districts which show a rise is somewhat larger than those which show a fall; so that, though prices have on the whole slightly risen, they have not yet by any means reached famine rates. In some districts of Behar they are higher than they appear to have been in January 1866; in others they are lower.

The prices-current returns* for the weeks ending January 3rd and January 10th are enclosed, as well as a table comparing the prices ruling in December 1865 with those ruling in December 1873: it should be noted that we are not very certain about the accuracy of the quotations of 1865.

* Enclosures 2 and 3.

The export of rice from Calcutta and Chittagong continues as brisk as ever. It is said that prices in London will not longer admit of its being sent to that port profitably. It is satisfactory to find that the East Indian Railway is still pouring in supplies of food into Behar both from the North-West and from Howrah. The operations of Government do not seem as yet to have greatly deterred private parties from entering the grain trade so far as the railway traffic shows. The total export of food-stuffs from Bengal to places beyond sea since the 1st November now amounts to 78,500 tons, and the imports from beyond sea to 22,900 tons, of which almost the whole was imported on Government account. Wheat still continues to be exported from Behar. The following extract from the last report under circular

No. 70, from the Collector of the 24-Pergunnahs, shows how the districts in the neighbourhood of Calcutta become depleted for foreign export:—"But whatever the actual amount of the stocks may be, the Assistant Collector of Diamond Harbour thinks it certain that it is smaller now than at this time last year, and for the reason which I have already given in an earlier part of this report, viz., that the high prices are tempting the ryots to convert a larger quantity of their paddy than usual into atop or unparboiled rice for exportation.* The high prices," he remarks, "are present and certain, the scarcity of food is prospective and uncertain, and as with the ignorant and thoughtless the good at hand always outweighs the evil in the future, the cultivators are selling off all their stocks of grain at high prices for export without keeping a sufficient stock in hand for home consumption."

* Note.—Ryots parboil before husking rice intended for their own use.

A note on the movement of food-grains is added in Appendix A.

3. On Thursday, the 8th January, His Excellency the Viceroy held a conference at Government House, and the present position of the Government as to transport of grain into the interior, as to the establishment of relief committees and relief centres, was discussed. A memorandum on certain points was hurriedly prepared by the Secretary to this Government for His Excellency the Viceroy, who wished to have it the same day on which the request was made. The facts were there stated so far they could be given from the latest reports and returns available the day before the conference; but the information then available in a precise form did not, except for a part of the Bhaugulpore division, give the facts to any later date than the 27th December, the date of the last fortnightly Narratives submitted from each district to Government, as previously arranged. The information since received and embodied in this narrative and its enclosures, is drawn from later and fuller reports, which were on the 8th January either in the post or being prepared in reply to the inquiries made by this Government in the beginning of January. "Two letters dated the 12th January, conveying the orders of the Government of India on the subject of grain transport and of relief committees, will be found in Appendices D. and F."*

* Pages 138 and 144.

4. In previous narratives it has been noted that the Government of India had sanctioned a supply of Government grain up to the 31st January 1874, up to a limit of 18,75,000 maunds, and it was subsequently explained that the total provision had come up to 19,25,000 maunds. Out of this total 15,00,000 maunds were allotted to districts and 4,25,000 were held as a reserve, a course which the Government of India approved and emphasised. On the 5th January the Lieutenant-Governor addressed to the Government of India a confidential letter (Appendix C.),* asking that a further supply of—

* Page 184.

(a.) 75,000 tons of grain, to be pushed forward as fast as possible to distant distressed districts during the three months commencing 1st February.

(b.) 150,000 tons, to be provided in the same period as a reserve to replace the vacuum caused by exports from Bengal to beyond the sea.

(c.) 75,000 tons, to replace exports from Bengal to Behar and the North-Western Provinces.

Total - 300,000 tons.

On the 6th January* the Lieutenant-Governor was informed by a confidential letter that the additional 75,000 tons (and more than that quantity) had already been arranged for from beyond the sea, which makes, with 30,000 tons provided to the end of January, a total of 110,000 tons on which the Government may calculate; a subsequent confidential letter of the 12th* January informed the Lieutenant-Governor that arrangements had already been made for a reserve over and above the 110,000 tons promised to the Government of Bengal from beyond the sea, and that additional precautions would be taken as circumstances seemed to require.

* Page 137.

* Page 137.

5. On receipt of the letter of the 6th January, the Lieutenant-Governor arranged for allotting to districts so much of the reserve grain (4,25,000 maunds) that had not been previously* assigned; and he issued a notice (see letter No. 61 of the 9th January 1874, Appendix E.) to local officers that more Government grain would be supplied, and that each necessitous district might expect to receive during

* Note.—A part had been already allotted at the Commissioner of Patna's instance.—See enclosure No. 12.

the next three months (February—April) at least as much more grain as had been given in the January allotment.

6. The total January supply of 19,25,000 maunds will be contributed from the following sources, namely—

From the North-West Provinces and the Central Provinces direct into the Behar districts - - - - -	4,44,000
From Eastern Bengal direct into the Northern Bengal districts - - - - - - -	80,000
From Calcutta, either Bengal, or Orissa, or Saigaon, or Burmah, or Madras rice - - - - -	14,01,000
Total -	19,25,000

Regarding the first two sources of supply, the Lieutenant-Governor has no doubt that almost [*] the whole quantity will reach the distressed districts and will be more or less forward towards store houses in the interior. Actual returns of the amounts delivered out of these outside supplies have not been received, but the control of these supplies is in the hands of the Commissioners, who report that the whole will be delivered during and before the end of January, and the Lieutenant-Governor is satisfied that such will be the case.

7. In regard to the Calcutta supply, the Calcutta grain officer's statement (Appendix B) shows that 8,39,778 maunds of Government grain had been despatched from Calcutta to the distressed districts up to Tuesday, the 13th January, and that 3,92,910 maunds had been despatched since the date of last narrative. Up to the same day Government grain had been received in Calcutta from across the sea to the amount of about 27,000 tons.[*] During the last ten days rice from Burmah and Saigaon has come into Calcutta more quickly than it could be sent up-country; and convenient places of storage have been arranged for on the East Indian Railway Company's premises at Howrah alongside of the rails.

8. The Saigaon rice, several thousand tons of which arrived within a week, was all packed in bags made of plaited straw; many of these bags had burst on the steamers and all the grain had to be rebagged. About one thousand tons of this rice is being packed at Kooshtea, and the rest is being rebagged at Calcutta. Some extra cost will be incurred for landing and rebagging this Saigaon rice; but the amount per ton will not be very large, and the Calcutta grain officer will, he is fairly confident, be able to unload all these large Saigaon steamers quickly enough to save all charge for demurrage, except perhaps two or three days demurrage of one steamer. The rebagging cannot however be done on board the steamers, as the time allowed for the steamers' stay in port does not admit of this being done. The Government jails are manufacturing one-maund bags as fast as they can, and they hope to give up 200,000 bags a month. The rebagging in Calcutta will be done as far as possible in the one-maund bags, which are more convenient for inland carriage than the ordinary two-maund bags.

9. The Saigon rice is being experimented on as to the best mode of cleaning, cooking, and digesting it. Reports of all the experiments have not yet been received; but so far as information is available, this rice contains about 14 per cent. of quite useless husk, besides 14 per cent. of broken but edible grain. This is a larger proportion of husk than was found in the Burmah cargo rice; but, on the other hand, the Saigon rice is said to be more digestible for Bengalees than the Burmah rice.

10. Towards the end of the fortnight under report there was a block of grain wagons at the Patna ghât station of the East Indian Railway. This was at first due to excess arrivals of Government grain, and when the Government grain had been cleared away there was a block of private grain. One result of this block was, that on the 10th January there was deficiency of wagons for despatch of grain from Howrah. The Government establishments at the Patna stations have been strengthened, and the Agent of the East Indian Railway has promised that as many wagons as the Government here requires, and as its officers up-country can unload and dispose of, shall be forthcoming at Howrah. Other arrangements are under consideration for expediting the traffic at the Patna stations.

11. Quite accurate returns of the despatches of grain to, and of the arrivals in,

---

[*] The only doubtful item is 10,000 maunds of Nerbudda valley wheat.

[*] The invoices for some of the arrivals are not yet to hand, so that the quantity cannot be precisely stated. Some of this rice has not yet been passed through the custom house books, and thus the figure here given exceeds the total imports shown at paragraph 2 above.

the interior of the distressed districts have not yet been received, up to the most recent date, the fortnightly statement only now becoming due, weekly returns on this matter have, however, under the orders of the Government of India, been called for (see Appendix E). But from various reports and notices we Appendix E. now know generally what the local officers' arrangements and preparations are, and at Appendix D will be found a letter and memorandum (dated 14th January) from this Government showing to what extent the local officers are or * Page 140. may be expected shortly to be working the local transport of grain.* The totals there shown are very large, namely—

Patna Division	1,69,000	maunds weekly.
Bhaugulpore Division	1,05,000	„
Rajshahye Division	60,000	„
Total	3,34,000	

The Lieutenant-Governor has little doubt but that the whole of the original supply of grain to the end of January, and most of the additional amount lately allotted from the reserve, will be either stored in, or in transit within, the distressed districts by the 31st January.

12. Paragraphs 29–30 of the Patna Divisional Narrative (enclosure No. 8), however, represent that the exertions of Government officers in drawing out all available means of carriage have operated to the hindrance of the local private trade. Private importers, Mr. Bayley writes, have to incur demurrage charges and disappointment, because they cannot hire boats and carts to carry away their grain. The Lieutenant-Governor fully believes that the strenuous efforts of the local officers in drawing together all available means of transport will have been of great use to the country; but he thinks that the Government grain should not monopolise the means of transport which have been brought together, and that room should be left for private importers. The Commissioner has been instructed (see Government letter No 115S.R., enclosure No. 8) to use his discretion in acting in the way he thinks best on the instructions conveyed in paragraphs 7 and 8 of the Government letter, No. 10S.R. of the 3rd January (see Appendix E). The paragraphs were as follows:—

"7. While the Lieutenant-Governor thus calls for the strenuous exertions of the local officers to obtain sufficient carriage, and to transport supplies to the more distant tracts not reached by private enterprise with sufficient rapidity, he would also remind them that a great work of this kind, to be done on a large scale, requires discretion as well as energy. Such service as is required of cartmen and others, will not be well done by unwilling men; rough attempts to press carriage indiscriminately may do more harm than good by diminishing the public supply and putting a stop to private supply. Every endeavour should be made to obtain willing and efficient carriage. As before observed, contract rates of transport would be best, but, when necessary, carts and boats may be hired for a period.

"8. At the same time it must be particularly borne in mind that one great object must be to interfere with private trade as little as possible. Wherever private traders or other private persons are importing, or are willing to import, with or without advances, it will always be better to let them do so by preference, and to obtain the Government supplies through them. It is principally for remote tracts where private enterprise fails that, for so much supply to laborers and relief-houses as it may be necessary for Government to undertake, regular transport trains or other means of carriage must be organised."

The Lieutenant-Governor trusts to the discretion of the Commissioners to limit the weekly Government despatches of grain along routes on which there may be hope of a thriving private grain trade. Sir George Campbell fears that for the north of Chumparun, for Dinagepore and part of Purneah, private trade cannot be trusted to do much. For the north and north-west of Tirhoot, too, and for the north of Sarun, private trade cannot, it is apprehended, be expected to do nearly all that is required.

13. As the Lieutenant-Governor has said, he has much cause to be satisfied with the energy and success of the Behar officers in calling out really large means of carriage at a comparatively short notice: The difficulties in the way of rapid transport are much greater in the Rajshahye division, but there, too, the Lieutenant-Governor does not anticipate failure. Boat transport in shallow inland waters is (as pointed out in paragraphs 15–18 of the Patna divisional narrative, enclosure

No. 8) very slow at this time of the year; yet boats are the ordinary and by far the cheapest carriage of the country in the Rajshahye division; and it is only when the water routes have been found too slow, that the local officers have begun to open cart routes on a large scale, and to organize a large number of carts and bullocks. The Lieutenant-Governor must himself say that, two months ago, he himself would have been disposed to trust mainly to water carriage for the transport of grain into the interior of Rajshahye; he is glad to say that the local officers have, under the instructions of Government, done their utmost to essay all routes, but it is now clear that cart and bullock transport will have to be largely employed, and that we cannot trust wholly to the water routes. It is satisfactory that the grain transport began and was pressed on early enough in the season to enable the Rajshahye officers to organise and work cart trains when the water routes proved inadequate. At the same time though the water routes are slow, yet they are cheap; and Mr. Molony (Commissioner of Rajshahye) has, in his most recent letter (9th January) upon the subject, assured the Government that he is going to keep all the water routes working at the same time that the land routes are also fully utilised. The failure of the water routes has at any rate more than ever convinced the Lieutenant-Governor of the great need of the Northern Bengal Railway.

14. Among special measures taken to improve facilities for transporting grain may be mentioned—

(1.) The Government river steamer "Koladyne" has been sent to help the "Teesta" at Kooshtea. The "Teesta" has proved too weak for the duty required of her, and native boats take from 12 to 15 days to go up-stream from Kooshtea to Godagaree; with help of the "Koladyne" the work of crossing grain from Kooshtea to the river side depôts in the Rajshahye district should proceed more rapidly.

(2.) There has been some delay in providing the hulk required (see paragraph 33 of the Seventh Narrative) for False Point. But the Master Attendant writes on the 14th that a hulk has been engaged, and will be at False Point by the 21st. The British Indian Steam Navigation Company have been requested to put an extra steamer on the berth at once. The Government brig "Guide" has reached Chandballee in Balasore, and was to leave yesterday, the 14th, with a cargo of Government grain for Calcutta.

(3.) Mr. H. Hankey, formerly Acting Commissioner of Chittagong, has been appointed to inspect grain transport arrangements, and has taken up his duty at once. On the 12th current, the day after he received notice of his appointment, a letter was received from him showing that he had already reached Rampore Beauleah in Rajshahye. Copy of the orders assigning him this duty has been separately submitted for the orders of the Government of India.

15. Up to the date of last Narrative only in some districts had relief committees been formally appointed, but district officers had been instructed to make preparations, and to organise local committees whenever the necessity appeared, and had a discretion given them to afford relief in any isolated cases of distress that might come under their notice. The Lieutenant-Governor was not desirous specially to press officers to undertake the final formation of committees so long as distress did not seem to be actually pressing, and while they had so much heavy and urgent work to do of other kinds. In anticipation, however, of the early need of such measures, the Lieutenant-Governor instructed Mr. Geddes, an officer particularly well qualified for the duty, to compile from the records of former famines, both in Bengal and elsewhere, all the most approved orders and instructions bearing upon this subject. Mr. Geddes has just brought this work to a close, and the time expended on it has been far from wasted.

In communication with the Government of India it has been decided that the time has now come for making definite and systematic arrangements for the distribution of charitable relief, so that as soon as the actual necessity first appears everything may be found in working order. The reports previously directed have therefore been again called for as the proposed sites for relief centres; the source from which each centre will draw its supply of food; the establishments proposed for each, and the names of the proposed committees of management. Local officers have been authorized to put the committees in actual operation and raise subscriptions whenever there is any appearance of serious distress, giving on behalf of Government contributions equal to the amount of private subscriptions.

16. In order to have all these arrangements under proper control, and that there may be no hitch in their working hereafter, the Lieutenant-Governor has proposed to the Government of India that the arrangements sketched in Appendix A of Mr. Bernard's letter No. 3888, dated 11th December (appended to the Narrative of the 12th December), should come into force at once, *i.e.*, that Mr. Schalch should be appointed President elect of the future central relief committee at Calcutta for all Bengal, and should undertake in immediate communication with the Lieutenant-Governor, the drafting of the rules for the guidance of district committees that these may be submitted for the approval of the Government of India at the earliest possible date. Having done this Mr. Schalch will, it is further proposed, visit the distressed districts and arrange with the local officers on the spot, all that it is possible to settle beforehand, and give such instructions as will ensure the smooth and efficient working of the scheme when put into actual operation. The correspondence* on this subject will be found in Appendix (F).

* *i.e.*, Circular No. 9, dated 3rd January 1874.
i.e., Circular No. 73, dated 10th January 1874, and letter to Government of India, dated 14th January.

17. Copies of the Fortnightly Narratives from the distressed districts, bringing the history of affairs down to Saturday December 27th, together with the Resolutions of Government on them, are enclosed.* The following is a short resumé of the information contained in them. This information is not very recent, the fact being that the narratives of January 10th are now due, but have not arrived in time for this Narrative. It is proposed to ask the Government of India to allow the next special Narrative to be despatched on 22nd January, so that it may contain the latest information.

* Enclosures 4, 5, 6.

A.—State of the Country.

The supply of food in the local markets is still generally ample at the high prices quoted; certain tracts of Northern Behar must be excepted from this statement. These are, in Tirhoot:—

(1.) The eastern corner thannah Singheya.
(2.) The north-western corner of the Seetamurhee sub-division.

And in Sarun:—

(1.) Thannahs Pursa and Bussuntpore in the centre and east of the district.
(2.) Thannah Bhurowlee on the north of the district.

Prices are reported to be in some districts easier, but later information somewhat qualifies this. In Behar they are on the whole higher than they were at the corresponding period of 1865–66. Local officers have been warned not to alarm the people by making inquisitorial enquiries as to the stocks held by them, but such further information on this subject as is contained in these narratives goes to show that things are in this respect not more favorable than had been supposed.

The condition of the people remains on the whole as satisfactory as could be expected. In Northern Behar, however, affairs are beginning to give cause for serious anxiety. In parts both of Sarun and Tirhoot distress is already in some degree felt, and people are beginning to look out for work. In the north of Chumparun there is also some distress. Even in Rungpore the reports say that cases of distress are becoming common, especially among professional beggars. The tracts in which distress is most imminent are these—

(*a.*) Parts of Chumparun.
(*b.*) The northern half of Sarun.
(*c.*) The northern and north-eastern part of Tirhoot and the adjoining parts of Bhaugulpore and Monghyr.
(*d.*) The eastern corner of Gya and the adjoining part of Monghyr.
(*e.*) The eastern part of Purneah, the northern part of Maldah, and all the north-western half of Dinagepore.

The rainfall and the state of the crops have been fully described in paragraphs 1 and 2 of the last and in paragraph 1 of this Narrative, and need not be further alluded to here.

B.—Relief Works.

Many works are open, others are ready for opening, and others are being prospected. In the Rajshahye division there is no very great demand for employment, except in Dinagepore, where large numbers are coming to the works. This is very much the case also in the Bhaugulpore division, and in the Patna division south of the Ganges. But in the north of the Patna division the demand for employment is in many parts brisk, and there is occasion for the opening of new works as far as possible. A table showing the number of persons employed on relief works in some districts in the fortnights ending 27th December and 10th January, is enclosed.

The laborers employed on relief works are for the most part local men of the ordinary laboring classes. But in some cases emigrant bands of professional coolies have been taken on. Although relief works are intended primarily for the benefit of the districts in which they are opened, the Lieutenant-Governor would do nothing to discourage emigration in search of work. Emigration is a natural distributor and therefore alleviator of distress, as trade is. Still, it has been considered advisable to allow the professional coolies from Bhaugulpore, who had monopolised the local works in Maldah, to go forward to the railway works.

The laborers are paid for the most part by the task at fair rates, it being desirable to maintain that system as a test till the distress becomes really severe. But as soon as a certain point of distress is reached the system can be changed.

A dearth of tools was much feared. A statement of the arrangements already made by the Public Works Department for their supply is enclosed.* In addition to this the Department has been ordered to arrange for a further supply of 100,000 mattocks and picks.

C.—Transport of Food.

Later and full information on this head has been given in paragraphs 4 to 14, (above), so the district narratives need not be here abstracted upon this point.

D.—Storage of Government Grain at Relief Works.

Places for storage of Government grain have been selected in all districts, and store-houses have been rented or are being built. The narratives do not contain exact particulars of the arrangements made in each case, but local officers are confident of being able to house all the grain supplied to them, and their reports are coming in.

E.—Advances to Private Parties.

In the Patna division much has been done and is being done by way of advances. In Bhaugulpore and Rajshahye, this part of the relief scheme has proved less successful. With the exception of the Northern Behar planters, no class has come forward largely for advances to buy grain. In Rajshahye a few applications have been made. In the Patna division considerable advances have been made for land improvements, and the system of advancing money for wells on the system followed with opium cultivators has borne fruit. In the districts of the Burdwan and Chota Nagpore divisions advances for landed improvements are being largely taken, and it is expected that in Nuddea also the zemindars will come forward.

F.—Charitable Relief.

Most officers have selected places for relief centres, and in some districts relief committees, both central and branch, have been constituted. This portion of the relief operations ordered in Circular No. 80 of 17th November, is not very forward in all places, but district officers have been directed to carry out their instructions on this point at once. Paragraph 15 and 16 (above) state at more length the further orders which have been issued on this subject.

18. The monthly reports for the beginning of January under Circular No. 70, dated 13th October, have most of them been received.* The harvest has in most parts been completed, and it is now possible to compare previous estimates of the outturn of the crops of 1873 with the actual yield so far as it can be ascertained. The local officers' estimates were first reviewed in paragraph 4 and Appendix B. of the Second Special Narrative for 21st November. The next set of reports was reviewed in Appendix E. of the Sixth Special Narrative for 18th December. The following is a final review of the local officers' opinions regarding the yield of the crops of 1873. It is to be remembered that it embraces all crops grown in the rainy season of 1873, which are sown at the commencement of the rains and reaped during

* Enclosure No. 11.

* Copy of the Bhaugulpore district report, which is a very good one, will be found in enclosure No. 10.

or after the rains, and it excludes what are ordinarily called "rubbee" or spring crops:—

Midnapore (part of), Jessore (part of), Backergunge, Noakhally, Chittagong, Cuttack, Balasore, Pooree.

(1.) The Lower Delta and the Littoral Districts.—In November it was estimated that the crops of 1873 would give from three-quarters to a full average crop. In December it was said the crops of 1873 will not be more than average ones all round. The final estimate is that, on the whole, they have not been up to the average. Jessore and Midnapore are worse off with two-thirds of an average crop; then come Noakhally and Backergunge with something more than three-fourths of an average crop. The Lieutenant-Governor hopes, however, that these are under estimates and that the districts last-mentioned, with parts of Nuddea and Jessore, have a fair average crop. Pooree and Chittagong have very nearly average crops, while Cuttack and Balasore are better off than usual.

Burdwan, Hooghly with Howrah, and part of Midnapore.

(2.) Western Bengal below the Uplands.—Former estimates varied from under one-half to fully one-half of an average yield. The final result is that the crops of 1873 have yielded rather more than one-half of an average outturn. Howrah appears to be best with two-thirds of an average. Burdwan had a good early rice crop, and the late rice is now reported to be better than half an average. Hooghly has yielded something under half an average crop.

24-Pergunnahs, Nuddea, Moorshedabad, Furreedpore, Pubna, part of Jessore.

(3.) The Central Delta Districts.—The final reports from the 24-Pergunnahs and Nuddea are more sanguine than the former ones; but on the whole there appears no sufficient reason for estimating the outturn for the whole of this tract higher than before. It has reaped from one-half to three-quarters of an average crop all round.

Rajshahye, Dinagepore, Maldah, Bograh, Rungpore.

(4.) Northern Bengal.—The final result of the harvests in Northern Bengal is, on the whole, certainly not better than was anticipated. The former estimate, from one-quarter to one-third of the outturn of an ordinary year, has not been exceeded. The outturn has probably been nearer one-quarter than one-half.

Dacca, Mymensing, Sylhet, Tipperah, Cachar.

(5.) Eastern Bengal.—The last reports fully bear out the favorable view taken in December. The outturn of the crops of 1873 has been from two-thirds to a full average. Tipperah is perhaps better off than before reported, but the difference is not so great as to affect the general average.

Bancoorah, Beerbhoom, part of Midnapore, Maunbhoom, Hazareebaugh, Lohardugga, Singbhoom, Sonthal Pergunnahs, part of Bhaugulpore, and Monghyr.

(6.) The up-land country of Bengal and Chota Nagpore.—The former estimates of the probable yield in this tract were perhaps if anything sanguine. The former estimate was that the crops of 1873 would yield from one-half to three-quarters of a full average year. The result has been that from one-half to two-thirds of an average has been reaped.

Tirhoot, Sarun, Chumparun, parts of Bhaugulpore and Monghyr, Purneah.

(7a.) Northern Behar.—It is now certain that on the whole less than one-third of the outturn of an ordinary year has been obtained in this tract from the crops of 1873. Tirhoot, Sarun, and Chumparun show no improvement. The improvement noted in the last review in the estimates for North Bhaugulpore and Purneah has been justified by the result.

Patna, Gya, Shahabad, parts of Bhaugulpore, and Monghyr.

(7b.) Southern Behar.—In the review of the last set of reports it was stated that the crops of 1873 of this tract would yield one-third of an average. The present reports fully confirm this estimate and somewhat improve on it.

Darjeeling, Julpigoree, Cooch Behar, Gowalparah, Kamroop, Durrung, Nowgong, Seebsaugor, Lukhimpore, Naga Hills, Khasi Hills, Garo Hills.

(8.) Assam and the Hill Districts.—The present set of reports do not greatly qualify the statements made in former reports. The area of somewhat short crops may be extended from Julpigoree and Cooch Behar, mentioned in last review, to Goalparah. In other districts the crops have been fairly good.

(9.) On the whole the estimate that the crops of 1873 would give, more or less, one-half of an average outturn is supported by the present reports, which have been submitted after observation of the harvests. Local officers have few subordinates who are able to take trustworthy observations of so intricate and wide a subject as the outturn of crops; actual survey has of course been impossible. The subordinate executive establishments upon whom much of this work falls are still very raw and untrained, having been but a few months appointed.

19. The following is a general synopsis of the prospects of the spring crops as described in these reports under Circular No. 70 for January:—

In the lower delta and littoral districts and in Eastern Bengal they are doing well, and will in all probability give an average yield, though in these districts they are very small in quantity.

In Western Bengal below the uplands and in the central delta districts the prospect is bad. The outturn will probably not be more than one-half that of an ordinary year. In Northern Bengal the prospect is also bad, but not hopeless, though according to the reports there seems little chance of more than one-third of an average outturn being obtained. Over most of these tracts the spring crops do not contribute largely to the food-supply of the country. Grains produced from these crops form less than one-eighth of the total food-supply.

In Behar on the other hand, the spring crops contribute a very considerable quota of the food-supply of the people, ranging from one-eighth on the borders of Bengal Proper to one-half in the districts bordering on the North-Western Provinces. In all this country the rubbee prospects still largely depend on more rain in the present month. In the Patna division south of the Ganges, on the whole, half a crop is expected, which will be better with seasonable rain, and may be much better. In the Patna division north of the Ganges from one-third to one-half the yield of an average crop may still be obtained. In the Bhaugulpore division the spring (rubbee) crops, taking all the circumstances into consideration, promise marvellously well according to these reports.

20. One other point in this set of reports may be noticed here. Local officers were required to ascertain as far as possible the amount of grain held in stock by landholders, traders, and ryots. The result of their inquiries, which they were warned should not be inquisitorial, is not very definite. But on the whole, looking not only to these reports but also to what is generally known of the habits of the people, the Lieutenant-Governor estimates that the supply of food grown in the country is annually either exported or consumed, and that stocks are as a rule about two or three months in advance of the supply, that is, that if no crops at all had been reaped in the late harvest, the people could still have found support for two or three months from the stocks in hand.

21. It was mentioned in the last Narrative that the Lieutenant-Governor had recognised the fact that relief works would probably become necessary in some districts of the Burdwan and Presidency divisions. The Commissioner of Burdwan has now submitted a report showing the proposals made for relief works in the different districts. The ordinary annual-road-works are in progress, and the Commissioner has not yet decided what works he will sanction as special relief works. His proposal to allot Rs. 10,000 to each district, with the exception of Midnapore, for advances under Act XXVI. of 1871, applications for which have been freely made especially in Burdwan, has been approved. The offer of Government to bear one-third of the cost of works of public utility in the districts of Burdwan and Hooghly has been extended to Bancoorah and Beerbhoom. The Commissioner has received full authority to use his discretion in regard to advances, and has been told that no work fit to be sanctioned should be delayed for want of funds. Extra subordinate native constables have been allotted to Burdwan and Hooghly.

22. To the Nuddea district a special sub-deputy has been allotted for work in connection with scarcity and relief. The Commissioner of the Presidency division thinks that, with the grant he has received for advances for land improvements, and the funds now at the command of the District Road Cess Committees, full work can be provided for all who are likely to demand it. If extra grants are required he will make early application.

23. Reference was made in the last Narrative to the state of affairs in the division of Chota Nagpore, and it was stated that anxiety was felt on account of the sub-division of Palamow in the Lohardugga district. This sub-division has been recognised as a tract in which relief works will be required, and preliminary arrangements have been ordered. Happily, however, there has been at least one good fall of rain there.

In Maunbhoom vegetable seeds have been distributed, and the experiment is considered to have been a successful one; barley seed distributed by the Deputy Commissioner has been eagerly taken and readily sown.

24. It has before been mentioned that a limited area in the north-eastern corner of Balasore had suffered severely from drought. The Commissioner of Orissa proposed to remit the January instalment of revenue from the area affected, on con-

dition that the amount remitted should be made good by the landholders in 1875. It was considered that a strong enough case for the remission of revenue had not been made out.

25. Certain estates the property of Government had balances at their credit from the 3 per cent. annually deducted from their rental on account of the Government Estates Improvement Fund; lists of these balances had been circulated, and Commissioners have been informed that the present is considered a favorable opportunity for expending them. The Commissioner of Chota Nagpore had already arranged for expending the balances of his division, and the Commissioner of Rajshahye has reported a full scheme for expending to advantage his district balances at the credit of this fund.

26. It was found that some local officers entertained erroneous notions as to the manner in which relief works should be carried out. They were inclined to prefer professional agency to ordinary local agency in the management of the works. The Lieutenant-Governor has reminded them that the works are to be carried out under the district road fund committees by the officers and local men usually employed, supplemented, when necessary, by professional agency. The Lieutenant-Governor thinks that planters and other local men who have usually undertaken the supervision of district works are just the persons who should now, where they are willing to undertake the duty, be employed on relief works. Circular No. 79, dated 12th January, on the subject will be found at enclosure No. 14.

27. Statements having been made in the public prints (whether true or not has not yet been ascertained) that the pay of laborers on relief works in a certain locality had been allowed to get 15 days in arrear owing to the absence of funds, a circular has been issued insisting that on no account shall works or payment be delayed on such a ground. No formal procedure, the Lieutenant-Governor is determined, shall be allowed to delay the opening of new works, or stop the work on old works when they are required for relief purposes. Local officers have been authorised in all such cases to use their discretion in taking measures without waiting formal sanction, and in dispensing with routine and formalities generally. Copy of that circular will be found in enclosure No. .

28. Reference has frequently been made to a scheme for promoting emigration from Behar to the tea districts during the present scarcity. Difficulties, however, have arisen, and it has not been thought advisable to press the attempt. A resolution recorded on the subject, showing at length the Lieutenant-Governor's reasons for abandoning the scheme, is enclosed herewith (Appendix G).

30. In accordance with the orders of the Government of India, a circular No. 8S.R., dated 3rd January, has been issued, requesting local officers to bear in mind the previous instructions on the subject, that no interference with the trade in grain is to be directly or indirectly attempted. It was found necessary to warn the Deputy Commissioners of Julpigoree and Seebsaugor specially against interference with private trade. The circular mentioned in this paragraph will be found in enclosure No. 15.

31. Some correspondence on the subject of the purchases of grain by the Government of Bengal has taken place, and the circumstances under which 25,000 maunds were purchased after the receipt of the orders of the Government of India have been explained. It is now clearly understood that without the previous sanction of that Government no more purchases are to be made.

32. The relief Commissioner of the Rajshahye division had requested to be allowed to sell Government grain to the local public in certain tracts where local trade can in no degree be trusted to supply the wants of the people. The Lieutenant-Governor proposed to allow the Relief Commissioner to exercise his discretion as to the places at which such a strong measure might be necessary. The Government of India, while holding that the Relief Commissioner's proposals are not opposed to the policy of Government for exceptional localities, has asked for further information before it can sanction them. The Relief Commissioner has been requested to furnish further evidence of the necessity of the measure he proposes.

33. It has been arranged that the Fortnightly Special Narrative shall be regularly communicated to the public press after the excision of such parts as the Government of India may consider it undesirable to publish.

34. The Government of India having asked for particulars regarding transport of Government grain and the establishment of relief committees in the Rajshahye division, such information as was then available on these subjects was submitted.

35. The estimate made by the committee of the British Indian Association of the

deficiency in the crops of 1873, as compared with the crops of an ordinary year, did not formally agree with that made by this Government. The Lieutenant-Governor has submitted to the Government of India his reasons for thinking that there is no very great difference in the estimates. The committee thought there would be a deficiency in the late rice crop of two-thirds exclusive of Orissa and Assam, where the crops are good. This Government estimated the deficiency in the crops of 1873, including the early rice and other crops reaped during the rains, at one-half more or less, not omitting Orissa and Assam. A further and final estimate of the deficiency is given in this Narrative.

36. In addition to the extra civil and engineering establishments allotted to the Patna division, intelligence has been received of the deputation on special duty in connection with scarcity and relief measures of six military officers, some of whom have had some civil experience. These officers have been placed entirely at the disposal of the Commissioner of Patna to assist in relief operations. Besides these officers are officers of standing in the Commissariat Department. Colonel Mackenzie has also been directed to place himself under the orders of the Commissioner of Patna.

37. From the Upper Gunduck Embankment intelligence has been received that arrangements have been made with the Raja of Bettiah's agent for taking possession of the land on the Raja's estates required for the embankment; and portions of the work have already been aligned. The Executive Engineer reports, under date January 10th, that he will be able to commence work in a week's time. Sites for store-houses have been selected and materials for their construction are being collected.

38. On the Lower Gunduck Embankments in Sarun and Tirhoot 1,201 laborers were daily employed during the week ending January 3rd, and 1,401 during the week ending January 10th. 1,890 maunds of rice had already been stored and other consignments are in transit. On the Soane works 1,382 additional acres have been irrigated on the western side of the river, making a total of 130,272 acres irrigated up to date. On the eastern bank 7,041 acres in the Patna and Gya districts have been irrigated, making a total of 15,003 acres. The Collector of Gya, however, reports that some 28,000 acres in addition have been irrigated from the Poonpoon river, which had been replenished with water carried from the Soane. The average daily number of laborers employed during the fortnight has been 32,000. Local labor is reported to be only one-tenth of the total. The condition of the laborers is good and food is plentiful. At Dehree 27,650 maunds of food have been stored, and 1,000 maunds of wheat and 2,500 maunds of rice are said to be on their way. In addition to this 2,000 maunds of rice are in store at the out-stations of Navigunj and Dunwar.

39. From the Kana Nuddee works in Hooghly it is reported that water is passing down the new channel at the rate of 250 feet a second. Water to the extent of 100 cubic feet a second has been turned down the Bachorda Khal on the right bank of the river. The daily number of laborers employed has fallen from 1,657 to 1,024. The people are reported to be enthusiastic in their expressions of gratitude for the water, which they are using for irrigation of potato and sugar-cane crops and for replenishing their exhausted tanks.

40. No recent intelligence has been received from the Northern Bengal Railway Works; but arrangements have been made for having information regularly supplied for future narratives.

41. In regard to providing native doctors and other medical subordinates for the charge of field dispensaries on relief works, the latest intelligence from the medical department shows that 20 hospital assistants and local native doctors have already been collected together, and there will probably "be no want of medical subordinates for the relief works." In the letter of this Government the requirements of the works had been put down, as a preliminary estimate, at about 60 native doctors in all.

By order of the Lieutenant-Governor of Bengal,
H. LUTTMAN-JOHNSON,
Additional Under-Secretary to the Government of Bengal.

Calcutta, 15th January 1874.

[CONFIDENTIAL.]

APPENDIX C. to foregoing Narrative.

No. 36 S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, in the Statistical Department, to the DEPUTY-SECRETARY to the GOVERNMENT OF INDIA, Department of Agriculture, Revenue, and Commerce.

Scarcity and Relief.

SIR, Calcutta, dated 5th January 1874.

AT paragraph 11 of last (the seventh) Special Narrative of the Bengal drought, it was stated that the Lieutenant-Governor was anxiously considering how much more Government grain ought to be bought for the distressed districts when the preliminary supply sanctioned up to the end of January 1874 should be completed. I am now directed to submit a statement of the views at which Sir George Campbell has arrived on this important subject.

2. We still have not and cannot have certainty as to what will happen in Bengal and Behar during the next eight months. We have not and cannot have accurate information regarding the stocks of food held in the country. We do not know for certain that there will be great failure of actual food-supply, but we know that there is risk of it, and we can only estimate for supplies as an insurance against risk. We now know that the failure of the rice crop is, speaking generally, as complete as we had before estimated it to be, except that we hope the rice harvest is better in the Dacca, the Mymensing, and perhaps the south of the Bhaugulpore district than was at first feared. The failure of the rice crop in the districts north of the Ganges will be quite as bad as had been estimated.

3. The sowings of the spring crops were narrowed by the drought in great part of Behar, particularly in the northern parts of the Patna division, though in some parts they were pretty widely sown, and in most places they were better sown and germinated much better than was expected. The Christmas rain in Behar has been as yet only about a quarter of an inch as an average; but rain comes oftener in January than in December, so there is still hope of more rain. The spring crops may be said then still to be better than was anticipated at the sowing season, but to depend much upon further rain, the coming of which is doubtful. The low lying lands, which are flooded every year, will yield a fair crop anyhow; all the rest of the spring crop lands depend on rain.

However the spring crop turns out, we must beware of relying too much on its yield to fill the gap in the food-supply caused by excessive failure of the autumn crops. Unhappily we do not possess for Behar and Bengal any statistics of the area under spring food-crops. But estimates have been furnished for some districts of the area or the proportion of the total cultivation under these crops, while for other districts an estimate has been offered of the proportion in which spring crop food-grains enter into the ordinary food of the common people. The general result is that in Bengal the spring crops contribute very little, and in Behar they contribute in but a moderate degree (very far less than the autumn crops), to the food of the people. There must be uncertainty on a matter of this kind in the absence of agricultural statistics; but the Lieutenant-Governor's general impression is that for Northern and Central Bengal the spring crops (wheat, barley, pulse, and spring millet) furnish less than one-sixth, and that in Behar these crops furnish less than one-third, of the food of the people.

4. There has not yet been serious distress or famine anywhere, and prices are not so excessive as might have been feared. So far then the symptoms are all favorable. It has, however, generally been the case that, in seasons of difficulty and risk, prices and appearances are comparatively favorable in December and January, and get much worse afterwards. Still these symptoms are certainly at the present time so favorable that Sir George Campbell would derive much consolation from them if he were not oppressed with the fear that the present ease may be, to a considerable extent, attributable to an undue confidence in the importations and arrangements made by the Government. The Lieutenant-Governor has submitted (see letter No. 4119, dated 23rd December) at some length his views regarding the effect of Government importations on prices, and on the minds of the native public. From many sides comes the assurance* that natives believe "the Government are this time at any rate checkmating the knavish grain-dealers." And it was only yesterday that an intelligent native officer of Gya, who has served Government for 35 years and has risen to the top of his branch of the service, expressed his opinion that "if the dealers had not seen that Government was importing and storing grain, prices would assuredly have reached 5 or 6 seers per rupee by this time," that is, to say, we should have had famine prices at Gya.

Local trade is not active, except that about 80,000 to 1,00,000 maunds of private grain per week are imported into Behar from the North-Western Provinces; and this comparative dulness of private trade supports the local officers' view that dealers may fear competition with Government. This apprehension that the people may place too great confidence in Government and that private traders may exaggerate the action of Government throws an element of uncertainty over present prices and appearances.

5. Some of the latest reports that have reached Government are as gloomy as the earlier letters; though perhaps it may be said that our officers are beginning to differentiate the probable severity of the distress in different tracts, and are now able to say "here distress will

* See for instance, the Monghyr fortnightly narrative in enclosure No. 5 of the seventh Narrative.

be very bad anyhow, but there we shall pull through." In a demi-official letter of the 28th December, Mr. Bayley wrote to the Lieutenant-Governor: "My hopes have been raised by the late rain, but without this I should have said that the prospects of the north and east of Tirhoot and of part of Chumparun, were worse, even than I had anticipated, *i.e.*, that I had hoped severe distress would not be felt till March or April, and I began to see that we should have to deal with it by the end of January." Mr. Bayley has since explained that the accounts of rain then received were exaggerated, and that his hopes on that score have been by no means fulfilled. Mr. Robinson, Relief Commissioner of Rajshahye, writes* as if grave distress and even absolute absence of food were nearly certain before very long in the north and north-west of Dinagepore; and this is the view of one who has known Dinagepore for many years, has always been a very active officer, and has now been touring in that particular tract and making full inquiries from village to village.

* See the letter submitted under cover of my letter No. 7S.R., dated 3rd January 1873.

6. On the whole, then, the Lieutenant-Governor is compelled to think that there is still serious risk of subsequent running up of prices, of panic, and even of famine. He believes that, if we would ensure against that risk, we must go on laying in large supplies.

7. At paragraph 7 of the seventh Narrative the difficulties experienced in transporting large quantities of Government grain have been adverted to, and mention has been made of the comparative failure of water carriage on inland streams. Sir George Campbell feels that, in the face of these delays and failures, we cannot omit for a single day to employ all means of transport if we wish to guard against risk in the more distant parts. He feels that we have gone so far that we can hardly draw back without going further.

Under this view, then, Sir George Campbell considers we must provide—

1st. For a continual flow of food towards distant and inaccessible distressed tracts.

2ndly. For a reserve of food for the districts nearer the sea-board, the railway, and the navigable rivers in case the supply fails there.

8. I am to observe that though, as stated at paragraph 11 of last Narrative, the traffic to more distant parts will be stopped at the commencement of the rainy season until such time as the rivers fill well; still food can at all times be sent to districts near railways and near perennially navigable rivers. Much country will also be opened to water navigation when the rains have fairly set in. The greatest need in these latter districts has always been at the last in the months of June, July, and August; that is, when the stocks are lowest, and the small residue has been taken for seed grain. A supply for that season should certainly be in reserve.

9. It may, the Lieutenant-Governor considers, be reckoned that supplies received in Calcutta and despatched in February, March, and April will reach the interior of the distant distressed tracts before the beginning of the rainy season; and that supplies despatched in May, June, and July may reach many districts before the new crop comes in.

10. As regards the quantity required for despatch during February, March, and April, everything depends on the view taken by the Government of India on the question of going beyond mere storage of food for laborers on relief works; that question is raised specifically in Mr. Robinson's letter submitted* yesterday for the orders of His Excellency the Viceroy in Council. Since the Government has gone so far, and has induced so much reliance upon itself, we must, Sir George Campbell, thinks, go further, and send into the really distressed tracts as much grain as we can, leaving it possibly to local dealers to distribute it as Mr. Robinson proposes. The Lieutenant-Governor would wish to have, at any rate, another twenty lakhs of maunds (say 75,000 tons) of food to be forwarded into the less accessible parts of the three distressed divisions † during the three months following the 1st February next.

* Government of Bengal letter, dated 3rd January 1874.

† Patna.
Bhaugulpore.
Rajshahye.

11. Regarding the further reserve for other divisions and the country generally, a good deal depends on the course of exports. Sir George Campbell's view is that Bengal Proper might probably, if taken by itself and its produce had been retained, have supported its own population, but that it would not be safe to leave Bengal without replacing the drain caused by exports. If the Government of India should decide* to buy in this country, and if the effect should be to forestall and prevent large exports, the total supply needed from abroad would not be so large as it would be if we had to replace exports. But the Lieutenant-Governor has already expressed † his belief that we cannot stop exports from Calcutta effectually without raising the price so much as to cause a famine; he considers our object must be to keep the price in the supply districts, of which Calcutta is the focus, so low that there may be no such result, so that in fact there may be opportunity of private trade to the parts of the country where food is wanted. If, however, we thus avoid extreme famine prices, he fears we must calculate that much of the new rice crop will be exported. Taking the rice export year to run from the 1st October, he thinks we may expect that the export of food-grains from Bengal will reach 150,000 or 200,000 tons by March or April next. For the purposes of the present letter, however, the Lieutenant-Governor would take the lower figure. Out of this total, about 78,000 tons have been already exported up during the three months ending on the 31st December 1873, the amount of despatch during each month being in round numbers as per margin.* The export

* See paragraphs 4 and 5 of Her Majesty's Secretary of State's despatch of the 1st December 1873, where this procedure is discussed.

† See paragraph 4 of the third Special Narrative.

	Tons.
* October - - -	16,300
November - -	20,000
December - - -	41,600

of food-grains sent from Bengal to Behar and beyond has been, during the last three months of 1873, exclusive of foreign rice imported by Government, about 45,000 tons; and it may by the end of May mount up to 75,000 tons.

12. If the Government of India be pleased to accept the view that we ought to provide another 75,000 tons for speedy despatch to the more inaccessible districts, and that we ought also to supply the vacuum caused by exports from Bengal, then we should require, in addition to the preliminary supply sanctioned up to the end of January, further supplies as follows:—

	Tons.
Supply to be pushed forward as fast as possible to distant distressed districts - - - - - - - -	75,000
Reserve to replace the vacuum caused by exports across the sea - -	150,000
And perhaps to replace exports from Bengal to the Behar districts -	75,000
If the last item be included the total will be - - - -	300,000
If it be excluded the total will be - - - - - -	225,000

It is understood that about 45,000* tons of foreign rice, in excess of this Government's estimate of the preliminary supply up to the end of January, has already been arranged for, so that it will remain to provide in the next three months say 180,000 tons, which is the lowest estimate at which the Lieutenant-Governor can safely put the amount proper to be provided against the risk we run.

13. It is quite impossible, as has been already said, to be at all certain. If a regular famine came upon Bengal and Behar ten times the amount of grain mentioned in the next foregoing paragraph, even if it could be distributed, would not keep the whole population so that no one should starve. But in view of all the present circumstances, and subject to any modifications resulting from the course of the spring crop, of the exports, or of other symptoms, Sir George Campbell would recommend that provision be made for supplying the additional amount of grain last named (180,000 tons) for the requirements of February, March, and April, and he would recommend that matters should be so arranged that in May, June, and July, a further amount, sufficient to fill the vacuum caused in Bengal by exports up-country estimated at 75,000 tons, should be further available. He would himself have preferred that the whole Burmah crop should be held as a reserve, but if that cannot now be without great derangement of trade and enormous expense, he hopes so much as he has named could be obtained.

It will be remembered that if happily the whole amount kept in reserve is not needed it will not be lost, nor will the whole cost fall on Government. Rice keeps well, and a good sum would be obtained on resale.

14. As regards the mode of purchase, and the most difficult question whether it is desirable to buy on the spot so as to enhance prices and stop exports, or whether it is desirable to import everything from a distance, and as regards other economic questions of the kind, the Lieutenant-Governor will not attempt to offer further opinions. The Government of India has already expressed its disapproval of Sir George Campbell's views on these subjects, and His Excellency in Council will best judge what course will be most beneficial.

One thing the Lieutenant-Governor must say as earnestly as he can, namely, that however much the internal trade of the country, if left to itself, might operate, we cannot look for any considerable private imports into Bengal from beyond the sea. We shall not get such imports unless severe famine breaks out in a very acute form and lasts for months before supplies come.

15. Any purchases of grain in this country will not, it must be remembered, add to the general food-supply; though, if such purchases have the effect of diminishing exports, so much might be deducted from the imports required.

From the North-Western Provinces and Central India private imports into Behar will, the Lieutenant-Governor hopes, continue, if the spring crops there continue to fare well, and he hopes that in that case we may look to the northern supplies as a further reserve in case of need.

16. If the additional quantity of grain now asked for be deemed excessive, it will be remembered that one-half of the proposed supply is merely to replace the drain caused by exports, a measure of which Her Majesty's Secretary of State appears to recognise the necessity. The rest of the grain asked for is to supply Behar and the North Ganges districts now classed as "distressed," or to replace the Bengal grain sent thither. If our total imports of grain from beyond the sea, including those already calculated, amount to, say, 350,000 tons, then—

	Tons of Foreign Grain.
(*a.*) We shall have provided for the more remote distressed districts where the failure has been worst, say - - - -	125,000
(*b.*) We shall get to replace supplies sent from Bengal to the same quarters, say - - - - - - -	75,000
(*c.*) We shall get to replace grain exports beyond the sea, say -	150,000
Total - -	350,000

---

[*] The figures on which the calculation is made will be found at paragraph 11 of the last Narrative. It is known that 40,000 tons of Burmah rice have already been ordered; and it is believed that some 5,000 tons or so of the Saigon rice will be over and above the 25,000 tons required for the January supply, as per paragraph 2 of Bengal Government letter of 2nd December.—See Appendix B. to Fourth Narrative.

17. After all, this supply is but small in so great a population; but, as Sir George Campbell has before said, it sometimes happens that famine is averted by quantities of food far under what might have been calculated on to feed a whole population. If we cannot obtain or distribute more, so much as has been proposed would go a long way to stave off the risk of famine, and if that risk is averted, the loss sustained in the purchase of grain will have been well spent.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

P.S.—Before this letter had been finally struck off, a further report, No. 54F., dated the 30th December 1873, was received from the Commissioner of Patna, stating that he feared severe famine in part of North Tirhoot. Copies of that letter and of the Lieutenant-Governor's orders thereon, No. 19S.R., dated the 5th January 1874, are appended to the present letter.

CONFIDENTIAL.

No. 41 A.

From A. P. HOWELL, ESQ., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to the SECRETARY to the GOVERNMENT OF BENGAL.

Agriculture and Horticulture. Famine.

SIR, Dated Calcutta, the 6th January 1874.

I AM directed by the Viceroy and Governor-General to acknowledge the receipt of your letter No. 36S.R. of the 5th inst. received this day, and to inform you with reference to the 10th paragraph of that letter, that the Lieutenant-Governor may, in addition to the 35,000 tons, for which provision was made in compliance with His Honor's request of 2nd December last, rely upon having at his disposal 75,000 tons of rice during the three months beginning with the 1st of February next, provision having already been made for more than that quantity.

2. His Excellency desires to impress in the strongest manner upon the Lieutenant-Governor the absolute necessity of preserving complete secrecy in regard both to the amount of the demands made by His Honor and of the provision made by the Government of India to meet those demands on account of the effect which the public announcement of large purchases may have upon the market, and still more in regard to the probability that any such announcement will check private trade.

3. The information now placed before the Government of India satisfies His Excellency that the time has arrived for the constitution of relief committees, and probably of a central committee at Calcutta. Upon this subject and upon the instructions which should be given to the relief committees, particularly in regard to the sale and distribution of grain, His Excellency considers it to be desirable that a conference should take place with the Lieutenant-Governor, and he therefore requests His Honor's attendance, accompanied by Mr. Bernard, at Government House on Thursday next at 3 o'clock.

4. Your letter of the 5th contains, in addition to the request for the further provision for despatch to the less accessible parts of the distressed districts, the compliance with which has been announced in this letter, further important estimates and suggestions which are not overlooked, and which will be subsequently dealt with.

5. The Viceroy and Governor-General desires in the meantime, without any delay, to satisfy the Lieutenant-Governor that the full requirements specified in the 10th paragraph of the letter under reply are at his disposal, in order that the local officers may be informed at once, and that no time whatever may be lost in making arrangements for the carriage of the grain up country, which His Excellency has always regarded as a matter of great difficulty, and one to which the attention of the Government of Bengal should be specially directed.

I have, &c.
(Signed) ARTHUR HOWELL,
Deputy Secretary to the Government of India.

CONFIDENTIAL.

No. 70 A.

From A. P. HOWELL, ESQ., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to the SECRETARY to the GOVERNMENT OF BENGAL.

Agriculture and Horticulture. Famine.

SIR, Dated Calcutta, the 12th January 1874.

I AM directed to reply to your confidential letter No. 36S.R., of the 5th inst., communicating the Lieutenant-Governor's recommendations regarding the quantity of food grains to be supplied by Government for relief works or relief operations in the districts affected by drought during the months subsequent to January.

2. The Government of Bengal have been already informed by the Governor-General (see my letter of the 6th inst.) that the 75,000 tons required by the Local Government during the three months, commencing with the 1st February, have been already arranged for from beyond sea. This quantity will be in addition to the 35,000 tons which constituted the demand of the Local Government upon the Government of India, as explained in your letter No. 46 of the 2nd ultimo.

3. The further requirements, in addition to the 110,000 tons above mentioned, as set forth by the Lieutenant-Governor, have received the careful consideration of the Government of India. Arrangements had been made before the receipt of the letter under acknowledgment for a further reserve, and such additional precautions will be taken as circumstances appear to require.

4. This portion of the arrangements for meeting the contemplated distress having been undertaken by the Government of India, I am to request that the Government of Bengal will not make any more purchase of grain.

5. One important point, in respect to the quantity of grain which the Government of India may deem it necessary to provide, is the ability of the Local Government and its officers to supply country carriage for the conveyance of the supplies into the interior of the district affected. On this subject a separate communication has been addressed to the Government of Bengal. At present there appears reason for serious apprehension as to whether the local authorities can convey to the relief works and relief centres the supplies which the Government of India has already provided, and which can be conveyed by railway to the districts in question.

I have, &c.
(Signed) ARTHUR HOWELL,
Deputy Secretary to the Government of Bengal.

APPENDIX D. to foregoing Narrative.

No. 82.

From ARTHUR HOWELL, ESQ., Deputy Secretary to the Government of India, to the SECRETARY to the GOVERNMENT OF BENGAL, Department of Agriculture, Revenue, and Commerce.

Agriculture and Horticulture. Famine.

SIR, Dated Calcutta, the 12th January 1874.

THE Governor-General in Council desires me to urge upon the Government of Bengal the necessity for immediate action in providing an adequate amount of inland carriage for the transport of grain.

2. The orders issued upon this matter by the Government of India will doubtless be in the recollection of the Lieutenant-Governor. I am desired, however, to recapitulate them seriatim.

In paragraph 21 of the general Resolution of the 7th November last, it was stated—

"In those places where the means of water-carriage do not exist, the grain-traders must mainly depend on the country carriage. There may, indeed, be ground for apprehension that, as the dry season advances, mortality beyond the average must arise among the draught cattle. This subject will doubtless receive the anxious consideration of the local Government and of its officers. Every aid that can be afforded by the Commissariat or other public departments will be rendered; and enquiries are being made as to the practicability of constructing tramways in the distressed districts."

Again, in the conference held with His Honor on the 10th November, the subject was specially treated, as will be seen from the following record of it:—

"His Excellency next adverted to the means available for transporting grain from the railway into the interior of the affected districts, as to which he expressed considerable anxiety," and "remarked that the serious attention of the local officers should be directed to this subject; any assistance which the Government of India could give, either by utilizing the Commissariat or Post Office service, or in any other way, would be readily given. A communication had already been made to the Government of Bengal, stating the extent to which the Commissariat could render assistance."

I am to point out that the conclusions of this conference were declared in Financial Secretary's letter No. 3003, dated 13th November, to be instructions for the guidance of the local Government.

Again, in paragraph 11 of the same letter, it was said—

"The Governor-General trusts to the Lieutenant-Governor to obtain from each division and district statements in categorical form of all that is proposed to be done in consequence of the scarcity, to issue suitable instructions on each statement as soon as it is received, and to give the Commissioners and District officers discretion to act on emergency even in anticipation of His Honor's instructions."

This categorical information as respects transport, which would be most valuable, has not yet, I am to remark, been given.

In paragraphs 3 and 4 of Financial Secretary's letter No. 3004, dated 14th November, it was stated—

"One main difficulty will probably be want of draught animals for the transport of food-grains to the interior of the districts."

"4. These considerations are well known to the Lieutenant-Governor, and will doubtless have formed the subject, among many other things, of His Honor's forethought."

In the final paragraph of Financial Secretary's letter No. 55, dated 29th November 1873, it is observed—

"So far as concerns the transport by rail to the stations in the distressed districts, the Government of India trusts that there will be no difficulty. The apprehensions of the Government of India are directed towards the prospect of despatching the grain from the railway stations into the interior of the country. The important subject will doubtless engage the constant attention of the local Government."

3. It was understood by the Government of India from paragraphs 13, 14, and 15 of the circular by the local Government, dated 17th November, that supervision would be exercised over the proceedings of the local officers in respect to inland transport, and that an early and most careful report would be obtained from them regarding the means of transport from the nearest railway or river-side station to the centres of relief works or distress. It was consequently hoped that such reports would by this time have been available for submission if required by the Government of India. That the question was further receiving the attention of the Government of Bengal, was understood from paragraph 3 of the letter from that Government, No. 3563, dated 22nd November—

"The Lieutenant-Governor is very earnestly of opinion that we should transport grain to our places of storage at once before a block comes, at railway stations and on cart-roads, with new rice of the season 1873–74."

4. In the letter from the Government of Bengal, No. 3626, dated 25th November, 1873, some details were given of the provision for inland carriage, and in reply to that letter the Government of India remarked that the information was deficient, and that further details should be submitted as soon as they could be; paragraph 2 was as follows:—

"2. In reference to your concluding paragraph (6), I am to state that the Government of India, while observing with satisfaction the reports of the District Officers as to the present abundance of country carriage in some of the distressed districts, cannot fail to look forward to the time which may arrive but too soon when this carriage may begin to prove deficient; and to this prospect the special attention of the local Government is invited."

5. On the 2nd December the Government of Bengal made a requisition for 18¾ lakhs of maunds of grain to be in the distressed districts or in depôt ready for them by the end of January. It was stated that for a large part of this consignment the Lieutenant-Governor would arrange for its despatch to the interior as promptly as possible. On the 6th December these proposals were sanctioned.

In Financial Secretary's letter No. 3586, dated 9th December, the Government of India furnished the Government of Bengal with a memorandum from the Commissary General on the possible supply of bullocks available for transport in certain localities.

In paragraph 7 of the 4th Special Narrative, the Government of India was assured that the District Officers were forwarding to its destination all the grain which had reached them "without any hitch or hindrance so far." This assurance was repeated in paragraph 8 of the 5th narrative.

6. The Governor-General in Council has learnt at the conference held at Government House on the 8th instant, that while the railway transport was adequate for present requirements, yet the Local Government had no sufficient information in its possession as to whether the inland transport and country carriage would or would not prove adequate and efficient, or whether the local officers had or had not succeeded in doing what was expected of them in this matter. The information that was available seemed to indicate a possible deficiency of country carriage, though the Government of India earnestly hope that such may not prove to be the case.

7. The Government of India fully recognizes the difficulty of the matter, but can no longer remain in uncertainty upon a point on which the success of all relief operations must mainly depend, and I am accordingly desired to enclose two forms, one for Commissioners of Divisions and the other for Magistrates of Districts; and, I am to request, that they may be submitted weekly to the Government of India with the required information to date. The returns should be sent on as received, and no one return delayed until another has arrived.

From each district the first submission of these returns will therefore be looked for on the 24th instant, and at weekly intervals subsequently.

His Excellency in Council desires that the District Officers may be given to fully understand the importance he attaches to the punctuality and accuracy of these returns.

8. The Governor-General in Council is indeed aware that the Lieutenant-Governor has urgently drawn the attention of the local officers to this subject by a circular dated the 3rd current. But His Excellency in Council thinks that the time has come when precise returns should be obtained, so that a remedy may be promptly applied wherever needed.

9. I am further desired to request that in any instructions which the Local Government may think it necessary to issue to the District Officers on this subject, it may be considered—

(1.) Whether it will not be advisable to use the available carriage first, while it is fresh and

S 2

strong, for the more remote centres of relief; the nearer ones can be supplied afterwards by coolies and other means: (2.) what means can be adopted for carefully and continually inspecting and repairing the roads, especially the worst parts, as good roads will double the transport power.

I have the honor to be, Sir,
Your most obedient Servant,
ARTHUR HOWELL,
Deputy Secretary to the Government of India.

CONFIDENTIAL.

No. 112S.R.

From A. MACKENZIE, ESQ., Junior Secretary to the Government of Bengal, to the DEPUTY SECRETARY to the GOVERNMENT OF INDIA, Agriculture, Revenue, and Commerce Department.

Scarcity and Relief.

SIR,

Calcutta, dated 14th January 1874.

I AM directed to acknowledge receipt of your letter No. 82, dated 12th instant, and to say that immediate instructions have been issued to obtain precise information as to the means of transport and despatch of grain into the interior of districts in the form prescribed by the Government of India. I am to take the opportunity of forwarding a copy of a circular No. 61 of the 9th instant, on the subject of pushing on supplies of grain to the local depôts.

2. As regards that portion of your letter in which you set forth the orders already issued by the Government of India on the subject, I am to say that the Lieutenant-Governor has fully understood and acted on the instructions quoted by you. The only point in your recital to which he would take exception is that in which the desire of the Supreme Government to have in categorical form from each division and district statements " of all that was proposed to be done in consequence of the scarcity " is set forth as having a special application to the subject of transport and supply of carriage. The Lieutenant-Governor would only remark that the paragraph quoted was of perfectly general application, and had no special reference to the matter of transport; no special returns of transport were ever called for by the Government of India.

3. With reference to the 6th paragraph of your letter under reply, I am to submit that the manner in which the situation is there described can hardly be accepted as stated in a manner altogether just to this Government. It is true that being suddenly called upon in an unofficial manner to furnish forthwith on the same day precise information on the amount of transport available, the Secretary to this Government had not at hand any precise statement of the kind required, nor had he precise information up to date of the progress of all the grain slowly finding its way through devious water and other channels, many of which were being tried by way of experiment. But I am to submit that this Government is not without sufficient information of all that is going on, and has taken every means in its power to ascertain and develope the best and most efficient modes of transport.

4. The situation in regard to the question of carriage is really as follows. The despatch of a certain quantity of grain to distressed districts was sanctioned by the Government of India on the 6th December, and by orders of this Government No. 3834 of that date specific quantities were allotted to each such district, and local officers were instructed in clear and urgent terms to have the whole of the grain thus allotted despatched to their places of final storage, and as far as possible stored by the 31st of January.

5. As respects the quantity to be so disposed of, I am to observe that it was not 18¾ lakhs of maunds, as stated in paragraph 5 of your letter, but 15 lakhs of maunds. As duly reported and explained, 3¾ lakhs of maunds were kept in reserve, and Mr. Secretary Hume's confidential letter of the 16th December, paragraph 8, especially and emphatically approved of such reserve being made, and dwelt on the necessity of maintaining it.

6. The task, then, which was laid upon the district officers, was that of despatching into the interior 15 lakhs of maunds before the 31st January; and since those orders issued up till now the subject of transport not only has not been overlooked and treated as of secondary importance, but has engaged the Lieutenant-Governor's most anxious thought and constant care. In all his orders and arrangements he has treated it as of primary importance, and whatever has been done or omitted in respect of it, has been done or omitted of set purpose and after full deliberation.

7. To begin with, the Lieutenant-Governor had been assured, in personal communication with the local officers and otherwise, that in the distressed districts there is an abundance of local carriage, and that no serious difficulty would come in the way of storing the comparatively moderate amounts of grain allotted. It will be remembered also that the grain given is solely for expenditure on relief works, and that the Government of India has been most emphatic in insisting on leaving the ordinary supply of the people at large to the operations of private trade. Under these circumstances the Lieutenant-Governor thought it undesirable to interfere too much with local resources, and to disturb the distribution of supplies which the demand for carriage would naturally effect, by pressing for the collection of carts and all manner of available carriage on the part of Government officers. He was, on the contrary, of opinion that our great object should be not to disturb ordinary channels and ways of transport more than could be helped. He looked on this first despatch of Government grain as experimental

and desired to have it so utilized as to lead to the ascertaining of the best routes for future despatches of grain to the places where it is most required. He was especially anxious to test all water routes, and to get at the necessary knowledge of these; maps and statements have been constantly before his eyes. It was, indeed, in the first instance, proposed to the Lieutenant-Governor to call on each district officer to state what amount of carriage he could supply in order to regulate the despatch of grain. But His Honor thought this would involve delay when there was so much besides to be done at starting. He felt that the whole work was new to Bengal officers. He was sure none of them really knew or could tell the resources of their districts in the way of carriage till they had actually tried them; and he deliberately therefore, decided not to call for detailed estimates of available carriage. What he said to each officer in effect was: "Here is so much grain for your district. You must place it in your local store-houses by the best means available to you by the 31st of January." With these instructions the Government set to work to despatch the grain to rail and river-side stations. The Lieutenant-Governor has systematically not waited to hear that carriage was ready, but has sent on the grain and laid it down at main depôts to be forwarded to the interior, urging and pressing on the local officers continually the importance of getting it away and of developing and testing their district transport resources.

8. Reports of progress have been received from time to time, but the Lieutenant-Governor's experience had from the first made him aware that difficulties by land and water would of necessity arise, and that there must be some delays and failures in beginning a great work of this character. He has the satisfaction of believing that his officers have done their very best. But at the end of the month in which they received their orders the situation was this:—Much grain had been despatched; of some despatches information had reached Government, and of some the reports had still to come. Much was known to be in transit from different points, but it was impossible for this Government, at a moment's notice, to follow it and say at once exactly how much had actually reached its destination. Some delays and difficulties had, moreover, occurred, as the Lieutenant-Governor anticipated they must, and it was only gradually that the arrangements began to take shape and get into working order. With the first week of January, however, they did begin to take really effective shape; and though several of the reports had not come to hand when the Lieutenant-Governor conferred with His Excellency the Viceroy on the 8th instant, some important communications were then actually in the post, and we now know that the grain was in fact being distributed much faster than Mr. Bernard could state in figures when he gave the Viceroy's Private Secretary the best information he could, on such short notice, put together.

10. The latest information on the subject is contained in a note appended to this letter. But specific reports have also, as intimated at the outset, been called for, and will be forwarded.

11. The general result is that the Lieutenant-Governor is sanguine that in far the greater number of distressed districts, if not in all, the grain originally allotted will by the 31st have been distributed as ordered.

12. It is only within the last few days since this Government has received by your letter of the 6th instant information that a further supply will be forthcoming for despatch, that the Lieutenant-Governor has felt at liberty to allot the amount first kept in reserve. Still he hopes that most of that quantity also will be despatched by the 31st to the interior of the districts, and he is sanguine that when it is seen how, as the result of the experiments and efforts made, the transport arrangements of the districts are fully brought into play, we shall in the next three months satisfactorily transport the whole of the further supply now promised, and more if need be.

13. As regards the particular divisions, I am first to notice that the Rajshahye division, in regard to which Mr. Bernard's information was least definite, and where His Excellency the Viceroy thought things most unsatisfactory, has been that to which this Government has on its part devoted most thought and care. Dinagepore and other districts of the division have many carts, and had we devoted ourselves simply to moving up the first allotment without regard to other needs and the exigencies of private trade, it might probably have been easily done. The Lieutenant-Governor was, however, particularly anxious to find water routes, and strained all the resources of this Government to supply steamers and flats and get boats. A regular exploring expedition went up the Oorasagur, and by the devious routes of the Chullun bheel and Atrai; every effort was made to use the water route by the Mahanuddi to Raigunge; and much grain is going up by these routes. But, as already reported, the water routes this season are not satisfactory, owing to the abnormal lowness of the rivers, and we are being more and more driven to cartage. The time and labor spent in exploring has not been lost. But a large transport train is now being organised on the Rajmehal and Dinagepore road, and another is working from Dhaparee along the Northern Bengal Railway line, while the water routes will still be utilised as far as may be.

14. In the Bhaugulpore division good water routes are not available, and supply is going on by carts, and works in a more simple way. The Lieutenant-Governor has just heard that the whole of the allotment of one district has reached the store-houses; in the two others things are well advanced; the allotments will be delivered in time, and probably more than the original allotments.

15. In the Patna division the Commissioner has had a very heavy task, and met with many difficulties and disappointments, as was to be expected. Mr. Bayley has, however, striven to overcome these with persistent energy, and the Lieutenant-Governor knows he and his officers are doing all that can be done.

Here also the water routes have proved disappointing. Two or three from the east have been tried and proved failures. We are still trying another, which is more hopeful. Further to the west the Gunduck route has proved very little practicable, owing to difficulties of navigation, want of water, of suitable boats. Ferry services have now been organised on the Ganges; and long trains of carts are taking grain inland, while we still make the most of water carriage, where possible at all.

16. With respect to the offer of assistance from the Commissariat, I am to explain that the Lieutenant-Governor has never lost sight of this; but Colonel Willes, the head of the Department, seemed in conversation to be less sanguine about the Department's ability to supply camels than Colonel Macbean. The Commissioner of Patna also did not take a sanguine view of this mode of transport, and thought his local carriage would prove sufficient for the quantity of grain allotted. This being so the Lieutenant-Governor did not apply for Commissariat assistance, but experimented with our present means, and waited results and reports on our ability to forward the further allotments before indenting for Commissariat carriage.

The Commissioner of Patna has indeed just written to say that after conferring with Colonel Mackenzie, of the Commissariat Department, he is still of opinion that recourse should be had to that Department only as a last resource.

I have the honor to be, Sir,
Your most obedient servant,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

P.S.—While this letter was in course of issue letters have been received from the Commissioners of Bhaugulpore and Patna, which confirm much that has been said above. The former officer, replying to this Government's letter, No. 10, dated 3rd instant, says:—

"The Government is quite right in believing that no actually pressing effort has yet been made anywhere to test the resources in the matter of carriage to any extreme degree."—"The despatches of grain into the interior of the districts of this division are in a more forward state than would appear from the portion of the report to the Government of India quoted in your letter."

Mr. Barlow then goes on to show what he is doing to push forward grain as indicated in the accompanying note.

Mr. Bayley, writing demi-officially, confirms in a striking manner the view taken by the Lieutenant-Governor of the danger that too great a pressure applied all at once to collect carriage would hamper and injure the operations of private trade. Urgent pressure brought to bear to clear away in a minimum time the deliveries at the Patna stations is said to have interfered much with the operations of that trade.

NOTE as to the present condition and prospects of the Grain Transport Arrangements so far as is known without waiting for Special Reports.

THE total provision of Government grain up to the end of January was put (see Appendix C to the sixth Narrative) at 19,25,000 maunds. By the first orders of the Government of India dated the 6th December, the total was taken at 18,75,000; but the arrangements made by Commissioners of division and subsequently reported brought the total up to 19¼ lakhs. Of this there was to be sent into the distressed districts, by the end of January, 15,00,000 maunds of grain, a reserve being kept of 4,25,000 maunds. The total provision was to come thus—

	Mds.	Mds.
From the North-Western Provinces—		
Commissioners' orders	1,85,000	
Tirhoot dealers, &c.	44,000	
Government of Bengal orders through Mr. Colvin	1,50,000	
		3,79,000
From Eastern Bengal direct into the Rajshahye division, an amount at first reported to be only 40,000 maunds, but afterwards ascertained to be		80,000
From the Nerbudda valley—		
Bunsee Lall's consignment and Manick Chund's consignment subsequently reported		65,000
Total		5,24,000
Balances to be provided from Calcutta, either by purchase there or in Orissa, or by importation from Burmah, Madras, &c.		14,01,000
Total		19,25,000

2. When the arrangements made by the Bengal Government were first reported to the Government of India, it was expected that the amount to be provided from Calcutta would be larger than the above figure (14 lakhs of maunds). But when the Commissioners reported all their

arrangements, and the purchases made* in the Central Provinces were added to the total amount provided from the North-Western Provinces, the balance to be provided from Calcutta remained as above shown. Of this balance 4,25,000 maunds were, as above mentioned, reckoned as unassigned reserve. Subsequently (during the first week of January), when the Lieutenant-Governor learned that he might reckon upon receiving a further supply of grain after the January supply was done, the whole reserve was allotted to the most necessitous districts. But notice of such fresh allotment, and promise of further supplies in February to April, did not reach the district officers until the month of January was well on. At the outset they had been told to arrange for transporting and storing only the 15,00,000 of maunds.

3. The whole of the North-Western Provinces supply, the whole of the Eastern Bengal supply, and almost the whole of the Nerbudda Valley supply are to be delivered in the distressed districts before the end of January. The arrangement of these supplies* is in the hands of the Commissioners; they report that it will all arrive within the required date, and the Government has accepted these assurances. There remain then the Calcutta despatches, which were to have been 9,76,000 maunds by the end of January, but which, now that the reserve has been allotted, should be 14,01,000 maunds.

4. Mr. Toynbee's statement* shows that up to the morning of Tuesday (the 13th January) there had been sent away from Calcutta 8,39,000 maunds of Government grain, and there were thus 5,61,000 still to go out of the January supply. Eighteen days of the month are left. If the East Indian Railway can take away 30,000 maunds a day, then 5,40,000 maunds could, if need be, go to the Patna and Bhaugulpore divisions, while about 1,70,000 maunds are due to the Rajshahye division. Some part of the Rajshahye division consignment must go viâ Rajmehal and the East Indian Railway, but we can hope actually to despatch from Calcutta the full 14,01,000 maunds before the end of January. If we fall short the amount short should not be large.

5. Then, as to what the local officers are doing, can do, or promise to do. The Government has not received absolute final figures of what can be done. Replies to the questions on this point have not come. But we can say this much,—

Patna Division.

Mr. Bayley writes (demi-officially on the 10th January) regarding Tirhoot and Sarun that he can carry away—

	Maunds.
By three different routes to Tirhoot - - - -	50,000 a week.
By three different routes to Chumparun - - - -	44,000 ,,
No recent information has come, but the Lieutenant-Governor estimates that Sarun can take - - - -	30,000 ,,
And that Gya can take - - - - - - -	25,000 ,,
Regarding the Shahabad and Patna districts, no recent information is to hand. The Soane Canal Works are taking regularly 5,000 maunds a week. Mr. Levinge has been instructed to take more. Shahabad and Patna have comparatively small allotments of grain, private trade is there brisk, and no effort has yet been made to carry very large quantities of Government grain into the interior. The Lieutenant-Governor does not propose at present to call upon the local officers of these two districts to make any such effort, and so he reckons the weekly transport of Shahabad and Patna at - - -	20,000 ,,
Total for the division - - -	1,69,000 per week.

Mr. Bayley (under date the 12th January) telegraphed—"Grain despatched from Patna ghât alone during past week, 82,000 maunds." Mr. Bayley has on the same date demi-officially informed the Lieutenant-Governor that, by pressing on exceedingly the Government transport we are exhausting the whole carrying power of the country, and that there is risk of our interfering much with private trade. Under these circumstances the Lieutenant-Governor has directed that the Government consignments may be so managed either by getting carriage and boats from far off, or by (if necessary) limiting daily consignments, that private trade shall not suffer. And thus it is perfectly possible that the Government transport in the Patna division, where private trade is fairly brisk, may not be kept up to the total that might be possible if Government grain only were considered.

Bhaugulpore Division.

The Commissioner, Mr. Barlow, telegraphs (on the 13th January): "Monghyr grain 1,07,000 maunds received; all reported stored." On the 12th January Mr. Barlow sent a statement and reports showing that Bhaugulpore hopes to have his full second lakh (that is, the additional lakh now given to the district, its original assignment being first completed) stored by the 15th February. Regarding Purneah, Mr. Barlow wrote that he had arranged for a second crossing over the Ganges at Colgong, whereat 3,000 maunds of grain daily could be crossed. With the help of the railway crossing at Sahebgunge, Mr. Barlow hopes to deliver from 5,000 to 6,000 maunds of grain daily at Caragola, all of which he believed Mr. Munro, of the police, the officer in charge of the carting work at Caragola, would manage to carry away. The total available transport for the Bhaugulpore division thus amounts to—

---

* One of these purchases was, as has been reported to the Government of India, made under special circumstances after other purchases had been quite stopped.

* Except the small Nerbudda Valley supply, regarding the arrival of which there is little doubt.

* Appendix B. to eighth Narrative.

	Mds.
Monghyr, which carries away all it receives, and may be put down at per week - - - -	30,000
Bhaugulpore, ditto ditto - -	40,000
Purneah, which may be put down at - - -	35,000
Total per week - -	105,000

As yet no complaints of hindrance to private carriage have been received from the Bhaugulpore division.

Rajshahye Division.

For this division we have as yet only reports of the grain despatched to a date not now very recent (Commissioner's Nos. 49 and 51 of 5th January); and, owing to the distances to be travelled by letters over non-railway routes, the information from this division can never be so prompt as from Behar. For this division it may be said that during about one month there were despatched—

	Mds.
From Kooshtea - - - - - -	70,000
„ Goalundo viâ the Oorasagor - - -	46,000
„ Calcutta by steamer to Kaligunge - -	20,000
„ Dacca to ditto - - -	20,000
„ Serajgunj - - - - - -	10,000
„ Rajmehal - - - - - -	5,000
Mr. Robinson has now begun to organise a train of carts from opposite of Rajmehal to carry 500 maunds a day, or say per month - - - - -	15,000
Major Lindsay has prepared to cart from Rampore Beauleah and from Dhaparee at least 5,000 maunds a piece per week, or per month - - -	40,000
Total per month - - -	226,000

The Lieutenant-Governor anticipates that the Rajshahye officers will be able to carry into the interior of Dinagepore, Rungpore, Maldah, Rajshahye, and Bograh, about 60,000 maunds a week, If the Dinagepore routes viâ the Mahanuddy cannot be worked up to the full extent required. Mr. Barlow is prepared to go on supplying the north-west of Dinagepore viâ Caragolah, the Purneah road, up to an amount of at least 50,000 maunds a month, when the full Purneah supply shall have been laid in.

6. To sum up the whole, it may be stated that the local officers can despatch to the interior—

	Per week. Mds.
Patna division - - - - -	169,000
Bhaugulpore division - - - -	105,000
Rajshahye division - - - - -	60,000
Total - -	334,000

The Lieutenant-Governor hopes that in districts where private trade is brisk, the large amounts named may not have to be carried. And he does not feel sure that the East Indian Railway can deliver the full amounts shown in the Patna and Bhaugulpore divisions without occasional delays such as have occurred on one or two occasions, till at least additional rolling stock is procured and arrangements made as the railway propose to do.

By order of the Lieutenant-Governor of Bengal,
C. Bernard.
Calcutta, 14th January 1874. Officiating Secretary to the Government of Bengal.

Appendix F. to foregoing Narrative.

No. 83.

From Arthur Howell, Esq., Deputy Secretary to the Government of India, to the Secretary to the Government of Bengal.

Department of Agriculture, Revenue, and Commerce.

Agriculture and Horticulture. Famine.

Sir, Dated Calcutta, the 12th January 1874.

I am desired to call the immediate attention of the Government of Bengal to the subject of Relief Committees.

2. In paragraph 28 of the Resolution of the 7th November last it was stated that—

"The Governor General relies upon the Lieutenant-Governor to take steps for organizing district and local committees in seasonable time, and in sufficient numbers, so that the measures for relief shall be far reaching and comprehensive in proportion as the distress may become widespread.

Whatever application His Honor may make for assistance from the ranks of the public service, with a view to effectively constituting these committees, will receive immediate attention from the Government of India."

3. Again, in the conference held at Government House on the 10th November last, the duty "of being prepared beforehand" with all the machinery for relief was strongly urged, and the Viceroy expressed an opinion that immediate steps were necessary for obtaining from the District Officers "detailed recommendations showing the places where relief centres should be established and the names of those who would serve on the Committees." A hope was expressed that the Secretary to the local Government would then be able to frame for the Lieutenant-Governor's consideration detailed regulations for the guidance of these Committees. I am to point out that the conclusions arrived at during this conference were expressly declared in Financial Secretary's letter No. 3003, dated 13th November, to be instructions for the guidance of the local Government.

4. At the conference subsequently held on the 8th instant, the Governor General in Council was informed that the regulations have not yet been prepared, and that the organization of the committees has been postponed, owing mainly to the more urgent calls upon the local officers in respect to the provision of transport and the storage of grain. His Excellency is ready to make every allowance for this, but recent reports, especially from Sarun and Tirhoot, lead the Government of India to apprehend that the preparation for bringing relief committees into action has been too long delayed.

5. The attention of the Government of Bengal was called to this subject in my letter of the 30th ultimo, and a circular was addressed on the 3rd instant, by the Lieutenant-Governor's direction, to the Commissioners of Rajshahye, Patna, and Bhaugulpore, and the Relief Commissioner of Rajshahye, asking for an early report of the state of their preparations. I am to request that the Government of India may be furnished, as soon as possible, with information of the number, names, and sites of the relief centres proposed to be constituted, and of the committees actually formed. District maps should accompany your reply; but if the preparation of these maps will cause any delay, the rest of the required information should not on this account be kept back.

6. The Lieutenant-Governor was understood to say at the conference that the regulations for the guidance of Relief Committees were still under preparation. And as they may involve some questions of considerable importance, it is desirable that they should be submitted as soon as possible for the sanction of the Government of India.

7. The Government of Bengal will receive a separate communication to the effect that orders have been issued appointing certain military officers to place themselves at the disposal of the Commissioner of Patna to assist in the superintendence of the Committees in that division.

I have the honor to be, Sir,
Your most obedient Servant,
ARTHUR HOWELL.
Deputy Secretary to the Government of India.

No. 122 S. R.

From A. MACKENZIE, ESQ., Junior Secretary to the Government of Bengal, to the SECRETARY to the GOVERNMENT OF INDIA in the Department of Agriculture, Revenue, and Commerce.

Scarcity and Relief.

SIR, Calcutta, dated 14th January 1874.

I AM directed to acknowledge the receipt of your letter, No. 83, dated 12th instant, regarding the organisation of relief committees and charitable relief. The Lieutenant-Governor is sorry to understand that recent reports have led His Excellency in Council to think that the arrangements for bringing these committees into operation have been too long delayed. The views of the Government of India and of this Government, as repeatedly expressed, had been that the time for general charitable relief had not yet come; but district officers have from the outset had a discretion to start local committees wherever the necessity for this arose in any particular locality, and directions were given them to relieve any isolated cases of distress. The Lieutenant-Governor has not himself seen in the reports anything to make him think that action has been really too long delayed, but His Honor quite concurs with His Excellency in Council that the time has come when steps may very well be taken of the kind indicated. The circulars from this Government to local officers, Nos. 9 and 73, of the 3rd and 10th instant, copies herewith forwarded, will show what action this Government has already taken in this direction.

2. As regards the preparation of rules defining the functions of the committees and prescribing their mode of action, it must be owned that some little delay has occurred, but the Lieutenant-Governor did not feel that this was really urgently pressing, inasmuch as isolated cases and very local distress are best dealt with according to the circumstances of the locality rather than under general rules, and, as already stated, the local officers had a discretion to meet such cases. It is only when operations become large that general rules become necessary and applicable. The Lieutenant-Governor has already explained that he did not think fit to press specially for relief committees while other matters were more urgent, and he thought that till committees were appointed, rules for regulating their action were not immediately required. He has, however, not by any means lost sight of the subject, and Mr. Geddes, an officer peculiarly fitted for the task, was at a very early date directed to compile, arrange, and classify all the most important and approved orders on this subject from the reports of all recent famines both in Bengal and else-

where. No officer could do this sort of work better than Mr. Geddes, who has considered such matters much; but as he is thoughtful his rate of work is a little slow, and delay has certainly occurred, as the Lieutenant-Governor has admitted. The work is, however, now done and in type, and its excellence will, the Lieutenant-Governor hopes, quite make up for the delay which after all has done no practical harm.

3. At the conference of the 10th November it was arranged, among other things, that relief rules for the guidance of committees should be drawn up, and Mr. Bernard was mentioned, being the Secretary in attendance on that day, as the officer who might prepare them. The Lieutenant-Governor wishes, however, to make it clear that no shadow of blame can attach to Mr. Bernard in this matter. He has been working under the Lieutenant-Governor's own eye and direction, and His Honor has deliberately to the full employed him in other matters, and has not made over to him this particular work. Far from Mr. Bernard being to blame in this or in any other matter connected with scarcity and relief, the Lieutenant-Governor desires to take this opportunity of declaring in the most emphatic manner that no mortal man could have rendered more constant, devoted, and efficient work from the very beginning of this famine business. The Lieutenant-Governor's only fear is that Mr. Bernard is injuring his health by excessive devotion to these duties, and His Honor dreads lest, by putting too much upon him, he may detract from his eventual power of work, a misfortune than which nothing could be greater.

4. The Lieutennnt-Governor has no doubt the Government of India will think him right in exercising his discretion as to the particular officers to do this or other work.

5. All the above however being said, the Lieutenant-Governor thoroughly recognizes the urgency and importance of making arrangements for charitable relief, and entirely agrees that both committees should be organised and rules issued as soon as possible.

6. Every effort is being made to get the definite information requested in your 5th paragraph, and as soon as it is received it will be submitted. The rules shall be submitted in draft as soon as may be. Meantime a proposal as regards the best mode of meeting the wishes of His Excellency in Council for the appointment of a central committee, and for regulating and superintending relief operations, will be submitted in a separate letter.

I have the honor to be, Sir,
Your most obedient servant,
A. Mackenzie,
Junior Secretary to the Government of Bengal.

No. 123 S.R.

From A. Mackenzie, Esq., Junior Secretary to the Government of Bengal, to the Deputy Secretary to the Government of India.

Scarcity and Relief.

Sir, Calcutta, dated 14th January 1874.

In my separate letter No. 122 of this day's date, I have submitted the Lieutenant-Governor's explanations as to the present situation of the question of appointing local relief committees and framing rules for their guidance.

2. In conseqnence of what passed at the conference of the 8th instant, it was arranged that, although an appeal to the general public might be postponed for a short time, it was desirable that the machinery of Chairman, Secretary, &c. of a central relief committee should be prepared at once. The Lieutenant-Governor now, therefore, proposes in anticipation of the formal appointment of such a Committee, to give effect at once to the arrangements sketched in the Appendix A to Mr. Bernard's letter No. 3888 of the 11th December, which have already met with the approval and sanction of the Government of India in Mr. Chapman's letter No. 3690, dated the 12th December 1873. That is to say, he proposes that Mr. Schalch should be set apart as President Elect of the proposed Central Committee, to undertake at once the superintendence of charitable relief arrangements in the interior, and make preliminary arrangements in Calcutta; and that a Secretary should also be appointed to begin work with Mr. Schalch forthwith.

3. The Lieutenant-Governor is sure that no one so well fitted for this duty as Mr. Schalch is, by both general and special experience, could be anywhere found. Mr. Schalch has selected as his Secretary a very competent young officer, who knows well the part of the Behar country where distress is pressing, viz., Mr. A. Forbes, C.S. The Lieutenant-Governor had originally thought that a senior officer would have been required for this post, and had proposed a rate of salary which it will now not be necessary to give. His Honor has full confidence in the propriety of Mr. Schalch's choice, and proposes to give Mr. Forbes a salary of Rs. 1,400 while engaged on this duty instead of Rs. 2,500 as before estimated. His Honor would take this opportunity of begging that he may be permitted to put Mr. Toynbee's allowances on a par with those of Mr. Geddes and Mr. Forbes. Mr. Toynbee is doing very heavy and responsible work, and doing it in a very efficient manner.

4. The Lieutenant-Governor, some days ago, asked Mr. Schalch to note his views as to the functions and rules of working of relief committees, and placed him in communication with Mr. Geddes, the proof sheets of whose work he has seen. Under all the circumstances, and seeing the mass of details with which this office is now overburdened, and looking to Mr. Schalch's most special qualifications, the Lieutenant-Governor thinks it will be best that Mr. Schalch should first draft the rules in rough and settle them with His Honor, and that they should then be submitted for the approval of His Excellency the Viceroy.

5. Mr. Schalch is under the impression that it may be desirable to consult the members of the future central committee, and to get their approval to any rules issued. But however this may be, the rules may very well be settled and approved at once, so far as Government is concerned. It will probably be desirable that Mr. Schalch should, in an informal way, associate with himself a few gentlemen who are likely to be active and prominent members of the committee, leaving the rest to be nominated and appointed after His Excellency the Viceroy has, in public meeting, stated the degree of necessity which exists and made a formal appeal to public charity.

6. Mr. Schalch further purposes (and the Lieutenant-Governor quite endorses his view) that after drafting the rules, he should go up-country and visit the distressed districts, see the local officers, and settle on the spot all that can be settled. The Lieutenant-Governor is sure the public service and the interests of humanity will be best advanced by engaging Mr. Schalch at once in this duty. His thoughts have, in communication with the Lieutenant-Governor, been much directed to these matters of late. His Honor trusts that, within a very few days, we shall have a rough draft of rules. The Lieutenant-Governor does not think it would be necessary to gazette the proposed appointments at present, but Mr. Dampier might be gazetted to act as an Additional Member of the Board of Revenue in pursuance of the plans already proposed and approved.

7. I am to add that besides Mr. Forbes, Mr. Schalch would eventually wish to have another Secretary accustomed to dealing with the public, getting in subscriptions, and so on. If the services of Mr. H. Wood, who has done such good work on former occasions without either fee or reward, can be secured, the Government would be fortunate. It may be doubtful whether Mr. Wood's present position would admit of his again undertaking these duties gratuitously, but in that case an honorarium could be given him out of the saving on the original estimate of salaries caused by the appointment of Mr. Forbes.

I have the honor to be, Sir,
Your most obedient servant,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

MEMORANDUM of the Proceedings at a Conference held at Government House, Calcutta, on January the 8th, 1874.

PRESENT:

THE VICEROY.
THE LIEUTENANT-GOVERNOR OF BENGAL.
THE HONORABLE SIR RICHARD TEMPLE, K.C.S.I.
THE HONORABLE B. H. ELLIS, C.S.I.
MAJOR-GENERAL THE HONORABLE SIR H. W. NORMAN, K.C.B.
THE HONORABLE E. C. BAYLEY, C.S.I.
MR. H. O. HUME, C.B., Secretary to the Government of India in the Department of Agriculture, Revenue, and Commerce.
MR. C. BERNARD, Secretary to the Government of Bengal.
MR. A. HOWELL, Deputy Secretary in the Department of Agriculture, Revenue, and Commerce.
MR. TOYNBEE, Officer charged with the receipt and despatch of grain from Calcutta.
CAPTAIN E. BARING, R.A., Private Secretary to the Viceroy.

The Viceroy said that a Conference had been held at Government House on the 10th of November to concert measures in view of the anticipated famine in Bengal. Two months had now elapsed since that date, and as the latest letters from the Government of Bengal showed that the distress was coming on in some parts more rapidly than had been anticipated, it appeared a suitable time for holding another Conference, in order that stock might be taken of what had been done, and that the arrangement of any further measures which may be necessary might be facilitated.

The first point which he desired to discuss was transport, and in considering this subject His Excellency proposed to deal, in the first instance, with the transport of grain from Calcutta to the main centres in the distressed districts, and secondly, with the local means of transport which were available for distributing grain. Mr. Bernard had furnished returns* of the available means of transport which were at the disposal of the Bengal officers. His Excellency had made a summary of those returns, and he thought the most convenient method to adopt would be to go through them seriatim in order to see what had been done and what remained to be done.

* NOTE.—This information was furnished by Mr. Bernard on the 7th in consequence of a request from the Viceroy made on the same morning through his Private Secretary.

The Lieutenant-Governor had stated in his circular letter No. 10 S. R. of the 3rd January that arrangements had been made to distribute 16 lakhs of maunds before the end of January, besides 3 lakhs of maunds in reserve to supply any demand for quantities exceeding the assignments within that period, and that up to the 3rd of January about 4¼ lakhs had been despatched from Calcutta by Mr. Toynbee, and about 1½ lakhs more from the North-Western Provinces and Eastern Bengal, making 6 lakhs in all. There remained, therefore, 10 lakhs (erroneously computed at 9 in the letter from the Government of Bengal) to be distributed, besides 3 lakhs of reserve; total, 13 lakhs.

Mr. Bernard explained that about 2,85,000 maunds, or say 3 lakhs, had to arrive from the

North-Western Provinces. The amount, therefore, that had to be sent up-country from Calcutta amounted only to 8 lakhs, one lakh of the reserve having been appropriated, or 10 lakhs, including the reserve.

The Viceroy said that he presumed the reserve would be sent up-country, and therefore, estimating the quantity to be distributed to be 10 lakhs, it became necessary to enquire whether it was possible to send that quantity up country from Calcutta before the 31st of January.

Mr. Bernard had stated that "at a pinch" 40,000 maunds a day could be sent by the East Indian Railway, but "for a continuance" only from 25,000 to 30,000 maunds a day could be despatched to Behar, or say 27,500. He also estimated that "quite half as much a day," or say 14,000 maunds, could be despatched to the Rajshahye Division by the Eastern Bengal Railway. The total quantity, therefore, that could be sent daily from Calcutta up-country amounted to 41,500 maunds.

The Lieutenant-Governor remarked that of the total originally assigned about one-fifth was for Rajshahye, and about four-fifths for Behar.

The Viceroy remarked that in that case 8 lakhs would have to go to Behar and 2 lakhs to Rajshahye. If grain were sent to Behar at the rate of 27,500 maunds per diem, in the 28 days between the 3rd and the 31st of January a total quantity of 7,70,000 maunds could be despatched, or very nearly 8 lakhs, and that as Mr. Bernard's estimate of the amount of grain that could be despatched to Rajshahye was 14,000 maunds per diem, it was clear that within the same period 2 lakhs could be despatched in that direction without any difficulty. It appeared therefore that the railways could meet the demands that would be made upon them.

Mr. Toynbee remarked that there was already a block at Calcutta. The greatest quantity of grain which he had despatched in any one day by the East Indian Railway was 28,000 maunds. More rice was being received than could be sent forward.

The Viceroy remarked that without doubt rice was being received by the Government of India at Calcutta quicker than it could be sent up-country, and this would very probably continue to be the case, but the main question now was, whether a sufficient amount of rolling stock was available to send the 8 lakhs which had been arranged by the Government of Bengal to be sent to Behar before the 31st of January.

The Lieutenant-Governor said that Mr. Batchelor, the Traffic Manager of the East Indian Railway Company, had explained to him that the resources of the railway had not really up to the present moment been strained, and that they could work up to a very much larger maximum than was at present the case.

The Viceroy observed that the Railway Company would be asked distinctly to state what they could do in the way of transport.

Mr. Ellis said it would be very objectionable to interfere with the transport of private stores.

The Viceroy assented, but thought it was essential that the Government should know exactly what the railway could do.

Mr. Toynbee said that private traffic was always given a preference to the Government demands.

Sir Richard Temple remarked that Mr. Stephenson, the agent of the East Indian Railway Company, had assured the Government in November that he could send 2,000 tons a day in covered waggons, and could increase the quantity considerably by sending grain in open waggons.

After some further conversation Mr. Toynbee said that he could send off 28,000 maunds a day from Calcutta by the East Indian Railway.

The Viceroy said that the result of this portion of the discussion was, therefore, so far satisfactory, for it became evident that, though the Railway would not perhaps, be able to send up the rice so quickly as it was received at Calcutta, they would be able to send the 8 lakhs which were arranged to be sent to Behar before the 31st of January; and as regards the Eastern Bengal Railway, which would throw supplies into the Rajshahye Division, there appeared to be no difficulty.

His Excellency then passed on to the subject of local transport. He said that the returns on this subject which he had received from Mr. Bernard were very incomplete.

The Lieutenant-Governor observed that the demand for information of this sort had been made suddenly yesterday, and that it was not to be supposed that the papers which Mr. Bernard had given Captain Baring on so short a notice, and which were furnished so hurriedly that he himself had not seen them, represented all the transport that was available. No definite figures regarding the limit of transport capabilities had been in the first instance asked for from the local officers, because they themselves could not tell till they tried. The local officers had not yet stated the utmost they could carry; they had only stated what they had actually done when their reports were written. The plan which in the first instance the Lieutenant-Governor had deliberately followed was this:—The grain sanctioned by the Government of India was put down at the Railway and river side stations for the local officers, and they were told to do the utmost they could to get it into the interior. They had been making experiments, and a variety of routes and modes of transport had been tried with a view to see which was the best.

The Viceroy said that he regretted that the information was incomplete, but the stage for experiments had now passed, and we were approaching a period when the whole of the transport service must be thoroughly well organized. The importance of this subject had been frequently pressed on the Government of Bengal by the Government of India, and he had hoped to receive more full information upon the subject and to hear that the organization of the transport was in a more complete state than it appeared to be. As it was, it appeared to him that, so far as he could judge from the returns he had received, the local transport which had been provided was not sufficient. Perhaps the best course would be to go through Mr. Bernard's returns in detail. First, as regards the Patna Division.—Mr. Bernard states that 37,000 maunds have to be supplied to the Patna district to make up their full requisition of 50,000 maunds before the end of January, which the Magistrate says he can send off "in a few weeks' time if need be; say, therefore that rice can be despatched into this district at the rate of 1,300 maunds a day. Mr. Bernard states that grain can apparently be carried into Gya at the rate of about 3,000 maunds a day." In Shahabad, Mr. Bernard states that "when transport begins in earnest there, the Soane Canal and the local works could carry away quite as much as Gya could do, *i.e.*, 3,000 maunds a day." Tirhoot, Mr. Bernard states, "ought to work for some time to come" up to a total of 4,000 maunds a day. In Sarun the transport is reported to amount to "barely 1,000 maunds a day." Mr. Bernard states that "scarcely any grain has been carried to the interior" of Chumparun, but "contracts for carrying 8,000 to 10,000 maunds a week have been made;" say, therefore, that 1,300 maunds a day would be carried.

The Lieutenant-Governor explained that the Patna and Shahabad districts might, for the purposes of the present argument, be left out of account. The Patna district could be easily supplied, and the Shahabad district was not considered by the Commissioner to need immediately as much as had originally been assigned to it. It was proposed to divert some of the stores which had been originally proposed for these districts to other tracts which stood more in need of them. It was desirable to push as much grain as possible to the north of the Ganges.

The Viceroy said that if Shahabad and Patna were left out of account, the available amount of transport according to Mr. Bernard's report, which seemed to him to embody the latest information, would be as follows: Gya, 3,000 maunds per diem; Tirhoot, 4,000; Sarun, 1,000; Chumparun, 1,300;—total 9,300, or about 65,000 maunds a week.

Next, as regards the Bhaugulpore Division, Mr. Bernard said that "the Bhaugulpore and Monghyr Collectors are transporting about 2,000 maunds a day each, and the Purneah Collector, who has been rather behind-hand hitherto, hopes to carry away 4,000 maunds a day." This made a total of 8,000 maunds a day.

It appeared, therefore, that in the Patna and Bhaugulpore Divisions together there was, so far as we know at present, local transport available for 17,300 maunds a day; but as 28,000 maunds a day would be brought up by the Railway from Calcutta, besides what is expected from the North-West, it followed that the local transport fell short of what was required to meet the exigencies of the case by more than 10,000 maunds per diem.

Turning next to Rajshahye, His Excellency said that Mr. Bernard had stated as follows:—"Of the internal transport we cannot, I am afraid say much at present." It appeared, therefore, that there was little or no information on the subject of transport in this Division. Rajshahye was the place where the greatest difficulty was immediately apprehended, and it was doubtful what quantity of grain was now in store there.

Mr. Bernard observed that the transport of grain in the Rajshahye Division was a very tedious matter. He could not say that there was any considerable amount altogether in store there. There was certainly more than a lakh of maunds which had left Kooshtea and Goalundo, but very little of it had arrived at its final destination.

The Viceroy said that he thought, on the whole, that the question of local transport was not in a satisfactory state. He did not wish to express any want of confidence in any of the Commissioners or district officers, but what he wished to say was that the ultimate responsibility rests with the Government of India, and that they were not at all satisfied with the present condition of the transport. So far as the means at our disposal enabled us to judge, the transport in different districts was not sufficient to carry out the Lieutenant-Governor's original programme for distributing grain up to the 31st of January.

It was possible that Mr. Bernard's report did not represent the whole of the transport that was available, but this was a matter of the first importance, and the Government could only go by the official information which they had before them. The Government of India had constantly called attention to this subject, and had suggested early in November that Commissariat transport might be made use of.

The Lieutenant-Governor repeated that Mr. Bernard's note did not represent the whole of our means of transport, and it would be found that we could carry and were carrying more than His Excellency supposed. He further said that he was not aware that any public letter had been received on the subject of Commissariat transport. The suggestion had certainly been made, and he had talked on the subject to Colonel Willes, the head of the Commissariat Department, but he found that Colonel Willes did not agree in the sanguine estimate of Commissariat power which Colonel Macbean had given the Viceroy.

The Viceroy observed that he believed such a letter had been written,* but at any rate the suggestion was made. In the present condition of affairs he thought the best thing to do would be to send an experienced Commissariat Officer to Patna, to consult with the Commissioner and to give him carte blanche to do what he could.

Sir Henry Norman said that without doubt a good Commissariat Officer could be found for this service.

The Lieutenant-Governor said that north of the Ganges the risk was so great that he should be glad to have assistance. He did not ask for any Commissariat assistance in Rajshahye. He thought it would be advisable, if possible, to bring supplies from Oude into Behar.

The Viceroy said that he was unable at present to state positively whether any supplies would be available in Oude. From enquiries he had made during his recent visit to Oude some anxiety had been caused to him as to whether the supplies in that province would be sufficient to meet its own demands. Later accounts were somewhat better, but he was unable at present to say whether it would be possible for any large quantity of grain to be transported from Oude into Behar.

---

* Note.—The public letter to which the Viceroy referred has been subsequently ascertained to be No. 141 from the Secretary to the Government of India in the Military Department, to the Secretary to the Government of Bengal, dated 6th November 1873.

Sir Richard Temple said that he had ascertained from the Commissary-General that 5,000 pack-bullocks could be supplied in one month and 7,000 in another at the rate of Rs. 4 a month. He had received a specific enquiry from Colonel Willes on this subject, and he wished to know what answer should be sent to him. Was the special Commissariat Officer to ask the Commissioner whether or not he wanted those bullocks, and if so, was he to get them ?

The Lieutenant-Governor said it was clear that the Commissariat Officer should consult the Commissioner, as it was impossible that the conference could settle such a matter.

Sir Henry Norman said that as it was arranged to depute a special Commissariat Officer to Patna with full authority to act, this officer would be able to see for himself what were the requirements of the case.

The Viceroy observed, before leaving the subject of transport, that he thought the Commissioners and Collectors should be called upon to state distinctly what their powers of transport were, not only for the present but for the next four or five months.

There was another point on which he should like to have the Lieutenant-Governor's opinion. Proposals had been made for light railroads, one from Patna to Gya and the other from Hajeepore to Mozufferpore. These railroads could not be constructed in time to meet the present distress, but Colonel Dickens had drawn up a memorandum showing that a tramway on which bullocks would be used might be laid between Hajeepore and Mozufferpore, and be ready by May.

The Lieutenant-Governor did not think it was advisable to construct such a tramway, and it was therefore decided that the project should be abandoned.

The Viceroy said that the next subject to which he wished to call attention was the distribution of gratuitous relief. The last narratives had made it clear to him that in Sarun and Tirhoot the time had arrived for the distribution of relief. The reports from Dinagepore, where severe distress was anticipated, were not quite clear as to the absolute necessity for gratuitous relief yet.

The Lieutenant-Governor remarked that the last narrative seemed to say that such necessity had not yet actually arisen in Dinagepore.

The Viceroy said that the last narrative was to that effect; but Mr. Robinson's letter of the 25th of December was a little inconsistent with his narrative of the 28th. As, however, the narrative was the later of the two, it might be assumed that there would be no immediate necessity.

The reports from Sarun were very bad, and he could not but think that the local officers there had been somewhat slack in carrying out the orders of Government. These officers had been asked for reports on the constitution of Relief Committees, but they had not been yet organised, which might now give rise to difficulty.

The Lieutenant-Governor did not think that serious blame was to be attached to the local officers in this matter. The Government of Bengal did not, in the first instance, press specially for these Committees. They felt that the most pressing thing was the transport of grain and the commencement of relief works, and that this might take precedence of the formation of Relief Committees. The Government had since more especially required the officers to proceed with Relief Committees. There were certain parts of the country in which it was desirable that Relief Committees should now be organised, and he thought that the time had arrived to consider the question.

The Viceroy said that he would read Mr. Bernard's return, which would show how matters stood in respect to the formation of Relief Committees. Mr. Bernard said—

As yet we have not received replies from districts on paragraph 18 of Circular No. 80 about Relief Committees. We have recently drawn attention to the subject in Circular No. 9 of 3rd January.

As yet we have received no report from the local officers as to the constitution of the Relief Committees, and no general expression of opinion or advice on the subject has been received. Under paragraph 18 of Circular No. 80 we had left much to the local officers' discretion, saying—" When it is evident that charitable relief must be given in any district, the Magistrate will call a meeting of Native and European gentlemen who may be willing to serve on Relief Committees; he will nominate Branch Committees under the sub-divisional officers or other fit persons."

Taking the several distressed districts in order by the light of the latest reports, we can say—

Patna Division.—No general remarks by the Commissioner at present.

Patna District.—Sites for relief centres in two of the sub-divisions not yet fixed. Magistrate
* 28th Dec. has* the illustrated map in hand.

* 29th Dec. Gya District.—Sites for three classes of centres chosen, map sent* to Commissioner not yet reached Government. Buildings being arranged for; plenty of names of committee-men can be got, but Mr. Palmer is doubtful if Native members will exert themselves actively.

* 30th Dec. Shahabad District.—Plans not yet* settled. Paragraph 18 of Circular No. 80 still under
† Narrative of 16th Dec. consideration. Centres will be established† where European supervision can be brought to bear.

* 31st Dec. Tirhoot District.—Nothing yet* done. We have now begged to have Relief Committees or agency organised at once, and in anticipation of orders in one part of the district.

* 31st Dec. Narrative. Sarun District.—The* different indigo factories in the district have been selected as relie centres, and a map of the nature prescribed by Government order is under preparation.

Chumparun District.—Scheme not yet drawn up, attention being given to it.

Bhaugulpore Division.—General remark by Commissioner that "Magistrate-Collector will shortly have all machinery ready for action. Sites for centres in all three stages of famine had been selected in all districts, and Relief Committees are being rapidly organized everywhere."

Monghyr.—Thirty-one centres for charitable relief have been selected, and the district and sub-divisional officers are going round arranging for the appointment of committee-men. Map showing relief centres has been sent to the Commissioner.

Bhaugulpore District.—Relief centres not yet reported. Magistrate writes (30th December) :— "I met both sub-divisional officers while in the north, and noted several places to which grain may have to be sent hereafter. I have not had time yet to put these notes into proper form."

Purneah District.—For the three sub-divisions Mr. Kemble has selected 25 sites for relief centres. As 13 of these committees have been formed either under the sub-divisional officer or under the Deputy Collector, who is sent out in charge of the distressed proportion of the Sudder sub-division.

RAJSHAHYE DIVISION.

Moorshedabad District.—A meeting was to be held on the 3rd January at the Commissioner's Office with a view of appointing Relief Committees.

Subscriptions have been opened at the Lallbagh sub-division.

Scheme for relief centres in interior not yet prepared.

Maldah.—Scheme for relief centres, &c. not yet completed. A District Committee and two Branch Committees of Relief have been organised. The Head Quarters Committee was formed on 30th November, and some small funds were collected.

Rajshahye District.—Committees not yet formed ; scheme for relief centres not yet framed.

Dinagepore District.—Same as preceding.

Bogragh District.—Ditto. Meeting of a Central Committee convened for 7th January.

Rungpore.—A Central Committee has been formed at the head quarters ; a branch is being formed at one out-station ; others are being prepared. Scheme of relief centres is not yet matured.

The Viceroy said that he would read a further return by Mr. Bernard on the distribution and sale of grain, which was as follows :—

For the distribution or sale of Government grain to the public or to purchasers, as distinguished from people on works, we have as yet received proposals from Mr. Robinson only. His letter has been laid before the Government of India.

Mr. Ravenshaw in the note he drew up of his experience in Orissa adverts to the question of selling grain to the public, but he does not give any particulars as to procedure.

Mr. Bayley made* demi-officially a proposal that food should be sold at the market rates of the neighbourhood, and wages should be raised proportionately: to this proposal the Lieutenant-Governor could not agree.

Beyond this we have had no opinions or suggestions, except that Mr. Worsley of Tirhoot suggested we should aid middle-class women by furnishing them with in-door work and food through the village headmen.

At page 10 of the last (29th December) Monghyr narrative will be found the instructions which Mr. Lockwood gave to his officers for starting local Relief Committees and regulating the distribution of food. He has been told that his action in this matter is a little premature.

The Viceroy then remarked that the point to consider now was this—the Relief Committees being constituted, what should be their functions ? He should like to know what instructions it was proposed to give the committees.

Mr. Bernard explained that they were collecting information with a view to determining what instructions should be given. Mr. Geddes had been entrusted with this duty. No final instructions had yet been issued.

The Viceroy said that he thought that no time should be lost, and that the matter had better now be discussed. The primary object of the Relief Committees would appear to be to distribute food gratuitously to those who were unable to buy it.

The Lieutenant-Governor entertained a similar view, but thought that the change from relief works to charitable relief should be by gradations, of which there were several. All relief which was given apart from public works should be under the Relief Committees, and great care should be taken as to the manner in which relief was to be dispensed.

The Viceroy thought that this, as a first principle, might form the foundation of the instructions to committees. A very important matter was the manner in which relief should be given to the respectable class of persons, especially women, in regard to whom inquiries must be made, as they would not apply for relief, and he presumed that this could only be done by employing natives to distribute the relief. He might mention that he had seen a letter from Mr. Bayley, who stated that his former anticipations had turned out worse than he had expected, and that whatever we did he was very much afraid that a number of this particular class would die. The Government would do all they could to prevent this, but the question was a very difficult one.

The Lieutenant-Governor thought that it was the most difficult question of all, and that it must be very carefully dealt with.

The Viceroy said the next thing was to consider, having formed the Relief Committees, what amount of superintendence was necessary. It would appear necessary to provide ample European superintendence, and, therefore, at once to strengthen the present European establishments.

The Lieutenant-Governor said that he would be very glad to have additional European superintendence.

---

* Mr. Hewitt's demi-official of the 11th December 1873.

The Viceroy thought that in regard to this no time was to be lost. Unless we took measures at once, the local officers could not be held responsible. At the former conference it had been mentioned that the Government of India were prepared to give the services of some military officers to the Government of Bengal, if necessary. He thought the best thing to do would be to place military officers at the disposal of the Commissioners of the distressed divisions.

The Lieutenant-Governor wished to explain in regard to the Rajshahye Division that the people were, as a rule, rich, so that in a great portion of the district they would not want money, but grain. There were no large laboring classes. On the other hand, in Patna there were thirteen millions of people, of whom the greater part were laborers, very poor, and if once severe famine set in, he thought that the numbers who would require charitable relief would be quite in the proportion of ten in that division to one in Rajshahye.

The Viceroy thought that the only thing that could be done at present was to arrange that the best officers who could be found should be directed to proceed at once to the districts in question.

After some further conversation it was arranged that Sir Henry Norman should make out a list of the unemployed military officers who were available for service in the distressed districts, and that six should at once be ordered to place themselves at the disposal of the Commissioner of Patna.

In regard to the probable amount of distress likely to arise, the Lieutenant-Governor said that the information from Chumparun was very imperfect; the Commissioner was dissatisfied with the reports hitherto furnished; there was a good crop of Indian corn, but the reports of the rubbee crop were very bad. As regards Monghyr, there was no cause for alarm, as it was in close proximity to three Railways, and there would be no difficulty in sending large quantities of grain into that district. The Gya district had turned out better than was expected. In Rajshahye the people were not poor, and there was not much cause for anxiety as regards money. He hoped we should find the means of throwing sufficient supplies into Rajshahye. Sarun was to a considerable extent a rubbee district, and if the rubbee failed, it would be possible to throw supplies into the district from the rivers on the sides of it. If rain fell within the next ten days, it would have an excellent effect in Sarun. He believed that the greatest pinch would be in Tirhoot. This was a thickly populated district, and the relief operations would probably be heavier here than elsewhere.

The Viceroy next desired to discuss the propriety of forming at once a Central Relief Committee in Calcutta for the purpose of raising public subscriptions and aiding the Local Committees. It was a sound principle that when the Government came to give gratuitous relief, the people should be expected to contribute to a certain extent, and it had been already declared that the Government would double any subscriptions that were made either locally or generally, although they would, of course, be prepared to give more, if necessary.

The Lieutenant-Governor thought that before going further it might be well to look at the state of the country all over. On the whole he did not think that the apprehensions need now be greater than they were a few weeks ago. Burdwan division now seemed to be better than we had at one time feared; Bhaugulpore was certainly better; as regards Eastern Bengal, our minds were a good deal relieved; the greater part of Rajshahye he did not think was worse than we expected; from South Behar the accounts were apparently better; so that it came to this, that the prospects of the country as a whole did not appear worse than we had anticipated. The fact was that the apprehension of distress was now becoming more localised, and we were more prepared to say that in certain parts of the country the danger was becoming more immediate. The question was, if we once decided to appeal to the general public, in what form should we do so? Were we to say that the appeal would be final or only partial, and that it would be necessary to make a larger appeal afterwards? A final appeal could not be made so as to command the greatest amount of success unless the public believed that famine either existed or was very imminent. Some persons still believed that there would be no famine, whereas even they probably would believe if another fortnight passed without rain.

The Viceroy thought that if the distress became at all bad, there would be great disappointment expressed both here and in England if Relief Committees were not instituted and subscriptions invited. He was inclined to think that even though it might not be expedient to call a public meeting and actually set on foot the Central Committee at once, in consequence of the information not being yet sufficiently complete to lay before the public, it would, at any rate, be desirable that the Lieutenant-Governor should have the Members of the Committee, Chairman, Secretary, &c., ready, and thus the people would know we were working in the matter. It would be unfortunate if action should be forced on the Government by pressure from without.

The Lieutenant-Governor agreed in the advisability of immediate preparations, and said that he would at once take the matter in hand.

The Viceroy said that the next point was a very important one. Mr. Robinson, the Relief Commissioner of Rajshahye, had been over a part of Dinagepore, and had reported that there were very small supplies and no trade, and that unless Government came forward and sold grain to the people, there would be within the next two months in the part of the country that he visited an actual dearth of food. That raised a great question. It was not very pressing as regards the particular district concerned, because the report stated that there was no great want at present, but it raised a very important principle to which he would now refer. When the anticipated famine first came before the Government, they had discussed the question whether Government ought to interfere with private trade, and it was laid down in the resolution of the 7th of November that it was most undesirable to interfere with private trade, because on private trade alone the general supply of the country must depend, but at the same time we added—

It has, however, been proved by the said experience of famines in India that exceptional circumstances may arise whereby numbers of persons may be exposed to danger of starvation or to disease arising from want of food. In all such cases, where human life may be at stake, the Government and its officers will do their utmost to apply the most effectual remedy that may be practicable, and will strive, by forethought and management, to prevent the occurrence of any such misfortunes.

If the peculiar circumstances of any district upon full enquiry were found to be such that we could not depend on private trade to bring in supplies, it appeared to His Excellency right to supplement the private trade until such time as private trade could bring in supplies. That course was exactly in accordance with what took place during the Irish famine. In Ireland the potato crop failed over the whole country. It was the only food of the people. There was no trade organization capable of supplying the people with food. Relief Committees were, therefore, organized and Government stores placed in convenient localities. The principle laid down in Ireland was that there should be as little interference as possible with private trade, and, therefore, where there was food to be had from private traders, the Relief Committees confined themselves to distribution of gratuitous relief, and only where there were no supplies in the hands of private traders did Government sell food to the people. In the latter case, the way in which Government sold was to take the market price at the nearest great mart where the fair price of grain could be tested, and to add to that something for the cost of carriage. Therefore when the Government took the place of the grain dealer, it charged somewhat the same as the grain dealer would have charged, and the moment the private dealer came in, Government closed its stores. Now, the question was, supposing such circumstances to arise in India, should that principle be carried out, or was there any other principle which would be better? Of course as we have everywhere in India local grain dealers, either Relief Committees or officers of Government, or whoever it might be found right to employ, might be authorised to advance to such dealers grain on behalf of Government, and let them sell it on their own account, or simply on Government account. This was a very important matter, and it struck him that the first thing to be done was to decide on the general principle which should be adopted.

The Lieutenant-Governor said that his own feeling was to get the grain upon the spot, and having done so, to decide according to the circumstances of each case. He was inclined to think that the Government might in some places with great advantage take the place of wholesale dealers, which in the end would seem to be much the same thing as His Excellency had recommended.

The Viceroy replied that it was very essential not to take any action of that kind, except in particular localities where it was distinctly proved to the satisfaction of men who had considered the subject carefully that the trade was not acting. All the local officers feared that trade might be paralysed by the action of Government, which he hoped would not be the case.

The Lieutenant-Governor said that in Behar there was a very large trading class; on the other hand, we were told in regard to the Dinagepore district, about which Mr. Robinson had reported, that in ordinary times large quantities of grain were exported, but none was now imported. Mr. Robinson, he thought, should be told that he would get a good supply of grain to take up there, and if it were necessary to sell it, that he might do so.

The Viceroy thought it would be expedient that Mr. Robinson should submit his proposals more in detail. He did not think that a general authority to sell at a great mart, such as Raigunge, as proposed by Mr. Robinson, could be given without doing harm.

The Lieutenant-Governor thought that if they kept in mind the possibility of eventually selling the grain, there could not be anything wrong in sending up a large quantity.

The Viceroy said that in regard to this subject he had taken the precaution from the beginning to say as little as possible about the action of Government in importing grain, and especially as regards the quantity which had been ordered. He was so apprehensive of the effect upon private trade, if the Government were supposed to be making large importations, that he thought the less said about the quantity of grain imported the better. The Government, however, were ready to meet further demands, and there could be no objection to Mr. Robinson storing the quantity which he suggested, namely, about 2,000 tons, but he thought it most essential that no idea should get abroad that Government was going to open stores and take upon itself the task of feeding the whole population. All the Government could do would be to supplement the action of private trade. This could not be too distinctly understood. But in special limited districts, where from one cause or another private trade might be found not to bring in supplies, Government might, he thought, properly sell grain at its price at the nearest large grain mart, with the addition of something for carriage, as was done in the Irish famine. The sale of Government grain in this manner would continue until the supply brought in by private trade was found sufficient to meet the wants of the people. It would then at once be discontinued, and the grain in Government stores would be devoted to its legitimate object, namely, the supply of food to people engaged on Government relief works, and the distribution through the Relief Committees of gratuitous relief to that limited portion of the population who stood in absolute need of it.

Sir Richard Temple could not understand how Raigunge, where Mr. Robinson proposed to form "a large reserve," being a place with water communication, could be destitute of supplies. In his judgment Mr Robinson's report was vague and unsatisfactory. He believed that if Mr. Robinson's plans were adopted, great difficulties would ensue. He had no local knowledge in the matter, but it appeared to him that Raigunge being a large place centrally situated between the Dinagepore and Purneah districts, and being celebrated for trade, if it was known that Government had a great quantity of grain stored there, it would be hard to say what the effect would be. Whilst entirely assenting to the principles laid down by the Viceroy, he thought that the information as to the condition of the extensive tract of country mentioned by Mr. Robinson was insufficient to show the necessity of opening Government stores for the sale of grain there.

After some further conversation, the Viceroy said that a reply should be written to the Government of Bengal on the subject of Mr. Robinson's proposal.

The proceedings then terminated.

No. 112.

From Arthur Howell, Esq., Deputy Secretary to the Government of India, to the Secretary to the Government of Bengal.

Department of Agriculture, Revenue, and Commerce.

Agriculture and Horticulture. Famine.

Sir, Dated Calcutta, 15th January 1874.

In reference to this passage quoted in the margin in the letter, No. 604, of the 16th December 1873,* from the Governor General to the Government of Bengal, I am to address you further as follows.

> Lord Northbrook does not doubt that on such communications being made to them, zemindars will either make advances to such cultivators from their own funds or accept with alacrity the assistance offered by Government for this purpose. But if these expectations should not be realized, and difficulty is found with regard to security for advances made directly to cultivators, His Excellency is ready to consider whether some legislative provision should not be made to the effect that the landlord shall stand security for the repayment.

2. The Governor General in Council has observed with much satisfaction that, in view to the scarcity in the provinces under the Government of Bengal, many zemindars have incurred or are incurring outlay for the benefit of their estates or of their tenantry and dependents, and it is hoped that many more zemindars will act in a similar manner. Under these particular circumstances, some zemindars may find temporary difficulty in paying the instalments of land revenue with the punctuality which is usually observed and enforced. In such cases Government would by no means desire to adopt the coercive measures which are authorised by law, and is ready to allow some reasonable period within which the zemindar might discharge fully his obligations to the State. But it would, on the other hand, be necessary that this measure should be restricted to cases where, by reason of his exertions for the public benefit, the zemindar might be in temporary difficulty. And it is to be understood that the occurrence of scarcity is not by itself a reason for postponement of revenue instalments in Bengal and Behar, where the land revenue has been permanently settled at rates which represent a small proportion of the revenue which would have been realised under temporary settlement, or of the rent paid by the land.

3. But it is not inconsistent with these principles that the State should deal liberally with those zemindars who may have distinguished, or who may yet distinguish themselves, by employing labor on works of permanent improvement of the land, or importing grain for distribution, or sustaining their ryots in a season of difficulty—or by any act of munificence towards their tenantry, or of charity towards the people in reference to the scarcity, which may be shown to the satisfaction of the Collector.

4. In such special cases the Collector should refrain from the application of any coercive process in respect to unpaid arrears of the instalment now due (12th January), and may exercise a discretion in postponing the discharge of part or whole of the coming instalments of the 28th March and the 28th June. Care should be taken that this course is adopted only in the cases specified above; and each case where the Collector may exercise this discretion should be afterwards fully reported for the information of the Divisional Commissioner and the Board of Revenue.

5. Ordinarily the arrear would have to be discharged together with the subsequent instalments, but the Collector might, with the sanction of superior authority, distribute the instalments over a longer term not exceeding two years from the date of the original postponement.

I have the honor to be, Sir,
Your most obedient servant,
(Signed) A. P. Howell,
Deputy Secretary to the Government of India.

No. 6 of 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.—Famine.

To His Grace the Right Honourable the DUKE OF ARGYLL, K.T., Her Majesty's Secretary of State for India.

MY LORD DUKE, Calcutta, the 23rd January 1874.

WE have the honor to forward the special narrative of the drought in Bengal from the 16th to the 22nd instant.

2. The narrative extends over a short period, and is submitted in order that the dates of future narratives may fit in more conveniently with the dates of the reports from local officers.

3. The district reports show that in the south of the Patna Division, and, on the whole, throughout the Bhaugulpore and Rajshahye Divisions, the recent rain-fall, although not large, has done good; and altogether the prospects of the rubbee throughout that area of country cannot be considered as unsatisfactory.

4. The latest price lists show a slight increase in prices generally throughout the country, but the price of common rice in Calcutta has somewhat fallen.

5. Our anticipation that the most severe distress would occur in the northern part of the district of Tirhoot and in the districts of Champarun and Sarun has been realized, and the time has now arrived to put into full activity those measures upon which we originally determined to meet that distress. It is clear from the reports of the district officers that they are fully alive to the responsibility which rests upon them, and that active measures are being taken for the organization of relief committees and for the provision of relief works. *We have in communication with the Lieutenant-Governor of Bengal, associated Sir Richard Temple with His Honor, for the purpose of providing the presence of a high officer in Behar with full powers to direct and control the relief operations under the general instructions which have been issued by the Government of India and the Government of Bengal. * See page 166.

6. We believe that the presence of Sir Richard Temple on the spot, with full authority, will materially conduce to the early and complete organization of those operations.

7. Your Grace is aware that Sir Richard Temple will succeed Sir George Campbell as Lieutenant-Governor of Bengal at the commencement of the hot season, and it will be an additional advantage that he should personally visit the distressed districts previous to his assumption of the Government.

8. We have at our hand ample supplies of grain from beyond the sea to meet any demands that may come upon us from the distressed districts. Notwithstanding this provision, your Grace will be glad to observe, from the reports of the district officers generally, that private trade is active, especially in Behar, and that the measures taken by Government for the importation of grain in connection with the relief of distress are understood by the traders and have not interfered with their operations.

9. Our letter No. 126† of the 17th January, addressed to the Government of Bengal, will show the view that we then entertained as to the sufficiency of the arrangements for transport and the organization of relief committees. Although full particulars of the power of local transport have not yet been received, we are glad to be able to assure your Grace that so far as we can judge from present information, every effort is being made to convey the supplies to the depôts that have been selected, and that the Commissioner of Patna has availed himself of the assistance of Lieutenant-Colonel Mackenzie of the Commissariat Department, for the organization, and supply, if necessary, of means of transport throughout that division. Further assistance from the Commissariat will be rendered in other parts of the distressed districts, and we are prepared, after communication with His Excellency the Commander-in-Chief, who has willingly rendered his assistance in the matter, to reinforce the local staff by a considerable number of excellent officers of the Quarter-Master General's Department, should their services be required. We have immediately complied with the request of the Lieutenant-Governor of Bengal to hire steamers for the transport of grain across the Ganges. We have, † Page 164.

moreover, given full authority for the construction of any temporary appliances on the railroads that may be necessary to prevent a block of grain at the different stations, as also for such an increase in the number of engines as the East Indian Railway Agency may consider desirable.

10. The Lieutenant-Governor of Bengal has undertaken to submit the regulations for the relief committees on Saturday next, on which day we hope to be able finally to arrange for their issue. We shall then decide upon a day for the institution of the central relief committee at Calcutta.

11. We propose to make an arrangement by which ships bringing rice from Chittagong and Orissa shall be relieved of all port charges at Calcutta, other than those for the payment of services actually rendered. By this means the disadvantage that at present exists with respect to shipments of rice from those ports to Calcutta, as compared with shipments to other ports, will be removed.

12. Further, we have undertaken to establish a systematic scheme of Government emigration from Bengal to British Burma, and we have appropriated a sum of £50,000 as a fund from which advances will be made to cover the expenses of the transport of the emigrants, who will be required to refund a portion at any rate of those expenses, the refund being credited to the original grant. The measure appears to us highly desirable in itself and the present opportunity is most favorable for commencing it, as we have arranged for very favourable rates for the conveyance of emigrants to Burma in the vessels employed by Government for bringing rice from that Province to Calcutta. We shall have the honor of forwarding to your Grace the details of this measure by the next mail.

We have the honour to be,
My Lord Duke,
Your Grace's most obedient and humble Servants,
(Signed) NORTHBROOK.
B. H. ELLIS.
H. W. NORMAN.
ARTHUR HOBHOUSE.
E. C. BAYLEY.

NINTH SPECIAL NARRATIVE of the DROUGHT in BENGAL from the 16th to the 22nd January.

This Narrative is submitted by special arrangement for the past week instead of being forwarded on the 29th January, in order that the dates of submission of future Narratives may fit in more conveniently with the dates of receipt of reports from local officers.

The weather has continued cold and bright for the most part and frosty in the northern districts. The Meteorological Reporter thus describes the weather since the 1st of January: "The cold has been unprecedented in the records of the last " nineteen years. On the mornings of the 8th, 9th, and 15th, the thermometer at " the Surveyor-General's Office marked 51·8°, 51·4°, and 51·5°, the lowest " temperature previously recorded having been 52·7°. The ordinary minimum " temperature during the month of January is between 55° and 57°. The winds " have been variable; chiefly they have blown from the north and east, whereas the " prevailing direction in this month is usually from the north-west." From Behar, too, intelligence of extraordinary cold has been received. There water has frozen at night.

A fall of rain in Behar and Eastern Bengal on the 12th and 13th was recorded in last Narrative. This fall extended, as was hoped, to Northern Bengal, but the quantities recorded are very small. They are noted on the margin. Though the quantities recorded at the various stations are not large, the fall was in some cases heavier in outlying parts than at the head-quarters station. It has benefitted the cold weather crops in several districts, and has enabled the people to recommence agricultural operations in the field.

Patna - -	·39
Shahabad - -	slight.
Sarun - -	·19
Tirhoot - -	·09
Monghyr -	·12
Bhaugulpore -	·07
Purneah - -	·07
Dinagepore -	·03
Maldah - -	·09
Bograh - -	a few drops.
Rajshahye - -	·15
Kooshtea -	a shower.
Furreedpore -	·35
Dacca - -	·19

2. In regard to the crops there is little to report. In the Burdwan Division the spring crops are turning out better than was expected, but there they were

expected to be very bad. In the Presidency Division and central districts they are still bad, while in Eastern Bengal and the littoral districts they continue to give a fair prospect. In Moorshedabad the extreme cold has done them injury. In Northern Bengal the rain has done good. In Rungpore much improvement has resulted from the previous rain.

Turning to Behar, the officers of the Bhaugulpore Division still report favourably of the prospects of the spring crops. Perhaps the Purneah report may be less favourable this week than before. From the southern part of the Patna Division it is reported that the spring crops are very promising and doing remarkably well. They have suffered from the cold, but have been benefited by the rain. Mr. Levinge, of the Soane Canal Works, has been making a tour through the western part of the Gya district and fully confirms the Magistrate-Collector's favourable report. Great activity is displayed by the people in irrigating their fields.

The northern half of the Patna Division has been to some extent afflicted since last report by west winds, which dry up the spring crops, and by frost, which kills them. Any benefit which may have been derived from the slight fall of rain noted above has been in places neutralised by the dry west winds and hoar frost. In Sarun the mud wells are drying up.

The fear expressed in the last Narrative, that distress was approaching in parts of the Patna Division, has not, unfortunately, proved ungrounded. There can now be no doubt that distress must soon be severe in parts of the three northern districts of the Patna division. Attention is requested to the fortnightly narratives[*] of 10th January from these districts. Later reports confirm what is said in those narratives. From Purneah, too, distress is now reported to have commenced in thannah Kudbah, the south-eastern corner of the district.

[*] Enclosure 4.

The weekly rainfall and crop reports for the week ending 17th January are enclosed herewith.[†]

[†] Enclosure 1.

In Behar the price of common rice has slightly risen at three stations, but remains stationary at seven stations. In Central and Northern Bengal it has risen in five districts, it has fallen in one, and remains stationary in six. In the Dacca Division there has been a general rise; in the Chittagong Division a general fall. In Orissa there has been no change. The price of lesser millets and maize is clearly rising in Behar.

The return of prices-current for the week ending January the 17th is enclosed herewith,[‡] and also a return[§] comparing the prices of rice which prevailed in January 1866 with those now prevailing. As before explained, such wide limits of variation are given in the records of prices prevailing in January 1866, that it is difficult to fix a mean with certainty. It is not safe to assume from a record that the prices varied from 9 to 15 seers to the rupee, that the mean was 12 seers. The usual note on the movement of food-grains is appended.[||] The exports of food from Bengal to non-Bengal ports now amount to 91,400 tons since November 1st, besides 16,380 tons exported in October. As against this, Government has imported up to date about 33,000 tons of rice from beyond the sea.

[‡] Enclosure 2.

[§] Enclosure 3.

[||] Appendix A

3. As the condition of parts of Behar is becoming critical, it has been arranged, in communication with the Government of India, that Sir Richard Temple should proceed first to Behar, and afterwards to other distressed tracts, and should personally inspect and direct the relief operations and arrangements now in progress. Full authority will be delegated to Sir Richard Temple to act and issue orders in behalf of the Government of Bengal in the distressed tracts which he may from time to time visit. Copy of the Gazette Extraordinary under which this arrangement has been made will be found in Appendix I.,[¶] the necessary orders and instructions are about to issue, and Sir Richard has arranged to start on Saturday the 24th current.

[¶] Page 166

4. During the past week Government grain from Burmah has continued to arrive; the Orissa supplies are also coming in gradually. No more Saigon rice has arrived; all the 10,000 tons previously received has been unloaded; 7,500 tons are rebagged and housed in engine sheds close to the East Indian Railway. The rebagging had to be done in a hurry, and the grain will have to be weighed in the Howrah store-house. About 2,500 tons of the Saigon rice has been rebagged at Kooshtea and is rapidly going off to the Rajshahye Division from that place. The Government of India has been pleased to place the duty of receiving grain from beyond the sea in the hands of a competent officer directly under its own orders; so that the Bengal Government grain officer will now be able to give up his whole time to

* Page 164. the despatch of the grain up country.* (See Government of India letter No. 126, dated 17th January, Appendix H.)

Appendix B. shows that 152,327 maunds of Government grain were despatched from Calcutta during the week. The largest amount of grain sent away by the East Indian Railway in any one day of the week was 14,000 bags (28,000 maunds); on one day only 5,000 maunds, and on another day only 9,000 maunds, were sent away. The Calcutta grain officer had always more grain on the platforms to send away than the Railway Company could furnish wagons for. The Traffic Manager of the East Indian Railway has, however, reported to the Government of India that his line can send away from Howrah some 1,000 tons to 1,500 a day without interfering with the private traffic; but he has asked that he may receive three days before the beginning of each week a table of the despatches of grain which Government intends to make from Howrah during such week. Accordingly a table has been sent him showing the intended despatches for the week beginning on Monday, the 26th January (see enclosure 8). It must be noted here that one great reason of the shortness of wagons at Howrah was that some hundreds of wagons containing grain for Patna ghât station were standing on the line in Behar because there was not sufficient station room or appliances at Patna for unloading them. Matters are, however, improving, for on Tuesday, the 20th current, 40,000 maunds of Government grain were despatched from Howrah, a larger quantity than had yet been sent in any one day. The despatches of last Tuesday being made at night, do not come into the figures shown in Appendix B.

5. Before proceeding to notice the progress in despatching grain from railway stations into the interior of the district, it may be well to state what has been done or is doing to obviate the block of traffic at Patna, and so enable the East Indian Railway to work rapidly and smoothly. The first step to be taken was to provide † more station room on the river-side at or close to Patna. Over 8,000 tons of private grain, and over 4,000 tons of Government grain, were thrown in fourteen days into the Patna ghât station, which, being in the heart of a great city, is necessarily more or less cramped. Wagons could not be unloaded fast enough; they had to be drawn up outside the station, and at one time each bag of grain had to be carried on men's heads from the wagons 1,400 yards to the boats. The first thing to do was to stop the despatch of Government grain to Patna until the block had been cleared. This was done, and yesterday (the 20th January) a telegram was received from the traffic department saying the Patna station was clear, and Government grain might be pushed on faster again. This is accordingly now being done. But there was every hope that much more private grain would continue to come down from the North-West into Behar; and the Commissioner reported that ordinary traffic had been much hindered, and discouraged by the large Government transactions which occupied so much of the station room, of the railway coolies, and of the boat power. It was therefore necessary to make permanent arrangements for giving relief, and the Lieutenant-Governor suggested that one or more special river-side stations should be made to accommodate the Government grain, while the Patna Ghât and other stations much frequented by private traffic might be left for private importers. The suggestions most approved were, that a river-side station should be made close to Patna city, and that another river-side station should be made either at Barrh or Mokameh. It was also suggested that, if much North-West Provinces' grain came down, the branch line from the Buxar station to the Ganges might be relaid. The Government of India has been pleased to despatch its Consulting Engineer to the spot with full power to order the immediate construction of such temporary lines and river-side stations as may be necessary. The railway officers are sanguine that the temporary lines required could be laid in a very few days' time. When these stations are made Patna Ghât station will

† Page 169. be left free for private importers. (See enclosure 10.)†

One other difficulty was that the number of station coolies (railway porters) who could carry large grain bags was limited, and they were nearly all taken up in unloading Government grain. The ordinary untrained Patna coolies could not, it was said, do this work. Colonel Mackenzie, the Commissariat officer, has set himself at once to organise and train a body of railway coolies who shall do the Government work at the new river-side stations, and so leave the ordinary railway coolies available for private importers. Arrangements are now being made to send as much grain as possible in smaller bags.

Another, and a very serious difficulty, which has occurred in several places was the crossing of the Government grain over the Ganges. When the grain traffic set in so briskly as it has done during the last fortnight, the native boats on the river could not carry the grain over fast enough. Government officers, being the more active and energetic, had secured most of the boats, and private trade could not be accommodated. This was a very great evil, and the Government of India has been pleased to assent to the Lieutenant-Governor's proposal for hiring two steamers and four flats, which should carry the Government grain across the Ganges from the two new river-side stations, thus leaving private boats for the use of private traders. The steam ferries will cost a good deal more than ordinary native boats would do; but if the Government did not hire steamers for the duty, no one else could, and the native boats on the river are not nearly numerous enough or strong enough to accommodate the whole traffic now setting in from the railway to northern Behar. It is a very singular fact that in this country of water channels and boats, our difficulty has been in regard to boats and water carriage far more than in regard to land carriage. (See enclosure 9.)*

* Page 166.

6. As was observed in enclosure No. 8 to last (the eighth) narrative, the energetic action of the Government officers was not to be regretted, seeing that it had gathered together a large number of boats and carts, and seeing that, by the arrangements above detailed, the Government hopes to leave full room for private traffic. So far as carts in North Behar are concerned, there has not yet been any ground for fearing that Government operations engross all the cart power of the country. Hitherto the Government officers have reported that there are enough carts in Behar to serve all the Government and all the private traffic. It was noticed in last narrative that private traders to Patna Ghât station had incurred heavy demurrage, because they had been unable to remove their grain promptly during the railway block. The Government of India was pleased to intimate that such demurrage charges should, under the circumstances, be borne by Government. The Lieutenant-Governor had, however, during last week communicated with the railway authorities on the subject, and had, before the receipt of the Government of India orders, ascertained from Mr. Cecil Stephenson that "under the circum-" stances which occasioned the detention of grain consigned to famine stations, the " Railway Company would make no claim for demurrage up to and inclusive of " the 24th January."

7. At paragraph 11 of last (the eighth) Narrative it was stated that the local officers might be expected shortly to despatch to the interior—

Patna Division	1,69,000	maunds weekly.
Bhaugulpore	1,05,000	ditto.
Rajshahye	60,000	ditto.

The district narratives now forwarded show that during the fortnight ending on the 10th January 2,03,000 maunds of Government grain were despatched from stations in the Patna district mainly to the interior of the North Behar districts. The store-houses in the interior of Patna are being filled, but about them there is no present hurry. There has been delay in getting the Gya grain for the Nowada sub-division away from the railway, but the difficulty is being overcome. The store-houses in the interior of Shahabad contained at the end of the fortnight 33,000 maunds of Government grain besides 35,000 maunds in store-houses on the Soane canal works, and a great deal more in transit from the railway. 32,000 maunds of grain had reached the Tirhoot store-houses, and about 33,000 maunds more were said to have nearly reached their destination. This rate of progress was insufficient, and the local officers have promised to send forward from the river-side into the interior of Tirhoot at least 50,000 to 60,000 maunds a week. In the Sarun store-houses 31,000 maunds of grain have already been housed, and the Magistrate reports that all the Government grain that comes to him from the railway stations is despatched to the interior as fast as it arrives. 18,000 maunds of grain have been stored in Chumparun besides the stores at the Gunduck embankment works, and the Magistrate reports that 45,000 maunds a week are being sent forward to his stores.

8. In the Bhaugulpore Division the transport and storage of Government grain has gone on well. 1,05,000 maunds were lodged in the Monghyr store-houses; and all the grain delivered at railway stations was carried away as fast as it came. Contrary winds and the formation of a sandbank opposite Bhaugulpore station impeded the Magistrate's arrangements for some time, nevertheless, 35,000 maunds were in store at the end of the fortnight, and about 30,000 maunds more were in transit from the Railway. A consignment of 24,000 maunds that went up the Kosee river in boats for Soopole had not been heard of for some days, but the boats

are supposed to be near their destination. The Magistrate of Bhaugulpore expects to send off 4,000 maunds a day northwards until he has finished his allotment. The Purneah store-houses contained 58,000 maunds at the end of the fortnight; and complete arrangements have been made for crossing 6,000 maunds a day from Colgong and Sahebgunge to Caragola.

9. The Government grain has taken longer to reach the interior of the Rajshahye Division, and the difficulties have been greater than elsewhere. Mr. Molony's report (Enclosure 7) shows what the grain routes are and how they are being worked. *All* the grain delivered at Goalundo up to the date of last Narrative (*i.e.*, 37,000 maunds) had passed the point in the Oorasagur route where the despatching officer (Mr. Clay) stationed himself for some days to expedite the passage of the boats up the river. More grain is now being sent to Goalundo for despatch by the same route. From Kooshtea 1,12,000 maunds have been sent off, but nearly all of it went in native boats which took fourteen days to beat up the river to Godagaree. Now that two powerful steamers have been set to work at Kooshtea, the grain will get across the river much more rapidly. Up to the date of the informations embodied in the last narratives only 38,000 maunds of grain had been actually stored in the interior of the Rajshahye Division, besides the grain stored on the Northern Bengal Railway. But about 2,00,000 maunds more were actually in transit by land and water to the interior of the division. The Magistrate of Rungpore has reported that he can move into the interior of his district, by carts and boats, 2,000 maunds a day, and that he might carry 3,000 maunds if he used every endeavour. A cart train from Rajmehal viâ Maldah to Dinagepore is being organised, and the Relief Commissioner intends to carry 500 maunds a day by this route. The supervising staff has been greatly strengthened; the two steamers and flats at the Kooshtea ferry will carry grain across the Ganges much quicker than heretofore; at the end of the season the rains and floods, which will more or less completely bar the transport of grain into the interior of Behar, will open a number of water routes into the farthest parts of the Rajshahye division.

10. It has been mentioned that Colonel Mackenzie, of the Commissariat Department, had been placed under the orders of the Commissioner of Patna to assist him in organising transport services. Copy of the orders passed by the Commissioner of Patna after consultation with Colonel Mackenzie is herewith enclosed.* The Commissioner of Patna is consulting with Colonel Mackenzie as to the advisability of procuring camels, bullocks, or other means of transport from a distance. At present the Commissioner's view rather is to collect together carriage of this kind from a distance and to hold it in reserve till the local means of transport—carts—are shown to be inadequate to the demand made upon them by Government and private traders. The importation of foreign carriage involves difficult questions regarding feeding the animals, &c. The Lieutenant-Governor has asked for further aid from the Commissariat Department to assist in organising services for the transport of grain across the Ganges and its adjacent sandy flats at Patna, Sahebgunge, and Rajmehal. The river crossing has already been shown to be the weakest link in the chain of transport.

* Appendix G.

11. The information contained in the fortnightly narratives from the distressed districts† for the fortnight ending January the 10th may be briefly summarised as follows:—

† Enclosures 4, 5, 6.

A.—State of the Country.

Food is still generally obtainable without difficulty at the high prices quoted, except in one or two places in the special tracts mentioned below. The prices indicate rather the expectation than the presence of scarcity. Coarse rice is selling at 12 to 14 seers to the rupee, that is, from Rs. 2-13 to Rs. 3-5 a maund. In some places it is cheaper than this, while in others it is as high as Rs. 4 a maund. In Behar Indian-corn is selling at 14 to 18 seers to the rupee; but the former figure is rapidly taking the place of the latter. Wheat is to be bought at 11 to 14 seers to the rupee.

The condition of the people is still generally satisfactory. There is no very brisk demand for employment in most places. The report from Bogra is that "the condition of the people cannot be considered favorable," but the Relief Commissioner who has lately visited the district declares it to be in no present danger. The Moorshedabad Magistrate-Collector infers from the high price of food that the laboring classes are in distress. So in the Bhaugulpore division, where wages are very low, the high prices must have already affected the condition of those who are dependent upon wages paid in money for their subsistence. Generally, greater distress may be in this way inferred than has manifested itself.

To these remarks on the general position of affairs, the northern part of the Patna Division is an unfortunate exception. In Tirhoot the condition of the people has "become decidedly worse." In the sub-division of Mudhoobunnee people are feeling the scarcity considerably. In Sarun the distress must certainly be said to be increasing. The Chumparun report is still more alarming. People are in that district taking to the relief works in large numbers. The Lieutenant-Governor is of opinion that parts of Tirhoot are already in a critical state, and that relief arrangements, in addition to the road works already commenced or prospected, will, in those parts, soon become necessary. Grain thefts are not causing any alarm. The table enclosed* of the chief crimes against property during last December in the distressed districts, as compared with the same month of former years, shows a decided increase of such crime in 1873. This table is submitted under orders contained in No. 601, dated 16th December, from the Under-Secretary in the Agriculture, Revenue, and Commerce Department. An account of the rainfall and the state of the crops up to the date of the latest intelligence is contained in paragraphs 1 and 2 of this Narrative.

* Appendix C.

B.—Relief Works.

In the Rajshahye Division there is generally no very excessive demand for employment except in Dinagepore. In the Dinagepore district, however, work is readily taken up. Nor again in the Bhaugulpore Division and the southern part of the Patna Division do the people seem in great want of employment. The Soane canal works do not attract much local labour. But, on the other hand, in the northern half of the Patna Division and in part of Monghyr nearly all the work provided has been taken up, and in special tracts it has been found necessary to provide more.

A table† is enclosed showing the numbers employed upon relief works in the different districts up to January. These returns are incomplete, district officers intending to send the precise returns to the Public Works Department in a return due a few days later; they have been reminded that the returns of labourers must be punctually submitted. From the narratives the following information is extracted:—Tirhoot employed nearly 10,000, besides about 4,000 people employed by the Durbhanga Estate; Sarun about 13,400; Dinagepore upwards of 6,000; Rajshahye about 500 laborers, daily during the fortnight under review.

† Appendix D.

C.—Transport of Food.

The latest information regarding the transport of Government grain has been fully detailed in paragraphs 6 to 9 of this Narrative. Only in the Patna Division and some of the eastern parts of the Rajshahye Division does private trade in grain appear to be active. The private importations by rail and river into the Patna Division have been as follows:—

	Mds.
Into the Patna district - - - -	2,20,931
„ Shahabad district - - -	1,11,011
„ Bhaugulpore „ - - -	4,922
„ Monghyr „ - - -	18,271

In addition to this it is stated that 81,000 maunds has found its way into Sarun from Oudh and the North-West. In the north-eastern parts of Tirhoot, and still more in Dinagepore, very little is being done by the trade to supply the necessities of the population. In these parts there appears to be no ground for supposing that Government importations have in any way deterred private parties from entering the grain trade.

In enclosure 5 will be found mention of a practice whereby grain dealers import wheat into the distressed districts at the specially low rate and then attempt to re-export it to Calcutta. The railway authorities refuse to re-book such grain as far as they can; if this perversion of the objects of Government is carried to any great extent further steps will have to be taken.

D.—STORAGE OF GOVERNMENT GRAIN.

There is nothing further to report regarding the selection of places for the storage of Government grain, and the arrangements made for storage-houses. The movement of Government grain is described in paragraphs 6 to 9 above. Regular tabulated returns of amounts stored in each storage-house will be submitted with the next and succeeding narratives.

E.—ADVANCES TO PRIVATE PARTIES.

In the Patna Division advances both for land improvements and for purchase of grain are still applied for; and a further credit to meet advances, for purchase of grain has been allotted to the Commissioners of Patna and Bhaugulpore. On the representation of the relief officer of Tirhoot, it has been decided to make small advances to petty traders who take grain into the interior of districts for sale. A man who buys grain at Patna to sell at Madhoobunee, some 80 miles distant, can hardly be said to buy locally.

In the Bhaugulpore Division, some small beginnings towards taking advances for land improvements have been made. With the exception of the districts of Dinagepore and Bograh, the system of advances has been favourably received in the Rajshahye Division. The applications, however, are not always *bonâ fide*.

F.—CHARITABLE RELIEF.

Some progress has been made in the Bhaugulpore and Rajshahye Divisions in the organization of systems of charitable relief, but some districts are backward in this respect. The Patna Division is still backward, and the district officers have postponed giving information on the subject until they submit the special report called for by Circular No. 9 S.R., dated January 3rd.

At a meeting held on the 19th January at Patna for the purpose of organizing charitable relief, subscriptions to the amount of Rs. 36,000 were promised.

12. The Commissioner of Chota Nagpore has submitted plans for relief works in the Palamow sub-division of the Lohardugga district. His plans have been sanctioned on the understanding that the necessary expenditure on Government estates shall, in the first place, be met from the balance in hand to the credit of the 3 per cent. Government Estate Improvement Fund. Palamow is to some extent owned directly by Government. The Commissioner has been authorised to grant advances to the farmers of Government lands in Palamow on the same terms as have been conceded in Singbhoom.

The Commissioner of Burdwan has recommended the commencement of relief works and the organization of a system of charitable relief in the Beerbhoom district. The Lieutenant-Governor has heard of want of employment in the Raneegunge part of Burdwan, and has called the Commissioner's particular attention to the subject. The needs of this division will be carefully considered.

13. It has been found necessary to divide the large district of Tirhoot, which contains more than four millions of inhabitants, and where affairs are looking specially threatening, into two districts for scarcity and relief purposes. The three sub-divisions of Seetamurhee, Madhoobunnee, and Durbhangah, containing 2¼ millions of inhabitants, have been placed under the charge of separate civil and engineering officers, the former Magistrate-Collector of Tirhoot retaining full charge of the whole district for general purposes, but leaving all business connected with scarcity and relief in the three sub-divisions above named to the new staff. The orders constituting this new jurisdiction are contained in a resolution dated 20th January.* It has also been arranged to attach an extra-judicial officer to the three northern sub-divisions of Tirhoot, as well as to the sub-divisions of Bettiah, Chumparun, and Sewan, in Sarun, in order to set free the sub-divisional officers upon scarcity and relief business.

* Appendix E.

14. It has been found necessary to issue some further orders regarding the reports to be submitted from the various districts and divisions. Much of the information submitted in the monthly reports under Circular No. 70, of October 13th, is now no longer required. In its place a report is to be submitted from districts not ranked as distressed in the first week in each month, containing information on the following points:—

A.—General result of the past harvest, the prospects of the spring crops, the extent of the preparations for the early rice crop, and other early crops and their prospects.

B.—The supply of grain in the district bazars, and the extent of district import and export.

C.—The range of prices, and the general condition of the people.

D.—The amount of immigration (if any) from the distressed districts, and the disposal of the immigrants.

E.—The extent to which local works have been utilized, and district funds spent, for purposes of relief.

F.—Any special matters relating to the scarcity, *e.g.*, establishment of relief committees on account of dearness of food, or any other measure taken in consequence of scarcity.

The circular letter containing these orders and recapitulating former orders is enclosed.*

* Enclosure 11.

15. In order to make it quite clear what methods of relieving the impending scarcity have been sanctioned, and to what districts they severally apply, a circular letter has been issued, summarising, in a convenient form, the orders hitherto passed regarding relief measures. Particular attention is invited to this letter, No. 175 S.R., dated 17th January.†

† Enclosure 12.

16. The Government of India having directed that Collectors should refrain, in the case of zemindars who distinguished themselves by expenditure for the benefit of their ryots in their extremity, from using any coercive process in collecting unpaid arrears of the January instalment of the land revenue, and should be authorised to postpone in such cases, if they think fit, the collection of the March and June instalments, these orders were circulated to district officers with this Government, No. 155. S.R., dated 16th January, in which attention is called to the limitation of the orders to cases where the zemindar actually distinguishes himself by his liberality.‡

‡ Appendix F., see page 164.

17. Major Lindsay reports, under date January 13th, that the 100,000 maunds of rice allotted to him for the Northern Bengal Railway was thus distributed:—

		Mds.
At Sultanpore (Nowgong)	-	18,000
„ Goalundo and in transit to Sultanpore (Nowgong)	-	23,734
„ Parbuttypore	-	5,872
In transit to Rampore Beauleah	-	20,000
„ transit to Bamungaon	-	30,000
Balance to be sent *viâ* Rajmehal to Parbuttypore	-	2,394
Total	-	100,000

He adds: "As regards the future transport of rice, supposing pressure to come a " month hence, I think that I should have no difficulty in passing up 30,000 maunds " a month from Bamungaon and Rampore Beauleah to Sultanpore. I could also " count upon taking 10,000 maunds a month *viâ* Rajmehal to Parbuttypore. In " addition to this the route from Goalundo to Sultanpore would be open."

Major Lindsay is strongly of opinion that the contract system should be adopted in making arrangements for transport, and that a permanent service of carts should be organised on the lines of transport. Major Lindsay has succeeded in doing something to improve the channel of the Oorasagur. People are coming in pretty fast to work on the feeder roads which are being constructed from Neetpore in the Dinagepore district. Regular reports from the whole length of the Northern Bengal Railway have not yet come in. But Major Lindsay writes (under date the 17th January): "A considerable length of the line is ready for earthwork to begin, " the side-widths having been laid out and profiles erected. On this section, near " where I am now encamped, people asked for work, and some 600 odd are now " employed. On the feeder roads many miles are ready for the people to work on, " and near Syedpore some hundreds are employed. * * * * * I trust " the Lieutenant-Governor will be satisfied with the knowledge that any amount of " work is ready for the people, and that all who ask for it get it."

18. From the Gunduck Embankment Works in Chumparun it is reported that work has been commenced in two places, and that a daily average of 460 men is employed on the upper embankment. 7,900 maunds of grain are in store on the works. People are coming in readily for employment. From the Gunduck Embankment Works in Sarun and Tirhoot we learn that the number of men employed daily has fallen from 1,401 to 1,077.

19. On the Soane Canal Works 32,000 is the daily average of laborers employed. Here, too, there is a decrease in numbers since last week. The number of acres under irrigation is 133,057 on the west or Shahabad side, and 22,152 on the east or Gya side of the river. Some 35,000 maunds of grain are in store on the works.

20. Work has almost ceased on the Kana Nuddee, only 418 men being now employed. There is now but a small demand for work. The supply of water down the new cut continues good. The zemindars are said to be charging 6 annas a beegah for the water which Government has provided; inquiry is being made into the truth of this statement.

21. The British India Steam Navigation Company was asked to provide additional freight from the Orissa ports to Calcutta. The Company is unable to do this unless it withdraws a steamer from the mail service between Bombay and Kurrachee. The Government of India has been asked to sanction the temporary withdrawal of one steamer from that service.

By order of the Lieutenant-Governor of Bengal,
H. LUTTMAN-JOHNSON,
Additional Under Secretary to the Government of Bengal.

Calcutta, the 22nd January 1874.

APPENDIX H. to foregoing Narrative.

No. 126.

GOVERNMENT OF INDIA.

DEPARTMENT OF AGRICULTURE, REVENUE, AND COMMERCE.

To the SECRETARY to the GOVERNMENT of BENGAL.

SIR, Fort William, the 17th January 1874.

I AM directed to acknowledge the receipt of letters No. 105 of the 13th, and Nos. 112,* 122,† and 123 ‡ S.R., of the 14th instant.

2. In reply to letter No. 105, I am to say that the Governor-General in Council approves of the allotment of 19,25,000 maunds of grain for distribution in the distressed districts up to the 31st of January, and of the provisional orders issued by the Lieutenant-Governor in his confidential Circular No. 61, of the 9th instant, for the allotment of 75,000 tons placed at His Honor's disposal during the three months commencing with the 1st February. The Lieutenant-Governor will probably before long be in a position to form an estimate of the relative necessities of the different parts of the country, and to make the final allotments accordingly. As at present informed, His Excellency agrees with the Lieutenant-Governor that the interior of Tirhoot, Sarun, Chumparun, and Dinagepore comprise the area of country where Government stores are particularly required.

3. With reference to the remarks contained in the 3rd paragraph of letter No. 112, I am to observe that there has been no intention whatever of describing the situation with respect to local transport in a manner unjust to the Government of Bengal. The information furnished to the Viceroy by Mr. Bernard was asked for expressly with reference to the Conference of the 8th; the circumstances admitted of no delay, and the returns cannot be regarded as unofficial. Moreover, the Viceroy believes that they conveyed an accurate statement of the official information then in possession of the Local Government. His Excellency thinks that the 6th paragraph of Mr. Howell's letter of the 12th instant does not materially differ from the opinions expressed by the Lieutenant-Governor himself in his Circular of the 3rd of January, No. 10 S. R., in the Resolution issued by His Honor in the Statistical Department on the 6th January on scarcity and relief in the Patna Division, and in the Circular No. 61, of the 9th January, paragraph 7. Allusion was made in the 8th paragraph of Mr. Howell's letter to the fact that the Lieutenant-Governor had urgently drawn the attention of the local officers to the subject by his Circular of the 3rd instant.

4. The only desire of the Government of India was to ensure proper arrangements for the inland transport, and the Viceroy is most anxious to give every aid in his power to the Lieutenant-Governor in the efforts which His Honor is making to secure such arrangements.

5. His Excellency agrees with the Lieutenant-Governor that the success of the endeavours of Government to meet the distress which is reported to be imminent in some districts hinges on the transporting power, and he is glad to find that since the Conference of the 8th further information leads His Honor to hope that the local officers will be able to transport all the grain allotted to them up to the 31st of January, and that their powers of transport for the future will be much greater than was known at the Conference. His Excellency awaits the returns that have been called for, and will only now observe that the Government of India expect to be able to furnish as much grain as the local officers will be

* Page 140.
† Page 145.
‡ Page 146.

able to transport to the distressed districts which may require additional supplies, and will, moreover, retain a reserve at Calcutta to meet the case of an unexpected outbreak of distress elsewhere.

6. The Viceroy entirely agrees with the Lieutenant-Governor's remarks and instructions as to the great importance of interfering as little as possible with the transport of grain imported by private traders.

7. Upon this point I am to observe that the observation made by Mr. Bayley that the operations of trade have already been much interfered with at Patna by demands of the Government upon the local transport, and the remark of the Lieutenant-Governor that "Government transport in the Patna Division, where private trade is fairly brisk, may not be "kept up to the total that might be possible, if Government grain only were considered," would seem to lead to the conclusion that there should be no further delay whatever in bringing to bear the resources which the Commissariat can supply from a distance, and the Viceroy is, therefore, surprised to hear that Mr. Bayley "is still of opinion that recourse "should be had to that Department only as a last resource." His Excellency can hardly conceive it possible, in the face of the alarming reports sent by Mr. Bayley as to the prospects of Tirhoot, that this assistance can safely be neglected, and if it is not at once accepted, His Excellency requests that a special report may be made without delay upon the subject.

8. With reference to the letters Nos. 122 and 123 on the subject of the instructions to be prepared for the Relief Committees, and to the constitution of the Central Relief Committee, I am to observe that the Viceroy had no intention, in alluding to what took place at the Conference on the 10th November, to attach any blame whatever to Mr. Bernard, because the general instructions for the Relief Committees had not been prepared sooner. His Excellency is well aware that Mr. Bernard fully merits the praise which is bestowed upon him by the Lieutenant-Governor, and that he has acted entirely under His Honor's directions with respect to the order in which the famine work has been proceeded with.

9. The recommendations which His Honor has made in the last-mentioned letters for the provisional constitution of the Central Relief Committee and the employment of Mr. Schalch to draw up rules for the Relief Committes are approved, as well as the employment of Mr. Forbes and ultimately, perhaps, of Mr. Wood as Secretaries. Orders will be passed in the Financial Department as to the remuneration to be given to these two latter gentlemen. As soon as a day can be fixed when the rules will be ready for consideration His Excellency desires to be informed, as he would arrange to consider them immediately at a conference, and thus avoid the delay which would ensue from their being submitted in a letter.

10. Now that all purchases of grain will be conducted by the Government of India, it is desirable, in order that business may be properly divided, and also the weight of the duties which are thrown upon the Local Government be lightened, to place under the immediate direction of the Government of India the whole business of receiving and storing grain at Calcutta, and of preparing it for issue to the Local Government for despatch up-country. Arrangements will, therefore, be made for the transfer of that part of Mr. Toynbee's present work to the Government of India. Mr. Toynbee, who, the Viceroy is glad to hear, is considered by the Lieutenant-Governor to have done heavy and responsible work in a very efficient manner, may still be advantageously employed under the Lieutenant-Governor in arranging for the despatch of the grain from Calcutta; but as his duties will be considerably lightened, the Government of Bengal will not, perhaps, wish to press for any further addition to his allowances.

11. This change is not made from any feeling on the part of the Government of India that the work has hitherto not been properly performed, but merely as a better and more convenient distribution of work for the future. The date of the transfer and the detailed arrangements for the transaction of business will be settled by communication between the Departments concerned. The questions raised in your letter No. 168 S. R. of this date had also better be considered in personal communication with the officers concerned, and a joint report submitted.

I have the honor to be, Sir,
Your most obedient servant,
A. Howell,
Deputy Secretary to the Government of India.

No. 127.

Copy, with connected papers, is forwarded to the Financial Department for information, with special reference to paragraph 9.

A. Howell,
Deputy Secretary to the Government of India.

APPENDIX I. to foregoing Narrative.

GAZETTE OF INDIA—EXTRAORDINARY.

No. 178.

NOTIFICATION.

DEPARTMENT OF AGRICULTURE, REVENUE, AND COMMERCE.

Fort William, the 21st January 1874.

The accounts which the Lieutenant-Governor of Bengal has communicated to the Viceroy of the present condition of parts of Behar made it, in His Excellency's opinion, essential that some high officer should be present on the spot, with full powers to direct and control the operations in connection with the relief of scarcity and distress under the general instructions which have been issued by the Government of India and the Lieutenant-Governor of Bengal.

2. As it is impossible, under existing circumstances, that the Lieutenant-Governor should himself proceed to Behar, the Viceroy has agreed to associate with His Honor, for the above purpose, the Honorable Sir Richard Temple, who will visit first Behar, and afterwards other parts of the county where distress may exist, with full authority, to be delegated to him by the Government of Bengal, to direct the relief operations.

3. It has been arranged that the Lieutenant-Governor will give the necessary orders to all officers concerned.

4. Sir Richard Temple will report his proceedings from time to time to the Government of Bengal.

A. O. HUME,
Secretary to the Government of India.

Enclosure No. 9 to foregoing Narrative.

No. 195 S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, in the Statistical Department, to the DEPUTY SECRETARY to the GOVERNMENT of INDIA, in the Department of Agriculture, Revenue, and Commerce.

Scarcity and Relief.

SIR, Calcutta, dated 20th January 1874.

IN the papers at enclosure No. 8* of the eighth Special Narrative, much was said regarding the hindrance caused to private trade, by the Government grain operations taking up so large a share of the boat-power for crossing the Ganges. It was said that the Commissioner had been authorized to charter a steamer and two flats to work the Government grain over the ferry opposite Patna ghât.

* Patna divisional report, and orders thereon.

2. Since those papers were submitted, it has become more and more apparent that one great difficulty in getting Government grain into the districts north of the Ganges is the Ganges-crossing. From Patna, from Barrh, from Kooshtea, and elsewhere comes the same report, "We have collected all the boats to be had, and yet we cannot get nearly enough, and the boat "transport (in Rajshahye at any rate) is very slow and tedious." At the Caragola and Colgong crossings, in the Bhaugulpore Division, no complaint has recently been made that boats are insufficient.

3. The Lieutenant-Governor has accordingly reviewed the position in the accompanying memorandum regarding the Ganges-crossings and the disposal of the Government steamers† which are available. The memorandum was prepared after Captain Baker, Master-Attendant, had returned from his visit to Kooshtea; and Mr. Hankey, who has just returned from a visit of inspection along the Ganges front of the Rajshahye Division, has annotated upon it. It will be seen that for the Rajshahye Division crossings sufficient arrangements can be made with Government vessels. But for the Patna Division ferries we have no Government steamers or flats available. It is therefore necessary to hire such vessels as we require.

† The small steamer *Flame* is no good for the Ganges-crossings; she is now plying on the Mahanuddee between Godagaree and old Maldah.

4. The enclosed copy of a demi-official letter from Mr. Hewitt shows that if we are to leave any large share of the native boats available for private traffic, and if we are to leave the Patna ghât station free for private traffic, we must have two sidings down to the Ganges, one probably at the Barrh or Mokameh station and one at the new temporary river-side station to be made between Patna and Futwa. We must also have a steamer with flats for each of these river-side stations. It should be explained that it will probably cost considerably more to ferry Government grain across in hired steamers than in native boats. But, as has been already said,

there would be no hope of our leaving sufficient native boats for private trade if we were to trust to ordinary boats for crossing the large quantities of Government grain we hope to send to the northern districts. The great importance to the country of leaving sufficient room for private grain may be gathered from the fact that during the fortnight ending on the 10th January 2,20,000 maunds (say 8,100 tons) of private grain came into the Patna stations as against 1,20,000 maunds (say 4,500 tons) of Government grain.

5. The Lieutenant-Governor has now concluded an arrangement with the India General Steam Navigation Company for hiring for one month at Patna one steamer and two flats, with power to continue the hiring for three months if the state of the river permits the steamer to work usefully. The charge is to be Rs. 15,000 a month[*] plus the difference in the price of coal between Patna and Calcutta if the hiring is by the month; or Rs. 15,000 a month without extra allowances if the hiring be for three months.

6. But as it is clear from Mr. Hewitt's letter[†] that two steamers and four flats will be required, the Lieutenant-Governor is in treaty with the India General Steam Navigation Company for the hire of a second steamer and two more flats. One steamer[‡] and two flats are now at Patna and will be stopped there; another steamer[§] and two flats are expected to-day (20th January) or to-morrow at Kooshtea, on her way down the river from Behar. The Lieutenant-Governor would propose to arrange for hiring her at once on the same terms, and sending her back to work the Mokameh and Barrh ferries to Champta Ghât, while the *Chunar* and her flats work from the new river-side station near Patna, to Revelgunge, and perhaps to Hajeepore.

7. I am now to solicit the sanction of His Excellency the Viceroy in Council to hiring these two steamers and flats for one month certain, and to keeping them for the full three months if the depth of water in the river permits.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

---

[*] Bydays caused by break-downs of machinery are to be deducted.

[†] Mr. Bayley, who is on tour in North Behar, writes, though at less length, that two steamers will be required for the Ganges ferries if sufficient room is to be left for private trade.

[‡] The *Chunar*.

[§] The *Patna*.

MEMORANDUM prepared under the Lieutenant-Governor's orders on the subject of Steam Transport across the Ganges, after Captain Baker's visit to Kooshtea and Goalundo.

The great difficulty of our present transport is getting the grain across the Ganges. We require—

Steamer-Ferry with flats—

1. At Patna for Hajeepore.
2. At Patna for Revelgunge.
3. At Rajmehal.
4. At Kooshtea.

The heaviest work by far is at Patna, where we hope to put across 1,50,000 maunds a week.

Then at Kooshtea we want to put across at least two lakhs of maunds a month.

At Rajmehal we want to cross about 1,000 maunds a day now, and probably a good deal more hereafter.

Captain Baker cannot tell us how many native boats are available at Kooshtea, but 5,000 maunds in boats were just starting as Captain Baker was there. The last letter I saw from Mr. Dawson (dated Saturday last) said he had got *all* the boats he could lay his hands upon, and that he was now awaiting their return from their first trip.

Captain Baker has available steamers *Koladyne*, *Peel*, *Teesta*, and four flats.

He reckons that the *Koladyne* and *Teesta* with three flats could only put across from Kooshtea to Godagaree about 1,00,000 maunds a month.

The *Peel* can easily take two flats. The *Koladyne* would do better with one flat, but might carry two. The *Teesta* can barely take one full flat up-stream, and can hardly get on. It takes from 24 to 36 hours to load or to unload a flat. But two or three flats can go on loading or unloading at the same time.

Note by Mr. Hankey.

Eight hours is quite sufficient to unload a flat in if both sides are worked simultaneously, and no flat should be over 12 hours in loading.

At present we have engaged the India General Steam Navigation Company's steamer *Chunar* with two flats for the Patna work. And we are awaiting Mr. Hewitt's detailed report to learn if they want a second steamer and can use them.

I would now—

(1) put the *Teesta* and the *Gogra* flat to work from Sahebgunge down to opposite Rajmehal; she will have her heavy load down-stream, and ought to do the job in six hours. She will go back empty, and can get back in a day. The time saved in loading from the Sahebgunge ghât will quite make up for the extra length of river. We must tell the Rajmehal officer to arrange a trestle landing place opposite Rajmehal.

Providing the *Peel* can work two flats, and four flats, viz., *Gogra*, *Ganges*, *Isla*, and *Kanai* are available. 1¾ lakhs per mensem should be conveyed with the supplemental aid of country boats.
H. HANKEY.

(2.) I would keep the *Peel* and the *Koladyne* at work between Kooshtea and the Rajshahye trans-Gangetic receiving depôts. These two steamers with three flats should be able to put across 1⅓ lakhs of maunds a month.

Not necessary.
H. HANKEY.

But we must hire a fifth flat to be always loading at Kooshtea. The hired flat should be a large one and would work between.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

No. 191.

COPY forwarded to the Master-Attendant for information, with an intimation that the fifth flat need not be hired.

No. 192.

COPY forwarded to the Commissioners of Patna, Bhaugulpore, and Rajshaye for information, with remark to the Commissioner of Patna that the Lieutenant-Governor, on receipt of Mr. Hewitt's demi-official letter of the 17th January 1874, has directed arrangements to be made if possible for the hire of two steamers* and four flats for the Patna district ferries.

* *Patna* and *Chunar*.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

Calcutta, the 16th January 1874.

MY DEAR BERNARD,   Bankipore, the 17th January 1874.

I HAVE just had a conference with Mr. Allen, the Traffic Superintendent, and Colonel Mackenzie, who will be in charge of the transport arrangements during next month.

According to my calculations we ought to be prepared to send off a lakh of maunds a week to Tirhoot, and a similar quantity to Sarun and Chumparun together.

Tirhoot, I certainly think, can be most satisfactorily worked from Chumpta Ghât between Barrh and Mokameh on the opposite side of the river from those two stations.

It appears that it has been already proposed to lay down a tramway from Mokameh to the river-side, a distance of about ¾ of a mile, and that the line was surveyed last year by Mr. LeMesurier, and the proposition is now pending before the Board of Directors. Mr. Allen, who originally made the proposal, has been over the ground, and says he believes the line could be laid down in a fortnight. Mr. LeMesurier is now at Allahabad, it is believed, but Mr. Allen has telegraphed to inquire, and if he is he will call on me on his way down. Should he be at Jamalpore, I am sure Colonel Mackenzie will arrange to meet him at Mokameh early next week, and if arrangements can be made for getting immediate sanction, the work could be put in hand at once.

We should then require a steamer to take the grain across the river, and I would propose that all grain imported by dealers should be taken across at the ferry charges usually paid, Rs. 4 per 100 bags* The steamer and flats ought to be able to take a load of 20,000 maunds.

Mr. Allen recommends Mokameh in preference to Barrh; *first*, because the places for a tramway there are all cut and dried, and can be put in hand at once, and also because the Tirhoot trade is tending towards Mokameh rather than Barrh. He says that traders used formerly to send goods to Barrh, but that they find now that Mokameh is better suited for the downward trade, which is the direction Tirhoot traffic generally takes. When we are about it we may as well make a road that will be permanently useful. A third recommendation is, that the Mokameh line can be made much quicker than that at Barrh. The only objection is that the grain would have to go up-stream from Mokameh instead of down, but, with a steamer, that would be matter of no consequence. For the Sarun and Chumparun grain he recommends that a short tramway be made from between Futwa and Patna city down to Doomri Ghât on the river bank. The line there runs very close to the river, and he says, from what he has seen of the place, he believes there will be no difficulty in carrying it out, but he will have a regular survey made early next week, and see whether there are any practical difficulties. If there are none the line could be completed in three weeks, and arrangements made for receiving grain by the 9th February.

As an alternative project, a tramway from Bankipore was suggested; this would be of advantage to the Railway Company, as they could turn the waggons off at Bankipore, and so avoid the necessity of having an extra station staff, which must necessarily be employed at the intermediate station proposed between Patna and Futwa; but, on the other hand, the distance is much greater from the rail to the river at Bankipore, and the line would require a great deal of earth-work, which would take time and would hardly consolidate at present. The tramway at this intermediate station will probably not be made sufficiently strong to bear engines, and will require a considerable gang of coolies, from 200 to 300 men there, to push the waggons if we cannot manage to get elephants to do the work.

---

* Owing to the difficulty of getting boats our rates have been raised to Rs. 6 per 100 bags.

We are going to try the experiment. As for goods' sheds, both Mr. Allen and Colonel Mackenzie concur in thinking that if we cannot get galvanised iron at once, and the railway authorities have no stock in hand, it would be safer to stack the grain on raised platforms and cover the stacks with tarpaulins.

The grain ought never to be there more than one night; and they both say that tarpaulins would afford perfect protection against any rain that would be likely to come in that time, while there would be much less danger from fire than would arise in thatched sheds.

To work this ghât we should also require a steamer, which we would send alternately across the ghât and to Revelgunge, working by boats when the steamer was on its way to Revelgunge. She ought not to carry less than 20,000 maunds, and if she could take more so much the better.

At this intermediate station I would propose to take nothing but Government grain, leaving Patna Ghât free for private trade, and by sending a large portion of the Chumparun grain to Revelgunge, we would leave the Hajeepore Ghât almost entirely, and the Mozufferpore road entirely, free for private trade I am sending a copy of this to Bayley and Halliday.

I am, yours sincerely,
H. Hewitt.

Enclosure No. 10 to foregoing Narrative.

No. 124 P.S., dated Calcutta, the 16th January 1874.

From C. Bernard, Esq., Officiating Secretary to the Government of Bengal, Statistical Department, to the Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce.

It will be in the recollection of the Government of India that at the conference held by His Excellency the Viceroy at Government House on the 8th January, Sir George Campbell stated his belief that there would not be any block of grain on the East Indian Railway line, and that the railway could carry for us as much grain as we required to send. At the time of speaking Sir George relied on the local Traffic Manager's statement, that there had up to that time been no block on the railway, except a short stoppage at Patna Ghât. Up to the date of the conference the facts were as the traffic department represented. Since the conference the Lieutenant-Governor has communicated with Mr. Cecil Stephenson, and learnt from him that the East Indian Railway will, if need be, borrow rolling stock, and can arrange for despatching from Howrah as much grain as the Government can send, or as its officers can dispose of at the up-country stations.

2. During the last two days, however, it has become clear to the Lieutenant-Governor that there is a very heavy block in the grain traffic at Patna Ghât station, and the block works back to Howrah, where it is now much felt. Large importations of Government grain are going on, and large private consignments are coming in; most of the grain is intended for districts north of the Ganges, and so the great bulk goes to the river-side station at Patna Ghât; the platform room at a station in the heart of a city like Patna is necessarily confined; the sidings for shunting empties are perhaps insufficient, and the consequence is that hundreds of wagons stand unloaded, sometimes for days together, outside the Patna Ghât station or at adjoining stations.

3. The appended extract of a demi-official letter from Mr. S. C. Bayley, dated Chuprah, the 14th current, shows how serious the railway block at Patna Ghât is becoming. Mr. Hewitt's demi-official letter, which was submitted to you with my demi-official letter of yesterday, described the circumstances at length, and paragraphs 29 to 31 of enclosure No. 8 to the last (eighth) narrative give less recent information on the same point. So far as information has reached this Government, the block is not caused by the failure of Government officers to remove Government grain, but by the inability of private consignees to take their grain, when Government despatches takes up so very large a share of the platform room and the coolie power, and so much of boat resources of the country.

4. At any rate, whatever may be the cause, the result is very obvious, and the Lieutenant-Governor believes that a remedy can only be applied by increasing the railway appliances and establishments in the Patna Division. The railway department is under the immediate control of the Government of India, and Sir George Campbell would solicit that the Government Consulting Engineer (or such other officer as the Government of India may be pleased to trust) may be sent to the spot with authority to sanction the East Indian Railway Company's incurring such reasonable expenditure as may be needed for giving more platform room, and carrying sidings down to one or more favourable points on the river near Patna.

5. My demi-official letter of yesterday's date submitted one proposal for a siding near Patna, the suggestion for which came first from Mr. Rivett-Carnac; and the extract now forwarded from Mr. Bayley's letter recommends some such plan. It might also be considered whether

the Buxar siding down to the river could be used as a place of debarkation for the Sarun and Chumparun grain; and whether a siding coud be advantageously carried down to the river at Mokameh opposite to which a road runs through Rooshra to Durbhangah.

6. At any rate the Lieutenant-Governor would recommend that the temporary line to the river side near Patna should be constructed as soon as the site can be selected and the temporary way put down. The land can be taken up temporarily, and the Collector can arrange that there should not be an hour's difficulty on that score. The best site could probably be selected in a single morning by the local Railway Engineer in consultation with the local Traffic Manager and the Magistrate-Collector or Mr. Hewitt. Care would have to be taken to lay down sufficient rails to allow of ample shunting room, and if the site were well chosen and appliances for loading into boats hastily run up, it might be possible in two weeks time to do all the Government grain business of Patna Ghât at the new station and to leave Patna Ghât station free for private traders.

No. 124 A.P.S.

Copy, with copy of the extract, forwarded to the Commissioner of Patna, with the request that he (or in his absence Mr. Hewitt) will advise with the railway officers as soon as orders are received for the construction of the siding or temporary line.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, the 16th January 1874.

Extract of a Letter from Mr. S. C. Bayley, dated 14th January 1874.

"I hope to be able to report to you by the 1st of February that we have arranged to despatch 50,000 maunds weekly to each of the three northern districts. Our first difficulty is the railway. They have not the room, and they have not the means and appliances at Patna Ghât for delivering rapidly even what we are now getting, and the interests of private consignors are being sacrificed as it is, and will be so still more in the future if our consignments are increased. More room and an additional siding might help them, but the Traffic Superintendent, Mr. Allen, tells me this cannot be carried out while the work is so rapid. It occurred to me that a temporary tramway leading from the railway say at Bankipore to some other point of the river, with a large yard and facilities for unloading, the whole rice to be specially for Government consignments, would answer our purpose and afford relief to the public, and if our consignments run on, as doubtless they will, to a million of maunds, the money would be well spent. If you think there is anything in the project, will you ask the railway people to try and work it? * * * * *

"As I said before, I shall be very much disappointed if I am not able to tell you on the 1st February that I have arranged for the (weekly) carriage of 50,000 maunds to each of these three districts besides what you may have to allot to Gya and the south of the Ganges."

No. 7 of 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

AGRICULTURE and HORTICULTURE.
Famine.

To His Grace the Right Honourable the Duke of Argyll, K.T., Her Majesty's Secretary of State for India.

Calcutta, the 30th January 1874.

My Lord Duke,

In continuation of our former despatches regarding the scarcity in Bengal, we desire to report the progress of affairs during the past week.

2. On the 24th instant we held a conference with the Lieutenant-Governor of Bengal, attended by a considerable number of experienced officers, and we discussed at length the principles on which the local and central relief committees should be formed and the rules by which they should be guided. We have forwarded these rules to the Local Government for circulation among the district officers, and we enclose a copy of them. We desire to call your Grace's attention to the fact that

we have not disregarded the varying circumstances of different localities; on the contrary, the rules contain an express provision to the effect that they are not intended to preclude relief committees or officers of Government from adopting special measures to relieve sudden or severe distress wherever it may occur. Nevertheless we believe that on the whole the rules, as they stand, will be found to work well and to provide for some of the peculiar difficulties by which the relief of distress is attended in this country.

3. Among the subjects discussed at the conference was the question of calling a public meeting at Calcutta in view to the constitution of a central committee, composed of official and non-official members, and charged with the duty of collecting subscriptions and aiding and supervising the district committees. We have often referred to this question, and we have now decided on forming the central committee not because the distress has already assumed proportions beyond the capacity of the local committees to cope with, but because in this, as in other matters, we think it better to be prepared beforehand with every measure that a sudden outbreak of severe distress may demand; whereas, if our arrangements were deferred until such a contingency actually arose, they would be less able to bear the unexpected pressure upon them. As to the constitution of the committee we enclose our correspondence with the Government of Bengal; it will be seen that so far as superior agency is concerned, we are anxious to provide for the work of central relief being carried on with as little charge as possible upon the funds of the committee. We propose to hold the public meeting on the 4th proximo, of the result of which your Grace will be informed next mail.

4. Sir Richard Temple, whose delegation to Behar we reported in our last despatch, left Calcutta on the evening of the 24th and is already in the centre of the distressed districts. We await with interest the receipt from the Government of Bengal of intelligence as to his movements, and whether the estimate we have been led to form of the probable extent of the scarcity is confirmed by his observation and enquiries. We are also desirous to learn whether the measures that have been ordered by the Government of India and the Local Government are really in that state of progress which district reports have led us to expect, and of which we have assured your Grace. While we feel great confidence in the exertions of the district officers, we anticipate much good from Sir Richard Temple's presence in Behar.

5. It is with no little satisfaction that we are able to report that on the 25th and 26th instant there was a heavy rain-fall, varying from half an inch to three and a half inches, all over Bengal, and extending to Oudh and the southern portions of the North-Western Provinces. In Mirzapore it has been very beneficial. As regards the Burdwan and Presidency Divisions in Bengal, the rain is too late to do any appreciable good to the cold-weather crops on the ground, but everywhere it will have done something to fill the tanks and promote the growth of fodder, besides rendering more easy the ploughing of the fields for the next early rice crop. A statement in detail will be found among the enclosures of our despatch, and it may be hoped that the rain which fell at Rajmehal, Bograh, Julpigoree, and Rungpore extended over the intervening district of Dinagepore, from which actual reports have not yet been received. Unhappily the rain has not extended to the chief spring crop areas of the Patna and Bhagulpore Divisions, though it reached to Rajmehal on the one side and to Lohardugga on the other. From Tirhoot and Chumpáran no return has been received. In the Patna District there were only partial showers amounting to about one-tenth of an inch, but even this cannot fail to have been useful to the low-land crops. What effect this fall may have upon prices has yet to be seen, but at present they still show the same gradual tendency to rise, and this so generally as to prove, coupled with the activity of trade, that the distressed districts are drawing largely upon the more favoured regions to the East and South.

6. We forward a correspondence* with the Government of Bengal, prescribing the principle which, we think, should regulate the grant of advances to private companies for the purchase of grain in districts removed from the operation of ordinary trade, as also our reply to an appeal preferred by the landholders and others in the Hooghly District from the decision of the Local Government refusing to remit the levy of the road cess or to suspend the ordinary land revenue demand.

* Pages 175 to 180.

7. As to the remission of the port dues at Calcutta, which we mentioned last week, we have decided for the present to postpone it.

8. We now enclose† the details of our scheme of Government emigration to Burmah. The arrangements contemplated in the scheme are actually on foot, and

† Pages 180 to 185.

we hope shortly to see set in from Calcutta a steady and continuous stream of emigration relieving the distressed districts of Bengal and diffusing itself over a Province where a scanty labour market and a sparse agricultural population have hitherto formed the only obstacles to development.

We have the honor to be,
My Lord Duke,
Your Grace's most obedient and humble Servants,
NORTHBROOK.
B. H. ELLIS.
H. W. NORMAN.
A. HOBHOUSE.
E. C. BAYLEY.

Enclosures to foregoing Despatch.

INSTRUCTIONS TO RELIEF COMMITTEES.

I.—ORGANIZATION OF COMMITTEES.

There will be three classes of Committees,—first, the Central Committee at Calcutta; second, District Committees; third, Sub-divisional Committees. The latter will generally be organized for a sub-division, but where necessary more than one of such Committees may be appointed in a sub-division.

2. The Central Relief Committee at Calcutta will be organized under the immediate supervision of the Lieutenant-Governor of Bengal.

3. The District Relief Committees will be organized in such districts as the Commissioner of the Division may think it desirable. The Magistrate and Collector of the district will usually be the Chairman of the District Committee, and will arrange for the appointment of the Members in communication with the Commissioner of the Division.

4. The Sub-divisional Committees will be organized wherever the Magistrate and Collector of a district considers it desirable. The Sub-divisional Officer will usually be the Chairman of the Sub-divisional Committee, and will arrange for the appointment of Members in communication with the Collector of the district.

5. The District Relief Committees will communicate direct with the Central Relief Committee at Calcutta.

6. The Sub-divisional Relief Committees will act under the general supervision of the District Relief Committees.

7. The Sub-divisional Relief Committees will be responsible for organizing the agency for the relief of distress within their area. They will be authorised to employ Sub-Committees, or any other agency which, with a view to local circumstances, they may think best suited for the purpose, or to delegate any portion of their duty to the other Members. The Sub-divisional Committees will be responsible that the whole of the relief operations within the sub-division should be constantly inspected, once a week at the least, for the purpose of ascertaining whether the relief operations have been properly carried on, and whether there are any places in the sub-division in need of relief where relief operations have not been instituted. For this purpose they will apply through the Collector of the district for such additional assistance, whether Native or European, as they may require.

II.—DUTIES OF COMMITTEES.

The functions of the Central Relief Committee will be to collect subscriptions and to supply money or food, as the case may be, to the District Committees; to exercise a general supervision over the proceedings of those Committees; to receive their reports; and to examine their accounts.

2. The functions of the District Relief Committees will be to draw supplies of money or food from the Central Relief Committee; to collect subscriptions on their own behalf, but so as not to interfere with the resources of the Sub-divisional Committees; to supply the Sub-divisional Relief Committees with money or food; to exercise a general supervision over the proceedings of those Committees; to receive their reports; and to examine their accounts, forwarding reports and accounts to the Central Relief Committee at Calcutta.

3. The functions of the Sub-divisional Relief Committees will be—

(*a.*) To collect subscriptions and to distribute the resources which will be at their disposal from local subscriptions, from the contributions of Government, and from the grants received from District Committees.

(*b.*) To provide food for relief purposes from local sources or Government depôts.

(*c.*) To transport food to convenient places, and to provide for its proper storage.

(*d.*) To distribute gratuitous relief to persons in need of it and unable to work.

(*e.*) To provide useful employment for those people who apply for it, and are able to work, by instituting minor relief works and providing other employment, such as spinning, weaving, husking rice, &c. Sub-divisional Committees will have full information of the Imperial and Provincial Public Works in their neighbourhood, in order that, if desirable, able-bodied labourers may be despatched to those works, together with their families.

(*f.*) To provide in such manner as may be considered the best, in each particular locality, for the relief of such persons whose caste usages and feelings prevent them from going to the Government Public Works—women of good family and others—who would die of starvation if not relieved. Relief for this class of persons might be afforded either wholly gratuitously, or partly gratuitously, by the sale of grain under the market rates, or even in some cases, with due precautions, by the advance of money or grain to be subsequently repaid.

(*g.*) If there should be an absolute deficiency in the supply of grain in any part of their district, the Sub-divisional Committee may, with the previous approval of the Collector, make arrangements for the sale of grain from Government Stores. The arrangement should be made through the agency of the traders, which will probably be available everywhere. The price should be fixed at that of the nearest large mart, where supplies are readily brought in by railroad or river, together with such addition, representing the cost of transport, as may be considered proper. Such sales should be stopped at once as soon as the local trade receives supplies, and any competition with local trade should be carefully avoided.

(*h.*) It will be probably found necessary for the Sub-divisional Committees to establish in certain parts of their districts Poor Houses, where those who apply may be received and furnished with cooked food. It will be essential, however, that besides such Houses relief centres should be established, if possible, in every large village in which severe distress exists, from which centres the distribution of food, either cooked or not, might be made to those who, under the general principles laid down, should receive gratuitous relief as unable to work. It appears highly desirable to avoid the congregation of large masses of people together away from their homes for the purpose of relief.

III.—ACCOUNTS.

The Central Relief Committee at Calcutta should draw up forms of account for the use of the Sub-divisional and District Committees. Provision will be made, in communication with the Central Committee, for the proper audit of their accounts.

IV.—MISCELLANEOUS.

Nothing in these Rules is intended to preclude Relief Committees or Officers of Government from adopting special measures to relieve sudden and severe distress wherever it may occur, reporting the measures they have taken at once for the approval of superior authority.

2. Further and more detailed instructions for Relief Committees will be given from time to time by the Central Relief Committee at Calcutta in communication with the Government of Bengal.

No. 198 A., dated 21st January 1874.

From A. P. HOWELL, Esq., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to the SECRETARY to the GOVERNMENT of BENGAL.

In continuation of my letter No. 126, of the 17th instant,* and with special reference to the arrangements proposed for the constitution of the central relief committee at Calcutta, I am directed to request that the subject may be further considered by His Honor the Lieutenant-Governor.

* Page 164.

2. In Financial Secretary's letter No. 3690, of the 12th ultimo, the Government of India expressed its willingness to give all due assistance to the Bengal establishments, and yet desired that all reasonable economy might be practised, and no appointment created before its absolute necessity should arise. The Government of India desires to repeat this assurance, but wish to be informed by the Government of Bengal whether the preliminary arrangements for the constitution of the committee will require the whole time of an officer of so much ability and experience as Mr. Schalch, the proposed President of the committee. The Governor General in Council is disposed to believe that until the committee is actually at work, and the daily pressure of business is found to be such as to require the undivided attention of the President, the precedents of the Agra Central Committees of 1860–61 and 1867–68 might be followed, and no special officer be appointed to superintend its deliberations. When the committee comes actually to be constituted, the Governor General in Council trusts that it will be found practicable to place upon it many officers whose interests in the work, and whose special experience in relief operations, will give material assistance to the Chairman.

3. Again, as regards the proposed appointments of Mr. Forbes and, ultimately, perhaps, of Mr. Wood, as Secretaries to the committee, the Government of India would wish to know whether it could not for the present be arranged that one of the two Secretaries of the Board,

who are both officers of long Secretariat experience, could not assist Mr. Schalch in framing, on the precedents of former occasions, the few simple regulations that will be required for the control of the local committees. This arrangement would not prevent the appointment of special officers, whenever such appointments may be found actually necessary to conduct the business devolving upon the committee.

4. I am accordingly to request that, pending a reply to this enquiry, Mr. Schalch's place in the Board of Revenue may not be filled up, and that, at least until the committee is actually constituted, the proposed appointment of the Secretaries to it may be kept in abeyance.

No. 138 P.-S., dated 23rd January 1874.

From C. Bernard, Esq., Officiating Secretary to the Government of Bengal, to the Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce.

I am directed to acknowledge the receipt of your letter No. 198 A., dated 21st January, regarding the appointment of Mr. Schalch to be Chairman elect of the central relief committee, and of Mr. Forbes to be its Secretary.

2. In reply, I am to submit that, until the central committee is regularly constituted, there will be no extra charge to Government from Mr. Schalch's employment on this special duty, and when it is established, the charge will be very small, no extra man being appointed, and the allowances confined to those proposed in this office letter No. 3888, dated 11th December, and sanctioned by the Government of India. Mr. Dampier will take the greater part of the land revenue work of the Board along with his Secretariat work, making over part of his side of the Secretariat to Mr. Rivers Thompson. The fact that other current business is slack, while so many officers are occupied with famine work, makes this arrangement possible.

3. But the Lieutenant-Governor would solicit permission to allow Mr. Schalch to have Mr. Forbes as his Secretary for relief purposes from the day when he first took charge of the work. It is not quite certain when the central committee will be convened, but it is very desirable that matters should be thoroughly in train before the committee are appointed. There is already in some parts of Tirhoot, Chumparun, Purneah, and Monghyr need for charitable relief committees to begin work at once; and indeed such committees are in some of these tracts already at work. Mr. Schalch is shortly going up-country to visit some of these tracts, and it is desirable that the operation of the local relief committees should be under Mr. Schalch's direction from the beginning. The Lieutenant-Governor would therefore be greatly obliged if the Government of India would sanction Mr. Forbes to taking up the duty of Secretary to the central relief committee at once, as proposed in this office letter No. 123 S.-R., dated 14th January last.

No. 245, dated 26th January 1874.

From A. P. Howell, Esq., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to the Secretary to the Government of Bengal.

In reply to your letter No. 138 P.-S. of the 23rd instant, on the subject of the central relief committee at Calcutta, I am directed to state that, until the committee is formed, it appears to the Governor General in Council to be hardly necessary to appoint a paid Secretary who has no other work, or to relieve Mr. Schalch of his duties at the Board of Revenue. I am therefore to request that His Honor the Lieutenant-Governor will bring forward the proposal again after the central committee has been formed and has met.

2. With regard to the deputation of Mr. Schalch to Behar, I am to add that it is not considered necessary that he should visit the distressed districts at present, especially while Sir Richard Temple is there.

3. While the Government of India is anxious to strengthen the European superintendence on the spot, it seems desirable, as far as practicable, to abstain from increasing appointments or salaries at head-quarters, especially in constituting a central relief committee, the expense of which will be partly borne from private subscriptions. The Government of India would be glad if the work that may devolve upon the committee could be performed, so far as the superior agency is concerned, with as little charge upon the funds of the committee as possible, and at any rate that the committee should be consulted before any expenditure of the kind is incurred.

4. Possibly His Honor may be able, upon further consideration, to suggest some arrangement under which this can be done, by utilizing the extra establishments which have already been sanctioned on account of the impending scarcity; if not, the Government of India will endeavour to make some such arrangement.

5. Meanwhile, sanction to the proposals contained in your letter under acknowledgment is deferred.

No. 246.

Copy, with copy of the letter from this office, No. 198 A. of the 21st instant, is forwarded to Financial Department for information, in continuation of endorsement No. 127 of the 17th instant.

STATEMENT of RAINFALL as reported from the Districts of Bengal and Behar on the 24th—26th January.

	Inches.
Burdwan	1·16
Bancoorah	1·25
Beerbhoom	0·47
Midnapore	0·44
Hooghly	0·84
Howrah	0·60
24-Pergunnahs	0·58
Nuddea	1·16
Jessore	Gentle but steady rain all day on the 25th, varying from ·33 to ·90.
Rungpore	3·8
Moorshedabad	0.35 at Rampore Hât.
Maldah	0·25
Bograh	2·48
Pubna	0·55
Julpigoree	1·08
Cooch Behar	1·40
Dacca	Heavy rain.
Furreedpore	0·70
Cachar	0·81
Tipperah	1·00
Bhaugulpore	Slight rain in interior; none at head-quarters.
Rajmehal	2
Darjeeling	Heavy rain on the 25th.
Patna	Partial showers, ·01.
Purneah	·40
Sonthal Pergunnahs	2 inches at Rajmehal.
Lohardugga	1·50
Singhboom	0·75
Maunbhoom	1·77
Goalparah	Rain steadily falling.

LETTER from A. MACKENZIE, Esq., Junior Secretary to the Government of Bengal, to the DEPUTY SECRETARY to the GOVERNMENT of INDIA, Department of Agriculture, Revenue, and Commerce, No. 165 S.-R., dated Calcutta the 16th January 1874.

I am directed to forward, for the orders of His Excellency the Governor-General in Council, the accompanying application from the managing directors of the Indian Terai Tea Company of Darjeeling, asking for a loan to enable them to lay in stores of rice for coolies working on their gardens. A note by Mr. Metcalfe, Commissioner of the Cooch Behar Division, on the subject, is also enclosed. It will be seen other planters would probably take advantage of such loans if sanctioned.

2. The Lieutenant-Governor would propose to grant such advances to Darjeeling planters only on the ground that they employ free labourers upon monthly wages, and do not guarantee rice to their labourers under agreements. If they import rice from a distance, they will benefit a district which produces little, and to which distressed labourers are sure to resort.

3. The Lieutenant-Governor would charge six per cent. interest upon such loans.

4. The Commissioner thinks that the lands of Cooch Behar, Sidlee, and Bijnee can probably supply as much rice as will be required without any trenching on Purneah and Bengal supplies.

Enclosure 1.

LETTER from T. CARRETT, Esq., Managing Director, Indian Terai Tea Company, Limited, to C. BERNARD, Esq., Officiating Secretary to the Government of Bengal, Statistical Department, dated Calcutta, the 7th January 1874.

With reference to a letter from the Officiating Commissioner of Cooch Behar Division, to the Chairman of the Central Committee, Darjeeling Planters' Association, of date 11th December

1873, I have the honour to ask you to grant a loan to the Indian Terai Tea Company, Limited, who are carrying on tea operations at Chenga, near Pankabarree, of Rs. 6,000 for rice supplies for the coolies working on the estate. In asking you this favour, I need scarcely add that the loan is asked for *bonâ fide* for rice supplies in consequence of the impending scarcity. A great lot of the rice and other supplies has been already bargained for, and a part of it is already stored.

Mr. R. F. Graham of Darjeeling, who is a Director of the Company, and who has superintended the supply of rice, will, if you wish it, corroborate this letter, and is now in Calcutta.

Enclosure 2.

LETTER from C. T. METCALFE, Esq., Officiating Commissioner, Cooch Behar Division, to the CHAIRMAN, CENTRAL COMMITTEE, DARJEELING PLANTERS' ASSOCIATION, No. 421 T., dated Camp Doobree, the 11th December 1873.

I have the honour to acknowledge the receipt of your letter dated the 2nd of December 1873, bearing Mr. Gouldsbury, Assistant Commissioner's endorsement of the 8th December 1873.

2. I quite appreciate the difficulties under which the Darjeeling tea planters will labour in obtaining cheap food for their coolies while the tendency of the grain export is towards the plains. The tea coolie is probably dependent upon a local shopkeeper, who again is guided in fixing the selling rates either by the selling rates at the local hâts when the grain is plentiful, or, when grain is dear, at the rate at which the goladar will sell it.

3. The suggestion in your paragraph 5, whether it will not be advisable to stop the export of rice, seems to me open to the objection that a very large portion of the local rice would go into the hands of the golandars, who, in the case of the Darjeeling Terai, are also jotedars and cultivators.

4. It would be quite impossible to stop local traffic. Indeed, it would be very unadvisable to do so; and where districts are adjoined to each other, and where there is no organized custom agency, it is almost impossible successfully to prevent export of grain.

5. My instructions to the district officers some weeks ago were to explain to the holders of large stocks that prices would rise excessively, and that it was to their benefit and profit to withhold stock for the market for the present. This advice was, I believe, acted upon in many instances.

6. With reference to future supplies for the Darjeeling district, a few days ago I demi-officially communicated to the Assistant Commissioner in charge of Darjeeling that I was quite prepared to assist in the import, where grain is required *bonâ fide* for factory purposes, to the extent of 1,000 maunds per factory.

7. The suggestion contained in your last paragraph to issue weekly price current has my entire approval, and will be carried out.

8. If any planter desiring to import rice will telegraph the price which he will pay for rice or dhan per maund to Cooch Behar to my address, I will communicate to him early full information of cost of carriage, &c.

Enclosure 3.

LETTER from R. F. GRAHAM, Esq., to C. BERNARD, Esq., Officiating Secretary to the Government of Bengal, Statistical Department, dated Calcutta, the 19th January 1874.

With reference to a letter from the Officiating Commissioner of Cooch Behar Division to the Chairman of the Central Committee, Darjeeling Planters' Association, of date 11th December 1873, I have the honour to ask you to grant a loan to the Mim Estate, who are carrying on tea operations at Mim, near Darjeeling, for a loan of Rs. 4,000 for rice and Indian corn and potatoe supplies for the coolies working on the estate. In asking you this favour, I need scarcely add that the loan is asked for *bonâ fide* for rice, &c. supplies in consequence of the impending scarcity. A lot of the rice, &c., has been already bargained for, and a considerable part is already stored.

Mr. R. F. Graham of Darjeeling, the writer of this, and who is connected with this estate, is in Calcutta, and would give any additional information required.

P.S.—Since writing the above, I have heard that the letter herein referred to alludes more to the supply of rice and not to loans of money; but inasmuch as the rice, &c. for this estate has already been bargained for and in part stored, I ask the Government for a money loan.

Enclosure 4.

LETTER from C. T. METCALFE, Esq., Officiating Commissioner, Cooch Behar Division, to the CHAIRMAN, CENTRAL COMMITTEE, DARJEELING PLANTERS' ASSOCIATION, No. 421 T., dated Camp Doobree, 11th December 1873.

I have the honour to acknowledge the receipt of your letter dated the 2nd of December 1873, bearing Mr. Gouldsbury, Assistant Commissioner's endorsement of the 8th December 1873.

2. I quite appreciate the difficulties under which the Darjeeling tea planters will labour in obtaining cheap food for their coolies while the tendency of the grain export is towards the plains. The tea coolie is probably dependent upon a local shopkeeper, who again is guided in fixing the selling rates either by the selling rates at the local hâts, when grain is plentiful, or, when grain is dear, at the rate which the goladar will sell it.

3. The suggestion in your paragraph 5, whether it will not be advisable to stop the export of rice, seems to me open to the objection that a very large portion of the local rice would go into the hands of the goladars, who, in the case of the Darjeeling Terai, are also jotedars and cultivators.

4. It would be quite impossible to stop local traffic. Indeed, it would be very unadvisable to do so; and where districts are adjoined to each other, and where there is no organized custom agency, it is almost impossible successfully to prevent export of grain.

5. My instructions to the district officers some weeks ago were to explain to the holders of large stocks that prices would rise excessively, and that it was to their benefit and profit to withhold stock for the market for the present. This advice was, I believe, acted upon in many instances.

6. With reference to future supplies for the Darjeeling district, a few days ago I demi-officially communicated to the Assistant Commissioner in charge of Darjeeling that I was quite prepared to assist in the import, where grain is required *bonâ fide* for factory purposes, to the extent of 1,000 maunds per factory.

7. The suggestion contained in your last paragraph, to issue weekly price current, has my entire approval, and will be carried out.

8. If any planter desiring to import rice will telegraph the price which he will pay for rice or dhan per maund to Cooch Behar to my address, I will communicate to him early full information of cost of carriage, &c.

Letter from A. P. HOWELL, Esq., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to the SECRETARY to the GOVERNMENT of BENGAL, No. 213, dated 23rd January 1874.

In reply to your letter, No. 165 S.-R., dated the 16th, and received on the 21st instant, forwarding an application from the Managing Directors of the Indian Terai Tea Company at Darjeeling for a loan of Rs. 6,000 to enable them to lay in stores of rice for coolies working on their gardens, I am directed to state that the application is analogous to those contemplated in paragraph 26 of the general resolution of the 17th November last.

2. So long as the local Government is satisfied that the conditions prescribed in that paragraph are strictly fulfilled, that the security for the repayment of the loan, with the interest stated, is adequate, that the money will be devoted solely to the object in view, and that there is no private trade with which this measure could interfere, the Governor General in Council is willing to sanction it. Where there is little or no trade, such loans, so employed, operate beneficially by reducing the number of consumers at the local markets; but inasmuch as they transfer to the State a portion of the burden, which in a season of scarcity properly falls on the private shareholders, they should be resorted to with caution, and each case tested by its merits.

ENDORSEMENT, No. 214, dated 28th January 1874.

Copy of correspondence to Financial Department for information.

No. 3,319, dated 24th December 1873.

From L. C. ABBOTT, Esq., Additional Under-Secretary to the Government of Bengal, to the SECRETARY to the GOVERNMENT of INDIA, Department of Agriculture, Revenue, and Commerce.

In forwarding the accompanying memorial, purporting to be signed by zemindars and ryots of Hooghly, I am directed to observe that the memorialists in the first place appeal against the orders of the Lieutenant-Governor refusing to postpone the immediate levy of the road cess in Hooghly, and in the second, ask, either for the entire remission or at least suspension for two years, of the next two instalments of the land revenue in all estates of landholders in the Hooghly district, on condition that the landholders will, on their part, similarly remit or suspend the collection of the remaining instalments of the current year's rent, and the first quarterly instalments of the ensuing year.

2. With reference to the appeal against the orders of the Lieutenant-Governor, I am directed to forward copy of a letter, No. 2,997 of 18th November, to Commissioner of Burdwan, with the extracts therein referred to; and with regard to the request of the petitioners for the remission or suspension of revenue, I am to say that no such measure has as yet been recommended by any of the local officers, and that, as His Excellency the Governor General in Council is doubtless aware, Hooghly is by no means the district to which such a concession should first be made.

No. 2,997, dated 18th November 1873.

From L. C. ABBOTT, Esq., Additional Under-Secretary to the Government of Bengal, to the COMMISSIONER of BURDWAN.

The Lieutenant-Governor is pleased to authorize that if in any portion of the road cess districts of your division or in any particular estate you believe that the cess-paying ryots are reduced to present distress, and rents are not realized, the cess may be suspended.

2. Extracts, paragraphs 3, 6, 7, and 9 of a letter addressed to the Board are annexed, as showing the principles by which the Government desires to be guided in this matter. The Lieutenant-Governor trusts to your discretion to act for the best, so as neither to remit the cess unnecessarily nor to press the people too much where they are really reduced to great distress. Wherever the cess is postponed, the fact should be at once made known to the cess-paying ryots.

Extract from a letter from L. C. ABBOTT, Esq., Additional Under-Secretary to the Government of Bengal, to the SECRETARY to the BOARD of REVENUE, Lower Provinces, No. 2,996, dated Calcutta, the November 1873.

Para. 3. The Member in charge will remember that although high prices may be expected to prevail everywhere, the agriculturists who may have even a moderate or short crop which has not wholly failed, will have a compensation in these high prices; and till the failure is extreme, they suffer far less than the landless classes. It is therefore very necessary to discriminate between those cases in which an extreme failure has involved all classes in a common distress, and a moderate or partial failure in which the labourers and non-agriculturists chiefly suffer, and in which rents are paid without very heavy remissions.

* * * * * * * *

6. It is believed that these instructions will certainly apply to Monghyr and Bhaugulpore, and probably to Purneah. But the Collector of Purneah now announces that a very unusual breadth of land has been sown with rubbee crops, and if in that especially moist soil the seed germinates and gives promise of a good crop, it is possible that the farmers of Purneah may not be so badly off after all. Moreover, the Collector stated on the occasion of the Lieutenant-Governor's recent visit to the Bhaugulpore Division, that the Purneah road cess income was already coming in freely.

7. As regards Rajshahye, there is a high dry part called the "Barran," where there is certainly great failure, and where the cess must no doubt be remitted to the aboriginal colonists who cultivate that part; but the result of the crops in the rest of Rajshahye is not yet very clearly ascertained, and the last accounts received from the Commissioner direct are somewhat favourable. In Moorshedabad, again, there was a great deficiency of rain in some parts, but most parts seem to be better, some late rain having fallen. Hooghly is in somewhat the same position. The low parts which form the greater part of the Howrah magistracy will produce good crops, and much of Hooghly proper is low and capable of irrigation, or cultivated with vegetables; the final result, however, in this district remains to be seen.

* * * * * * * *

9. On the whole the Lieutenant-Governor thinks it will be enough to tell the Commissioners of Rajshahye and Burdwan what he he has told some petitioners from Hooghly, that in any portions of, or estates in, road cess districts, in which they believe that the cess-paying ryots are reduced to present distress, and rents are not realized, the cess may be suspended and instructions issued accordingly. The Lieutenant-Governor would not go further than this at present. He deems it specially necessary to make this proviso about the non-realization of rents, for he finds from Mr. Cockerell's report that the zemindars of Behar sustained little or no loss in rents during the Behar famine of 1865–66, and that even on the Durbhanga Ward's Estate only 6 per cent. of the rents were remitted. If the zemindars can similarly collect their rents during the present year in the districts where the failure of crops has not been very extreme, there seems no reason why the district road fund should not have the cess income which bears so very small a proportion to the rents, and which is devoted to the employment of the people who most suffer.

To His Excellency the VICEROY and GOVERNOR GENERAL of INDIA.

The humble petition of the undersigned Zemindars, Talookdars, and Ryots of the District of Hooghly in Lower Bengal.

Sheweth,—That with reference to a memorial presented to your Excellency, praying for the suspension of the operation of the Road Cess Act in the Districts of Hooghly and Burdwan, your memorialists were informed by the Officiating Secretary to the Government of Bengal, by a letter dated the 8th October 1872, that "should the fever recur or not abate, he (the Lieutenant Governor) would be ready, when the time for collection came round, to take into consideration the question of suspending the realization of the cess in the fever-stricken tracts;" and further, that "the Lieutenant-Governor will not fail in carrying out the local Act to give effect to any exceptional circumstances which may affect the District of Burdwan or Hooghly when the time for putting the assessment into operation arrives."

That as, in pursuance of the policy above indicated, His Honour the Lieutenant-Governor of Bengal was pleased to suspend the operation of the Road Cess Act in the District of Burdwan only, your memorialists and others presented to His Honour a memorial, dated the 2nd of September last, praying for the extension of the indulgence to the people of Hooghly, on the grounds that neither in extent nor in intensity were the sufferings of the people from epidemic fever less in Hooghly than in Burdwan; that, as a matter of fact, the condition of the poorer classes in the former district was worse than in the latter; that it was common to see thousands of beegahs of land lying uncultivated and overgrown with jungle for want of agricultural labour in several villages; that, in addition to the distress to which the people had been reduced by repeated calamaties, they were threatened with the horrors of an impending famine, and that a special difficulty of a serious character presented itself in this district with regard to the valuation of estates and the assessment of the cess, by reason of the material variations in the rent-roll of estates which had occurred by the extinction of numerous holdings by deaths and relinquishments since the submission of the road cess returns by your memorialists.

That on the 6th of November last the prayer of your memorialists was rejected by His Honour, and they were informed that "the ryots of Hooghly pay the cess along with their rents, and in a proportion to the rent almost infinitesimally small. As long, therefore, as rents are collected, the cess, now specially wanted for district works, must be paid by landholders. If it is satisfactorily shown that on any estate the collection of rents has been suspended, the Lieutenant-Governor will direct that harsh measures should not be taken to enforce the early payment of the road cess on that estate."

That your memorialists beg to annex hereto copy of the aforesaid memorial, and of the order passed thereon.

That your memorialists humbly beg leave to submit that the enforcement of the payment of the road cess would be the extreme hardship to a people whose condition has been already rendered very wretched by the annual visitations of epidemic fever, and by the all but total failure of the last ammon paddy crop; that the relief proposed to be given in the shape of remunerative employment to poor men, and of the improvement of the means of communication by the execution of "district works," will little, if at all, counterbalance the misery that will ensue by the realization in this crisis of the money required for such works, and that the collection of the cess, how small it may be, from ryots who are in most cases unable to pay even their current rents, would be a hopeless task.

That your Excellency is well aware that the entire body of the landholders of this district depend solely on the assets of their estates, not only for the payment of the Government revenue, but also for their own means of livelihood; but the difficulty which those of your memorialists, who are landholders and other zemindars and talookdars, feel in collecting the rents on their estates is so great, and the hardship which the collection of rent entails on the poor ryots in their present deplorable condition is so obviously suicidal to their own interests, that they would have temporarily abstained altogether from the collection of rent if they had been freed from the liability of paying the Government revenue on their estates; and your memorialists confidently submit that if Government be pleased to remit for good, or suspend for two years, the payment of the next two instalments of Government revenue on the estates of all landholders of this district, who will similarly remit or suspend the collection of the remaining instalments of the current year's rent, and the first quarterly instalment of the next year's rent, a majority of the landholders of this district would gladly come forward and agree to the arrangement, although it would cost them the loss of half a year's profits on their estates.

Your memorialists therefore humbly pray for themselves and their co-signatories of the original memorial, that your Excellency will be pleased to order that the collection of the road cess be suspended in the District of Hooghly for the period of a year, and that the payment of the next two instalments of the Government revenue be remitted for good or suspended for two years on the estates of all landholders of the district, who would bind themselves to behave similarly towards their ryots.

And your memorialists, as in duty bound, will every pray.

SREENATH CHUCKERBUTTY AND OTHERS.

No. 265, dated 27th January 1874.

From A. P. HOWELL, Esq., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to the SECRETARY to the GOVERNMENT of BENGAL.

I am directed to acknowledge the receipt of Mr. Abbott's letter, No. 3319, dated the 24th ultimo, forwarding a memorial from certain zemindars and ryots of the Hooghly district, who, in the first place, appeal against the orders of the Government of Bengal refusing to postpone the immediate levy of the road cess in that district, and in the second, pray either for the entire remission, or at least suspension for two years of the next two instalments of the land revenue in all estates of landholders in that district, on condition that they will on their part similarly remit or suspend the collection of the remaining instalments of the current year's rent and the first quarterly instalments of the ensuing year.

2. In reply, I am to state that the instructions issued by the Government of Bengal in its letter to the Commissioner of Burdwan, No. 2997, dated 18th November last, are in accordance with the views expressed by the Government of India, in the general resolution (paragraph 18) of the 7th idem, as to the remission, in certain cases, of the road cess; and that the Government of India declines to interfere with the exercise of the discretion of the Government of Bengal in dealing with particular cases as they arise.

3. With regard to the application of the memorialists for the postponement of the collection of the next two instalments of the land revenue upon certain conditions, I am to add that the views of the Government of India upon this subject have been expressed since the memorial was written, in the letter to the Government of Bengal, No. 112 of the 15th instant; and that the measures sanctioned by that letter will meet the cases of such zemindars as may, in the opinion of the local officers, come within the conditions therein explained.

4. I am accordingly to request that, with the permission of His Honor the Lieutenant-Governor, the memorialists may be informed in the sense explained above.

No. 27.

EXTRACT from the PROCEEDINGS of the GOVERNMENT of INDIA, in the DEPARTMENT of AGRICULTURE, REVENUE, and COMMERCE, dated Calcutta, the 23d January 1874.

[Emigration.]

RESOLUTION.

READ the under-mentioned correspondence relative to emigration of labourers from the distressed districts of Bengal to British Burma.

To the Government of Bengal, No. 334, dated 10th December 1873.
To the Chief Commissioner, British Burma, No. 337, dated 12th idem.
From the Government of Bengal, No. 4107, dated 22nd idem.
From British Burma, No. 1171—284, dated 22nd idem.
To the Government of Bengal, No. 667, dated 23rd idem.
From the Government of Bengal, No. 29 S.-R., dated 5th January 1874.
Telegram to the Chief Commissioner, British Burma, dated 5th January 1874.
Telegram from the Chief Commissioner, dated 7th January 1874.

The Governor General in Council has had under consideration the question of assisting emigration from the distressed districts of Bengal to British Burma, partly, as one means of alleviating the apprehended scarcity, and partly, in view to promoting the cultivation of waste land in that province.

2. The present is a peculiarly favourable time, not only on account of the greater willingness on the part of the population to emigrate which may be anticipated on account of the scarcity, but also from the fact that the transport of the emigrants can be readily arranged by the vessels now employed in importing rice from Burma to Bengal.

3. His Excellency in Council has therefore decided to allot 5 lakhs of Rupees for the promotion of emigration to Burma, which sum is to be formed into a separate fund from which the expenses of State emigration to Burma will be defrayed, and to which any recoveries which the Chief Commissioner may find it possible to make from the emigrants will be credited. All sums thus recouped will be available for expenditure in the same manner and under the same conditions as the original grant.

4. His Excellency in Council has decided to appoint a Superintendent of State Emigration to Burma, and that officer will act in direct correspondence with the Government of India in all matters connected with the objects of his appointment.

5. Emigrants for Burma will be collected in two ways—
(1.) By recruiters acting under the Superintendent's orders.
(2.) By district officers in the distressed districts.

6. In the absence of any special law governing emigration from the Continent of India to British Burma, such emigration will require to be regulated by special contract in each case. The form of the contract to be entered into by the emigrant is appended to this Resolution.

7. In the case of emigrants recruited by the staff employed under the orders of the Superintendent, that officer will, for the purposes of executing the contract, be *ex officio* the representative of the Chief Commissioner of British Burma; in the case of emigrants recruited through district or sub-divisional officers, those officers are similarly constituted, for these same purposes, representatives of the Chief Commissioner.

8. The recruiters working under the Superintendent's orders will bring the emigrants recruited by them direct to the depôt at Calcutta.

9. The emigrants recruited by district officers will be forwarded to that depôt from time to time, in batches of convenient numbers, under the charge of selected persons who will provide for their food and transport on the way.

10. All subsidiary details in regard to the collection of emigrants in, and their transport from, the distressed districts will be arranged between the Superintendent and the district officers, and such further orders as may be necessary on this subject will be issued hereafter in this Department.

11. It is to be borne in mind by the Superintendent and the District officers, who conduct recruiting operations, that the proportion of women and children below the age of 12 to adult males and youths over 14 years of age, should not as a rule exceed 2 of the former to 3 of the latter.

12. It will be the duty of the Superintendent to place himself in direct communication with the Magistrate Collectors of the distressed districts, to arrange with them for the transport to Calcutta of persons willing to emigrate, and who shall have executed the required contract; to provide these officers with the necessary funds, to receive and check their accounts of the expenditure of the same, and to incorporate these accounts in his own; to organise and maintain a staff of respectable recruiters, and to execute contracts, as representative of the Chief Commissioner of British Burma, with such emigrants as they may recruit; to erect and constitute a suitable depôt for the reception of all emigrants, whether recruited by his own staff or sent down from the distressed districts; to provide proper food and medicine for them while in depôt, and to see that all sanitary precautions for their comfort and the preservation of their health are duly taken; to arrange for their passages to British Burma by the vessels of the British India Steam Navigation Company, in accordance with the terms separately agreed upon with that Company; to provide them with such extra clothing as may be necessary for the voyage, to arrange for their subsistence during the voyage, and to send with them such native doctors, sirdars, cooks, and topasses as may be necessary; to maintain and render regularly, monthly accounts of all expenditure incurred on State emigration by or through him, and to carry out such further orders as the Government of India and the Chief Commissioner of British Burma may from time to time issue for his guidance in regard to these matters.

13. Necessary advances will be made to the Superintendent out of the emigration fund, on applications countersigned by the Secretary to the Government of India in the Department of Agriculture, Revenue, and Commerce.

14. In Burma the entire control of the arrangements will rest with the Chief Commissioner, who will assume all responsibility for the emigrants from the moment of their landing.

15. Expenses incurred on account of State emigration in Burma will be debited to the emigration fund, in such manner as may be arranged in the Financial Department.

(True Extract.)

A. O. Hume,
Secretary to the Government of India.

No. 28.

From A. O. Hume, Esq., C.B., Secretary to the Government of India, to the Chief Commissioner, British Burma.

Department of Agriculture, Revenue, and Commerce.
Emigration.

Sir, Dated Calcutta, the 23rd January 1874.

To you, No. 337, dated 12th December last.
From you, No. 1171—284 of 22nd idem.
Telegram to you, dated 5th January 1874.

With reference to the correspondence marginally noted, on the subject of emigration to British Burma, I am desired to call your attention to the resolution (No. 27 of this day's date), recorded by his Excellency the Governor General, authorising the initiation of a system of State emigration to that province.

2. I am to take this opportunity of explaining that his Excellency attaches great importance to the condition that this emigration should entail no ultimate real charge to the State, and that as far as possible all expenses incurred in connexion with the removal of emigrants from Bengal to Burma should in the first instance be recouped directly by deductions from their earnings to be credited to the Emigration Fund; or if this be undesirable or impossible, then indirectly from the additional revenue which may reasonably be expected to accrue from the increased area of land brought under cultivation by their means.

3. While, therefore, the Governor General in Council would not insist that every person whose transport to Burma is effected under this resolution should repay in cash the total amount expended on him and his family, his Excellency yet relies upon you to make every endeavour to recover, by deductions from wages earned or in such other ways as may appear to you equitable and suitable, as large a proportion as possible of the expenditure incurred.

4. As stated in paragraph 3 of the accompanying resolution, a sum of five lakhs has been assigned for the purpose of carrying out the scheme for emigration to Burma. All sums recouped by direct re-payments or deductions from wages will be credited to the Emigration Fund, to be expended in the same manner and under the same conditions as the original grant.

5. I am directed to add that you should keep up separate registers showing the extent of land brought under cultivation by labour imported at the expense of the Fund in order that Government may be in a position to judge from time to time how far the scheme is working beneficially.

I have the honour to be, Sir,
Your most obedient servant,
A. O. Hume,
Secretary to the Government of India.

No. 29.

From A. O. Hume, Esq., C.B., Secretary to the Government of India, to the Secretary to the Government of Bengal,

Department of Agriculture, Revenue, and Commerce.
Emigration.

Sir,
Calcutta, the 23rd January 1874.

I am directed to forward, for the information of his Honour the Lieutenant-Governor, the accompanying papers* on the subject of the arrangements which the Government of India would be glad to see carried out for promoting emigration from Bengal, and especially the distressed districts, to British Burmah.

2. His Honour will observe that the success of the scheme will depend mainly on the co-operation of the district officers, and I am to express a hope that such orders may be issued to them as will best ensure such co-operation. It is especially desirable that the advantages offered to emigrants by British Burmah, as generally explained in the draft contract† attached to the resolution, should be made known as widely as possible, not only to those who may be willing to emigrate themselves, but also to native gentlemen of influence and position whose assistance will materially further the proposal. District officers will doubtless be warned by his Honour that some discretion will be required in the matter; for, although the object in view is primarily to relieve the distressed districts of Bengal, the interests of the province to which the emigrants will be sent must also be remembered, and aged, sick, or infirm persons unlikely to prove useful colonists, should not be sent down to Calcutta for transport to Burmah. It is not, of course, intended to discourage the emigration to Burmah of persons only temporarily incapacitated from labour through privations consequent on the scarcity, who are capable of performing the journey in safety, and may be fairly expected to recover strength under more favourable conditions.

I have the honour to be, Sir,
Your most obedient servant,
A. O. Hume,
Secretary to the Government of India.

* Resolution, No. 27, dated 23rd January 1874.
Letter to Chief Commissioner of British Burmah, No. 28, dated 23rd idem.

† Page 184.

No. 599, dated Fort William, the 23rd January 1874.

Notification.—By the Government of India, Financial Department.

In exercise of the powers vested in him by the General Stamp Act, the Governor General in Council is pleased to exempt from payment of stamp duty all contracts for service in British Burmah under the Chief Commissioner of that province entered into between natives of India emigrating to British Burmah, in pursuance of the Government resolution of this date, for regulating such emigration, and the Superintendent of State Emigration or other Government officers acting as representatives of the said Chief Commissioner.

No. 30, dated Fort William, the 24th January 1874.

Notification.—By the Government of India, Department of Agriculture, Revenue, and Commerce.

In pursuance of Resolution No. 27, of the 23rd January 1874, his Excellency the Governor General in Council is pleased, with the concurrence of his Honour the Lieutenant-Governor of Bengal, to appoint Dr. A. Payne Superintendent of State Emigration to Burma, as a temporary arrangement.

No. 31.

From A. O. HUME, Esq., C.B., Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to Dr. A. PAYNE, Superintendent of State Emigration to Burma.

SIR, Calcutta, dated 24th January 1874.

I AM desired to forward for your information copies of the papers marginally noted, and to inform you that under the understanding that your new duties as Superintendent of State Emigration are in no way to interfere with the due discharge of the duties already devolving on you in connection with the Lock Hospital and Lunatic Asylums, and also that you will hold yourself responsible for the medical charge of, as well as for all other arrangements connected with, the new depôt to be established for emigrants to Burma, his Excellency has been pleased to assign to you a salary of Rs. 800 per mensem, in your capacity of Superintendent of State Emigration.

Resolution, No. 27, of 23rd January 1874.
Letter to Chief Commissioner, British Burma, No. 28, dated 23rd January 1874.
Letter to Government of Bengal, No. 29, of the same date.
Notification of 24th January 1874, appointing Dr. Payne Superintendent of State Emigration to Burmah.
Notification exempting contracts from stamp duty, Financial Department, No. 599, dated 23rd January 1874.
Extract of correspondence with B. I. S. N. Co., about carriage of emigrants to Burmah.

2. Para. 12 of the enclosed Resolution sufficiently indicates the nature of the duties which this appointment will entail upon you, and I am to request that you will, with the least possible delay, take in hand all preliminary arrangements, and submit an approximate estimate of the establishments and funds which you will require.

3. You should also report such subsidiary matters as may seem to you to require further specific orders, but generally, while holding you entirely responsible for results, and for duly reporting your proceedings, his Excellency is desirous of leaving you a wide discretion in the arrangement of details.

4. It is intended in the first instance that all emigrants shall be sent by the vessels of the British India Steam Navigation Company employed in bringing up rice from Burma, and the annexed extract of correspondence with that Company will show the terms on which they are prepared to carry these emigrants. You should at once place yourself in personal communication with Messrs. Mackinnon, Mackenzie, and arrange with them all necessary details.

5. In conclusion I am to add that his Excellency the Governor General in Council will look to you to carry out this proposed measure in all its details, as efficiently, rapidly, and economically as possible.

I have the honour to be,
Sir,
Your most obedient servant,
A. O. HUME,
Secy. to the Government of India.

From A. O. HUME, Esq., C.B., Secretary to the Government of India, to the SECRETARY to the GOVERNMENT of BENGAL.

Department of Agriculture, Revenue, and Commerce.
Emigration.

SIR, Calcutta, the 24th January 1874.

IN continuation of my letter No. 29, of yesterday's date, I am directed to forward, for the information of his Honour the Lieutenant-Governor, copy of a Notification,* appointing Dr. Payne Superintendent of State Emigration to British Burma, together with a letter † of instructions addressed to that officer. I am also to append the form of contract referred to in para. 6 of Resolution, No. 27, dated 23rd January 1874, and copy of a Notification ‡ issued in the Financial Department, exempting these contracts from stamp duty. A further supply of the form of contract for use by District Officers will follow hereafter, but the form now sent is intended to be used by officers executing the contract on behalf of the Chief Commissioner of British Burma, as a guide towards filling up the actual contract executed, which will be without the marginal explanations appended to the form herewith sent.

* No. 30, dated 24th instant.
† No. 31, dated 24th instant.
‡ No. 599, dated 23rd January.

2. I am to suggest that Sir Richard Temple should be requested, on his visit to the distressed districts, to lose no opportunity of satisfying himself that District Officers in those districts thoroughly understand the action to be taken by them under the Resolution No. 27, dated 23rd instant, and realize fully the great importance of co-operating cordially with the Superintendent.

I have the honour to be,
Sir,
Your most obedient servant,
A. O. HUME,
Secretary to the Government of India.

* Interest, name, and style of the official who represents the Chief Commissioner.

† Artificer, workman, or labourer, as the case may be.

‡ Wife or daughter, as the case may be.

●

CONTRACT of service between the Chief Commissioner of British Burmah, acting on behalf of the Secretary of State for India, and represented by (A.B.) * , and (X.Y.) †, son ‡ of caste ● resident of zillah ●

§ Fill in full name and title.

‖ And his family, as the case may be.

1. The above (X.Y.) who is hereinafter called the emigant, being desirous of contracting for service in British Burmah, under the Chief Commissioner of British Burmah, for a term of three years, commencing on the day of of the Christian year 18 , corresponding with the day of 1 . I § on behalf of the said Chief Commissioner, engage to provide the emigrant ‖ at the expense of such Chief Commissioner, with means of transport from in to British Burmah, and that the emigrant ¶ shall be supported and fed during the journey, and afterwards until employment is provided under this engagement in British Burmah, and be provided with any extra clothing that may be absolutely necessary for the journey.

¶ And his family.

** Fill in as may be requisite for male or female. Male, 10 rs. Female, 6 rs.

2. On behalf of the said Chief Commissioner I also guarantee the emigrant's wages at the rate of not less than rupees ** per month, and not less than rupees 3 to each of the emigrant's children above 10 years and under 16 years of age, who may go to British Burmah with the emigrant under this contract on condition that the emigrant and each such child shall severally work with due diligence eight hours a day, and that the said wages shall be paid in British Burmah, through the Chief Commissioner of British Burmah, or such other person as he may for that purpose depute.

3. I the emigrant engage forthwith or whenever ordered by the above-named representative of the Chief Commissioner of British Burmah, to proceed to British Burmah in pursuance of this contract, and there in any part of the province where I may be directed to labour, will diligently perform such reasonable and proper service as may be required of me by the Chief Commissioner of British Burmah, or any person authorized by or through such Chief Commissioner, to give orders for service under this contract.

†† And my said family.

4. I, the emigrant agree that out of whatever wages may be earned by service under this contract, the said Chief Commissioner shall be entitled to deduct and retain one-fifth towards repayment of the expenditure incurred in the transport food and clothing of myself †† and also, that if the wages earned by the service shall be in excess of the amount guaranteed, then it shall be open to the Chief Commissioner further to deduct for the purpose aforesaid, the whole or such part of the said excess as he may deem fitting until such time as the whole expenditure so incurred shall have been repaid.

‡‡ And my said family.

5. I, the emigrant further engage, that until such expenditure shall have been fully repaid, I ‡‡ , will not enter into any engagement for service with or serve any other person or persons, except with his express and written sanction.

6. I, the emigrant, agree that the Chief Commissioner of British Burmah, shall adjudge and determine the amount of expenditure which has been incurred, and is to be repaid, and that his decision shall be absolutely final and conclusive.

§§ Here fill in rs. 50 for a single man; rs. 100 for a man with a family.

7. In the event of my not observing the terms of this contract, or not proceeding on the journey and performing my work and duties to the satisfaction of the Chief Commissioner, or of the Government officer under whose superintendence I may be, I, the emigrant, will pay the sum of Rs. §§ by way of liquidated and ascertained damages hereby agreed upon, and such sum or any portion of it may be retained out of the wages or money earned under this contract, and I will forthwith pay to Government any balance or the whole amount of such damages, as the case may be.

6. It is expressly agreed that none of the terms of this contract shall affect the rights and powers of the Chief Commissioner, or of Government, to take proceedings under Section 492 of the Indian Penal Code, Act XLV. of 1860, or any other law for the time being in force.

Lastly, I (A.B.) , on behalf of the Chief Commissioner engage, that after the said expenditure has been repaid, or sooner, should he deem expedient, the said Chief Commissioner will, in case the emigrant desire it, allot land for cultivation rent-free for five years, and thereafter subject to a moderate land assessment under the revenue law or rules of British Burmah for the time being in force.

Extract of Correspondence with the British India Steam Navigation Company in regard to the carriage of Emigrants to Burma.

Extract of a demi-official from A. O. HUME, Esq., Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to T. M. RUSSELL, Esq., dated 2nd January 1874.

DEAR RUSSELL,

THESE are the terms that I propose for famine emigrants to Burma, if sent on mail vessels or vessels going down to bring up our rice.

Rupees 6 per head for all above 7 years of age, no charge for children below 7. We to feed and send one man to every 50 emigrants (who with any cooks, &c., we may have to send, are to go backwards and forwards free) to keep them in order.

* * * * * *

Demi-official from T. M. RUSSELL, Esq., to A. O. HUME, Esq., Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, dated 2nd January 1874.

MY DEAR MR. HUME,

THE rate of Rs. 6 for passage to Rangoon is certainly low, but anxious as we are to assist you and Government, we agree to it in same way as with the rice, and hope Government will send as many of the emigrants by the Company's steamers as they can conveniently carry.

No. 33.

From A. O. HUME, Esq., C.B., Secretary to the Government of India, to the CHIEF COMMISSIONER of BRITISH BURMA.

Department of Agriculture, Revenue, and Commerce.
Emigration.

SIR, Dated Calcutta, 24th January 1874.

IN continuation of my letter, No. 28, of yesterday's date, I am directed to forward the enclosed papers relative to State emigration to British Burma.

* See pages 182, 183, and 184.

1. Notification, No. 30, dated 24th January 1874, appointing Dr. Payne Superintendent of State Emigration to British Burma.
2. Lettter to Dr. Payne, No. 31, dated 24th January 1874.
3. Form of Contract.

I have the honour to be,
Sir,
Your most obedient servant,
A. O. HUME,
Secretary to the Government of India.

No. 8 of 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.
Famine.

To His Grace the Right Honourable the DUKE OF ARGYLL, K.T., Her Majesty's Secretary of State for India.

MY LORD DUKE, Calcutta, 30th January 1874.

WE have not before replied to your Grace's Despatch, Revenue, No. 20, of the 1st December last,* because we desired, in doing so, to place before Her Majesty's Government, in a concise form, the measures that we have taken for the supply of grain to meet the anticipated scarcity in Behar and parts of Bengal.

* See page 51 of Abstract. [C. 933, 1874.]

2. We have to express our acknowledgments for the unreserved sanction, by anticipation, of any measures which we may consider necessary for the saving of

life. We have derived much encouragement, under circumstances of some difficulty, from this mark of the confidence of Her Majesty's Government, as well as from the approval, which your Grace's Despatch conveyed, of our decision not to prohibit the export of rice from Indian ports. Upon this subject we enclose a
* See page 54 of Abstract. [C. 938, 1874.] Minute* written by the Viceroy, with which we entirely concur.

3. Your Grace will have observed that, although some information has been given in our weekly Despatches and in our correspondence with the Government of Bengal as to the measures we have taken for the provision of supplies of grain to the distressed districts, we have not yet reported the whole of those measures.

4. Obvious reasons affecting the success of large transactions for the purchase of grain induced us to adopt a prudent reserve upon the subject, and our desire to maintain that reserve was rendered stronger, because we received information that a general impression had begun to prevail that the Government proposed to take upon itself the duty of regulating the food supply of the people, and that there was much danger that such an impression would interfere with the activity of private trade in grain, to which alone we could look for supplies to meet any general deficiency in the markets situated upon the main lines of communication throughout the country.

5. The efforts of the Government of Bengal and of the Local Officers have, we are glad to say, succeeded in re-assuring the trade that their operations will not be interfered with by the Government, and the latest reports lead us to believe that the measures we have taken have not had an injurious effect upon private trade.

6. This being the case, and as our arrangements for the next three months are completed, there is no longer the same reason for silence, and we shall, therefore, proceed to inform your Grace of the general arrangements which we have made.

7. In the Despatch addressed by the Viceroy to your Grace on the 7th November
Para. 21, see page 7. last, it was observed that,—"Her Majesty's Government may rely upon the "Government of India not shrinking from using every available means, at what-"ever cost, to prevent, so far as they can, any loss of the lives of Her Majesty's "subjects in consequence of the calamity which now threatens Bengal." In the remarks which the Viceroy made in replying to an address from the Municipality of Agra, on the 24th of November, His Excellency, speaking on behalf of the Government of India, observed that,—"the Government is fully impressed with "the grave responsibility which rests upon them, and we have taken, without
Page 81. "delay or hesitation, measures in order to anticipate distress. Our aim and "object is to prevent, so far as is possible, the loss of the lives of any of Her "Majesty's subjects."

8. Your Grace is aware of the measures which were taken to enable the Government of Bengal and the Local Officers to commence at once public works of various kinds wherever there were people in want of employment; this course of action was indicated by former experience as well suited to preserve the general labouring population from arriving at a stage of distress at which any further relief might prove ineffectual.

9. In addition, however, to this provision we contemplated from the first that, judging from the experience of the famine in Orissa and in Behar in the years 1865 and 1866, it would be necessary to store grain in the distressed districts for the payment in food of the labourers engaged upon Government works, should any scarcity of supplies exist at the places at which they might be employed.
Page 10. The principles which we laid down for our guidance were expressed in the Resolution of Government of the 7th November. It was stated in that Resolution that, while the Government had confidence that the internal trade of British India would generally meet any deficiencies of grain in different parts of the country, exceptional circumstances might arise in which it would be necessary for Government to supplement private trade; that it was, therefore, proposed to lay in sufficient supplies of food for the sustenance of the labourers who would be employed upon the Government public works; that those supplies would be obtained in such a manner as to interfere as little as possible with the trade in grain; that the Government of India had arranged to obtain supplies from beyond the limits of the territories affected by the failure of the crops; and that purchases had consequently been ordered through the Government of Madras and the Chief Commissioner of British Burmah.

10. When that Resolution was issued, it was supposed that the condition of the country would have been such as to require the early assembly of Central Relief Committee at Calcutta, and our intention was to request the Committee, when constituted, to undertake the purchase of such grain as might be required for gratuitous distribution. As, however, it was not considered desirable to constitute the Central Relief Committee so soon, we took steps to provide supplies of food not only for the labourers employed upon public works but also for such other relief operations as may be found necessary.

11. In order that no time might be lost in laying down supplies in those districts which are situated furthest from the railroads and rivers, we authorised the Government of Bengal to purchase supplies in the first instance, but subsequently we have considered it desirable to take upon ourselves the main provision of supplies.

12. We will now state shortly the extent of the operations of Government.

The Government of Bengal have purchased 50,341 tons of food grains.

The purchases and arrangements of the Government of India have been as follows:—

	Tons.
Received into Calcutta up to present date - - - -	47,000
Arranged for and expected to be received in the next three months, say to the middle of May - - - -	244,500
Total - - - - -	291,500

The total provision of food grains, for which arrangements have been made up to the middle of May, amounts, therefore, to about 342,000 tons. This is exclusive of considerable quantities bought by the Court of Wards, and by planters, zemindars, and others with funds advanced by Government.

13. Having thus informed your Grace of our arrangements up to the present time, we will add a few remarks to show by what calculations we have been guided. We have not looked upon the prospects of the food supplies as indicating a probability that there will be a deficiency in the general food supply of Bengal which cannot be met from the resources which are obtainable by the trade from other parts of India, and nothing has occurred since the first intimation of the failure of the rice crop to lead us to entertain a different opinion.

14. Prices, no doubt, may be expected to rise to a high rate, and the rice must bring with it severe distress to a great number of people. The measures contemplated by Government are, that the distress, wherever it may arise, should be dealt with by relief works for the able-bodied, and by gratuitous relief for those who are unable to work, as well as for certain exceptional classes; but we have always endeavoured to avoid giving any impression that we could undertake the general supply and distribution of food. Such an undertaking on the part of Government is, in our opinion, an impossible task when the food supply of so vast a population is involved; while to have made the attempt would have paralyzed the exertions of the private traders, who in India, so far as inland trade is concerned, are numerous, and for the most part active and enterprising, and upon whom the main dependence of the country must always be placed.

15. We had therefore to calculate, from the best materials at our command, the probable number of persons who might require assistance from the State. The total population of the districts threatened by the drought was estimated at 25 millions. The largest number of people who, upon former occasions, have been found to come upon relief works, or upon the charitable relief dispensed by Relief Committees and others, is 10 per cent. of the population of the most distressed tracts of country. We applied that proportion to the whole population of the districts threatened by the drought, and estimated that it would be possible that we should have to provide for the subsistence of 2½ millions of persons for a period of seven months. The food for that number, at the rate of one pound of rice per head a day, gave a requirement of about 240,000 tons of grain.

16. We thought, moreover, that it would be desirable to have in reserve a further quantity of grain, and we have, therefore, secured a supply of 100,000 tons in addition to the above estimate.

17. Such was the foundation upon which the measures of the Government were based; and the demands and estimates sent to us by the Government of Bengal, which were made independently, have strengthened our belief that the provision

we have made will, so far as the supplies of food at the command of Government are concerned, be sufficient.

18. The first estimate forwarded to us by the Bengal Governor was dated the 2nd of December. The Lieutenant Governor wished, as a preliminary measure, to have in the distressed districts, or ready in depôts before the end of January 1874, a sufficient quantity of grain to supply five per cent. of the inhabitants of those districts for three months, and His Honour thought that we should probably then be in a position to prevent starvation and to alleviate keen distress wherever it might occur to the end of April 1874; before that quantity was consumed, we should know how far the scarcity was likely to deepen into a severe famine, and the Government of India would be able to order as much more rice as might be considered necessary. The Lieutenant Governor added that his preliminary estimate included all requirements for Imperial and Local relief works, as well as for relief houses. In a further letter upon the subject, dated the 11th December, the Lieutenant Governor remarked that if the quantity which he had demanded were in hand by the end of January, we might be able to bring in much more food during the remaining months, and to distribute it before the rains set in; but that we could hardly hope to distribute supplies beyond a total of 200,000 tons in the then distressed area by Government agency before the rainy season began. It was added that, if distress should extend to, and Government grain be required in, Central and Western Bengal, a very much heavier amount might be distributed.

19. This first demand, which, in order to provide for a reserve, was put at 70,000 tons, was sanctioned, and has been obtained by the Government of Bengal and the Government of India well within the time mentioned.

20. On the 5th of January the Government of Bengal submitted a further estimate. The Lieutenant Governor considered that provision ought to be made, *first*, for the continual flow of food towards distant and inaccessible distressed tracts, and, *secondly*, for a reserve of food for the districts nearer the seaboard, the railway, and the navigable rivers, in case the supply should fail there. His Honour said that supplies received in Calcutta, and despatched in February, March, and April would reach the interior before the beginning of the rainy season, and that supplies despatched in May, June, and July, might reach many districts before the new crop came in; and he expressed a wish that 75,000 tons more of food grains might be placed at his disposal, to be forwarded into the less accessible parts of Patna, Bhaugulpore, and Rajshahye Divisions during the three months following the 1st of February. His Honour also considered that a reserve of 150,000 tons should be in possession of Government, and that it might be desirable to secure a further reserve of 75,000 tons in the Months of May, June, and July.

21. We informed the Government of Bengal at once that a further quantity of 75,000 tons would be placed at their disposal; and your Grace will observe that the additional provision we have made amounts to nearly 200,000 tons up to the middle of May. We anticipate no difficulty in increasing our supplies still further if, in the course of the next three months, additional necessities should appear to us to require it.

22. We are satisfied that the East Indian and Eastern Bengal Railways can carry ample supplies of grain to their principal stations. Every exertion is being made by the Lieutenant-Governor of Bengal and the Local Officers to organise sufficient transport arrangements to carry the grain up the country, but the local difficulties which have to be encountered are very great.

23. From the best calculations that we can make, the first cost of these supplies will amount to about three millions sterling, an expenditure which we have not hesitated to incur for the purpose of alleviating the effects of the calamity with which a large tract of country is threatened.

We have the honour to be,
My Lord Duke,
Your Grace's most obedient and humble Servants,
NORTHBROOK.

No. 9 of 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.
Famine.

To His Grace the Right Honorable the Duke of Argyll, K.T., Her Majesty's Secretary of State for India.

MY LORD DUKE, Calcutta, the 6th February 1874.

IN continuation of our previous despatches, we have the honor to forward the tenth special narrative of the drought in Bengal for the fortnight ending the 6th instant.

2. We have again to report that since our last despatch a copious rain has fallen over the whole of Bengal and Behar. The beneficial effect of this rain will be great. The result to the spring crops is described in detail in the Bengal narrative. The rain-fall has not been confined to Bengal; good rain has been reported from Mirzapore, Goruckpore, Ghazeepore, and Benares. Rain has also fallen generally throughout Oudh. Further north, in Rohilkund and some of the upper districts of the North-western Provinces, there has been a plenteous supply. On the whole, we trust that we may now assume that the prospects of the rubbee crops in Oudh and the north-west are favorable.

3. The rain that has fallen will enable us before long to foresee with some degree of accuracy the real area of distress. The latest information which has been received from the Patna division is contained in Sir Richard Temple's telegram of the 4th instant, which is quoted at page 4 of the special narrative.

4. Your Grace will observe that, unfortunately, the tracts most seriously affected are the least accessible to carriage. This is the gravest feature in the calamity, and the difficulty will be aggravated if ample supplies have not been conveyed to the distressed districts before the rains. Sir R. Temple has taken the most energetic measures to provide the amount of transport required. As we have only this day received the special narrative, we are unable to say more than that the Lieutenant-Governor appears to have given a very complete and accurate account of the general condition of affairs, and that the district narratives and the orders given upon them by His Honor show that the local officers generally are wisely and energetically carrying out the relief measures.

5. A public meeting was held at Calcutta on the 4th instant for the purpose of forming a central relief committee to supervise and direct the charitable operations which the calamity will demand throughout the country. The committee was formed and has already appointed an executive committee, to which the actual work of relief will be entrusted. The meeting was largely attended, especially by the native community. A copy of the proceedings is enclosed, and a corrected copy will be submitted to Your Grace by next mail.

6. Our supplies are coming in rapidly and regularly from beyond sea, and we are making arrangements for storing them temporarily prior to despatch up-country. The inland trade still shows considerable activity in most parts of the country.

7. Partly in consequence of the rain, and partly, we believe, owing to the public being now fully informed as to the operations and policy of Government, the price of rice has fallen at Calcutta, but throughout the country generally the tendency is still upward, and common rice is now selling in many parts at a rate nearly double that of an ordinary year.

8. We have been informed by the Resident in Nepal that famine is apprehended in some parts of that country which border upon Behar; and he has been requested by the Nepalese Government to ascertain if supplies of rice can be procured in Calcutta. We have instructed him to say that the Government of India will be happy to place at the disposal of the Nepalese Government 1,000 tons of rice at cost price.

We have the honor to be,
My Lord Duke,
Your Grace's most obedient and humble Servants,
NORTHBROOK.

E. C. BAYLEY.

TENTH SPECIAL NARRATIVE OF THE DROUGHT IN BENGAL FROM THE 23RD JANUARY TO THE 4TH FEBRUARY 1874.

Weather and rainfall.

The weather of the fortnight under report has been very variable, but has happily ended with a general fall of rain which will do very great good. Some rain often falls in Bengal and Behar during the month of January. So far as our records go back, the average rainfall of January is—

About 0·40 of an inch for Bengal,
„ 0·70 „ „ Behar,

but this average is made up of a much larger fall in some years and none or next to none in others. Some rain was therefore hoped for during the month of January. Last narrative recorded a fall of from one-tenth to fourteenths of an inch over most of Behar and the greater part of Bengal on the 12th and 13th of January. During the fortnight under report there have been two distinct falls of rain, one on the 24th and 25th January, general over Bengal but which unfortunately scarcely reached the borders of Behar, and a more general fall on the last day of January and the 1st of February, of which we have not details; but we know it to have extended in a beneficial form over Behar as well as Bengal. The amount of rain registered at each of these two falls is given in the margin, so far as it is known up to the time of writing this Narrative. At one place in the Monghyr district, Jamooee, just where the railway issues from the Sonthal hills, 3¼ inches of rain fell in 20 hours, the rivers were flooded, and some damage was done.

	Amount of rain in inches registered at the rainfall of

Goalparah - -	nil.	0·50 and 0·63 at Dhoobree.

After this sheet had been printed, intelligence was received that the Tirhoot rainfall of the 1st February was 0·58 inches, and that the Chumparun fall was 1·05.

N.B.—Particulars of the rainfall of the 1st February have not yet been received from Tirhoot and Chumparun; but a telegram from Patna states that half an inch fell at Durbhangah, that from half an inch to one inch fell all over the division, and that the average was nearer one inch.

The Meteorological Reporter writes of the weather of the last fortnight thus:—

"After the unusual cold of the first half of January, the weather changed suddenly.

"The wind went round to the south, and during the last fortnight has blown unsteadily from that direction, becoming westerly in the daytime, and occasionally changing to east, or blowing all round the compass. As a consequence, the temperature has been high for the month of January, the air moist and oppressive, and the sky frequently clouded. On the 28th, half an inch of rain fell at Calcutta, and on the 31st January and the 1st February 1¼ inches. The rain of the latter date has extended over the whole of the country; that of the 25th was general, except in Behar and the southern part of Bhaugulpore division."

State of the crops.

2. The following extract from the Lieutenant-Governor's review of the last Patna division narrative (see enclosure No. 3), shows what was said of the condition of the crops in that division up to the last regular reports. The Lieutenant-Governor wrote thus:—

"The report of the crops in Patna and Gya is very favorable. The Shahabad account is also not unfavorable on the whole, and we may hope that the rains we are now having will not be too late to benefit the rubbee crops in these districts. The accounts of the rubbee crops of the districts north of the Ganges are very unfavorable, frost having done much damage, and no sufficient rain to do much good having fallen up to the date of the reports. It is not yet known how far the present rain has extended into these northern districts. The Lieutenant-Governor trusts that the estimates of the Collector of Sarun, and Relief Manager of Tirhoot, of a four-anna rubbee crop on the whole for each district is unduly gloomy. The reports of the sub-divisional and other officers quoted, do not seem to predicate so bad a result. The Chumparun report is not explicit about the rubbee, but the previous view had been unfavorable, and this report indicates that owing to frost things looked worse. It is the Lieutenant-Governor's belief that the result in our principal rubbee districts, viz. Sarun and Chumparun, is not yet clear; and that we shall know more what to expect when we hear what has occurred as regards rainfall and its effects in the last days of January and first days of February. In all Sarun and most of Chumparun, the rubbee crop is so important, that the state of these districts will much depend on it. The same may be said of parts of the south of Tirhoot, but in the north and north-east of Tirhoot the rubbee seems to be so small, that we cannot look to it for much improvement."

There seems now every reason to hope that the Lieutenant-Governor's favorable anticipations may be realised.

The account of the spring crops in Monghyr, Bhaugulpore, and the south of Purneah, was also satisfactory up to the 24th January. In those districts the frost had done comparatively little harm. The Collector of Monghyr spoke of the spring crops along the Ganges being as good as any he had ever seen. To the south of Monghyr, and in the part of Purneah near Dinagepore, the spring crops were in bad case. In the Rajshahye division, where the spring crops are less important than in Behar, the condition of the food-crops on the ground up to the 24th January, was either good, or moderately good.

Results of the rainfall.

3. The rain of the 24th—25th wherever it fell did unmixed good; in Rungpore and Bograh only was it very heavy, and there it clearly did much good. The rainfall of the 31st January and 1st February may have done some harm to the peas and the linseed which were in flower, and perhaps also to some other crops that had come into ear unusually soon; but on the whole it must have done very much good. It greatly benefited the young wheat, and barley and root crops, as well as the cheena (small millet); it moistened the soil and enabled the people to plough their lands, to transplant their *boro* rice which ripens in April, and to sow cheena, pumpkins, and vegetables. The rain, moreover, will promote the growth of fodder for the cattle; it will have to some extent filled the tanks and wells, and secured a fuller water-supply. The Magistrate of Bhaugulpore, who seems to understand the state of the crops at least as well as any of our officers, wrote on the 1st February: "The rain must have been very general, the wheat, barley, oats and cheena, of which last a large quantity has been sown), will, I believe, be entirely saved. It is said that peas in blossom, linseed, gram and urhur (pulse) will suffer a little, but the wheat is the great thing. Anyhow, the benefit is immense, and the injury to some crops (if any really) will be comparatively nothing. I should like to see the sun again now." From other quarters, also, have come the remark that the cloudy weather produces blight, and sunshine is wanted. On the 4th February the sky was clear and bright at Calcutta; but as this passes through the press on the morning of the 5th, there has been heavy rain—1·70 inches—with every appearance of more. The weekly rainfall and crop returns will be found at enclosures Nos. 1 and 2.

Prices.

4. There has been no very sudden alteration in prices. In the Burdwan Presidency and Rajshahye divisions there has been a small rise. In Eastern Bengal the tendency has been for prices to fall during the fortnight. In Behar there has been a rise of prices on the whole, though there has been a slight fall in the price of common rice in Sarun and Chumparun. The subjoined figures show for some of the principal districts the prices as reported on Saturday last, as compared with those ruling at the time of the submission of last narrative (10th January), and as compared with the 24th January 1873:—

Number of seers of common rice sold for a rupee on the

	10th January 1874.	24th January 1874.	24th January 1873.
Burdwan	14½	14	22½
Calcutta	12½	12½	17¼
Backergunge	17½	16½	29
Dacca	17	16	32
Dinagepore	13¼	13¼	28
Pubna	15	14	28
Patna	13	12	21
Gya	10	9½	18½
Tirhoot	10½	10	22
Bhaugulpore	12½	12½	22¼
Purneah	11	9	28
Hazareebagh	13	13½	17

Thus prices now are, on the average, nearly double what they are in an ordinary year. The only districts in which famine prices can be said to be reached are Gya and Purneah, where rice is selling at 9 and 9½ seers per rupee at the head-quarters. The result of the recent rainfall on prices has not yet been seen; but an engineer who arrived from the Northern Bengal Railway works this morning (4th February), reports that prices went down in the local marts near his work 12 per cent., after the rainfall of the 1st February.

The reports of the Chamber of Commerce during the fortnight showed that the demand in Calcutta for rice for exportation was at one time exceedingly brisk, and that a great deal of rice was coming in from the eastern districts. Towards the end of the fortnight the demand for exportation was said to have lulled. The total exportation of food grain from Calcutta during the month of January was 42,346 tons; and the total exports for January from Bengal ports, so far as returns have been received, were 59,222 tons. For some of the minor ports telegraphic summaries of the returns only have been received, so the figures may be liable to some slight modification hereafter. The total exports of food grains from Bengal ports to places outside Bengal amount to over 143,000 tons for the four months ending on the 31st January 1874, and 124,793 tons in the three months from the 1st November 1873; against this the Government imports of grain have been 47,000 tons, and there have been almost no private importations.

Sir R. Temple's tour in Behar.

5. It was stated in last narrative that Sir Richard Temple had been deputed to visit Behar. He left Calcutta on Saturday, the 24th January, stayed some hours at Patna, visited Mozufferpore, the head-quarters of Tirhoot, and met the Commissioner at Durbhanga by the end of the month. Copy of the orders issued by the Lieutenant-Governor delegating to Sir Richard Temple the necessary powers, and instructing the local officers, will be found at Appendix C. At Patna Sir Richard Temple issued orders for providing shelter for the private grain temporarily, and the Government grain, on and about the Patna railway stations. He inspected some of the chief stations for the receipt of grain, and went over their arrangements with the local officers. He sent down a requisition for a short length of tramway over the sands of the Ganges bed opposite Patna. A proposal for a similar short length of tramway at Champta Ghat, opposite Barrh, was afterwards merged in a larger proposition. Sir Richard Temple appears to consider the arrangements at railway stations, and generally on the south of the Ganges, to be efficient, and he has expressed his general approval of the conduct of the local officers, and of the arrangements which they have made. He telegraphed on the 26th that there was an abundance of boats on the Ganges, and that the carriage resources of Tirhoot and Chumparun were evidently large; but he could not undertake to give a final opinion as to their sufficiency until he visited Mozufferpore and Durbhangah. On the 1st February Sir Richard telegraphed a proposal for laying a tramway from the Ganges opposite Barrh, towards and beyond Durbhangah. On this proposition it may be well to extract here the Lieutenant-Governor's observations, as contained in the resolution on the Patna district narrative for the last fortnight, as follows:—

"Sir Richard Temple has recommended a plan suggested by Mr. Stevens, the Durbhangah engineer, and passed by the local officers, for laying down a tramway from opposite Barrh to Durbhangah and beyond, a total length of 87 miles. The

Lieutenant-Governor fears that the plan estimates a rate of speed in works of this kind which cannot be realised; but he has at once laid the plan before His Excellency the Viceroy, and it has been arranged that whatever is possible shall be done. After conferring with the best authorities His Excellency has sent Mr. Molesworth to examine the line, and ascertain if the whole or any part of the scheme is practicable. There cannot possibly be a better authority. If it is practicable, no time will be lost in laying a line; if it is not, we cannot conquer nature, and must do the best we can by other means. Most competent officers are employed and will be employed to ascertain the best routes, and to devise and superintend the best means of transport. His Excellency the Viceroy has been good enough to place at the disposal of this Government several officers of the Quartermaster-General's department for this special purpose."

Sir Richard Temple's latest account of the state of the country which he has visited is expressed in the following telegram :—" Camp Seetamarhee, 3rd February 1874. In Tirhoot alone civil officers expect to have 800,000 to a million on their hands for several months. Of a population of more than four millions in Tirhoot, one third have lost their harvest almost entirely, one third have lost the greater part. In Chumparun three to four hundred thousand persons, and perhaps 100,000 in Sarun, expected to be on our hands, besides some considerable numbers in Gya and Shahabad, altogether about one million and a half in the whole Patna division. No marked distress anywhere except towards eastern frontier of Tirhoot. In every direction daily, hundreds of persons of classes which would not ordinarily labour are coming to relief works. In some places I have seen from two to three thousand persons working. Certainly, without help from Government and public, great mortality north of the Ganges would occur, and many tracts throughout northern border of Patna division would be almost depopulated. Many experienced persons believe that already a large proportion of the population are limiting themselves to one meal a day. People appear gravely anxious but wonderfully patient. The worst feature is, that the most affected tracts are the least accessible to carriage. Aspect of fields in two thirds of Tirhoot district quite wretched."

Telegraph lines in North Behar.

6. At the end of December last, the Government of India sanctioned the construction of a telegraph line from Patna viâ Mozufferpore to Moteeharee in Chumparun. By the last accounts the material was all on the line, and it was expected that communication from Mozufferpore to the Ganges would be opened before the middle of February. Some delay will occur in laying a telegraph cable across the Ganges, so a temporary office will be opened at Hajeepore, and messages will pass between Patna and Hajeepore by ferry-boat. Sir Richard Temple suggested that flying telegraph lines should be constructed to connect Durbhangah, Seetamarhee, and Madhobanee with Mozufferpore, and to connect Bettiah and Ramnugger with Moteeharee. An officer of the telegraph department, with a supply of material, has been despatched to Behar to carry out this proposal. The local officers have been directed to expedite the transport of this telegraph material as far as possible.

Private trade in grain.

7. The private import of grain into the Patna division continues to be very considerable. The district narratives show that private grain came during the fortnight to the amount of—

	Mds.
In the Patna district	3,82,000
Shahabad ,,	1,20,000
Sarun ,,	80,000

The grain stores in Patna are overflowing, but the dealers seem very unready to carry their grain over into Tirhoot. The subject of promoting the carriage of this grain into the very distressed tracts has been specially commended to Sir Richard Temple's consideration (see enclosure No. 6). Meanwhile, the Lieutenant-Governor has relaxed the rules under which advances for the purchase of grain may be given to local dealers for the importation of grain from a distance, in order that the traders and shopkeepers of the distressed tracts may go over to Patna and bring back grain for sale in their neighbourhood.

In the other districts of Behar, especially in Monghyr and Purneah, grain seems to move much from place to place within the districts; but exportation from outside is small compared to the wants of the people. The latest figures regarding the movement of food grains will be found at Appendix A. It will be seen that by the East Indian Railway there went into the distressed districts of Behar—

From Bengal	- - -	3,05,700 mds of grain per week.
„ North-Western Provinces	-	1,67,000 „ „

The figures for the second week of the fortnight are not yet complete, but the total import into Behar from both ends may be taken at about 9,40,000 maunds during the fortnight. Out of this total about 5,00,000 maunds was Government grain.

Provision of Government grain.

8. On Saturday last (31st January) was published in the *Gazette of India* a despatch* to Her Majesty's Secretary of State to the effect that the Government of India had arranged for 340,000 tons of grain, of which nearly 270,000 tons are, it is believed, to come from beyond Bengal. This provision nearly corresponds with the quantity for which the Government of Bengal asked (see paragraph 4 of the 8th Narrative). It includes the 74,000 tons which have already been sent into the distressed districts. This Government is about to submit to the Government of India its plans for the storage and distribution of the expected supplies.

* Page 185.

Despatches of Government grain from Calcutta.

9. The usual statement will be found at Appendix B, showing the despatches of Government grain from Calcutta during the fortnight. 4,81,478 maunds have been sent off, of which 4,00,000 maunds have been sent by the East Indian Railway. The East Indian Railway have been able to give a daily supply of waggons at Howrah sufficient for from 1,000 to 1,500 tons. When the new river-side sidings at Patna and Barrh are open, the Government officers in Behar will be able to dispose of more grain than they are now taking; and our despatches from Calcutta may considerably increase. Owing to a block at Monghyr, caused by private grain on account of the Durbhanga estate, and to a temporary reduction* of the despatches to Patna Ghât, the despatches for four or five days out of the fortnight were short. But when the new sidings are open, there should be no reason why 1,500 tons of Government grain should not be sent away per diem from Howrah, and disposed of at the stations in Behar. A memorandum of proposed despatches for the ensuing week is sent to the traffic manager every Thursday, showing the quantities to be consigned to each station; and the Calcutta despatching officer does not depart from this programme without first ascertaining from the traffic managers by telegraph, that such departure will not cause inconvenience to the traffic.

* Made on the Commissioner's request.

Transport of Government grain.

In Appendix D* will be found two letters which state the progress made in despatching Government grain into the distressed districts up to the end of January. The subjoined passages from that correspondence state generally how matters stand, namely, that "the total quantity of grain despatched to the distressed divisions up to the 31st January stands thus:—

* Pages 204 to 207.

	Mds.
Despatched by Mr. Toynbee from Calcutta up to evening of Saturday, 31st January - - - -	13,90,000
Received from the North-Western Provinces and the Central Provinces, and from local Patna division dealers, as nearly as can be ascertained - -	4,30,000
Despatched or received from Eastern Bengal - -	1,11,000
Total - - -	19,31,000

It will thus be seen, that something more than the whole amount which this Government had proposed for the supply up to the end of January, had actually been despatched to the distressed districts by the 31st of that month. Out of the total despatches, the amount sent to the several divisions stand thus—

	Mds.
Patna division	10,10,000
Bhaugulpore	5,29,000
Rajshahye	3,92,000
Total	19,31,000

Of this total, nearly two-fifths had reached its final destination up to the despatch of the district reports of the 24th January, and the rest was mostly in transit of boats or carts, and partly on steamers and railway waggons at the earlier stages of its journey. The greatest difficulties were in the first instance experienced in the Rajshahye division, where the usual water routes have sadly failed.

The Rajshahye division is not, however, dependent on water carriage only. Into the north and centre of Dinagepore, grain is now being carried by six routes, namely—

(*a*) by the East Indian Railway to Caragola, thence by the Darjeeling road to Dengraghât, and by cart across into Dinagepore.
(*b*) by the East Indian Railway to Rajmehal, and thence by cart from the right bank of the Ganges to Maldah and Dinagepore.
(*c*) by steamer from Kooshtea to Godagaree, and thence by boat up the Mahanuddee to Raigunge.
(*d*) to Godagaree as before, and thence by cart up the old Darjeeling road to Dinagepore.
(*e*) from Kooshtea by steamer to Rampore Bcauleah, thence by cart to the upper Attrai, and by small boats up the river.
(*f*) from Kooshtea to Dhaparee, and thence by cart to the Attrai above Nattore and onward, both by cart and by boat.
(*g*) by the Oorasagur, Burrul, and Attrai rivers to Nowgong, and thence by cart, or by very small boats to the north of the district.

The relief officer of Tirhoot says he will be able to carry 3,50,000 maunds a month from the Ganges into the three distressed sub-divisions of Tirhoot; and the Commissioner of Patna is confident of being able to carry 45,000 or 50,000 maunds a week into Chumparun. The Sarun district, being nearer to the Ganges and Gogra, will be more easily supplied. Questions of improving and increasing the transport power of North Behar are being carefully considered by Sir Richard Temple on the spot.

The Coosee river route, which was tried by the Magistrate of Bhaugulpore (see paragraph 8 of last Narrative), proved very tedious and unsuccessful. The boats made only 22 miles in 17 days among the shoals at the mouth of the river, and the grain had to be disembarked and put on carts. The grain for North Bhaugulpore now goes wholly by cart from the bank of the Ganges up to Mudheypoorah and Soopole. On the Purneah road from Caragola there was some want of organization; Mr. Hankey, who is employed as inspector of transport arrangements, stayed some time in that district, and with the help of the Magistrate-collector, has brought matters into steady working order.

Loan of a steamer by Khwajeh Ahsanoollah.

10. Khwajeh Ahsanoollah, son of Syed Abdool Ghunny, C.S.I., of Dacca, has most liberally placed his steamer, the Star of Dacca, at the disposal of the Government for the purpose of towing grain boats into the distressed districts; she has been ordered to the Mahanuddy where she will work from Godagaree upwards as far as the water will permit. Meanwhile, Mr. Prestage, the agent of the Eastern Bengal Railway, has agreed to send one of the captains of his river steamers up the Mahanuddy to see how far the powerful steamers and flats belonging to his railway can go now and during the rains. He proposes to have ready for Government use, if required, a steamer and two flats which can carry between 1,000 tons at each trip. These Eastern Bengal Railway steamers are the most powerful on the Bengal rivers, and will, Mr. Prestage believes, be able, when the rivers rise, to make five trips a month from Godagaree to Raigunge, in the Dinagepore district, or to the Teesta. At present, however, steamers cannot go up the secondary rivers.

Government grain from Orissa.

11. The Government grain and also private grain from Orissa will now come forward quickly enough. The Government ship Cæsarowitch is plying between False Point and Calcutta; the brig Guide runs from Chandballee to Calcutta. The Government of India have permitted the British India Steam Navigation Company to take away a steamer temporarily from the Kurrachee service and put it on the Orissa berth. Meanwhile, occasional steamers belonging to that company are calling at "False Point" and at "Pooree," and are bringing Government and private grain up to Calcutta. Some of the Behar zemindars, who are laying in stores of grain for their ryots, find Orissa their best source of supply.

New railway stations on the Ganges bank.

12. At paragraph 3 of the last narrative it was mentioned that the Government of India had sent the railway consulting engineer with full power to construct, as proposed by the Lieutenant-Governor, two new river side stations for the reception of Government grain intended for the northern districts of the Patna division. The consulting engineer reported (see papers at enclosure No. 7) on the 26th January that two sites had been chosen, one near to the Barrh station and another near the Patna station, at which new river side stations were to be made for the reception of all Government grain. Colonel Taylor expected that both the new stations and the necessary sidings would be ready during the first week of the present month (February); that all the Government grain could then be received at these stations, and that the ordinary goods stations could be left for the private traders. Shelter for 2,000 tons of Government grain is also being put up at each of these new stations. Intimation has not yet been received that the new sidings are ready; but the Commissioner of Patna has telegraphed, that he can take 45,000 bags (90,000 maunds) of Government grain per week at the Patna Ghât station alone, so that the siding arrangements must be well forward. Opposite the Barrh siding, there is a fine straight reach of the Ganges with deep water up to the banks on both sides; in this reach river steamers and flats can work at ferrying grain across the river. But between Hajeepore and Patna Ghât, there is more difficulty; there are several sandbanks, the channel is shallow, and there is doubt whether steamers and flats can come near enough to the bank. By throwing out a mole, however, this difficulty may for a time be overcome; meanwhile, there is a very large fleet of native boats at Patna, ready to work the ferry between Patna and Hajeepore.

Other crossings over the Ganges.

13. At the other crossings over the Ganges, where the transport arrangements had previously halted, much progress is now reported. The two steamers and flats working from the Kooshtea are landing at Godagaree, Rampore Beauleah, and Dhaparee from thirty to fifty thousand maunds a week. At Rajmehal, a steamer and flat are employed to carry the grain over to Manick Chur, whence it starts by road to Maldah, and to the west and north of the Dinagepore district. The crossings from Colgong and Sahebgunge to Caragola in the Purneah district are now in capital working order: the railway officials, with their steamer, and with the help of country boats, can cross over 4,000 maunds a day; and Major Gordon of Bhagulpore has organised a service of native boats which are now carrying across 4,000 maunds a day from Colgong to Caragola. Opposite the Bhaugulpore station a sandbank has recently been thrown up, which compelled the Magistrate to make Sultangunge his receiving station; this change caused some days' delay, but the ferry is now working smoothly and rapidly.

Condition of the people.

In South Behar.

14. The district narratives, which will be found in enclosures Nos. 3 to 5, give an account of the state of the people. It may be stated generally, that with the exception of certain limited tracts to be described more fully below, the supply of grain in the local marts is sufficient, and there is, as yet, no actual distress of a severe kind. High prices there are, and must be until a new crop shall have been reaped next Autumn. Some of the district officers of South Behar go so far as to say on 24th January, that if the crops then on the ground continued to do well, there would be no fear of famine in Patna, or in Gya, or in South Bhaugulpore, or in any part of Monghyr except a corner of Jamooee. The Magistrate-collector of Shahabad expects, also, that if things continue to do as well as they are now doing, there will be no severe famine in his district, though there will be need for ample relief works, and perhaps for charitable relief in parts of the high lands of the district.

In North Behar.

But in North Behar matters are unhappily much worse. In three sub-divisions of Tirhoot, in the north of Chumparun and north of Bhaugulpore, in a part of Sarun, in certain tracts of Purneah and Monghyr, more keen distress is now beginning, and famine would certainly appear within a very few weeks unless we can stave it off. In Tirhoot, Sarun, Chumparun, Bhaugulpore, and Monghyr, people are coming to the relief works in large numbers; in three districts Government grain is beginning to be sold on the works, at one or two places the people are reported to be alarmed and to be much pinched; and a beginning has to be made of distributing charitable relief. The reports received make it clear that the condition of these tracts is extremely critical, and that relief works must be provided, and Government grain must be pushed into these parts as fast and as largely as means permit.

The condition of a part of Jamooee in Monghyr, and of parts of Purneah, is hardly any better. Severe distress in these tracts, if not famine, is very near at hand. In the Dinagepore, Maldah, Rajshahye, Rungpore, and Bograh districts, despite excessive failure of the rice crop, supplies are for the present sufficient, and actual keen distress has not yet appeared. The condition of all these districts, except perhaps Dinagepore, has become, since the rains, better than had been feared. The Rungpore district has much benefited by the rain; early crops are being sown, and it is hoped that it may fare tolerably. Regarding parts of Dinagepore, however, the Lieutenant-governor is still very anxious.

On the whole, there seems now good hope that many districts where the crops greatly failed, and regarding which much apprehension has been entertained, may escape actual famine. There will, however, be high prices everywhere; and the Lieutenant-Governor is much afraid lest high prices and scarcity might produce very bad effects in parts of the country where there is a large population of landless labourers, barely removed from actual penury at the best of times.

Relief works.

15. The district narratives (enclosures Nos. 3 to 5) give some account of the works that are going on, and at enclosure No. 8 will be found the latest returns of labourers employed on the relief works. The number of labourers employed per diem is about 33,000 in Sarun, where very full and timely arrangements for relief works have been made; in Dinagepore, a district ordinarily very destitute of labourers, 14,000 people are employed, besides the labourers on the Northern Bengal Railway; in Chumparun 12,700 labourers are at work, besides those on the Gunduck embankment; in Tirhoot there has been some deficiency of works, but 17,200 people are employed on Government and private relief works; there are 4,000 labourers employed in Monghyr, and the same number in Bhagulpore. In Purneah, though there are plenty of works ready, labourers do not seek employment, and as yet there are only 800 people on the relief works. In Chumparun and Purneah only does any large proportion of the workpeople belong to the cultivating classes who do not usually work upon the roads. In Purneah, though very high prices prevail and keen distress is believed to be felt in parts of the district, few people come to the relief works. In Tirhoot there was at first some failure to provide sufficient works and some want of sufficient system on the works; but this, it is hoped, has now been remedied, the Commissioner having taken up the subject as soon as it came to his notice. In Sarun, Chumparun, and Dinagepore, on the other hand, very ample work has been found for the people who want it.

Tank digging as relief work.

16. In the part of the Monghyr district where distress prevails and is expected, the difficulty has already been felt that great embanked roads carried athwart the drainage may do harm, if (as is too probable) funds cannot be found to bridge them. In default of such roads it is not possible to find sufficient other road work to employ the population which we expect to have on our relief works. The Commissioner and the local officers represent that there are in almost every village old tanks which have not been cleaned out for a generation, and the excavation of which would be the very best relief work, and would also confer a great and lasting benefit on the villagers. The difficulty, however, arises that the relief funds as yet given are in aid of the district road fund which is intended exclusively for the improvement of roads and waterways; and it seems doubtful whether public money of this kind ought to be spent on improving private properties and lands. The question of the best way of providing funds for works of this class was submitted to the Government of India, and it was suggested that at the present emergency the local officers should be permitted to undertake tank works when none else were available, and to settle in each case with the zemindars and the people what share they should contribute to the work. Meanwhile the Commissioner of Bhaugulpore was instructed to go to the spot to find out what other works he could; and he was told that no workmen must be sent away, and that if no other works could be found, village tanks might be undertaken.

The Commissioner of Patna made a similar reference on the same point, and he meanwhile had authorised the magistrate collectors of very distressed districts to begin tank works if they found it necessary so to do. The list of works appended to the Sarun narrative (see enclosure No. 3), contains many tank works. The Lieutenant Governor has much considered the question of spending public money on improving tanks on private property, and he believes that such works will have to be undertaken. Copies of a letter from the Commissioner of Bhaugulpore, with a letter to the Government of India, and a reference to Sir R. Temple, will be found in Appendix E.*

* Page 207.

17. It appeared to the Lieutenant-Governor that the funds at the disposal of the district committees for relief works were becoming insufficient; applications for further grants were received from some districts; and there was the additional consideration that by striking off ferry and road tolls, and by partially suspending the road cess, the means of district committees had been much reduced, just as there was very special need for them to spend largely on relief works. Even in districts where there had been no very grave failure of crops, prices would be very high, the labouring classes might have a hard time, and it would be very inadvisable that committees should, from want of funds, be obliged to stint local works. Accordingly the Lieutenant-Governor reviewed the position of all districts, and gave large special grants to the distressed and partially distressed districts. The text of the orders issued upon this matter will be found at enclosure No. 9. When making these special grants the Lieutenant-Governor said:—"It "will be understood that these grants are for the road cess year 1873-74; that, if "further grants are required for real relief work, they will be given on timely "application being made.

Funds for relief works.

"The total grants made from the provincial funds for the current year will thus be,—

	Rs.
Ordinary grants made on the 1st October, as per column 3 of the annexed statement - - - -	9,90,000
Amount of debit balances written off as grants, as per paragraph 2 of the present orders - - - -	1,83,127
Amount of special grants in aid of relief works, as per column 4 of the annexed statement - - -	14,45,000
	26,18,127

"Out of this total of 26,18,000, about 16½ lakhs will be expenditure consequent upon the unhappy failure of the crops in Behar and Bengal."

At enclosure No. 10 will be found a note drawn up by Colonel Nicolls, chief engineer, upon the labour returns, up to the 10th January, and the orders of the Lieutenant-Governor upon that note. The practical result of the comparisons instituted by Colonel Nicolls is, that in North Behar wages are low and labourers bring their women and children to the roads; while in the Rajshahye division wages are high, and it is quite contrary to usage for labourers to bring their women and children to work. From a relief point of view, this result is satisfactory in that a family in Behar, even with the low rate of wages there obtaining, earns more than a family in Rungpore, but then the number of bread winners in a family is much larger in the one case than in the other.

Wages on relief works.

18. Planters and zemindars on the Patna division are continuing to take advances for the purchase of grain for distribution to their ryots. But there is, in many districts, much unreadiness to take advances for landed improvements. In the Burdwan and Chota Nagpore divisions, and in the districts of Sarun, Chumparun, and Monghyr people are coming forward for land improvement advances very freely; but in the rest of Behar, and in the Rajshahye division they are backward. The Commissioner of Rajshahye has reported that in Moorshedabad many people would undertake tank works from their own funds, if Government would bear one-third of the cost just as it does at the present season, in the case of works executed from advances. The Lieutenant-Governor has gladly agreed to this concession, subject to the proviso that the works to be executed are to be really works of public utility to the whole village.

Advances to private parties.

19. In previous narratives, reference was made to a despatch in which His Excellency the Viceroy, after his tour in Behar, drew attention to the desirability of advancing funds to zemindars who would undertake to give advances of money or grain to their ryots. It was at the time suggested that, if need be, the legislature should be asked to compel landlords to recover such advances from their ryots. The Commissioners were invited to suggest the best

Advances to ryots.

means of meeting the difficulty. Mr. Barlow, of Bhaugulpore, alone recommended special legislation. Meanwhile the question pressed for solution, and the Magistrate of Rungpore specially urged that such advances to ryots should be allowed, and that for the purposes of such advances, jotedars (many of whom are holders of sub-tenures with ryots under them), should be treated as zemindars. The Lieutenant-Governor, after reviewing what had passed, held (Appendix F), that under His Excellency the Viceroy's orders, all putneedars, jotedars, and others holding a permanent interest in the land, might be reckoned as zemindars for the purpose of these advances; and he decided that the direct advance of money or grain to ryots in specially distressed tracts, should be treated as a question of relief under clause (*f*) of the instructions defining the duties of sub-divisional relief committees.

Instructions to relief committees.

20. At a conference at Government House on the 24th January, general instructions for the guidance of relief committees were settled. Those instructions, with the orders of the Government circulating them, will be found at Appendix G. They give much latitude and leave much discretion to the committees. The sub-divisional committee is made the working unit, and on each sub-divisional committee is thrown the very grave responsibility of seeing that every village within its jurisdiction receives such relief as it requires. Discretion is given to sub-divisional committees to advance money or grain to persons whose caste or usages prevent them going to public relief works; permission is given to institute minor village relief works, or to provide, through village headmen, in-door work, such as spinning or weaving; and authority is given to relief committees to sell Government grain to the people if the Collector approves. This last provision is so fenced that the committee's action cannot, if the instructions are observed, act in restraint of trade, for the committees are not to begin selling until there is an absolute deficiency of grain in the neighbourhood; they are to effect their sales through the local traders, and they are to cease selling as soon as the local trade receives supplies. The general rules are to be supplemented by more detailed rules, settled by the central relief committee in communication with the Government of Bengal.

Central Relief Committee at Calcutta.

21. On Wednesday, the 4th February, a public meeting was held in Calcutta, at which His Excellency the Viceroy presided, and it was decided that a central relief committee, consisting of some 150 native and European members, should be appointed to direct operations of charitable relief, and to collect subscriptions; with that object the committee were directed at once to commence operations in communication with the Government of Bengal. The central committee appointed an executive committee, consisting of the gentlemen marginally noted, under the chairmanship of the Hon. V. H. Schalch. Subscriptions towards the relief fund, to the amount of Rs. 65,000, were announced by His Excellency the Viceroy and by the Lieutenant-Governor at the meeting; and before the meeting separated a total sum of Rs. 123,000 had been promised. A copy of the report of the proceedings of the meeting will be submitted with next narrative.

Relief committees in the interior.

22. In the distressed sub-divisions of Tirhoot, Chumparun, and Purneah, relief committees have already begun to act, and committees have been nominated for all the districts of the Patna and Bhaugulpore divisions. Charitable relief on a large scale will not, it is hoped, be required for some time to come south of the Ganges, except in the afflicted corner of South Monghyr. In Mozufferpore, a meeting was held, and Rs. 35,000 were subscribed for relief purposes; in Durbhangah Rs. 15,000 were subscribed. In Chumparun, relief is to be given through the agency of planters, who will give to indigent people unable to work, tickets entitling them to fifteen days' food from the Government store. In Tirhoot, considerable sums have already been placed at the disposal of the sub-divisional committees for expenditure on gunny-weaving, spinning, and other in-door work for women and non-labouring people through the agency of village headmen.

Burdwan Division.

23. As regards the Burdwan division, the further reports received show that, while there is no immediate excessive deficiency of grain, and in case

such should occur, the railways and waterways give great facilities; the really pressing need is to provide a sufficiency of relief works to employ the people till the agricultural operations of another season commence. It is a good feature of the case that in this division many applications for advances for private works have been made, and the Commissioner has been strongly urged to see that, as regards public relief works, the provision made is complete. No doubt a good deal of charitable relief will be eventually necessary, more especially in the fever tracts, and in connection with the classes of people who have been reduced in their bodies and their means by inability to work through sickness. A special inquiry was ordered into the general condition of the people of these tracts some months ago, and the Commissioner has been again directed to give immediate personal attention to its early completion, and to visit and report exactly the state of things as they now exist.

In some parts of Beerbhoom a commencement has already been made of charitable relief. From Burdwan the local reports are as yet not very gloomy, and the Maharaja of Burdwan may be relied upon to help effectively should charitable relief be called for. Meantime, the organisation of committees is being prepared, and works are provided. The Hooghly reports are somewhat alarming, but there is reason to believe that the Collector has not sufficiently discriminated between those parts of his district where things are bad and other parts where the crops were fair, and the people are tolerably well off. The Howrah portion of this district especially is reported by the magistrate in charge to be in very good case with certain partial exceptions. The Hooghly collector has been told to provide work wherever required, and for food supply the situation of a district lying, as this does, on the highways of river and rail traffic, ought not to be at all critical. In fact, exportation is still going on from all the districts of the Burdwan division. The jungle tracts of Midnapore, which were at one time deemed very badly off, are now more favourably reported on by the Commissioner. The court of Wards and the Messrs. Watson are doing much here to provide work for the indigent. On the whole, the division of Burdwan lies so open to the operations of private trade, and contains so many intelligent native residents, that there is no great danger at present in leaving it to be supplied in that way, and in confining Government operations to relief works and aiding the establishment of relief committees.

Palamow sub-division.

24. In previous narratives it had been stated that the Palamow sub-division of Lohardugga had suffered grievously in recent famines, and that the crops of 1873 had failed. Colonel Dalton, the Commissioner of Chota Nagpore, has now marched through Palamow; he reports that there is cause for anxiety, that relief works must be freely undertaken, that the landholders and village chiefs are doing a great deal themselves, both to undertake works, and to import grain for the consumption of their people. Colonel Dalton considers that some small quantity of grain should be imported and stored on the works to supplement the local supply; he has also stored fodder along the supply routes. A special grant of funds has been made (see enclosure No. 9) for Palamow relief works, and the Government of India has agreed to a small quantity of grain being procured from Lohardugga, and stored on the relief works. Since Colonel Dalton's letter was written, rain has fallen in Palamow, and matters may improve. The deputy commissioner of Maunbhoom also proposed that a large quantity of Government grain should be stored at the Barakur for his district; as the distressed tract is close to the railway and the need is not emergent, Colonel Dalton's views upon the matter are awaited. No other part of the Chota Nagpore division gives present cause for anxiety.

Irrigation and embankment works.

25. The number of workmen on the Gunduk embankments is said to be daily increasing. By the last reports there were 680 laborers on the upper embankment in Chumparun, and 1,438 on the lower. On the Chumparun works, rice was selling at from nine to ten seers per rupee. On a part of the lower embankment men are now being employed on daily wages at the magistrate's request. It is found that petty contractors cannot afford to and will not employ weekly laborers. As distress becomes more general, it will be necessary to set apart one or more lengths of each work for workpeople who cannot do a full day's work. The obligation to do this is fully recognised by all Public Works officers, but there is difficulty in getting subordinates to act promptly in accordance therewith.

Soane Canal.

26. The area watered by the Soane canal has risen to 157,548 acres, besides the land which the people were able to irrigate with water let into the Poonpoon river from the Soane canal. In consequence of the heavy rain on the 1st and 2nd February, the sluice gates at the head of the canal had to be shut, in case freshes might come down the Soane and flood the country. There had been some discussion whether the water could now be shut off for the rest of the season without injury to the food crops; if it could be shut off, then the canal works could go on, and regular methodical irrigation could be possible next June; if it could not be shut off, then the masonry work could not go on, and irrigation might be postponed for another season. The local officer's view seemed to be, that if village channels (pynes, as they are called), and reservoirs had been filled, the water might now be shut off. The Irrigation Department reports that the village tanks and channels have been filled, the timely rain of the last ten days has secured the spring crops in Shahabad, and so the canal head can be safely closed, and the masonry works allowed to proceed.

Kana Nuddee work.

27. At enclosure No. 11 will be found a report by the Commissioner of the great benefit which has been done to a part of the Hooghly district, by letting the Damooda water into the Kana Nuddee. The extracts quoted in Mr. Buckland's report show that for drinking-water, for watering cattle, and for irrigating root crops and pumpkins, the new water-supply will be of the greatest value to the villagers, along fifty miles of what used to be a dry river bed with occasional stagnant pools of very dirty water. The cost of the Kana Nuddee works, as hitherto executed, has been very little over Rs. 12,000. Projects for opening out other channels, and leading Damooda water into them on a much larger scale, and at a cost of some lakhs of rupees, have been laid before the Government of India. One difficulty is that these works, which will very greatly improve the value of large permanently-settled estates, cannot be expected to be directly remunerative to Government.

Northern Bengal Railway.

28. The progress on the Northern Bengal Railway works, up to the 24th January, was as follows. Fifty miles of side widths were set out, the land for the railway is being made over as fast as it is required, and the procedure required by the Land Acquisition Act for settling the compensation is being complied with as rapidly and completely as possible. 150,000 cubic feet of earthwork has been completed, 1,300 labourers were on the work up to the 17th January, and many more had come since that date. Wages are paid in money every three days, and the work-people supply their own food from the local bazars. Arrangements for brick-making are being pushed on, and coal for burning bricks on the ten miles nearest the Ganges has been contracted for. Ninety-four miles of the telegraph line from Julpigoree southwards had been set up, and will be at work in a few days. The demand for labour on the central length is active; elsewhere there is no influx of local work-people. Rice has been stored in considerable quantity on the central section of the line; Major Lindsay reports that the river Atrai will be navigable during February and March for 50-maund boats up to Debeedoba (about the 140th mile on the line from the Ganges), and he is sending rice by that route. The Commissioner (Mr. Molony) reports this river route to be extremely tedious and uncertain, and he fears that a boat can only make one trip into the Upper Atrai in the season. The issue of Major Lindsay's experimental despatch up the river is awaited.

Emigration to Burmah.

29. The Government of India has set aside the sum of five lakhs of rupees (50,000*l.*) to promote a system of State emigration from the distressed districts to British Burmah. The terms offered are a three years' engagement on wages, of which the minimum is guaranteed to be, for men, Rs. 10 each, per mensem; for women, Rs. 6; and for children of between 10 and 16 years of age, Rs. 3. A deduction of one-fifth may be made from the above wage, and anything earned over and above it may also be deducted and credited to Government until the cost of the emigrant's passage has been recouped to the State. It is intended, however, that any sums thus recovered shall be expended in the same manner as the original State grant. A Superintendent of State Emigration has been appointed, and instructions have been given to the district officers to make

the terms widely known not only to laborers but to influential local men, who are invited to assist in inducing emigrants to come forward. District officers will, at the same time, exercise a discretion in selecting persons likely to prove useful colonists. Aged, sick, and infirm people will not be sent unless their infirmity is one temporarily caused by privation, and likely to pass away with proper care. The experiment will, it is hoped, prove advantageous to British Burmah, where the demand for laborers and colonists is yearly increasing. Copy of the orders of the Government of India and of the circular issued by the Lieutenant-Governor on the matter will be found at enclosure No. 12.

Military officers for relief works.

30. In previous narratives, it has been stated that His Excellency the Viceroy in Council had lent the services of Commissariat and of Staff Corps officers to help in grain transport and in relief work. Colonel Mackenzie, of the Commissariat, has organised a corps of railway coolies (station porters), to work the Patna stations; and he has, under the Commissioner, taken executive command of the transport service across the river Ganges, and at the points of departure on the Ganges for North Behar. Lieutenant Eliot, also of the Commissariat, is at Rajmehal and will take complete charge of the ferry and despatching of grain from the river *viâ* Maldah to Dinagepore, as soon as the train of carts is in regular working order. The Staff Corps officers are being employed in the districts of North Behar. And the Government of India has further been good enough to send Major Ker, of the Quarter-Master General's Department, to the Rajshahye division, and Captain Grant to Rajshahye, also to order Colonel Macgregor and Captain Trotter of the same Department to Patna. At Appendix H will be found a copy of the Lieutenant-Governor's orders explaining how these officers are to be employed in discovering and prospecting routes, and in devising means of transport.

Additional officers for sub-divisions.

31. Now that so heavy a duty and responsibility will devolve upon sub-divisional officers in connection with charitable relief and the prosecution of relief works, the Lieutenant-Governor has thought it necessary to send a second officer to each really distressed sub-division, who should take the magisterial and ordinary work off the shoulders of the sub-divisional officer, besides giving such special assistance as may be required in the circumstances of each case. This has now been done for all the very distressed sub-divisions of the Patna division, and it is being done for the sub-divisions of Bhaugulpore. The staff of officers in the Dinagepore district has also been largely increased, as in that large district there are as yet no sub-divisions.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

Calcutta,
The 5th February 1874.

APPENDIX D. to foregoing Narrative.

No. 334 S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, in the Statistical Department, to the DEPUTY SECRETARY to the GOVERNMENT of INDIA, in the Agriculture, Revenue, and Commerce Department.

Calcutta, dated 31st January 1874.

SCARCITY AND RELIEF.

SIR,

I AM directed to submit the first set of weekly transport returns of grain transport in the form directed by your letter No. 82, dated 12th January last.

2. I am to observe that these first returns, having been somewhat hurriedly sent out and made to meet the requirement of the Government of India, are not so complete or satisfactory as the Lieutenant-Governor could have wished, and that in some districts (especially in the Dinagepore District) the amount of Government grain which is returned as arrived at its final destination is still small. Grain does, in fact, take a long time to get through the various stages of transport and location till it is finally stored in the local depôts, and the returns of grain stored take a considerable time passing through the various grades of employés and officers up to Government, so that the statements of actual stores are somewhat behind date. But the streams of which the heads have reached their final destination will now flow continuously, and Sir George Campbell hopes that subsequent returns may be more complete. Meanwhile he directs me to submit an approximate account of how the despatch and delivery of grain stands on the last day of January.

3. In the first place, the total quantity of grain despatched to the distressed divisions up to the 31st January stand thus:—

	Mds.
Despatched by Mr. Toynbee from Calcutta up to evening of Saturday, 31st January - - - - - -	1,390,000
Received from the North-Western Provinces and the Central Provinces, and from local Patna division dealers, as nearly as can be ascertained	430,000[a]
Despatched or received from Eastern Bengal - - -	111,000[a]
Total - -	1,931,000

It will thus be seen that something more than the whole amount which this Government had proposed for the supply up to the end of January had actually been despatched to the distressed districts before the end of January. Out of the total despatches the amount sent to the several divisions stand thus:—

	Mds.
Patna Division - - - - - - - -	1,010,000
Bhaugulpore - - - - - - - - -	529,000
Rajshahye - - - - - - - - -	392,000
Total -	1,931,000

A part of what goes into north Bhaugulpore and east Purneah is intended to supply the requirements of Tirhoot and Dinagepore. Of this amount it may, moreover, be generally said that though many temporary blocks and difficulties have occurred, they have been solved in one way or another. We do not now know of any very serious blocks; the streams of grain are all moving forward.

4. According to the transport statements and the fortnightly narratives of the 24th January the total amount of the receipts and despatches may be distributed thus:

	Arrived at final destination according to return.	In transit as per district transport statements.	Not accounted for, either since arrived or in transit, or on the railway, or in carts, or in boats, or lying on the river side and other depôts.
	Mds.	Mds.	Mds.
Patna Division, (including Soane Canal, - -	[b]3,03,582	93,183	6,14,235
Bhaugulpore - - -	[b]2,37,738	95,099	1,96,163
Rajshahye - -	[b]1,30,955	88,398	1,73,491
Total -	6,72,275	2,76,680	9,83,889

---

[a] For details of these figures see Appendix A.

[b] For details of the figures here given see Appendix B.

The total shown as "in transit" or "unaccounted for" is very large, and with reference thereto the following remarks are submitted:—

(*a.*) The transport returns, though dated the 23rd and 24th January, cannot in reality give facts for remote parts of districts for any date later than the 16th or 18th. The Commissioner of Rajshahye, indeed, who was on tour in the north of his division, writes on the reverse of his statement, as if the 6th January was the latest date of his news from Kooshtea and other places. The Dinagepore returns show very little received, but the Rajshahye and Maldah returns show 88,398 maunds forwarded into that district. The telegrams from the officer in charge of the Patna Commissioner's office showed some days ago a much larger despatch from the main depôts in that division than the district returns show.

(*b.*) The magistrate collector of Bhaugulpore speaks of his Kosee supply of 24,000 maunds havingal most reached its destination by his last reports, and says that the rest of his stock on the north bank of the Ganges is going off day by day in carts. Evidently a large quantity is in course of slow transit in all the divisions.

(*c.*) The Purneah statement does not reckon grain as received in the district until it reaches Caragola, so that the bags either at Sahebgunge or Colgong or in boats crossing the river do not come into the Purneah statement.

(*d.*) Mr. Toynbee's despatches from Calcutta up to the 31st January would be nearly a fortnight in advance of the receipts in most districts up to the 20th or 21st January; and during the last 12 days of January, the Calcutta despatches were larger than they had been before.

5. The Lieutenant-Governor is not able to say that he is fully satisfied with the results of the Government grain transport up to the end of January as indicated in this letter; but he is satisfied that all the officers engaged in the business are doing their best to push on the Government grain, and he believes that they are doing it in the best way. As has been already represented, the waterways of the country, which it was thought right to test to the utmost, are extremely slow and difficult at this time of the year, and this year have proved unusually disappointing. It is some consolation to the Lieutenant-Governor that in the Rajshahye division, where transport is now most backward, the first heavy rain in June will fill the many channels, and make distribution of the Government grain much more easy than it is now.

On the whole subject, it will be remembered that till very lately this Government had only authority to send forward a limited supply of grain for relief works, and that it was rather desired to do so quietly without disturbing private trade, and to test routes by which that trade was least disturbed, than at once to strain all the resources of the country; very much was in that view left to the discretion of the local officers. Now that larger operations appear necessary, the Lieutenant-Governor is arranging for more systematic returns by which the onward movements of grain from stage to stage can be more promptly and exactly traced.

I have the honor to be,
Sir,
Your most obedient Servant,
C. BERNARD,
Offg. Secy. to the Govt. of Bengal.

LIST of Grain Transport Returns submitted to the Government of India under cover of Letter No. 334 S.R., dated 31st January.

Name of District or Division.	Week to which the Return refers.
FORM No. I.	
Divisional Commissioner, Rajshahye	Week ending 24th January 1874.
Relief do. do.	Ditto ditto.
Divisional Commissioner, Bhaugulpore.	
FORM No. II.	
Collector, Dinagepore	Ditto ditto.
Do. Maldah	Ditto ditto.
Do. Rajshahye	Ditto ditto.
Do. Rungpore	Ditto ditto.
Do. Bogra	Ditto ditto.
Do. Monghyr	Ditto ditto.
Do. Bhaugulpore	Ditto ditto.
Do. Purneah	Ditto ditto.
Do. Patna	Ditto ditto
Do. Gya	Ditto ditto.
Do. Shahabad	Ditto ditto.
Do. Tirhoot	Ditto ditto.
Do. Sarun	Ditto ditto.
Do. Chumparun	Ditto ditto.

APPENDIX A. to Letter No. 334 S.R., dated 31st January 1874.

The total of despatches or receipts from the North-Western Provinces and Central Provinces is made up thus:—

	Mds.
Commissioner's own purchase, all of which had been received as per Mr. Hewitt's telegram of 30th January 1874 - - - - - -	1,25,000
Purchases through Messrs. Colvin and Buck, most of which had been certainly received.—See Mr. Hewitt's telegram of same date - - - -	1,50,000
Purchases through local dealers in Patna, Gya, and Sarun; 75,000 maunds were purchased, but it is not certain that all has arrived. Some of the grain from these dealers was the first to arrive in North Tirhoot; but for the present the arrivals out of these purchases may be put down at - -	40,000
Purchases by Commissioner of Bhaugulpore, all of which have arrived - -	60,000
Purchases from Bunsee Lall of Nerbudda Valley wheat, all of which has been despatched (see telegram), and most of which has been received - -	40,000
Purchasers from Manik Chand of Nerbudda Valley wheat; out of 25,000 maunds 15,000 have been despatched - - - - -	15,000
Total - -	4,30,000

The total of receipts or despatches from Eastern Bengal is made up thus—

Commissioner of Patna's order from Chittagong, all of which has arrived, as per Mr Hewitt's telegram - - - - - - -	31,000
Commissioner of Rajshahye's purchases, all of which have been despatched and most of which has arrived at final destination - - - -	80,000
Total - -	1,11,000

APPENDIX B. to letter No. 334 S.R., dated 31st January 1874.

Showing details of the arrivals of grain at final destination in the several districts.

Patna Division.

Patna (as per transport statement of 24th January 1874) - -	33,517
Gya (as per paragraph 40 of fortnightly narrative) - - -	68,127
Shahabad (as per transport statement) - - - -	19,167
Tirhoot (as per fortnightly narrative) - - - -	1,03,926
Sarun (as per transport statement) - - - - - -	60,086
Chumparun (ditto) - - - - - - - -	55,759
Gunduck embankment (as per transport return of 15th January 1874) -	8,000
Soane Canal Work (up to 20th January 1874) - - -	35,000
Total - -	3,03,582

Bhaugulpore Division,

Monghyr (as per transport statement) - - - -	1,06,934
Bhaugulpore (ditto) - - - - - - - -	45,523
Purneah (ditto) - - - - - - - -	85,281
Total - -	2,37,738

Rajshahye Division.

Arrived on and for the Northern Bengal Railway Works	- -	23,510
Arrived in and for Bogra	- - - - - -	16,409
Ditto	for Rajshahye - - - - - -	20,570
Ditto	for Maldah - - - - -	17,466
Ditto	for Rungpore - - - - -	23,510
	Total - -	1,30,955

Forwarded by Maldah and Rajshahye to Dinagepore - - - -	88,398

No. 166 P.S., dated Calcutta, the 3rd February 1874.

From—The Offg. Secretary to the Govt. of Bengal, Statistical Department,
To—The Dy. Secy. to the Govt. of India, Agriculture, Revenue, and Commerce Dept.

In my letter,* despatched last night, was submitted a statement of the grain which had been despatched to or received in the distressed districts up to the end of January. And a large quantity of the grain despatched (as much as 6,14,435 maunds in the Patna Division) was shown as "not accounted for, &c."

*No. 834 S.R., dated 31st January.

2. To-day's post has, however, brought a letter from Mr. Hewitt, Deputy Commissioner of the Patna Division, showing the actual despatches from the Patna Division railway stations up to the end of January. They are as follow:—

	Mds.
Despatched to Chumparun	2,65,616
" to Sarun	1,23,359
" to Tirhoot	1,99,426
" to Patna	49,000
" to Gya	1,05,000
" to Shahabad	50,000
Besides what was supplied in Tirhoot by local dealers	45,000
Total	8,27,000

If to this total be added 80,000 maunds, despatched to or received at the Soane Canal Works, there is a total of 9,07,000 maunds accounted for, leaving only 1,03,000 maunds "unaccounted for, or in transit, or on the railway platform."

3. A letter has also been received from Mr. Barton Assistant to the Bhaugulpore Commissioner, showing that up to the 31st January there were actually in store—

	Mds.
In the Monghyr district	1,24,093
" Bhaugulpore district	64,385
" Purneah district	1,15,173
Total	3,03,651

leaving 2,26,000 maunds "in transit" and "not accounted for," out of the total of 5,29,000 maunds shown as dispatched to or received in the Bhaugulpore district at paragraph 3 of my letter above-mentioned.

4. As the Lieutenant-Governor wishes His Excellency the Viceroy in Council to have before him the latest information, this letter is submitted in manuscript at once, and may be read with my printed letter despatched last night.

Appendix E. to foregoing narrative.

No. 322.

From the Officiating Secretary to the Government of Bengal, in the Statistical Department, to the Secretary to the Government of India, in the Department of Agriculture, Revenue, and Commerce.

Calcutta, { dated January / Recd. by Gov. of India 7th February } 1874.

Scarcity and Relief.

Sir,

I am directed to submit for the orders of the Government of India a very important question in connection with the provision of adequate relief works in the tracts where actual and severe distress may be expected soon to appear.

2. In the enclosed Circular* of the 30th December, the Lieutenant-Governor admitted that tank-works and other such works might have to be taken in hand for relief purposes; but at the same time the Lieutenant-Governor said that the financial question must be faced and laid before the Government of India, with a view to the settlement of the point whether public money could be spent on works situated on, and which would more or less improve, private permanently settled estates.

* See appendix C to the Seventh Narrative.

3. The appended letter dated 18th January, from the Commissioner of Bhaugulpore, puts the matter broadly; it in effect says,—"we cannot provide a sufficient number of embanked roads which can usefully be undertaken, and which can supply all the labour that ought to be supplied. There are plenty of excellent and useful tanks, which would do much good, and which will bring the work near to the homes of the people, but there is

little hope of our getting the zemindar to undertake a sufficiency of these works either from advances or otherwise."

Such being the position, it might be quite possible to issue orders urging the district officers to press upon the zemindars that their interest and their duty required them to undertake such works. There can be little doubt that the landholding interest is directly concerned in the matter; but there is equally, the Lieutenant-Governor fears, little doubt but that it will in many cases be difficult and tedious to bring the zemindars to take that view of their interest; and there is risk that, while the work of persuasion is going on, the relief works may fall short, and the people may be left without work and without wages.

4. It is not only from the Bhaugulpore Division that such works have been reecommended as the best kind of relief works we can undertake. In the Patna Division and elsewhere similar proposals have been made. And a very pressing form which representations have taken is, that the cattle will die in many districts if the people are not employed to deepen the tanks till they come to water. The managers of the great estates under the Court of Wards have undertaken a large amount of relief work in the shape of tanks, but beyond these estates it is always a question whether the zemindar can or will undertake the duty, and where he will not very great difficulty arises.

5. The Lieutenant-Governor is very glad to be able to say that many zemindars have done and are doing much for their estates; but there will remain many estates where they do not. In one case there may be legal disabilities; in another case there may be many shareholders who cannot agree; in a third the responsible man may live in another district and refuse to answer the Collector's letters; and in such cases no one will have any legal power of compelling the zemindars to do their duty. Probably zemindars may be induced to allow such works to be done, and may even agree to the stipulation which has been attached to the part payment by Government in case of advances, viz., that works on which public money is spent should be for ever accessible to the people for drinking and such like purposes. But it might be difficult to put that stipulation in binding and effective shape in all cases; and if Government decided to do this, and to enforce a contribution, it might be necessary to have recourse to legislation.

6. This subject was discussed at the conference at Government House on the 24th instant, and it was agreed that it should be reported for more mature deliberation. Possibly Sir R. Temple's local inquiries may assist in forming a conclusion. The Lieutenant-Governor's present view is that in some cases, when proper public works cannot be found, either the Government or the relief committees must undertake works, which are not public works in the ordinary acceptation of the term, in order to give employment to the people and save the cattle. Unless Government is prepared to legislate, we must confine ourselves to those works which seem most beneficial to the people, and make the best bargain we can with the landholders in each case. In such circumstances Government might undertake works of a large and heavy description or very emergently required to save the country, while petty village works necessary for relief might be undertaken by the relief committees.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Offg. Secretary to the Govt. of Bengal.

No. 11 of 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.
Famine.

To His Grace the Right Honorable the DUKE OF ARGYLL, K.T., Her Majesty's Secretary of State for India.

MY LORD DUKE, Calcutta, the 13th February 1874.

IN continuation of our weekly despatches, we have the honor to forward a copy of the Supplement of the Calcutta Gazette of Wednesday last. It contains the most recent reports of the prices of food in Bengal, and of the general condition of the Province. Your Grace will observe that the effects of the rainfall, which we reported in our despatch of the 6th instant, have been most beneficial, and that the condition of the country generally has been materially improved.

2. We have received no information that the rainfall has materially improved the means of communication by river in the distressed districts, and indeed, this was hardly to be expected at the present season.

3. The accounts from the North-Western Provinces and from Oudh lead us to hope that the rubbee crop will be large, and this will afford means for meeting any demand for food which may arise in the districts of those provinces which have been affected by the failure of the autumn rains.

4. We informed Your Grace that we should, before long, be able to foresee with some degree of accuracy the extent of the country in which severe distress is inevitable. We are now in possession of the conclusions at which Sir Richard Temple has arrived, after visiting the worst parts of North Behar, and we enclose, for the information of Your Grace, copies of Sir Richard Temple's minutes of the 31st January, the 1st, the 5th, the 6th, the 8th, and the 10th instant, and of a telegram of the 12th, since received.

5. Sir Richard Temple estimates that a provision of 4,000,000 of maunds of food-grains should be made for Tirhoot, 1,000,000 for Chumparun, and 550,000 for Sarun (if the amount of food at three-quarters of a seer per head, per diem, is calculated upon the number and for the time mentioned in the telegram; but Sir Richard Temple has not as yet made a requisition for the quantity required for Sarun). For the north of the Patna Division, therefore, there will be a requirement up to the 15th of June, of 5,550,000 maunds in all, of which a portion will be provided by the Rajahs, Zemindars, the Court of Wards, and persons who have received advances from Government. We calculate that about 180,000 tons of food-grains, to be provided by Government, have to be conveyed into the north of Behar before the 15th of June. We are in a position to meet this demand without difficulty, and we have thought it right to approve, without hesitation, of the arrangements which Sir Richard Temple has made for the provision of transport from the railway to the northern parts of Tirhoot. We trust that these measures will be effectual, but we shall await further reports before expressing complete confidence upon this matter. Your Grace will observe that we have expressed to the Government of Bengal our disappointment that the requirements of North Tirhoot have, up to the present time, been under-estimated by the local officers. The arrangements for transport to Chumparun and Sarun are not expected to occasion any great difficulty.

6. We deputed Mr. Molesworth, Consulting Engineer for State Railways, to proceed to Barrh, in order to take immediate steps for constructing a tramway from Chumpta Ghât, on the northern bank of the Ganges, opposite Barrh, to Durbunga (forty-four miles), and we are glad to find that he considers the work to be feasible within such time as to be useful for the conveyance of food to the north of Tirhoot. It will be pressed on with the greatest possible expedition.

7. We alluded in our last despatch to the apprehension of distress in Nepaul. We enclose copy of a correspondence* which has passed with the Government of Bengal upon this subject, from which Your Grace will observe that it has not escaped the notice of Sir Richard Temple, and that we have given instructions to Mr. Girdlestone, the Resident in Nepaul, to confer with Sir Richard Temple, and to act upon his advice in his communications with the Nepalese Government.

* Pages 225–227.

8. We enclose a return showing the quantities of rice exported from the port of Calcutta and Chittagong since the 1st of October last,* divided into the

* Page 227.

different qualities of rice and distinguishing the places to which it has been exported.

The figures for last year are also given for the purpose of comparison.

The statistics of the export from Orissa will be furnished as soon as they have been received.

* Page 227.

9. We enclose a copy of a letter* which we have addressed to the Government of Bengal on the subject of the action to be taken by the Central Relief Committee, and the general conduct of relief operations. We have thought it desirable to explain our opinion that the rigid application of a labor test is inapplicable to the relief of distress where it extends over a large area of country, such as North Behar.

* Page 172.

* *See* page 10.

10. Your Grace will observe from the instructions* for Relief Committees, which we forwarded in our despatch No. 7 of the 30th ultimo, that we did not lay down any rules enforcing such a test, and on reference to our original orders issued on the 7th of November,* at the commencement of the period of scarcity, it will be seen that the institution of public works, and the extensive employment of the people upon such works, were intended as preliminary and precautionary measures, and by no means as the only manner in which relief should be extended to the people at a later period of the scarcity. We make these remarks, as some misapprehension appears to exist as to our views upon this important subject.

11. With respect to those parts of the country which have been affected by the drought, but do not lie within the Province of Bengal, we have to observe that Sir William Muir is taking every necessary measure for the relief of distress in the south-eastern districts of the North-Western Provinces, and we have not received from him any intimation that he will require assistance in the way of supplies from the Government of India in respect to those districts, the prospects of which have, on the whole, been materially improved by the late rains.

12. The Viceroy has received from Sir George Couper, the Chief Commissioner of Oudh, a carefully prepared minute, explaining the measures which he proposes to take for the relief of distress in the northern parts of Oudh adjoining the Terai. As this minute has not yet been received officially, we will only observe that Sir George Couper has personally visited those districts, and that the measures which he proposes to take have been framed in communication with the local officers and with the Rajah of Bulrampore, in whose estates the most distressed parts of the country lie, and we believe that they will be found sufficient. Sir George Couper has no apprehension that there will be any difficulty in laying in supplies in advance for any part of the country that may require them during the rains.

13. The drought that has now affected North Behar, coupled with former droughts within a short period of years, has necessarily attracted our attention to the provision of a system of irrigation which may, so far as is humanly possible, provide against the recurrence of similar calamities. Much consideration was given to the subject after the famine of 1866, but the plans which we have now before us do not extend to that portion of the country which is suffering the most severely from the drought. We have accordingly, as Your Grace will observe from our despatch No. 271, in the Public Works Department of the 12th instant, given directions for the immediate institution of surveys and enquiries throughout that district, with the object of deciding, as soon as possible, upon a scheme which may be taken in hand at the next working season. It would not be desirable to commence a work of such permanent importance without careful previous enquiry and deliberation, but Your Grace may rely upon the subject receiving prompt attention from us so soon as the necessary information has been obtained.

14. In accordance with the 5th para. of our last despatch No. 9 of the 6th instant, we have the honor to forward a corrected copy of the proceedings of the public meeting held at Calcutta on the 4th instant, for the purpose of forming a Central Relief Committee.

We have the honor to be,
My Lord Duke,
Your Grace's most obedient and humble Servants,
NORTHBROOK.

H. W. NORMAN.
A. HOBHOUSE.
E. C. BAYLEY.

Enclosures to foregoing Despatch.

No. 177 P.S., dated Calcutta, the 13th February 1874.

From C. BERNARD, ESQ., Acting Secretary to the Government of Bengal, to the DEPUTY SECRETARY to the GOVERNMENT OF INDIA, in the Department of Agriculture, Revenue, and Commerce.

I am directed to submit copy of a minute by Sir R. Temple upon the state of affairs in the Chumparun district. The Lieutenant-Governor fully approves and concurs in the instructions which Sir R. Temple has given. The only suggestion Sir George has to offer is that supplies of grain might possibly be brought into Chumparun by the Durolee Ghât from Oudh, or, perhaps, from Azimgurh, if happily the spring harvest turns out well in the Benares districts.

P.S.—A further Minute, dated the 10th February, has this morning been received, and a copy is submitted at once, so as to be in time for the outgoing mail.

MINUTE by the Honorable SIR RICHARD TEMPLE, K.C.S.I.—(No. 13, dated Camp Bettiah, the 8th February 1874.)

Having visited the Chumparun district, travelling through it from east to west, and proceeding viâ Bettiah to Ramnuggur, I have to record the following remarks regarding the quantity of grain which ought to be conveyed into the interior of the district by the 15th of June next and the means of conveying it.

2. First, as to the quantity: that depends of course, on the number of persons who may be expected to need assistance in some shape or other.

3. Mr. Kean, the Collector, after carefully conferring with me, makes the following statement.

Adapore.—This is a great rice-growing thannah: the greater portion of the crop failed. The cold weather crops (rubbee) are not much grown. Indian corn, however, is grown: there will be a four-anna crop. The poppy is said to be good; but the rice crop having almost totally failed, and there being no rubbee, or very little, I think at least 30 per cent. of the population would come on our hands in this thannah, which, as far as my present information goes, is the worst thannah in the sudder division.

Dhaka.—In this thannah also the rice crop failed, but it produced an eight-anna crop of "makai," and the rubbee will be about a six-anna crop. The poppy is also fair. I think 25 per cent. for this thannah.

Motiharee.—In this thannah the rice crop was not so entirely a failure. The rubbee and poppy are also comparatively good. I would calculate 20 per cent. for this thannah.

Gobindgunj.—The same as Motiharee.

Kessuaria and Modubun.—Mr. Weekes is making minute inquiries regarding the condition of these two thannahs. The poppy is said to be a failure, and lately unfavourable accounts of the rubbee have been received. The rahar has also been damaged by frost; a large crop of "kodo" and makai was gathered in these thannahs; perhaps 30 per cent.

Bettiah.—The accounts from this thannah have been all along comparatively good, *i.e.*, no such entire failure of crops as in some other thannahs has been reported. I would rank this thannah with the adjoining thannahs of Gobindgunj and Motiharee, and calculate 20 per cent.

Bagaha.—In this thannah distress will, no doubt, be greatly felt; it ranks as the second worst thannah in the district. I would calculate 35 or 40 per cent.

Lowrya—This is undoubtedly the worst thannah in this district. The rice crop failed entirely and there is no rubbee or poppy to speak of. I would calculate 50 per cent.

This caculation would be—

	Population.	Per cent.	
Adapore	114,561	30	34,350
Dhaka	230,484	25	57,600
Motiharee	134,621	20	26,920
Gobindgunj	141,986	20	28,380
Hessuria	150,863	30	45,240
Modubun	84,873	30	25,440
Bettiah	289,522	20	57,900
Bagaha	114,879	40	45,920
Lowrya	170,760	50	83,350
			405,200

In round numbers	400,000
At ¾th of a seer, deduct ¼th	100,000
	300,000 seers.

For two months full	600,000 seers.
„ three months, a half	450,000 „
„ two months, one-third	200,000 „
	1,250,000 „
Dividing by 40	31,250 maunds.
	30
	937,500 maunds.
Adding average of seven months for one month	133,928
	1,071,428 maunds.

4. Mr. T. Gibbon, the manager of the estates of the Rajah of Bettiah, a gentleman of great knowledge and experience, makes a somewhat more favourable statement as follows :—

Adapore	20	per cent. of the population will require assistance in some shape.
Dhaka	15	„ „
Motiharee	10	„ „
Gobindgunj	10	„ „
Kessuria	15	„ „
Modubun	15	„ „
Bettiah	20	„ „
Bagaha	50	„ „
Lowrya	50	„ „

In all 316,000 persons will require assistance at one time or another.

I anticipate—

¼ in February	79,000	persons average per diem.
½ in March	158,000	„
¾ in April	237,000	„
Full in May	316,000	„
„ in June	316,000	„
„ in July	316,000	„
¾ in August	237,000	„
¼ in September	79,000	„
	1,738,000	people.

or on an average per diem 217,000 persons for eight months at ¾th a seer per head, requiring 4,068 maunds a day (about), or 976,320 maunds in all.

5. The worst part of all is the Ramnuggur estate, chiefly comprising the Lowrya thannah. Mr. Howe, the civil officer there, expects that 60 or even 50 per cent. of the people may come on his hands at the worst season.

6. Mr. Vertannes, the Executive Engineer of the Gunduck Embankment, expects to have 20,000 laborers at work in the hot season.

7. Mr. Cooper, the Deputy Opium Agent, also a gentlemen of great experience, considered that in the thannahs of Kessuria and Modubun the assistance required might prove much greater than that above indicated.

8. In general terms it may be said that the rice crop is the staple product of that part of the district which may be defined by the Nepal frontier on the north, the Gunduck river on the west, the Bagmuttee on the east, and on the south by a line drawn straight on the map from Bagaha on the Gunduck to Dhaka Ramchundra ; that crop has failed, and the main food of the people there has been lost. In the rest of the district the spring crops are very poor. Besides these the people have had only the bhadoi, or Indian corn, which yielded but half the average, except towards the southern border, where the bhadoi crop was good.

9. These calculations are only anticipations which may fail to be realized; still they represent the best opinions that can be formed; and such opinions must be acted on now, otherwise the opportunity of providing the supplies will slip away.

10. On the whole I consider that one million of maunds of Government grain must be imported into this district by the 15th June, that is, before the setting in of the rains. It remains to be seen how this requirement is to be met.

11. The transport Agency at Patna, under Mr. Hewitt, have already sent on 215,000 maunds to arrive in the district by the 15th February.

12. The Collector is now concluding an arrangement with European contractors of proved

means and ability to cart not less than 50,000 maunds a week from Bunkur Ghât opposite Patna after the 15th February, which would give 200,000 maunds a month for 3½ months from 15th February to 1st June, or 700,000 maunds.

13. For the works on the Gunduck embankment, 24,000 maunds have arrived by the Gunduck river, and some further quantity is still in boats on the river. I believe that the total by river route will not exceed 50,000 maunds.

14. Thus the total Government provision may be set down at 975,000 maunds.

15. Then 150,000 maunds are being brought into the district by the manager of the Bettiah estates and by the planter resident in that portion of the district, which will come by the river route, and this supply will help to support those who might otherwise come on the hands of Government. If this quantity be considered together with the Government provision, it will be seen that there is a margin to ensure safety.

16. I believe that the Government provision, as above set forth, will suffice, inasmuch as, after the 15th May, the Gunduck will begin to rise, and will afford navigation to the neighbourhood of the most distressed localities, so that, if the land-carriage were to prove insufficient, it could be supplemented by water-carriage, or, if further supplies were still required, they could be obtained by river route.

17. I consider that the preparedness, which I have myself seen, of the transport arrangements, even to the remotest localities of distress, is creditable to the administration of the Chumparun district; and the Collector informs me that this is in a large degree due to Mr. T. Gibbon and to Mr. R. Lethbridge, both of whom will doubtless render still further public services during the coming crisis.

18. I believe that the arrangements of the carrying contracts, which I have inspected, are worthy of the confidence of Government.

19. I have instructed the Collector to have the transport routes examined, especially with a view to excavating tanks for watering the cattle.

20. I have accordingly to recommend that 50,000 maunds a week from 15th February may be sent forwards by Railway from Howrah for the service of the Chumparun district.

MINUTE by the Honorable SIR R. TEMPLE, K.C.S.I.—(No. 15, dated Camp Hutwa, the 10th February 1874.)

1. Having left the Chumparun district, I have to record briefly some general remarks regarding the condition of affairs there in reference to scarcity and relief.

2. There have recently been two falls of rain, amounting in various places to one inch or one inch and a half, even to two inches. The prospect of the spring harvest is much improved thereby. Much land is also being sown with such crops as cheena and moong, which will yield grain by the end of April, and afford some food supply by May. This supply may help to replenish the empty grain markets for some short period; perhaps for a month—some say for more than a month. There is much uncertainty as to the yield of this supplementary crop, which is sown largely when other crops fail, and but little in prosperous years. But it will afford some relief, and it will abridge somewhat the period of want. The recent rainfall, after the long drought, has raised the spirits of the people, and caused despondency to give way to undue hopefulness. More thoughtful people, however, advise me that the general situation, as previously apprehended, is not materially changed.

3. I believe that our precautions and preparations should go on without alteration or relaxation.

4. The local grain trade may do something to meet the demands of the central part of the district. But it is limited in its operations, and it will do little or nothing for the supply of those tracts along the north and north-western borders of the district which have lost their sole support from the withering of the rice crop. Neither at Motiharee nor at Bettiah (the two principal places of the district) could I find even one grain dealer of any capacity or position.

5. The district authorities do not give a favorable account of the public spirit and disposition of the zemindars. I have not heard of one who has behaved creditably. Three of the principal zemindars appear, indeed, to have evinced a disposition the reverse of satisfactory.

6. On the other hand, the Rajah of Bettiah personally manifests a desire to behave well. His European manager (Mr. T. M. Gibbon, an able and excellent man) has arranged to import 150,000 maunds of grain for the Bettiah estate, and will arrange other measures of relief. But the Rajah's treasury is impoverished, and his finances are embarrassed, and I by no means undertake to say that the above measures, though *per se* considerable, are really commensurate with the moral obligations of the Rajah, or with the size of his estates.

7. The Rajah of Ramnuggur, the owner of a fine zemindaree, with a population of at least 150,000 souls, was reported to me as having done nothing. He afterwards came to Bettiah, and agreed to import grain, to give advances to his ryots, and to stand security for advances to be made to them by Government. If he fulfils this agreement, I may yet be able to write in favorable terms regarding him.

8. I have met most of the European Indigo Planters, who are so numerous in this district, and have received from them cordial assurances of help in the distribution of relief.

9. In the eastern part of the district many complaints of scarcity and distress were made to me by villagers. But in the western parts of the district, where matters are so much more

threatening, the people preserved a patient and uncomplaining demeanour, which can, I think, be attributed only to the sight of the Government preparation, and the conviction that succour is at hand.

10. All along the northern frontier there will be very serious scarcity, beginning at the eastern corner, and becoming worse and worse westwards, till the north-western corner is reached, where the failure of food supply is utter, and where the case will be formidable in extent and in degree.

11. In consultation with the Collector I have arranged the additional Sub-divisional Committees and the Sub-Committees with a view to the effective administration of relief in these tracts, and have authorised the immediate erection of temporary accommodation for the European officers. There will be three Sub-divisional Committees and five Sub-Committees, all under the District Committee, which has been duly formed.

12. Some of the European superintendence required is already available. If more European officers are found to be needed, I will make a further communication.

13. The European officers in Ramnuggur Sub-divisional Committee—they will be four in number, including Mr. Howe, of the Civil Service—will be resident all through the rains in a very isolated and insalubrious situation. This cannot be avoided, and they are fully aware that, as regards famine in Chumparun, the officers at Ramnuggur occupy the post of honour. I am in communication with Dr. Francis, Deputy Inspector General, regarding the provision of medical aid.

14. Relief works are being commenced in every part of the district. These chiefly consisted of roads. The Collector had doubts as to whether village tanks could be regarded as relief works. I have ruled that they are to be so treated, and that the excavation and clearing out of old village tanks afford the very best means of relief.

15. These works were largely attended up to the day when the rain fell. Since that day the attendance has fallen off, as the people have gone away to sow the supplementary crops—"cheena," "moong," &c.

16. The new Executive, constituted in this district under orders of the Lieutenant-Governor, will prove very useful in the supervision of relief works. I met the new Executive Engineer, Mr. Murray, of Motiharee, and explained to him what was expected of his Department. I authorised the construction of a temporary office building for him. He complains of the want of good overseers. This complaint is, however, universal, and I fear that there will be a deficiency. However, I shall communicate further with the Superintending Engineer on the subject when I return to Patna.

17. Incendiarism, robbery, and crimes, which usually break out in times of scarcity, are reported as becoming rife along the northern border. I have, therefore, requested the Collector to entertain additional police up to the strength of 80 men, including petty officers, to watch incendiarism and to guard the grain depôts.

18. Many representations have been made regarding the danger of the seed-grain being used up for food, and the necessity of seed-grain being stored by Government. The matter is one of some difficulty, but, after consideration, I hope to arrive at some definite conclusion regarding it.

19. It seems probable that the sale of Government grain in the Ramnuggur tract cannot be much longer delayed. I have instructed the district authorities on the spot to adopt this measure on any day when they find that safety demands its adoption. Meanwhile I have authorised them to advance grain to ryots on security being given, either on the Rajah's security or on the hypothecation of the ryots' land with the Rajah's consent; also to pay the relief work laborers in kind.

20. The utmost vigilance has been enjoined on all the district authorities regarding the immediate relief of cases of individual distress.

21. There are no signs yet of the temporary telegraph lines from Mozufferpore viâ Motiharee to Bettiah and Ramnuggur. I have again urged the need of expedition on the attention of Major Mallock, who has been deputed by the Director-General to supervise works.

22. I have inspected the new Gunduck embankment on the east or left bank of that river. It will be very beneficial as protecting the rice-lands from excessive inundation. This may be inferred from the experience of the long existing embankments on the western or right bank. I am not equally sure of the need for the irrigation channel proposed to run marching with the embankments. Perhaps the money appropriated for the channel might be better spent in other ways. If the channel be not made, however, it will be necessary to make sluices and openings in the embankments to let out water for irrigation. The embankment itself will give employment to 20,000 labourers during the worst season along a line of 70 miles in length.

23. I have enquired particularly into the supply of boats and the navigable channel of the Gunduck. This navigation is regarded by the Chumparun authorities as a valuable resource. It is a resource of some importance, but the boats are not numerous nor capacious, and the current is strong in the rainy season, and my information is not such as to warrant the abandonment of our land carriage on this occount.

24. My Minute No. 13 of the 8th February shows that we expect to have to assist 400,000 persons in some shape or other during the worst season, and that we have arranged to import one million of maunds into the interior of the district by the beginning of June, to which may be added the 150,000 imported by the Rajah of Bettiah.

25. I had the satisfaction of seeing that the carriage contractors have got their system into

effective working order. I saw strings of Government grain carts wending their way among the villages, especially among the tracts of the remote Ramnuggur estates. This is, indeed, exactly what I desired to see.

26. The local resources in carts and bullocks are large. The contractors are able to obtain without any difficulty 6,000 carts for the performance of their contract. Much of the local carriage, however, will cease to be available as soon as the indigo-manufacturing season commences in June.

27. At present the contractors are taking delivery of the grain at Bunkur Ghât, opposite Patna, and follow the route viâ Mozufferpore and Bettiah to Ramnuggur. I have, however, approved of their trying for a part of their contract an alternative route viâ the ghât opposite Dinapore, and thence through the Sarun districts, Gobindgunj on the Gunduck, and thence to Bettiah. This will relieve the pressure now beginning to be extreme at Bunkur Ghât.

28. I trust that it will not be necessaay to indent on the North-West Provinces for carriage for the service of the Chumparun district.

29. The contractors state that at present the route is well supplied with water, save in one place, to which the attention of the Collector has been drawn. Instructions have, however, been repeated to the effect that tanks are to be excavated at the halting places.

30. The Collector and his officers evince every anxiety to understand and carry out the instructions they receive in reference to the impending scarcity.

No. 300 A., dated Calcutta, the 6th February 1874.

From A. Mackenzie, Esq., Junior Secretary to the Government of Bengal, to the Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce.

I am directed to forward, for the consideration of the Government of India, a Minute by Sir Richard Temple on the subject of the supply and transport of grain to the Tirhoot district, together with copy of a note by the Lieutenant-Governor.

No. 20, dated Durbhanga, the 1st February 1874.

From C. E. Buckland, Esq., with Sir Richard Temple, on Special Service, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I am directed to submit copy of a minute recorded by Sir Richard Temple regarding the transport arrangements for the Tirhoot district, and to express his hope that the arrangements therein described may meet with the approval of His Honor the Lieutenant-Governor of Bengal.

Minute by the Honorable Sir Richard Temple, K.C.S.I., dated Camp Durbhunga, the 31st January 1874.

No. I.

Having visited the Tirhoot district, seen some of the tracts most affected by drought, conversed with the Commissioner and the Civil Officers, and with most of the principal non-official residents, European and native, I desire to state the amount of Government grain which we should be prepared to bring into the district, and the arrangements for transport from the left bank of the Ganges into the interior.

The principal relief officer, Mr. Worsley, calculates the amount of grain required for his operations at four millions of maunds, or 148,200 tons.

The Collector, Mr. Halliday, estimates 3,500,000 maunds, which estimate is approved by the Commissioner, Mr. Steuart Bayley.

It is borne out to some extent by Colonel Burne, manager of the Durbhunga Estate, which has a population of half a million of people, situated in the most drought-stricken parts of the district. He states the requirement for his portion of the district at 740,000 maunds.

Mr. Macdonnell, civil officer of the Dhurbhunga subdivision, expects that, at the worst period, 400,000 persons will come on the hands of Government in his sub-division.

Mr. Cochran, civil officer of the Mudhoobunee sub-division, states his fear that at the worst period more than 400,000 persons will require relief in his sub-division in some shape or other from Government.

Mr. O'Reilly, the civil officer of the Seetamurhee sub-division, informed me that he expected to have 150,000 persons on the hands of Government during the worst months.

There will be distress throughout the north-west corner of the Tajpore sub-division. The Collector thinks that 30,000 persons may here come on our hands.

In the rest of Tajpore and in the two remaining sub-divisions of Hajeepore and Mozufferpore there is not likely to be any general distress. But in Mozufferpore there will be some thousands of persons seeking relief.

Thus the estimates of local officers give about one million as the number of souls who will come on our hands in the Tirhoot district out of a total population of upwards of four millions, or 25 per cent.; and this is the district most severely affected in the whole Behar province.

The estimate of a million of persons corresponds very much with the estimate of 3½ millions of maunds, or 129,700 tons as separately made by the Collector.

These statements represent nothing more than anticipations regarding subjects wherein certainty is not possible. But the time has now come when we must make the best estimate we can of the amount which will have to be transported into the interior from the left or north bank of the Ganges.

Looking at all the statements together, I consider that it will not be safe to provide carriage for less than four millons of maunds of food-grain, or 148,200 tons, which gives a margin over and above the Collector's estimate. The worst two months will be May and June, though the month preceding that period (April) may be bad: and the three months subsequent, July, August, and September, will almost certainly be so. Up to July land carriage only will be available. From July there will be help from water carriage, but the land carriage will fall off, and it would be preferable to bring the whole, or four millions of maunds, into the northern part of the district by the 15th June, the distances for inland carriage being from 40 to 80 miles from the Ganges.

Such being the present requirement, I have to see how it is to be met.

It was ascertained at Patna that the transport agent there (Mr. Hewitt) had despatched from there 2,00,000 maunds to arrive in the distressed sub-divisions of Tirhoot by 15th February, and had arranged to send from that date 50,000 maunds a week, which arrangement, would place 8,00,000 maunds in those sub-divisions by the 15th June, making up one million in all.

The Court of Wards (Durbhanga) has already arranged to bring 2,00,000 maunds.

The amount for which cash advances have been granted by Government to zemindars, indigo planters, and others, on condition that they bring the grain up in time, may be taken at 50,000 maunds.

The Collector, under direction of the Commissioner, has just made contracts with trustworthy European contractors to bring up 1,10,000 maunds a week from Chumpta Ghaut opposite Barrh from the 15th February, which arrangement up to 15th June would place 17,60,000 maunds in the distressed sub-divisions.

I have invited tenders, on the suggestion of the Lieutenant-Governor, North Western Provinces, for contracts, to be concluded there, to carry 2,00,000 maunds a week from left bank of Ganges to these sub-divisions from 1st April to 15th June, which arrangement, if effected, would bring in two millions of maunds.

These figures give the following results up to 15th June:—

	Maunds.
Patna Agency - - - - - -	10,00,000
Court of Wards - - - - - -	2,00,000
Zemindars, indigo-planters, and others - -	50,000
By local contracts - - - - -	17,60,000
By North-West contracts - - - - -	20,00,000
Total - - - - -	50,10,000

These arrangements will, if successful, provide more than the four millions required by 15th June, and will leave a fair margin to cover those partial failures which must be expected in operations of this kind.

I have provided a reserve of carts to be at disposal of the Commissioner in event of need or accident, by ordering purchase of 500 pair of draught-bullocks in Nepaul, the carts to be made in Tirhoot; 500 carts with bullocks will be purchased on the frontier of Chumparun district, or failing that, the bullocks will be purchased at Shahabad cattle fair, and carts made up in Tirhoot; 500 carts with bullocks are being obtained through the Government of the North-Western Provinces. Thus the reserve will be made up of 1,500 carts drawn by bullocks.

I have further, at the instance of the Commissioner and the Collector, recommended the laying down of a tramway from the left bank of Ganges to Mudhoobanee viâ Durbhanga to relieve the country carriage during the hot season.

Again, the Commissioner hopes to conclude a contract for the carriage of 50,000 maunds a week from 15th February from the Ganges opposite Monghyr to Durbhanga. This arrangement, if successful, would place 800,000 maunds in the distressed sub-divisions by 15th June, and may be regarded as a reserve to make up for deficiencies in other parts of the general plan.

We cannot be sure that the contracts asked for in the North-West Provinces will be taken up. If they are not, we have still time to purchase or hire large quantities of carriage in those Provinces.

Also, further purchases of draught-cattle can, if necessary, be probably effected in Nepaul or elsewhere, the carts being made up in Tirhoot.

We can, if absolutely necessary, obtain pack-bullocks from Central India; but we are averse to that plan if it can be avoided, because of the difficulty of fodder.

We can, as a last resource, obtain camels through the Commissariat at Agra; but the expense and the distance detract from the value of this plan.

By the advice of the Commissioner and the Collector, I have sent a requisition to the Government, North-Western Provinces, for 50,000 maunds of cotton seed (highly recommended as fodder), to be sent by railway to Patna; and a similar requisition to the Chief Commissioner, Central Provinces, or 100,000 maunds in all. I am assured by the best informed persons in Tirhoot, that this supply will be most useful to the transport service during the hot months.

By excavation of wells and old tanks along the routes of the grain transit, the Commissioner and the Collector hope to provide drinking-water for the cattle employed in the transport. They have arranged their relief works with this view.

The resources of the Tirhoot districts in carriage are more than ordinarily great. The indigo-planting and manufacture cause a large number of carts and bullocks to be kept up by the ryots and villagers. There is a large export trade, in prosperous years, of produce from the district (estimated, inclusive of rice, at five millions of maunds annually), which is chiefly carried to the Ganges by carts. There are many European non-official gentlemen resident in the district engaged in trade or industry. Thus it becomes possible to effect contracts, the execution of which can be relied upon to a considerable extent. The Commissioner and the Collector have very properly decided to resort to contracts for carriage, and not to collect carriage by direct agency of police or other establishments.

Lastly, if notwithstanding all these precautions, something more should be required after 15th June, there would still remain two more months up to 15th August, during which supplies could be brought up to distressed districts by water carriage.

These transport arrangements hold good only as far as the principal points within the distressed tracts. There will still remain detailed arrangements for the conveyance of grain to the villages. These will be made separately.

It is assumed that the railway will bring the requisite quantities of grain to the south or right bank of the Ganges. There will remain the provision of boats for crossing the Ganges; and for this purpose from 400 to 500 boats will suffice. This number Mr. Hewitt will certainly be able to obtain, and he has been instructed accordingly.

According to the above estimate, I have by the advice of the Commissioner and Collector, to recommend that 2,00,000 maunds a week may be sent forward from Calcutta for the service of the Tirhoot district, consigned to care of Mr. Hewitt.

I hope that the arrangements explained in this minute will not be thought larger than what the occasion demands. Unless we act effectively now regarding transport, the opportunity for action will pass away. The tracts most severely affected by scarcity happen to be those which are the most distant, the most isolated, and the most helpless. In most parts of Mudhoobanee and in many parts of Durbhanga, the September crop is always small, consequently the distress will be more than ordinarily protracted, will last through the autumn, and will not disappear at the earliest till December. And during the rainy season the rivers in that quarter (the Tiljooga, the Bolan, and the Kumla) are navigable only for small boats.

R. Temple.

Note on Sir R. Temple's Minute regarding the Supply of Grains for the Tirhoot district.

This Minute only reached me very late yesterday evening. I think that it should be at once laid before the Government of India, and therefore submit it early this morning with this general note, without delaying to refer to recent figures.

I confess that the estimate now made exceeds what I had thought that Government could undertake in a distressed district, and also exceeds my estimate of our powers of transport. I have always supposed that there must be some stocks; that the year's produce, small though it be, will one way and another last for some time; that private trade will do something; that something will be saved by pinching, and a resort of food not usually consumed; and that Government can only supply the margin left when all these resources are taken into account. Admitting that the people of this country are more self reliant in the matter of food, and less inclined to throw themselves permanently on Government or the public than in some other countries, I yet feel that this may, to some extent, be due to the fact that they have been obliged to help themselves in default of other means. And though all humane men would be glad if it were possible to maintain the people in full comfort and health in times of scarcity the attempt to do so might not only prove not only an impossible task, but if it were possible it might have the effect of rendering the people much less self reliant than hitherto. I believe, then, that it is necessary that we should hedge in our aid by severe tests; that painful though it be, we cannot in practice do more than so much as will avert actual starvation, while the people must still submit to severe privation and suffering on such an occasion as that which has overtaken us.

I am certainly not one of those who place an undue reliance on private trade for imports of food from abroad into Bengal. I have had no reliance whatever on any such trade. But for the distribution of food within this country, I have throughout believed that private trade will, in most quarters, do much, and should be permitted to do so, though there are some limited tracts in which it fails, and where Government must undertake almost the whole task. Wherever private exists or can be developed, I have not the least doubt that it acts in every way more beneficially than the operations of Government.

Now as regards a great part of Tirhoot private trade cannot be overlooked. Patna is in fact at this moment overflowing with private grain seeking an outlet, and if that outlet be found, farther private supplies are forthcoming in large quantities from the Punjab and the North-Western Provinces. Private trade certainly reaches Mozufferpore. We learned from the last report that 20 new grain shops had lately been established there by outside dealers. And by giving facilities for carriage and advances, I cannot doubt that private trade may be led to do much in Central and North-Western Tirhoot.

The last report stated that 200,000 maunds of grain had lately been imported from Nepal into the Seetamurhee division alone. In other quarters, by driblets, something, no doubt, finds its way into the distressed country. We have always then contemplated that the route from Patna by Mozufferpore should as much as possible be left open to private traffic, and that this traffic should be, as much as possible, stimulated by advances. I have relaxed the rule which originally required persons taking advances to import grain from a distance so far that the Tirhoot and other local dealers may have advances for importations from Patna and other railway stations. I cannot but think that Sir R. Temple has much under-estimated what may be done by these advances when he puts the amount to be obtained by this means at 50,000 maunds only. I hope it will prove to be very much more.

So much I have said regarding private trade merely to clear the ground; but I most entirely agree that we must not too much rely on private trade. For north-east Tirhoot, I believe we must ourselves undertake most of the work.

The tract in Tirhoot which chiefly depends on rice, and where the failure has been most excessive, is not the whole, but speaking roughly about half the district. In this view the estimate of a million people on our hands assumes nearer 50 per cent. than 25 per cent. of the population of the most distressed tract—a very liberal estimate.

Accepting that estimate of the number to be supported, I still cannot but think that the supply of food for them is estimated too liberally. Sir Richard Temple says three and half million maunds tallies with the estimate of one million people. To be safe, he says four million of maunds. This implies a provision of three and half to four maunds per head. Now we have estimated the food required for the whole support of an adult male to be ¾th of a seer or 1½lbs. per diem, viz., 1 lb. of rice or wheat and 1½ lb. of pulse, vegetable, fish, &c. The failure has been chiefly a rice failure; the pulses are good. The present rain will allow some quick-growing grains and vegetables to be sown, fish, milk, &c., are still in the country. Many classes habitually eat meat even in the shape of dead bullocks, mice, &c. If Government supplies 1 lb. per head of rice or other grain, I think the people may find the remaining quantity of food necessary to subsistence; and the above estimate is for an adult male, and if we extend it to the whole population, men, women, children, and infants, it becomes very liberal. I have been inclined to think that if, infants and all included, we supply a maund of 82 lbs. for 90 days, or three months, that eked out in other ways will probably suffice. Certainly 1½ maunds or 123 lbs. for four months would be a very ample provision.

As regards the time for which provision must be made, it must be remembered that it is not till comparatively late in the season, that the largest numbers come on our hands; then, if the people survive the worst months before the rains without being too entirely reduced; they gradually withdraw to cultivation. Tirhoot is a moist district; if the present genial fall moistens the ground well, and augurs the early rain-supply which very frequently follows a bad year, a good deal may be grown even in the hot months, and what is called the bhadoie, *i.e.*, the fast-growing maize, murwa, &c., come in in August. I have been inclined to think a four months' supply for the distressed population about a fair estimate, especially if we have some further reserve for the rains. That four months' supply would be 1½ million maunds.

At any rate it appeared to me that if we could secure two million maunds in the tracts distant from river and rail before the rains, and arrange for a reserve which could be thrown in early in the rains in case of necessity, we should have done our duty fairly by the Tirhoot district.

Now as regards transport. For some time I was not satisfied that so much in proportion had been done in Tirhoot as in some other districts; less has been despatched to Tirhoot than to Chumparun, and Tirhoot is certainly the district regarding which I have felt most cause for anxiety. Latterly things have got into better train, but seeing all that has passed, I was inclined to feel satisfied if the arrangements were such that 100,000 maunds per week were actually and without fail despatched by the direct land routes to the north of Tirhoot, the routes being so arranged as to leave room for a good private traffic on the Mozufferpore route. Latterly the local officers had promised more, and I have continued for some time past very distinctly to say that the need of the Tirhoot district exceeded the means of carriage on which we can rely, and that the local officers were simply to send forward as much as they probably could, any excess over my minimum demand being so much gain. Though they have held out hopes of more than the rate I have stated, still, looking to previous shortcomings, I had not ventured recently to calculate on more than 100,000 maunds per week by the direct routes. At this rate the supply would stand somewhat as follows:—

	Mds.
Despatched by Hr. Hewitt to end of January - - -	200,000
I put aside grain imported on advances as private traffic, but there is, in addition to the above despatch, imported by local dealers for Government - - - - - -	45,000
To be despatched in three months from 1st February to 1st May, say 13 weeks, at 1,00,000 maunds per week - - -	1,300,000
May be despatched in May, so as to be placed before the rains, say	300,000
Arranged by Durbhangah estate (a quantity which may be increased)	200,000
	2,045,000

This gives upwards of 2,000,000 maunds provided before the rains, exclusive of what I may call reserve side routes. These latter are the routes by Monghyr and the Ghugree rivers which are being tried, and the route by the Bhaugulpore district and Soopool, whence we propose to assist Tirhoot if we can supply anything in excess of the needs of Soopool. I fear, however, we cannot calculate on much from this quarter.

I would, however, make sure that we have in boats taken as far up the rivers as they can get a very considerable supply, which would be ready to go forward to Durbhangah and other points the moment the rivers open, and further supplies would be stored at the riverside stations. In this way I calculated on our being able to supply two millions of maunds (or half what Sir Richard Temple proposes) before the rains, and say another million of maunds in the early months of the rains if need be. If the rains are long delayed we can continue to cart; if they come early, our water arrangements would come into play early.

According to Sir R. Temple's statements it appears that the local officers now calculate on forwarding by local carriage much more than I had ventured to calculate on, that is, they have arranged to send forward 160,000 maunds per week. I can only say that, if they really can do so, I think they should. It will all be clear gain to get forward as much as we can as soon as we can. Now that we are a good deal relieved as regards our fears for some other districts, we can, I believe, supply for Tirhoot this amount of grain or rather the whole 200,000 maunds per week, at which Sir R. Temple puts the present demand. But when we come to the additional supply of another 200,000 per week from 1st April, by means of carriage to be obtained from the North-Western Provinces, I confess I have the greatest doubts of the practicability of the measure. I doubt if the railway could supply so much to Tirhoot with due regard to the needs of other districts. I still more doubt if the enormous supply of carts from the North-Western Provinces, which is calculated on, is a possible thing. I understand that Sir R. Temple has contemplated obtaining 20,000 carts from the North-Western Provinces. To carry 200,000 maunds per week would require at least so many carts of a description superior to the ordinary 10-maund carts of our districts. We must allow at least ten days for each trip; for more distant depôts a fortnight, besides an allowance for reserve, break-downs, and rest. I am not sure that we have ever in India put 20,000 soldiers into actual active moment in one field of operations at one time. An army of 20,000 carts brought from a distance, with bullocks and attendants and all, would be an astounding undertaking. Whence are they to come? How are they to be brought down? and where are men and bullocks to get food and provender and shelter? And if it were done, this would be for one large district alone, without calculating the needs of other districts. My own view is, that if from the neighbouring districts of the North-West Provinces we can get carriage sufficient to assist and secure the immediately adjoining districts of Chumparun and Sarun, we shall do very well.

For Tirhoot I am inclined to think that if local means can do all, or nearly all, that Sir R. Temple calculates on obtaining from them, we may be satisfied with that supply with only moderate assistance from the outside for special purposes.

6th February 1874. G. CAMPBELL.

No. 474.

From ARTHUR HOWELL, ESQ., Deputy Secretary to the Government of India, to the SECRETARY to the GOVERNMENT of BENGAL.

Department of Agriculture, Revenue, and Commerce.

SIR, Calcutta, the 13th February 1874.

I AM directed to acknowledge the receipt of your letter, No. 300A, of the 6th instant, with enclosed note of the Lieutenant-Governor upon a minute by Sir Richard Temple, regarding the supply of food in the Tirhoot district.

2. These documents have been laid before the Government of India, and the Governor General in Council cannot but express the disappointment which he feels at the local officers having for so long neglected fully to appreciate the requirements of those parts of the country, and thereby occasioned the postponement to the present time of arrangements for transport which should have been made many weeks ago.

3. Although it may hereafter be found that the estimates now sent forward are somewhat in excess of the actual requirements, yet, bearing in mind that those estimates have been made by the local officers who are immediately responsible, and moreover, that subsequent information has been received to the effect that a considerable number of people in Nepaul may not improbably come upon the hands of the British Government, the Government of India think that Sir Richard Temple has exercised a wise discretion in recommending that four millions of maunds of grain shall be provided for the district of Tirhoot, and that arrangements should be made for the transport into the interior of a larger quantity, in order that the probability that part of the transport arrangements will break down may be guarded against beforehand.

4. The Lieutenant-Governor expresses some doubt as to the advantage of obtaining the supply of transport for which tenders have been called for from the North-Western Provinces. His Honor will be glad to hear that Mr. Molesworth has reported that a tramway can be constructed from Chumpta Ghât to Durbunga, and that orders have been given for the immediate commencement of the work. This may perhaps modify the views of Sir Richard Temple as to the requirements for transport after April, when the contracts contemplated will commence; but the Government of India desire to comply with the requisitions which Sir Richard Temple may make after visiting the localities and conferring with the local authorities.

5. From information given by Sir George Campbell to the Viceroy, His Excellency believes that the Government of Bengal have taken measures to comply with Sir Richard Temple's request, that 200,000 maunds a week should be sent from Calcutta for use in the district of Tirhoot.

I have the honor to be, Sir,
Your most obedient servant,
(Signed) A. Howell,
Deputy Secretary to the Government of India.

No. 564—S.R.

From the Officiating Secretary to the Government of Bengal, in the Statistical Department, to the Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce.

Scarcity and Relief.

Sir,

Calcutta, dated 9th February 1874.

Minutes dated 1st and 5th February, by Sir R. Temple.
Note of points settled at Durbhangah by Sir R. Temple with the Commissioner of Patna.
Supplementary Minute by Sir R. Temple dated 6th February.
Copy of letter from the Bengal Government to the Commissioner of Patna.

I am directed to submit copies of the papers marginally noted received from the Patna division. Sir Richard Temple's orders and instructions, for the completeness of which the Lieutenant-Governor is very much obliged, have been communicated to the local officers. At the same time the Lieutenant-Governor has considered it right to draw special attention to the extreme urgency of some of the points Sir R. Temple has so properly taken up.

2. There is one point on which the Lieutenant-Governor desires to solicit that orders may issue and action may be taken at once, and that is in regard to the four miles of double line tramway required at Champta Ghât opposite Barrh. I am to solicit that, if the major scheme of a tramway from Champta Ghât to Durbhanga be set aside, immediate orders may issue for making and stocking with wagons (the latter is as important as the former) four miles of double line from Champta Ghât across the sands to such terminus as the local officers may direct.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 37, dated Camp Seeraha, the 5th February, 1874.

From C. E. Buckland, Esq., with Sir Richard Temple, on Special Service, to C. E. Bernard, Esq., Officiating Secretary to the Government of Bengal, Statistical Department.

I am directed to submit copy of a minute (No. 10) recorded by Sir Richard Temple, reporting the state of affairs, and his proceedings in the Tirhoot district, for the information of His Honor the Lieutenant-Governor.

No. 10.

Minute by the Honorable Sir Richard Temple, K.C.S.I.

Having visited the sub-divisions of Durbhunga and Mudhoobunee, which in respect to relief operations will probably be the heaviest in the Patna Division, and where the brunt of the whole work will mainly fall, I have to record the following remarks in reference to the general instructions forwarded under cover of Government Circular No. 2678R of the 26th ultimo.

2. Both these sub-divisions will be fit places for carrying out the instructions in Rule I., Part I., for having more than one sub-divisional committee.

3. Under Rule 4, Part I., the Collector should be requested to state the places where he recommends such additional sub-divisional committees to be organized. I consider that there should be one such additional sub-divisional committee established in Alapore, the eastern part of the Mudhoobunee tract, and one at some point in the south-eastern part of Durbhungah tract. A selected civil servant should be appointed Chairman of each of these additional sub-divisional committees. Thus there would be four sub-divisional Committees in the two sub-divisions. If the Commissioner desires it, I will endeavour to obtain the services of any officer whom he may name. But it is essential that the officer should be specially selected for the duty.

4. The sub-committees mentioned in Rule 7, Part I., will be numerous in both these sub-divisions. I regard this as a matter absolutely essential to success. The area of each should be divided into circles. From the centre of each circle the radii should be from twelve to fifteen miles long, so that the officer resident at the centre should be able to frequently inspect every

village. The officers in question should be European if possible; failing that, however, a selected Native may be appointed. I apprehend that ten such circles will be required in Mudhoobunee, and twelve or thirteen in Durbhungah, inclusive of circles in which the sub-divisional committee might be situate. The determination of the exact number is left to the discretion of the Commissioner.

5. A selected European officer should be appointed on each circle, and house accommodation should be at once provided for him. In Mudhoobunee I see that houses belonging to the Durbhungah Raj, and other houses, may be available; and there may also be some available houses in the Durbhungah sub-division. But the Commissioner is authorized at once to cause such bungalows as may be necessary to be constructed so as to be ready by the hot weather.

6. The Commissioner is requested to see at once what staff of officers he has now available for these sub-committees. I shall be happy to apply for the services of any officer, civil, military, or uncovenanted, whom he may name as suited for this important duty.

7. I shall be glad to receive by early date lists of the gentlemen proposed for the sub-divisional committees and the sub-committees in both these sub-divisions, with the names of the places where their head-quarters are to be.

8. It will be the particular duty of the sub-committee to see to the persons described in in Part II., Rule 3, Clause *f.* I fear that many Tirhootea Brahmins will have to be included in this provision, but great caution should be exercised in admitting such persons.

9. I apprehend that in both these sub-divisions many localities will come under the provisions of Clause *g*, which authorizes the sale of food from Government stores. The Commissioner will authorize the Collector to declare the places where and the date from which these provisions are to come into effect. It will be desirable to postpone the date as long as may be safely possible.

10. The attention of each sub-committee should be directed to Clause *h*, which provides for establishment of relief centres in every village where severe distress may exist. It will be an essential part of the officers' duty to frequently inspect such villages, and see that all persons justly needing relief are relieved without any exception.

11. In conclusion I would impress on the local authorities that, in order to prevent loss of life in these two sub-divisions during the worst season, the organization of the sub-committees with manageable circles is absolutely necessary.

Camp Durbhungah, the 1st February 1874. R. TEMPLE.

COPY forwarded to S. C. Bayley, Esq., Commissioner of Patna, for information and guidance.

Durbhungah, the 1st February 1874. C. E. BUCKLAND.

Dated Camp Seeraha (Border of Chumparun and Tirhoot districts), the 5th February 1874.

MINUTE by the Honorable SIR RICHARD TEMPLE, K.C.S.I.

Having left the district of Tirhoot and entered that of Chumparun, I desire to record the following remarks for the information of the Government of Bengal.

2. I have visited five out of the six sub-divisions of the very extensive district of Tirhoot, the Tajpore sub-division alone remaining unvisited; and I have had the advantage of meeting all the principal residents of the district, Native and European.

3. All the orders at present required, both as regards inland transport of grain and the formation of sub-divisional relief committees and sub-committees, have been given. But hereafter many supplementary orders will be required as matters advance.

4. The sub-committees throughout the Durbhunga and Mudhoobunee sub-divisions especially, and in part of Seetamarhee, will be numerous. For each sub-committee a European officer will be needed. Thus the staff of officers will require strengthening. Upon these points separate communication will be made. But I trust that only such officers may be despatched for famine work as may be selected for their aptitude. Indifferent men, if entrusted with such duty, will prove worse than useless.

5. I am highly satisfied with the district authorities generally in respect to relief business. They evince a zealous and intelligent appreciation of their duties, and merit the confidence of the local Government. To this, however, there is one exception regarding which I have written separately.

6. The presence of so large a body of indigo planters is a great advantage at the present time, both as respects the taking up of contracts for carriage and the distributing of relief. All the planters whom I meet give me cordial and unhesitating assurances that they will do their best to help in distributing relief among the villages with which they have connexion or relation.

7. The zemindars seem generally to be exerting themselves in the way of executing village works, tanks, and the like. I have suitably exhorted every zeminder whom I have met.

8. The Durbhanga raj has done something in the way of supplying grain and in executing relief works. But without any disparagement of its exertions, I do not consider that the raj has done enough as yet. I have impressed this view on the raj officers, and asked them to give large help in providing carriage, which I trust they will do.

9. The share which the raj has taken in constructing roads is very creditable. The raj Engineer, Mr. Stevens, deserves particular commendation.

10. The district generally is well provided with kucha roads, which is a great advantage at the present time. There is, and will be, difficulty in respect to drinking water for transport cattle along the main lines of road. But water, even in this year of deficient moisture, seems to be tolerably near the surface; so I hope that this difficulty may be remedied.

11. The cattle of the district are as yet in more than ordinarily good condition, having been fed on the stubble of the withered rice crop. The stubble has been largely stacked in most parts of the district. In some parts, however, I am informed that this precaution has been neglected by the people, and that some waste has occurred.

12. The European carriage contractors seem to think that their cartmen will be able to manage to scrape together fodder for the draught bullocks even in the hot weather. Looking to the uncertainty of this, and to the fatal consequences of a failure at the critical season, I am endearouring to lay in a large supply of reserve fodder at Patna.

13. The golas of grain depôts have been prepared all over the district, and the stocking of them with stores is proceeding rapidly. The eyes of the people seem to be much fixed on these depôts, and anxious inquiries are made as to when the stores will be opened. Every one who so inquires is told that the opening will be postponed so long as may be safely practicable.

14. The best informed opinions agree that the state and prospects of affairs are much worse now than in 1866 as regards the Durbhanga and Mudhoobanee sub-divisions, but better considerably as regards the Seetamarhee sub-division.

15. Several planters of long experience have told me that they had in the early part of the winter despaired of the safety of the lives of people. But when they hear of the arrangements which are being made by Government they express confidence, but also surprise, at the extent of the efforts. They however consider that nothing short of these efforts would suffice to save the district from serious mortality.

16. All European residents express confidence as to a sufficiency of carriage forthcoming. Notwithstanding that, however, I consider it most desirable to introduce a certain amount of carriage from the North-West Provinces, which I am accordingly endeavouring to arrange.

17. The native merchants and bankers of the district seem to me to be generally deficient in enterprise and public spirit. Few of them, however, are of sufficient calibre for large undertakings. The grain trade of the district has hitherto been one of export only; and it has not caused the growth of large local dealers. The Patna merchants buy up the crop from the producers. The producer sends the grain to Patna, where the merchants take delivery. Such is the description given to me. The large merchants might no doubt import now, if they were so minded; but they seem not to see their way to sending rice at a profit: they dread the cost of carriage and the distance of the localities, and they keep their grain at Patna.

18. The universal opinion in Tirhoot seems to be that neither the Patna merchants nor the Tirhoot merchants will or can supply in any large degree the wants of Mudhoobunee and Durbhunga and of the northern half of Seetamarhee. In the rest of the district (about two millions of population) the necessities will be on a more manageable scale; and there private trade will, I trust, do all, or nearly all, that is required. In the distressed tracts (somewhat over two millions of population) private trade will do a little, and the people certainly have stocks (though nobody can say exactly how much), and thus full fifty per cent. even of this section of the people may live without Government help. But the other half, numbering full a million persons, will be beyond the reach of trade, and will come in one way or other on the hands of Government. Such is the result of the best opinions, both official and non-official collated to the utmost of my care, and upon that basis the general arrangements are being framed. We cannot depend on the case being better than this. It may become worse of course; and with this view in all our arrangements we shall provide a margin for safety.

19. The consequence practically is, that we expect to import four millions of maunds of Government grain into the districts, and to insure its being carried inland without fail. We try to provide carriage for five millions. The programme of dates, despatches, and consignments is arranged with a view to the four millions of maunds being laid down in the distressed districts by the middle of June.

20. I think that zemindars may be induced to help their tenants to a large extent: also, that grain-dealers in northern borders of Tirhoot will take advances to obtain grain from Patna. They have been duly invited to do this.

21. I regret that I cannot gather much hope from the district officers of any extensive emigration from Tirhoot to Burmah. Their attention is however being given to the subject.

22. The temporary telegraph lines to the relief centres will augment our administrative power. I earnestly hope that the tramway northwards from Barr to Durbhunga and Mudhoobunee, which has just been sanctioned by Government, will prove feasible. If successfully constructed, it will be a great relief to carts and bullocks along the principal line of transport.

23. There will, I fear, be some difficulty about procuring rice in husk (paddy) for seed for next harvest in the distressed districts, I will write further as soon as I am able to arrive at a conclusion on the subject.

24. There has been recently a fall of rain, from half an inch to a full inch, in some of the northern parts of Tirhoot, in which parts the hopes of the people have revived. Some coarse and quick-growing crops are being sown on vacant rice lands wherever this rain has fallen. But there will be no germination unless a further fall of rain shall occur in a fortnight hence. If these inferior crops shall be raised, they will afford some relief from the middle of April to the middle of May.

25. I have not been much beset—not so much as might have been expected—by persons or crowds of persons complaining of scarcity. But hundreds of fresh applicants in many parts of the district are daily coming to the relief works. Though probably there will be no widespread distress for some little time to come, yet I am very apprehensive of individual cases of severe distress occurring in ever part of the district. It is difficult to be sure, of finding out these cases at this stage of affairs. I have, however, addressed a most earnest warning to all the civil officers in the district, and requested them to communicate this warning to all landholders, European and Native.

26. The transit arrangements under Mr. Hewitt at Patna will work well on the completion of the two branch railway lines to the right bank of the Ganges. The country boats for the river crossing will, I believe, prove efficient. The steamers cannot be relied upon by reason of defects in channel. The organization at the two principal ghats on left bank, Bunkur and Chumpta, is far from completed, but will be soon completed.

R. Temple.

Notes by Sir Richard Temple.

Memorandum of subjects settled, and instructions given by Sir Richard Temple, in communication with the Commissioner and Collecter of Tirhoot at Durbhangah.

1. Yes; this makes 1,60,000, which agrees with the 50,000, and the 1,10,000 in my minute of the 31st January.	1. The Collector of Tirhoot is to provide carriage from the resources of his own districts for 1,00,000 maunds weekly from Chumpta Ghât to Durbangah, and for 60,000* maunds weekly from Bunker Ghât to Seetamarhee. This is independent of what the Commissioner may be able to arrange for carrying from Monghyr, or by means of the Government carriage ordered. The work is to be done by contract as far as possible, and the agency of the police is to be in every way discouraged. * Since increased to 1,00,000.
2. Yes: this is most important. See my separate memorandum. I understand that Mr. Gale, the principal indigo planter in Mudhoobanee, and a large ticcadar in the Raj villages, has taken a contract for 30,000 maunds a week from Durbhangah to Mudhoobanee sub-division. The additional assistants in the Raj are agreed to.	2. The officers of the Durbhangah Raj are to provide for the carriage from Durbangha, of all the grain to be distributed into the interior of the Mudhubuni sub-division. For this purpose the manager is authorised to take on the services of two additional assistants at Rs. 300 a month each.
3. I have sent my recommendation to Calcutta on the 31st.	3. A tramway, if sanctioned, is to be laid down from Chumpta Ghat viâ Dulsingserai and Hyaghât to Durbhangah, and eventually to Mudhobuni.
4. Arrangements about Mr. Stevens approved; he is an excellent man.	4. The work is to be placed under Mr. Stevens, and to enable him to carry out his duties sufficiently, he is to be appointed Superintending Engineer of the special circle of Raj relief works and tramway roads.
5. The proposed establishment for him agreed to.	5. He should have under him for this purpose— 1 Executive Engineer } For tramway roads. } To be paid by Government. 2 Assistant Engineers } 1 Senior Assistants for Purneah roads } 3 Junior Assistants to be lent to the Raj and paid by the Raj for Raj relief works.
6. I have seen the place. The bund or dam should be put in hand at once. It will improve our water route at once; even if tramway should not be undertaken it will be essential to roadways. It will be a capital relief work.	6. He is to put a bund across the Koray for the tramway road, which it is hoped will also render available a water route viâ Rosrah to Hyaghât.
7. I concur in abandoning the Keray.	7. The water route viâ the Koosey, Telgoojah, and Korny is to be given up as it has proved a failure.
8. I have applied for Mr. Magrath's services accordingly.	8. The services of Mr. Magrath are to be applied for to the Government of Bengal, with a view of his being placed in charge of the Madhoobuni sub-division.
9. The digging out of old tanks along transport routes most essential for water supply. They will be capital relief works; see my separate memorandum.	9. Along all the routes of grain transport, old tanks wherever available are to be dug out, or new tanks or wells made. so as to provide a constant supply of water for transport cattle.

10. I have applied for the cotton seed to the Government, North-Western Provinces, and the Chief Commissioner, Central Provinces.	10. A lac of maunds of cotton seed is to be applied for from North-Western Provinces, and Central Provinces, and to be stocked along the transport routes.
11. Yes; most proper. The present will be a good opportunity for permanently improving the tanks of the district by relief labor.	11. Officers are authorized to deepen old tanks wherever necessary, to provide relief works, and to secure water for the cattle of the district.
12. Quite proper; I shall be glad to be furnished with names of all officers.	12. A responsible officer is to be placed in charge of each main line of grain transport to employ permanent gangs of laborers thereon and to be held responsible for its being kept in continual repair.
13. Yes; see my separate memorandum about Mudhubuni and Durbhangah relief circles. The immediate construction of the bungalows is authorized.	13. Relief centres are to be established in all the afflicted portions of the district; each centre to have a radius of about ten miles, and the sub-divisional officers are at once to construct temporary mat bungalows at each centre. It is estimated that twenty such centres will suffice for Tirhoot, and arrangements will be made for supplying an officer to each.
14. The cotton and puttooah have been applied for through Government North-Western Provices.	14. A supply of cotton for weaving, and puttooah for making string, will be applied for to be distributed in the villages for some relief work.
15 & 16. Quite approved; but I shall be glad to have names of the officers.	15. In addition to the transport arrangements already mentioned, the following instructions have been given. 16. A responsible officer is to be placed in charge of all the arrangements of each of the receiving stations of Bunker Ghât and Chumpta Ghât, and mat bungalows are to be put up at once for their accommodation.
17. Yes; I have officially addressed the Government of North-Western Provinces with this view.	17. Tenders have been invited through the North-Western Provinces' Government, for contracts to carry a lac of maunds weekly from each of the above ghâts into the interior.
18. I have arranged to make this up to 1,500 carts with bullocks.	18. A reserve of 1,500 carts with bullocks, is to be placed at the Commissioner's disposal in case of any failure of contractors' arrangements.
19. I agree to buy the 500 spare bullocks. Commissioner will please arrange.	19. A supply of 500 bullocks is to be bought at the Berhampore fair, and kept in reserve along the transport lines to assist the contractors in case of their cattle breaking down.

S. C. BAYLEY.

No. 41, dated Motiharee, the 6th February 1874.

From C. E. BUCKLAND, ESQ., on Special Service, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

With reference to my letter No. 37 of yesterday's date, submitting copy of Sir Richard Temple's minute No. 10 I am directed to submit copy of a further minute No. 12, which may be regarded as a supplement.

MINUTE by the Honorable SIR RICHARD TEMPLE, K.C.S.I., No. 12, dated Motiharee, the 6th February 1874.

As a supplement to my minute, No. 10 of yesterday's date, I desire to add that I am highly satisfied with the condition, progress, and prospects of the local relief works in the Durbhanga and Seetamurhee sub-divisions, but not so as regards the Mudhoobanee sub-division. In Durbhanga, the Raj Engineer, Mr. Stevens, and the sub-divisional officer, Mr. Macdonnell are fully alive to the necessity of the case; the same remark applies to Mr. O'Reilly and Sergeant O'Farrell in Seetamurhee. Some relief works are planned in Alapur, the worst part of Mudhoobunee. The Commissioner and the Collector have proceeded thither, and also Mr. Anderson, the Executive Engineer of the new or northern division of Tirhoot, and I expect very shortly to hear of the relief works being set on foot there.

2. The formation of a new Public Works Division there will be very beneficial. There remains the southern, or Mozufferpore executive division, in which the signs of activity are less manifest.

3. I have ordered temporary bungalows to be immediately erected at every place where the European president of a sub-committee is to be placed. As there will be many such sub-committees in each of the distressed sub-divisions, several bungalows will have to be erected, while in several places accommodation already exists.

R. TEMPLE.

No. 563—S.R.

From the **Officiating Secretary to the Government of Bengal** in the Statistical Department, to the **Commissioner of Patna.**

Scarcity and Relief.

Sir,
Calcutta, the 10th February 1874.

I am directed to forward copy of a minute dated the 5th February 1874, recorded by Sir Richard Temple after his visit to Tirhoot. The substance of the orders passed therein have already been communicated to you. I am at the same time to forward printed copies of Sir Richard Temple's Durbhangah minute of the 1st February, and of your note of the points on which Sir Richard Temple passed orders in communication with yourself. These copies will be convenient for communication to your officers.

2. The Lieutenant-Governor desires me to observe that, so far as the papers show, the officers of the Durbhangah estate have not as yet done fully their duty towards the people of the estate; and he hopes that they will at once exert themselves to open sufficient village relief works, to organize village relief through village agency, and generally to do the duty lying upon an opulent and powerful landlord. The Lieutenant-Governor is glad to be able to say that Mr. Stevens, the Durbhanga Engineer, seems to have done his duty very fully, and to merit the special acknowledgments of Government.

3. The Lieutenant-Governor trusts that you and your officers are taking very early and energetic action upon that part of Sir Richard Temple's orders which concerns—

(*a.*) The collection of fodder on traffic routes;

(*b.*) The maintenance of really passable and serviceable roads and ferries on the grain routes. The enormous pressure of carriage (nearly one thousand carts a day) makes this a matter of the very highest importance;

(*c.*) The promotion of private importation from Patna by means of advances to petty dealers;

(*d.*) The methodical organisation of arrangements at Barrh, Futwa Ghât Station, Chumpta Ghât, and Bunkur Ghât. Where there is so constant a stream of traffic and so much loading and unloading, very strict and careful method will be necessary.

4. In regard to officers for relief centres, a telegram has to-day gone to you, and the Lieutenant-Governor has informed you that two more civil servants are expected from the North-Western Provinces. If need be, he will apply for additional military officers; and you are authorised to employ European factory assistants, or to appoint approved natives to be temporary Famine Inspectors on the footing of Deputy Collector or Sub-Deputy. The Lieutenant-Governor fears that he cannot send you many more European officers from Bengal, and he apprehends that ordinary Bengalees, unaccustomed to Behar, and of no special proved aptitude, would not be useful on work of this kind. Sir George Campbell is glad to know and to acknowledge that very many planters are offering their aid gratuitously to the relief committees.

5. With reference to Sir Richard Temple's supplementary minute of the 6th instant, a copy herewith forwarded, I am to observe that you have authority to procure for the two Executive Engineers of Tirhoot all the local assistance you can, and if the Public Works Department can give any more subordinates for Tirhoot, it will at once do so.

6. The Lieutenant-Governor desires me also to invite your attention to the condition of the relief works in south Tirhoot, and to inquire whether the Public Works Department arrangements there are sufficient.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Telegram dated the 12th February 1874.

From Sir R. **Temple**, Bankipore, to **Viceroy** and **Lieutenant-Governor**, Calcutta.

Just returned from Sarun. Revised estimate for Sarun two hundred and eighty thousand who will require Government assistance in some shape or other for three and a half months. This makes instead of that given in my telegram of second February. Found seventy thousand labourers employed on relief works. Rubbee saved from disaster by recent rains, but still very deficient. Revised estimate for Chumparun four hundred thousand, same as stated in telegram of second. Am sending full official report about Sarun by post. I leave this for distressed tracts in North-eastern Tirhoot and adjoining portions of Bhaugulpore district on Saturday the fourteenth.

No. 572.—S.R.

From the **Officiating Secretary to the Government of Bengal** in the Statistical Department, to the **Deputy Secretary to the Government of India**, Department of Agriculture, Revenue, and Commerce.

Scarcity and Relief.

Sir,
Calcutta, dated 10th February 1874.

I am directed to submit copy of a minute recorded by Sir Richard Temple, regarding the threatened scarcity in that part of Nepal which lies below the Himalayas, and to the north of the British districts of Tirhoot and Chumparun. The Lieutenant-Governor has not seen Mr. Girdlestone's report of the 1st February, and he feels unable to advise any particular course until he knows more exactly what the threatened tracts are, where they lie, what is their population, and what their condition. He can, therefore, only submit Sir Richard Temple's minute for the orders of the Government of India.

2. The Lieutenant-Governor desires, however, to add that, though at the beginning of the scarcity there was some alarm about Nepal and the demands its people might make on the resources of our districts, yet recent reports from Tirhoot and Chumparun have contained no suggestion that considerable quantities of grain have been carried from North Behar into Nepal. On the other hand, the last Tirhoot narrative stated that above 200,000 maunds of maize had come from the Nepal Terai into Seetamurhee, but that the importation had now stopped. From some other quarters fear has been expressed that exportations to Nepal might affect the food supplies of North Behar, but as above stated, the official reports do not give any facts or opinions in support of such an apprehension.

3. On the general question of assisting the Nepalese, the Lieutenant-Governor would submit his opinion that we cannot, on relief works, or at relief centres, or at relief hospitals, make any distinction between British subjects and people from Nepal, but we must treat all who come for aid alike as well as we can.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Minute by the Honourable Sir Richard Temple, K.C.S.I., No. 11, dated Motiharree, the 5th February 1874.

The Resident at Nepal (Mr. C. Girdlestone), having forwarded to me copy of his letter No. 27 C, of the 1st February 1874, addressed to the Government of India in the Foreign Department, regarding the impending scarcity in the Nepalese Terai districts which march along with British territory, I desire at once to state my view on a matter which may at any moment become urgent.

2. On approaching the northern frontier of the Tirhoot and Chumparun districts, I was concerned to find that between our border and the Terai there is generally some narrow strip, of varying breadth, of Nepal territory, with villages much in the same circumstances and condition as the distressed British sub-divisions. I do not know what the population of the strip may be, but I see that in one sub-division of it, Jaleysur, the Resident puts the population at 225,000 souls; and possibly the adjoining sub-division of Sirha may have a similar number. Thus it may be that in contact with our distressed people we shall have half a million of equally distressed Nepalese. This circumstance constitutes an aggravation of our difficulties, which must be met.

3. On the civil officers' inquiring whether Nepalese subjects applying in our territory for work or relief must be treated in the same manner as British subjects, I replied that they must.

4. But the larger question remains; How are the Nepal authorities to get grains which they may purchase in India conveyed upwards from the northern or left bank of the Ganges? Of course they may get carriage locally if they can. But practically they can hardly do so, when all available carriage is engaged for our grain transport. In this way I apprehend little or nothing will be done.

5. One thing the Nepal authorities could, I should think, do, which is this: Their distressed strip of territory has resources in carts and bullocks. They could collect such carriage and send it down to the left bank of the Ganges to fetch grain. The British authorities would give due protection to such convoys, deputing officials to take care of them, so that the carriage might not be detained or seized for other purposes. Even this plan, however, would not probably bring all the grain that might be needed.

6. Therefore, I think we must be prepared to let the Nepal authorities have a portion of the grain supplies which we shall be sending to the north part of Tirhoot, on payment of the cost which may have been incurred in purchase, transport, and the like, by the British Government. I should be happy to arrange this in negociation with the Resident of Nepal.

7. It will be found that we cannot properly refuse succour to the distressed people beyond our frontier, who cannot obtain supplies save through British jurisdiction.

8. Also if any starving or sick Nepalese present themselves at our hospitals or relief-houses, we must, I think, admit them.

9. At the same time I think that the Resident would do well to impress on the Nepalese Government, the wrong and the mistake they commit in prohibiting free trade in grain between their districts and ours.

R. Temple.

No. 462.

From Arthur Howell, Esq., Deputy Secretary to the Government of India, to the Secretary to the Government of Bengal.

Department of Agriculture, Revenue, and Commerce.

Sir, Calcutta, 12th February 1874.

I am directed to acknowlege the receipt of your letter No. 572 of the 11th instant, with enclosed minute from Sir Richard Temple, regarding the threatened scarcity in that portion of the Nepal territory which borders on Tirhoot and Chumparun.

2. In reply I am to inform you that the Governor General in Council has been in communication with Mr. C. Girdlestone, the Resident in Nepal, on the subject of the assistance which may have to be rendered to the Nepalese Government to meet the distress which is apprehended in the above-mentioned districts.

3. The Government of India have offered the Nepalese Government 1,000 tons of rice at cost price, but, as Sir Richard Temple very truly observes, the difficulty lies mainly in arranging for its transport from the Railway to Nepal. Mr. Girdlestone has accordingly been directed to place himself in communication with Sir Richard Temple, and in his communications with the Nepalese Government to be guided by the instructions that he will receive from him.

4. The Government of India entirely concur with the Lieutenant-Governor and with Sir Richard Temple that no distinction should be made between British subjects and subjects of Nepal if the latter should apply for relief in British territory, and that we should do what we can to assist the distressed people beyond our border with supplies. No interference, therefore, should be permitted with the free transit of food grains on private account from British territories into Nepal.

5. At the same time it is the obvious duty of the Nepalese Government to provide as far as possible for the relief of their people, a duty which from the information received from Mr. Girdlestone, that Government seem entirely to recognize.

6. As the arrangements will be carried out by Sir Richard Temple in communication with Mr. Girdlestone and the Nepalese Government, no further orders can with advantage be given by the Government of India. I am to request that His Honor the Lieutenant-Governor will furnish Sir Richard Temple with a copy of this letter.

I have the honor to be, Sir,
Your most obedient servant,
(Signed) A. Howell,
Deputy Secretary to the Government of India.

No. 476.

Government of India.

Department of Agriculture, Revenue, and Commerce.

To the Secretary to the Government of Bengal.

Sir, Fort William, the 13th February 1874.

As the Central Relief Committee will act in communication with the Government of Bengal, the Government of India wish to make some observations upon the subject of its action and functions, and upon the general conduct of relief operations.

2. The Government of India does not wish to interfere in any way with the discretion of the Central Committee in the allotment of funds to the different Local Committees; but in the exercise of the general supervision over District Committees, which, under the rules agreed to at the meeting of January 24th, was delegated to the Central Committee, His Excellency in Council thinks that it is essential that care should be taken lest any instructions to be issued by the Central Committee should clash with those issued by the local authorities, upon whom the responsibility of relieving distress will devolve.

3. His Excellency considers that unity of control and distinct responsibility are essential to the success of measures for the relief of distress when applied to a large area of country, such as North Behar. The whole force of the administrative machinery of Government, largely increased from its ordinary strength, must be directed to the transport and distribution of food. The responsibility for ensuring a supply of food to those who cannot obtain it by other means must rest with the Commissioner of the Division and the local officers charged with this duty by him.

4. His Excellency is, therefore, of opinion that the functions of the Central Committee, when dealing with such areas of country as North Behar, should be mainly confined to the collection of subscriptions, and to arranging for the supply of food or money to District Committees; that the supervision to be exercised by the Central Committee over the District Committees should only be of a general nature; and that it would be undesirable that the Central Committee should issue detailed instructions for the relief of distress. These details must, in His Excellency's opinion, be very much left to the discretion of the District and Sub-Divisional Committees under the direction of the local officers, who must necessarily possess more complete knowledge than can be attained by any body, however zealous and efficient, acting at a distance from the actual scene of operations.

5. His Excellency does not doubt that the Central Committee will take this view of the subject, but he thinks that it is desirable to prevent the possibility of any misunderstanding arising.

6. It will probably be undesirable that the Central Committee should purchase grain except from Government stores, and any arrangements as to price will be made that may be considered equitable and proper by the Committee.

7. In connection with this subject, and with reference to an observation contained in a note written by His Honor the Lieutenant-Governor on Sir Richard Temple's Minute in respect to the provision of supplies in North Tirhoot, I am to observe that where distress, as is the case there, arises from a general deficiency of the food-supply of a large area of country, which deficiency cannot be met by private traders, stringent labor tests are not applicable. The labor test was tried during the earlier portion of the Irish famine; it failed, and ultimately gratuitous distribution of cooked food was substituted. It was under the latter system, coupled with the sale of grain at market rates by Government where private traders could not supply it, that the Irish famine was at last successfully dealt with. The circumstances in India are not entirely similar, but it appears to His Excellency that where they differ, the difference would point to an extension of the system of gratuitous distribution of food, and especially to the establishment of a system of advancing supplies of food to cultivators. When distress extends to whole classes of the population, His Excellency relies upon the local knowledge of the persons entrusted with the distribution of relief to prevent abuses.

8. This subject is one of very great importance. The provision of employment for the laboring population upon public works was directed—and in His Excellency's opinion properly directed—at the outset of the period of scarcity as a preliminary and precautionary measure, so that the means of providing themselves with subsistence might be afforded to the laboring population, and to the smaller cultivators who were not altogether unaccustomed to labor for hire. This application of public works has been proved to be sound by the experience of former periods of scarcity in India; but any system of relief by public works becomes impracticable when applied to a very large proportion of the population of a country. In order to apply it under those circumstances unprofitable work must be found simply as a test by which to prove that the persons applying for relief are proper objects upon which to bestow it. Any application of such a test upon the scale that would be necessary in dealing with North Tirhoot would, in His Excellency's opinion, inevitably break down, and, moreover, by congregating cultivators at centres for the purpose of giving them employment, entail not only considerable hardships upon the people, but, as was found to be the case in Orissa, more serious evils.

9. These observations are by no means intended to imply that wherever useful work can be found, whether of a public or of a private character, advantage should not be taken of it as affording a most valuable aid to the general system of relief, but they have been made for the purpose of preventing the Relief Committees from considering the universal application of a rigid labor test to be recommended by Government.

10. I am to request that a copy of this letter may be furnished to the Central Relief Committee, to Sir Richard Temple, and to the Commissioners of Patna, Bhaugulpore, and Rajshahye.

I have the honor to be, Sir,
Your most obedient servant,
A. Howell,
Deputy Secretary to the Government of India.

FURTHER CORRESPONDENCE.

No. 12 of 1874.

Government of India.

Department of Revenue, Agriculture, and Commerce.

Agriculture and Horticulture.
Famine.

To His Grace the Right Honorable the Duke of Argyll, K.T., Her Majesty's Secretary of State for India.

My Lord Duke, Calcutta, the 20th February 1874.

We have the honor to transmit the eleventh special narrative of the drought in Behar and parts of Bengal for the fortnight ending the 19th instant.

2. Your Grace will observe that the narrative confirms the reports which we gave in our despatch of the 13th instant, and that there is little to be said in addition to that despatch. Her Majesty's Government will learn with satisfaction that although severe distress is anticipated in many parts of the country, the Lieutenant-Governor of Bengal reports that it has been met and relieved, up to the present time, effectually.

3. The reports from Sir Richard Temple of the requirements of the Bhaugulpore Division and for the south of the Patna Division have not yet been received.

4. The estimate of the quantities of grain required for the distressed districts given in the 26th paragraph of the narrative cannot as yet be considered to be more than approximate. The supplies required are within our means, and we have already, in former communications, explained our ability to enlarge our arrangements for the provision of rice if we find it necessary.

5. The Lieutenant-Governor appears to have entertained some apprehension of the supplies of Government grain in Calcutta being insufficient; there is, however, no ground for such an apprehension. The great increase in the supplies required for Behar in consequence of Sir Richard Temple's requisitions has taxed, to the utmost the powers of the local officers, of the railway and of the contractors employed in unloading vessels as they arrive in port, and it is to be expected that some temporary obstructions may occur to prevent the uninterrupted flow of the large quantities of grain which have now to be conveyed from Calcutta. But every effort is being made by those in charge of the several parts of the transport arrangements to ensure success. To obviate any delay in the working of the transport from Patna to North Tirhoot and Chumparun, we have authorised the Commissioner of Patna to buy in the local market, where supplies are now plentiful, sufficient grain to keep the carriage in full work, should the arrival of grain from Calcutta be temporarily delayed from any cause.

6. The report of the price of common rice in the Purneah district occasioned us some anxiety. The Lieutenant-Governor has noticed the subject in the narrative, and we have since ascertained by telegraph from the Collector that the price has somewhat fallen, and is now ten instead of eight seers for the rupee.

7. Your Grace will observe that the correspondence given in Appendix I.* of the narrative is not complete; it will be completed next mail. The estimate of the famine expenditure summarised in para. 41 and contained in Appendix L.* has

* Page 41.

* Page 46.

not yet been examined in the Financial Department, and cannot consequently be accepted as conveying our views upon the subject. As regards the correspondence in Appendix K.* as to the action of the Central Relief Committee, we have invited the Lieutenant-Governor, accompanied by the members of the Committee, to attend a Conference on the 21st instant, in view to the settlement of such further questions as were not finally disposed of in our letter No. 476 of the 13th instant forwarded to Your Grace last mail.

* Page 43.

8. We have been informed by telegram from the Lieutenant-Governor of the North-Western Provinces that the last week's report is most favorable for the whole Province, and that prospects are decidedly brighter in the eastern districts.

9. As we observe that considerable notice has been attracted by a work written by Dr. Hunter, entitled "Famine aspects of Bengal Districts," we enclose a copy of our Resolution* of the 14th January on the subject of its circulation.

* Page 114.

We have the honor to be,
My Lord Duke,
Your Grace's most obedient and humble Servants,
NORTHBROOK.

E. C. BAYLEY.

ELEVENTH SPECIAL NARRATIVE OF THE DROUGHT IN BENGAL FROM THE 5TH TO THE 19TH FEBRUARY 1874.

Weather and rainfall.

DURING the week ending the 11th February the weather continued to be very variable at the beginning of the fortnight. Rain fell over and above what was recorded in last Narrative to some extent in Bengal, and slightly in parts of Behar, and some days later there was another fall in parts of Bengal. About the 9th February the weather cleared in Behar, where it has since been clear and very seasonable. But it was not till the 12th to 14th that the weather cleared up in Bengal. The meteorological registrar to Government writes of Calcutta, that "up to the 14th of February, the weather generally "close and cloudy, and the wind easterly. Rain fell on several days and was "general over the country. At Calcutta nearly 4 inches were registered between "the 1st and 14th, making, with what had fallen in January, a total of 4·69 inches "since the beginning of the year. The average quantity for the same period is one "inch. The clouds cleared away on the 14th, after a thunder-storm, accompanied "by some hail, and a cool land wind set in from north-west, and has continued "steadily in that quarter, bringing a return of the cold weather and clear cloud-"less skies."

It was specially fortunate that from the 9th February, or thereabouts, the weather in Behar was clear and dry; for sunshine was greatly wanted to bring out the full good done by the rain of the beginning of February, and to ripen the more valuable of the spring grains. In Bengal, where there is but little wheat and barley, and where the spring rice (borodhan), small millet (cheena), and root crops are of much importance, the continuance of damp weather till the 14th did rather good than harm. Very little hail fell, indeed its appearance was chronicled only in parts of Nuddea, Rungpore, and Mymensing; no hail is reported from Behar, where its coming was chiefly feared. The rain fell in a soft and beneficial manner—eminently beneficial to all crops in tracts where there were crops to be benefited. The rainfall of Bengal (central, western, and eastern) ranged from 2 to 5¼ inches during the first fourteen days of February, and averaged quite 2½ inches over the whole of Bengal proper; while in Behar, where excessive rain would have done much harm, the total fall averaged about an inch and a half.

Price of grain.

2. Notwithstanding the beneficial rainfall recorded in last Narrative, and the general improvement in the state of the crops on the ground, and in the prospect of the crop to come, there has been a general though not very great rise in prices during the fortnight. The only exception is the Rajshahye division, over almost the whole of which there has been some slight fall in prices. In some places high prices are attributed to the difficulty of

getting grain to market owing to the rain. The prices now quoted in the principal districts compare with those quoted last fortnight as follows :

	Number of seers sold for a rupee.	
	On 31st January.	On 14th February.
Burdwan	14	13
Beerbhoom	12⅜	12
Hooghly	11 & 12	10 & 10½
Calcutta	12½	10½
Dinagepore	13¼	14
Maldah	11¾	12½
Backergunge	16½	13½
Chittagong	18	17
Noakhally	17½	16
Patna	12	13
Shahabad	13	11¾
Tirhoot	10	10
Chumparun	11¾	11¼
Bhaugulpore	12⅝	11¼
Lohardugga	15½	16
Maunbhoom	15½	14½

There has been a rise in the exporting districts of East Bengal, and the rise has been felt in the Calcutta market, where, according to the reports of the Chamber of Commerce, the demand for export has been less brisk. Purneah is the only district whence very high prices are quoted, and there the price of common rice has risen to 8 seers per rupee. From the published prices current (see enclosure No. 2) no general rise in the price of maize and the lesser millets is apparent, except in the Sonthal Pergunnahs. Some of the narratives, however, say that the supply of these grains is being exhausted. The very high price in Purneah does not seem to have driven people to the relief works, nor is any general severe distress reported from that district as yet. Either the people must be busy with their spring crops, which promise well and are fairly abundant in Purneah, or they must be in better circumstances than ordinary Behar ryots.

Supply of grain.

3. The supply of grain at all the large marts is fairly sufficient, except in the worst tracts of North Behar, where it is difficult to get grain in either large or small quantities at the prices quoted. In South Behar and in parts of Purneah private trade in grain is active, and a good deal of grain moves from place to place. The imports of grain into the Patna and Shahabad districts continue to be very large. About 1,000 tons of private grain a day comes into Behar by railway from the north-west, and about 500 tons a day go up from Calcutta into Behar. The private grain carried into Behar is thus about 1,500 tons a day from both ends, or equal to 45,000 tons (12,50,000 maunds) a month, provided the private imports continue at this rate.

Exports of grain.

4. The total export of grain during the fortnight from Bengal ports to places beyond the sea was, so far as returns are available, 17,355 tons. The extreme activity of the export trade seems thus to have somewhat lulled. The total exports of food-grains from Bengal, from the 1st November 1873 up to date, has been 143,333 tons, and 163,035 tons from the 1st October. Since the scarcity began, Government importations (reckoning what is still in the river and has not yet been taken over) have been 69,900 tons from beyond the sea. Private importations of grain during the same period have now risen to 8,557 tons, of which the bulk came during the month of January. The usual note upon the movement of food-grains will be found at Appendix A.*

* Page 18.

Condition of the people.

5. The condition of the people everywhere, except in the very distressed parts of Tirhoot, Chumparun, Bhaugulpore, Dinagepore and Maldah, may be said to be somewhat more hopeful than it was, according to the information received since the submission of last narrative. The rainfall which, though somewhat late, did immense good, has improved the crops and revived the drooping spirits of the people. From nearly all districts, it is reported that the people have been enabled to prepare their lands for next crop, or to sow the quick-growing though precarious millets which are so much eaten by the poor, while in several Bengal districts the boro or early spring rice-crop has

already been sown. The fear of a water-famine has disappeared for the present, and, so far as the reports show, the cattle are as yet in very good case. Even from the bad parts of Sarun, Purneah, and Monghyr, where distress and need for relief has been for some weeks felt, there would seem to be some temporary improvement in the condition of the people; at any rate famine does not seem in those tracts to be nearer than it was a fortnight ago, though the number of laborers, especially of people of the middle classes, has on the Sarun relief works very greatly increased, and want is felt by people of the outcast tribes in south Monghyr.

In the worst parts of Tirhoot, Chumparun, and Bhaugulpore, on the other hand, the condition of the people is perceptibly worse than it was a fortnight ago. In Tirhoot vagrancy, begging, and crime is increasing; child desertion has begun; signs of want and suffering can be seen on persons who come to the relief works, and occasional visits to out-of-the-way villages show that the women and children are in places suffering severely from want. From the worst part of Chumparun it is reported that even the ryots will soon be without food supplies, while the condition of the lowest classes is said to be in some places very nearly approaching absolute want. Against these very bad reports may be set the fact that distress is being met and relieved effectually everywhere. In Sarun nearly 70,000 people are employed on the relief works of one kind and another. Charitable relief has begun in Chumparun and Monghyr, and is being commenced in Tirhoot, Purneah, and Maldah. As yet no cases of real starvation are reported, but some ascertained cases of death from sickness caused or intensified by insufficiency of food are said to have occurred. It seems to be a prevalent opinion that if Government relief works had not been opened thus early, and if Government had not imported grain, there would have been very much misery, and there might have been starvation before now. From Dinagepore the Magistrate is able to report that, after a tour through the worst parts of the district, he did not "come across any instances of actual want, that is, of a person without "food or the means of obtaining any."—(See enclosure No. 5.*)

* Page 76.

The rain there was heavier, and has done more good than in North Tirhoot, and the ryots are richer and better able to tide over very hard times. The careful inquiries made by the district Magistrate during his tour bear out the previous reports that over very large tracts of Dinagepore there had been very little rice crop, and there is hardly any spring food-crop in those parts of the district till the spring rice comes in. The Magistrate found the condition of the people had "become on the whole worse in the bad parts and better in the less distressed "quarters." From limited parts of Maldah, also, it is reported that distress is already much felt, that owing to the absence of rich residents local charity does not suffice, and that in the north of the district some hundreds of people are in receipt of relief from the charitable funds collected at the district head-quarters.

On the whole it may be said generally, as Mr. Lowis has said for Dinagepore, that in the very distressed tracts want is intensifying into famine; while in the districts, where there was a less complete failure and cold-weather crops were sown, the crops and the prospects of the people are in better condition than they were a fortnight ago. The scarcity is becoming more and more localised.

Sir Richard Temple's work in Behar.

6. Sir Richard Temple's deputation to Behar has borne much good fruit, and the result of his operations will be noticed before proceeding to the ordinary topics of the Narrative. It was stated in the last Narrative that he had inspected the principal grain-receiving stations of the East Indian Railway, made some short stay at and inspected Patna and the stations for receipt and despatch of grain, and that he had gone on into the most distressed parts of Tirhoot. He has since visited the more distressed parts of Tirhoot, he has travelled into the furthest and most distressed parts of Chumparun, has been through the worst parts of Sarun and Patna, where he met the Bhaugulpore officers. He has now gone back to visit again and arrange relief measures in north-east Tirhoot and the Bhaugulpore sub-division of Soopole, where suffering is said to be already upon some classes of the people.

* Pages 19 to 27.

Tirhoot district.

7. In Appendix C.* will be found copies of the minutes in which Sir Richard Temple summarises his views regarding the three districts of Tirhoot, Chumparun, and Sarun. He found the condition of the people in the three northern sub-divisions to be bad; he accepted the estimate of the local

officers, that nearly one-half the population of these tracts (or close upon one million of people) would be upon the hands of Government. He considered that to supply them four millions of maunds (about 148,000 tons) of Government grain would be required before the rains, and that arrangements ought to be made for five millions of maunds so as to provide against misadventure. He sanctioned arrangements whereby local contractors were to carry 2,00,000 maunds (about 7,400 tons) a week into the north-east of Tirhoot; he called for tenders from the North-Western Provinces to carry a further amount; and he very strongly urged the immediate construction of a tramway from Chumpta Ghât (opposite the Barh station of the East Indian Railway) to Durbhanga, and beyond Durbhanga into the Madhobanee and Setamarhee sub-divisions. The proposed line of tramway has been examined by Mr. Molesworth, the Consulting Engineer to the Government of India, who recommends that a light railway to be worked by engine-power should at once be laid down from Chumpta Ghât to Durbhanga, a distance of 44 miles. The Government of India has ordered the work to be taken in hand at once on the metre gauge; the roadway to carry the line will be put in order by Mr. Stevens, the Durbhanga Engineer; a full staff of engineers, platelayers, and subordinates has been ordered down from the Delhi State Railway; they are to be ready to take the field at once; material is being sent up to Barh, and nothing is left undone that can secure the early completion of the line. The Lieutenant-Governor has instructed the Commissioner so to arrange the carrying power of the country as to lift the railway material promptly, with as little hindrance as may be to the grain transport along the route which the railway takes.

8. Sir Richard Temple's minute of the 5th February* shows the orders he has given for organizing relief committees in the distressed parts of Tirhoot. The most afflicted tracts are divided into circles containing about 100 square miles of country; at a convenient site in the middle of each circle a temporary house is being erected, whereat is to be lodged the European officer charged with relief operation, who will be responsible for constantly inspecting and relieving all the villages of his circle. For some of the circles the entire superintendence of relief operations will be entrusted to planters, who have liberally and cordially offered their services for the work.

* Page 20.

The Lieutenant-Governor has fully accepted and acted on all Sir Richard Temple's arrangements for Tirhoot. He had only doubted whether relief on so very liberal a scale was within the means of Government, and no doubt if the estimates for other districts had been at all in the same proportion as that for Tirhoot, the quantity of grain required would have been far larger than that for which the Government of India has yet arranged, and larger than the Railway could transport to the neighbourhood of the distressed country. The estimates for the other districts being, however, more moderate, the quantity required for Tirhoot may be supplied from Calcutta and the North-Western Provinces together, if we can only manage sufficient transport into the interior. Now that the distress becomes more localised, we can do more for the specially distressed tracts than could have been done if there had been a more far extending need for large relief. The population of the most distressed tract of North Behar, in the districts of Tirhoot, Chumparun, and Bhaugulpore, is about three and a half millions (say something more than the population of Orissa) for whom it is proposed to provide about six millions maunds of grain, say 225,000 tons. It may possibly not be beyond the means of a great Government to feed such a population.

9. From North Tirhoot Sir Richard Temple travelled along the Nepal border, and then turned southwards into Chumparun; he visited the district head-quarters, the sub-divisional station of Bettiah, as well as the remote and very distressed pergunnah of Ramnuggur. He expressed satisfaction with the arrangements which had been made. He found that relief works were abundant and well managed; that the grain transport operations were well forward, and that a good deal of most useful relief had been administered by Mr. Thomas Gibbon, now agent to the Bettiah Rajah, whose good service has been previously brought to notice. Sir Richard Temple found that the condition of the extreme north of Chumparun was very bad, but that to the south of the district matters were much better, and he accepts the estimate of the local officers

Chumparun district.

that on an average about 217,000 people will be in one way or another on the hands of Government for eight months or 400,000 in the worst times. He estimates that one million maunds of grain will be required for their relief; and he has accepted the arrangement under which 50,000 maunds of Government grain per week are being sent up to Patna for despatch to Chumparun. He found that the local carriage contractors would probably be able to fulfil their engagement to carry this amount weekly as there was an abundance of carts in the district. Sir Richard Temple expressed his belief that water-carriage by the Gunduck river, though a resource of some importance when the snows melt and the river rises a little, was not secure enough to warrant the abandonment of land-carriage. The Lieutenant-Governor has accepted all Sir Richard Temple's plans for Chumparun, and has suggested that, if the spring crops turn out well, Chumparum might draw some supplies from Oude and the North-Western Provinces, *viâ* Durowlee ghât on the Gogra. Arrangements for the administration of charitable relief, similar to those described in the next preceding paragraph, were made by Sir Richard Temple for North Chumparun; and the latest Chumparun Narrative (see enclosure No. 3*) shows that the Ramnuggur relief houses may open with a large attendance of paupers.

* Page 72.

Sarun district.

10. Sir Richard Temple's minute of the 12th February on the Sarun district will be found at Appendix C.* He considers the condition of Sarun to be much less critical than Tirhoot or Chumparun, though even in Sarun there are tracts where, owing to a succession of bad years, the people are very badly off, and much relief will have to be given. Sir Richard Temple found that the Sarun arrangements for meeting and relieving distress by means of works were good; and he noted that nearly 70,000 persons, many of them women and children, were employed on the relief works (public and private) on the 10th February. He ascertained that private importations into Sarun were going on to a considerable extent, and that the local traders there were much more active than in either Tirhoot or Chumparun. He accepted the local officer's estimate that about 200,000 people in Sarun might be upon the hands of Government, and that 500,000 maunds of Government grain, besides 180,000 maunds provided by the Hutwa estate, would be required for the relief of the people. He arranged that out of this a supply of 5,000 maunds daily should be sent from Calcutta to Arrah (in preference to the routes hitherto followed), whence it could be crossed over into and distributed throughout Sarun. Carts for the transport of grain within the district were plentiful. The measures arranged by Sir Richard Temple are being carried out, and 5,000 maunds of grain have been despatched daily to Arrah since the 12th February.

* Page 23.

Distress in Nepal.

11. As he travelled along the Nepal frontier, Sir Richard Temple's attention was directed to the distress among the people across the Tirhoot border. It appeared that there was risk of grave distress there, and Sir Richard Temple suggested that the Government should help the Nepal Durbar to import food for their distressed subjects. The Lieutenant-Governor, when submitting the question to the Government of India, expressed his opinion that distressed Nepalese should be received at our works, relieved by our charity, and treated at our hospitals just as British subjects, and that no distinction could be made between applicants for aid, on whichever side of the border they happened to dwell. The Government of India accepted this view, and at the same time offered the Nepal Durbar 1,000 tons of Government rice at cost price, provided the Nepalese would carry it away from the Patna railway. Sir Richard Temple's minute and other papers on the subject will be found in Appendix E.*

* Page 35.

12. The subject of advances to ryots was discussed in previous Narratives (see Appendix F to the tenth Narrative). The matter has again been considered, and the orders of this Government (see Appendix F.* to the present Narrative) provide that advances of money, grain, or seed are to be made liberally to ryots on Government estates and Wards' estates, that every effort is to be used to make such advances through zemindars or on their responsibility, and that in any case where zemindars will not be answerable, or where ryots can offer no security, either advances of money and grain may be made by the Relief Committees (under part II, clause f. of the instructions), or special report must be made in order that Government may, in case of absolute necessity, undertake the duty which the landholders, for special reasons, are unable to perform.

* Page 36.

Medical aid for relief centres.

13. At Appendix G.* will be found a minute by Sir Richard Temple upon the number of medical officers and medical subordinates which will be required in the Patna division. From the report of the Medical Department and the Lieutenant-Governor's orders thereon, it will be seen that two surgeons are under orders, one for Tirhoot and one for Chumparun, that 25 native doctors have either arrived or are about to arrive in the distressed districts, that 25 more are under orders to join, and that the Lieutenant-Governor has asked for a reserve of 15 native doctors. The requisite complement of compounders and the necessary supply of medicines is also being furnished for each relief hospital or dispensary.

* Page 37.

Fodder for transport.

14. Sir Richard Temple's orders and requisitions for fodder from the North-Western Provinces will be found in Appendix H.* Experiment is to be made whether rice-dust, which is available from Burmah, can be usefully imported for feeding cattle. Arrangements are also made and making for carrying fodder and for sending spare carts and cartwrights along with each train of carts, for maintaining the traffic routes in order, for putting up bridges-of-boats, and for promptly paying the carters where large contractors are not employed. The rates of hire for carts have also been raised considerably on most of the cart routes.

* Page 40.

15. With a view to increasing the efficiency of the cart trains, Sir Richard Temple has applied for the services of a Veterinary Surgeon and two assistants to look after the bullocks on the cart routes; and the suggestion has been submitted for the favorable consideration of the Government of India.

Bhaugulpore division.

16. Sir Richard Temple has not yet reported what supply of Government grain he considers to be required for North Bhaugulpore and Purneah. But he expects that the despatches hitherto made will have to be largely increased, and he has proposed to buy and to hire further means of transport from the North-Western Provinces. A late telegram from Mr. Hankey, however, informs the Lieutenant-Governor that he hopes to provide a sufficiency of carriage from local resources.

General distribution of Government grain.

17. It will have been seen from the foregoing paragraphs that Sir Richard Temple has, with the utmost activity and energy, visited the more distressed tracts of the Patna division. He has discussed with the local officers the condition of affairs on the spot; he has decided all questions as they arose with a promptitude and clearness which the Lieutenant-Governor cannot sufficiently acknowledge.

Private trade in the South Behar districts.

18. The Lieutenant-General hopes that it may not prove necessary very largely to increase the allotments of Government grain for South Behar; he trusts that these comparatively accessible districts may be supplied by private trade. The late rains have secured a good spring crop in the North-Western Provinces and most parts of Oudh; there is every prospect of another abundant harvest in the Punjab; 1,500 tons of grain per diem are being brought into Behar by private importers; everybody is agreed that the Patna dealers have now got large stores of grain which they hesitate to carry into North Behar. If Government refrains from further importations into South Behar, except for the bare supply of laborers on works, and for occasional charitable relief, and if the carriage of these districts is left sufficiently free for private trade, we may, it is hoped for the present, leave the main supply of those districts to private trade. If matters unhappily grow worse, these districts are accessible, and the Government can at the end send up more grain for their relief. In the papers at enclosure No. 5* will be found an account of the arrangements which the Magistrate-Collector of Monghyr is, wisely as the Lieutenant-Governor thinks, making to leave full room for the operations of private trade.

* Page 77.

Despatches of Government grain from Calcutta.

19. The total despatches of Government grain from Calcutta during the fortnight have been 6,10,379 maunds, of which 1,01,813 maunds were for the Rajshahye division, and the rest was for Behar. The total quantity of Government grain sent into the distressed districts up to date has been over 26,00,000 maunds, or close upon 100,000 tons. Now that so much Government grain is coming into Calcutta, and the transport arrangements in the district are more complete, a much greater strain is being put upon the East Indian Railway, which carries supplies to Behar.

During the last three weeks the railway has not been able to carry away daily all the grain which the Government wished, thus—

	The Government notified its wish to send off daily from Howrah.	The railway succeeded in carrying away daily.
	Mds.	Mds.
Week ending 1st February	33,428	25,572
8th	34,714	30,946
,, 15th	60,000	about 38,000
,, 22nd	66,000	week not finished.

The railway have thus been able greatly and steadily to increase the supply of wagons for the Government grain; but still has, as yet, been unable to work up to our requirements, and as yet 52,000 maunds (about 1,900 tons) a day is the most it has taken in one day. The Lieutenant-Governor would wish to be able to send away up to 3,000 tons a day, and has recommended (see Appendix I.*) that if necessary engines and wagons and drivers be borrowed from other lines of railway. The officials of the East Indian Railway have promoted the Government grain traffic in every way that they can, and some of their difficulties formerly arose from the delay in unloading wagons at up-country stations. The East Indian Railway, moreover, is doing a very large private trade, and is carrying about 2,200 tons of grain, seeds and general goods from Allahabad downwards for private parties, besides an unusually brisk private trade from Calcutta. The Lieutenant-Governor's letter to the Government of India, and the notice of daily despatches of Government grain for the current week, will be found at Appendix I.* There was some fear, moreover, whether the supplies of Government rice available in Calcutta for immediate despatch would suffice to maintain the high rate of despatches required; in fact for the last three days the despatches from Calcutta have been less than should have been owing to paucity of grain available for despatch. On this point, also, the Government of India was consulted. The despatches have certainly for some time past verged very closely on the limit of the supplies, but it is believed that larger supplies will soon arrive from Burmah. The Government of India has promised to consult with the railway authorities, and to take such steps as may be required, and the railway Agency has promised to try henceforth to carry away 2,500 tons of Government grain daily, and to attempt more if the Government officers can unload and carry it away from the railway stations. Already grave inconvenience has occurred because the despatches of grain to Patna at the beginning of the current week were insufficient to employ all the carriage which the contractors had provided. There is no doubt or difficulty about the Eastern Bengal Railway's carrying away for Government as much grain as need be sent by that line.

* Page 41.

* Page 43.

Transport across the Ganges.

20. Almost all of the very distressed tracts are on the north of the Ganges, while the railway stations are on the south, so that most of the Government grain, directly it is unloaded from the railway wagons, has to be put across the river. Beginning at the highest station on the river, 5,000 maunds a day is ferried across punctually, and without any hitch whatever, in native boats from Arrah for the supply of the Sarun district. From the new siding at the river-side below Patna 20,000 maunds a day can be ferried over partly by a steamer and two flats, but mainly by native boats. At present there are plenty of native boats, and there is no hitch. It is feared that when the March winds blow, native boat ferries will become tedious; and unhappily the river may then be too low for river steamers to work across. Effort is being made to deepen the channel and to arrange for sending steamers of less draught to Patna. The Barrh ghât station has only just been opened; 16,000 maunds a day are to be sent thither, and ample steamer power is under orders for the ferry. The river is deep and the banks are good; report has just been received that the Barrh ferry station and arrangements are in complete order. The Monghyr station despatches of Government grain had been stopped for two or three weeks, owing to a block of private or rather Court of Wards' grain. But they will soon begin again, and there are sufficient native boats to carry from 2,000 to 3,000 maunds a day across to Khagareah on the lesser Gunduck. From Sultangunge and Bhaugulpore, whence grain is crossed over for north Bhaugulpore, 4,000 maunds a day have been steadily ferried over in native boats, and the railway stations are reported to be clear from time to time. From Colgong 6,000 maunds a day is ferried over to Caragola by native boats, and the Superintendent of Police in

charge of the service has asked that 8,000 maunds a day may be sent to him, as he can cross the whole of that quantity during the present favorable months. From Sahebgunge to Caragola the railway carries over daily 4,000 maunds. For the ferry which serves the road from Rajmehal to Dinagepore, a steamer, one flat, and native boats fully suffice to carry away the 1,000 to 1,200 maunds daily despatched by cart to Dinagepore. At Kooshtea two steamers and four flats are engaged in ferrying rice from the Eastern Bengal Railway station; and there is also an abundance of native boats, which, however, take a very long time (about a day for every eight miles) in beating up the Ganges to Godagaree and Rampore Beauleah. The arrangements at Kooshtea are able to put across over 3,00,000 maunds (about 11,000 tons) a month, and would do more if Government required. From Goalundo Government grain is sent by steamers up to Kaligunge in Rungpore, and to Shahazadpore in Bograh; and a small amount of grain is despatched weekly from Goalundo up the Burrul, and by water into the south of the Dinagepore district. Thus far, therefore, the ferry arrangements are ample. The Commissioner of Patna has, however, applied for three more steamers with flats to work the Barrh ferry, where a quantity of railway material will have to be crossed for the Durbhanga railway. The Government orders which form enclosure No. 7* show that the Lieutenant-Governor has arranged for complying with these demands. * Page 110.

Carriage into the interior, Patna Division.

21. The arrangements for carting grain into the interior have, in the Patna Division at any rate, been expanded so as to deal sufficiently with the very much larger importations of Government grain now going forward. For the Tirhoot district, arrangements have been made with large contractors who engage to carry 200,000 maunds weekly (or upward of 1,000 tons a day) into the interior; the rates of hire are very high, being seven annas (close upon one shilling) per ton per mile, or three pie per maund per mile. A similar contract has been made for carrying 50,000 maunds into North Chumparun, and 50,000 maunds are being carried weekly into Sarun. Sir Richard Temple has found that these transport contractors have begun well and are working regularly. Other reports show that the grain is cleared away from the Behar stations as rapidly as it arrives. For the interior of Patna, Gya and Shahabad, and for the Soane Canal Works, the available carriage is very ample for the conveyance of all the Government grain allotted to those districts. But during the last week or so some of this carriage must have been lying idle, as the railway could not carry up enough grain to supply all districts. At enclosure No. 8* will be found the Lieutenant-Governor's instructions to district officers to pay full demurrage for all carts and boats that are detained, so that none of the available carriage may be dispersed. * Page 111.

Bhaugulpore Division.

22. In the Monghyr district the grain stores are comparatively near to the railway; and every maund of Government grain that has yet been sent for Monghyr has been carted away as it arrived, and is now in store. The carriage arrangements of North Bhaugulpore and Purneah have now been very carefully inspected by Mr. Hankey, who found some want of organisation, has given orders for setting right, and has stayed to see those orders fully carried out. The latest news from Mr. Hankey is that he has nearly arranged to raise the despatches to North Bhaugulpore to 50,000 maunds per week, to the full extent required. From Caragola hitherto only 4,000 maunds a day have been carted into the interior; but here, too, the carrying power is being enlarged.

Rajshahye Division.

23. For the interior of the Rajshahye division the carriage arrangements which, during the absence of Messrs. Molony and Robinson in the further part of this division did not go on so well as could have been wished, are being much improved and expanded, not yet fully developed. The traffic of these districts in ordinary years is *down* the rivers during the rainy season. During the present dry year the rivers are very low, and at the best of times boats travel very slowly *up* the rivers of the interior. The beds of the Mahanuddy and of the Atrai are being improved, shoals are being removed, and a certain amount of Government grain is going up these streams; but the transport is slow and insufficient, and the district officers have for some time turned their attention more and more to the land routes, and have been organising trains of carts. The distressed parts of Rungpore, Bogra, Maldah and Rajshahye are happily near to the Berhampooter and the Ganges, and they can be supplied with certainty. But Dinagepore is the most distressed district of all; it requires from 6,00,000

to 10,00,000 maunds (37,000 tons); and the latest reports show that only from 35,000 to 40,000 maunds a week are going forward. Perhaps Dinagepore may be able to draw a part of its supplies through Purneah, but the Lieutenant-Governor does not wish much reliance to be placed on that source. He has arranged with the Commissioner and the local officers to increase largely the rate of transport towards Dinagepore. Already in answer to this call report has been received that on one cart route the daily despatches and the carrying power will be doubled before the 1st March.

* Page 110.

Small steamers.

The Lieutenant-Governor has, with the approval of the Government of India (see papers in enclosure No. 7*), arranged for building four small steamers in Calcutta, which will be ready during the end of June, and will be able to run on the inland rivers directly the rivers rise. The Government of India is endeavouring to bring round from Coconada one or more of the large steel steamers and flats (120 feet long and only 18 inches draught) which run on the Godavery; two of the lower Godavery steamers are already on their way to Calcutta. An indent for 10 more steamers of the same type (about 80 feet long and 2 feet 10 inches draught) has been sent to England for the Government of India; the steamers, or as many as can be sent, will come in pieces and will be put together in Calcutta. And it is hoped that by improving the river beds, and with the help of steamers, the full tale of the Dinagepore supplies may be made up at the beginning of the rainy season. When the inland rivers rise, all the afflicted tracts of Rajshahye will become very accessible. Meanwhile as much grain as can be sent by land will be pressed forward, and the rest will be stored at or near the mouths of the rivers which will after June be the routes of supply.

Small bags for packing grain.

25. From many districts representations have been received that the two-maund bags in which Government grain comes are too large for convenient handling in the interior. It is, moreover, impossible to load two-maund bags on pack-bullocks. The Lieutenant-Governor, too, feels that we must look much to eventually distributing the Government grain by head-loads, using the people themselves to bring their own supplies; and it is certain that ordinary coolies cannot conveniently carry even one-maund bags for any considerable distance. He has, therefore, arranged that all the Bengal jails shall manufacture for the Government use 30-seer (61 lb.) bags instead of one-maund (82 lb.) bags; and he hopes to get more than 150,000 of these small bags made every month. The Government of India have been asked to consider the subject, to contract for the supply of some hundreds of thousands 30-seer bags a month, and to arrange that future supplies of Government grain shall come in small bags of this size; and reply has been received that, so far as possible, and as small bags can be supplied, future consignments of rice will be packed therein. It is proposed to supply a quantity of empty 30-seer bags to the relief committees of each very distressed tract, so that they may send out grain to small relief centres in these bags, which can be returned and refilled as often as occasion may require.

* Page 27.

26. In Appendix D.* will be found Sir Richard Temple's minute regarding the arrangements for the supply and transport of grain for the relief of Tirhoot, Chumparun, and Bhaugulpore, with a note of the Lieutenant-Governor thereupon and the orders of the Government of India; the Lieutenant-Governor's orders regarding requirements of the Rajshahye division.

The estimate of the quantities of grain required for the relief of the more distressed districts have greatly risen; and at present the estimated requirements up to date stand thus:—

	Quantity of Government grain required.	
	Mds.	Tons.
For Tirhoot—		
As per Sir Richard Temple's estimate accepted by the Government of India - -	40,00,000	148,000
For Chumparun—		
As per Sir Richard Temple's estimate -	10,00,000	37,000
For Sarun—		
As per Sir Richard Temple's estimate -	5,00,000	18,500

	Quantity of Government grain required.	
	Mds.	Tons.
Southern districts of the Patna division and the Soane Canal works— As per this Government and the local officers' estimate; perhaps Gya may be found to require more - - - - -	5,00,000	18,500
Bhaugulpore district— Separate estimates not received, but following the scale adopted in Tirhoot, there will probably be required at least - -	7,00,000	25,900
Monghyr district— Has already received 1,50,000, and whatever more may be required can be delivered at any time. Say in all - - -	3,00,000	11,000
Purneah district— As yet 2,50,000 maunds have been allotted. But the requirements on the North Behar scale will probably reach - - -	5,00,000	18,500
Rajshahye division— As estimated by this Government on the statements of the local officers (see enclosure No. 5) 16,75,000 maunds, but say - -	15,00,000	55,500
Total - -	90,00,000	332,900

If the transport arrangements prove sufficient to carry all that Sir Richard Temple proposes, then the reserve left from the grain already provided by the Government of India will be very small, and will not suffice to meet the demand for a reserve of 20,000 tons which the Lieutenant-Governor requested might be kept to meet the possible necessities of the eastern districts, where there may perhaps be an undue depletion of stocks so as to make it difficult for private trade to supply the north-eastern district, where the failure of crops has been so great. If we find that we can carry to the distressed districts all the quantities shown above, and if they are all required, the Lieutenant-Governor has no doubt that the Government of India will be able to arrange for still further supplies from the abundant harvest of Burmah, and so to provide a reserve for Bengal necessities.

Relief works.

27. The fortnightly returns of laborers employed upon relief works are now submitted (see enclosure No. 9*), complete for the first time. These returns do not show the laborers employed on relief works executed by the Court of Wards, and such works in Tirhoot, Sarun, and Bhaugulpore are very considerable. It will be seen that the total of laborers employed in Sarun on the last day of the fortnight was only 57,000 according to the table in enclosure No. 9, while the Magistrate in his narrative (enclosure No. 3*), puts the total at over 68,000. In round numbers the total number of laborers on the relief works according to the latest advices, may be put down at—

* Page 112.

* Page 70.

Patna Division - - - - -	120,000	people.
Soane Canal works - - - -	32,000	„
Gunduck embankments - - - -	9,500	„
Bhaugulpore Division (inclusive of Khurruckpore works) - - - - - -	19,000	„
Rajshahye Division - - - - -	24,000	„
Burdwan Division, Nuddea and Chota Nagpore -	6,000	„
Northern Bengal Railway - - - -	3,000	„
Total -	213,000	„

In Bhaugulpore, Purneah and Chumparun, a large per-centage of the work-people belong to castes which do not usually take to field labor. In Sarun two-fifths of the laborers are men, while three-fifths are women and children. A great many people are employed also on tanks and irrigation works executed by land-holders with the help of advances from Government; on single works of this kind 200 and 300 people are often employed. Armies of ryots who would otherwise be in distress for themselves and their cattle, are receiving wages and employment in the transport of Government grain. The districts where relief works as yet draw but very few of the people are Purneah and North Bhaugulpore. The Lieutenant-Governor has directed very careful inquiries on the spot, with a view to ascertaining whether work is really and readily available in these tracts; whether the people are sufficiently and punctually paid, and whether there are any other administrative shortcomings in the management of the works. In Dinagepore, which marches with Purneah, people flock to the works, and thus the fewness of the Purneah laborers is the more remarkable. If it turns out that all the relief arrangements are really as they should be, and if the people neither come to the works nor starve, then we may hope that Purneah is, despite the grievous failure of the rice crop, better off than had been feared.

Apparent unpopularity of relief works in some districts.

28. It has been definitely settled that village tanks and such like works may under certain conditions be re-dug, or dug as relief works where other useful works may not be available. In Appendix E. of the last narrative the recommendations of the Lieutenant-Governor on this subject were given, and these have now been sanctioned by the Government of India (see enclosure 4*). In a previous narrative it was stated that there had been special difficulty about providing suitable relief works in South Monghyr. The Commissioner has now, during his visit to the spot, arranged for sufficient works, and has been able to educe a great deal of liberality from zemindars who are opening relief works at several points. In Sarun and Tirhoot such works are also being actively carried on, and Sir Richard Temple has authorised them in abundance.

Tank and irrigation works.

* Page 74.

The Irrigation Department was unable to give, on the papers and the information hitherto available, a final opinion upon the scheme for leading an irrigation channel behind the Gunduck embankment in the Sarun district; and so Colonel Gulliver, the Chief Engineer of Irrigation, has been deputed to Behar to inquire and decide on the spot whether this work (which will cost two lakhs of rupees for earthwork and two lakhs for masonry, &c.) can be undertaken with any certainty of its being remunerative, or of its eventually being worked into the greater project for irrigating Sarun from the Gunduck. Colonel Gulliver will, at the same time, examine certain other lesser schemes for joining together a series of reservoirs which stretch across the Chumparun, and for training the little Gunduck so as to save the Mozufferpore station.

29. In the Burdwan Division the most noticeable feature is the export going on from all parts concurrently with much failure of crops. The inference is, that the cultivators have grain, but this will probably grow much dearer as the season advances, and the laboring and landless class will suffer. It is to be feared that in many parts of this division, where the people have been already reduced by fever, charitable relief will have to be very extensively given. This may specially be looked for in the district of Burdwan itself. The reports of most of the sub-divisional officers are here gloomy, though the Magistrate does not himself apparently take so serious a view of things, and the Commissioner who has just specially visited the district under the Lieutenant-Governor's order takes a similar favorable view. The Lieutenant-Governor has directed that the necessary organization for charitable relief should be at once elaborated. The Maharajah of Burdwan has, with the liberality which has always distinguished him, formed a relief department for his estates with centres at Burdwan, Culna, and Chinsura. The whole cost of its operations will be borne by him, and he has intimated his readiness to do anything else that is necessary for charitable purposes. The Maharajah is only in this repeating what he did in 1866. No material change has taken place in Bancoorah, Beerbhoom, and Hooghly. Advances for land improvements have been very freely taken. Arrangements for works have been made, and the Commissioner has been pushing on the preparations for charitable relief centres. In Midnapore a scheme of district works has been sanctioned, which is believed to be well adapted to the necessities of the affected tracts, and as the Magistrate is of opinion that there will be a deficiency of grain in the wilder tracts, he has been allowed to make advances to zemindars and others to enable them to store.

Burdwan Division.

30. In the Chota Nagpore Division the district of Maunbhoom has benefited like other parts by the rain. Exportation is still going on, and it is anticipated that from this cause and the consequent dearness of food the poorer classes may suffer more than they would otherwise

Chota Nagpore Division.

have done. The Commissioner has recommended the storing of 50,000 maunds of Government grain at Burrakur. At present it is impossible to give this, as the railway cannot carry more than it is necessary to pour into the more distant parts of Behar. Fortunately, however, the parts of Maunbhoom where the grain may be required are near the rail and the Grand Trunk Road, and can be supplied at short notice if real need arises. A credit of a lakh of rupees has been granted for advances to zemindars and others for the purchase and importation of grain, while the tolls levied at the Burrakur bridge have been suspended as regards grain proceeding westward. There is an ample provision of works in this district, and the people go readily to them. Rs. 22,540 have also been taken as advances for land improvements, chiefly tank and petty irrigation works.

In Palamow it has been arranged to store 30,000 maunds of grain. The local zemindars have undertaken to bring 20,000 maunds of this from the neighbouring markets of Lohardugga, which are well supplied, and the rest will be sent by return coal and timber carts from the Soane depôt at Dehree. Work is here, as elsewhere in this division, provided in abundance.

In Singbhoom the villagers have undertaken a series of tanks and small irrigation works, of which Government will pay half the cost from the Government Estates Improvement Fund, and a system of village roads has been devised connecting the country markets. With these, and advances given for the storage of grain, it is hoped that the wants of this district have been sufficiently met.

Nuddea and the 24-Pergunnahs.

31. In the Presidency division the two districts affected are portions of Nuddea and the 24-Pergunnahs. As regards Nuddea, it is only in a few thannahs of the district bordering upon Moorshedabad that any special distress is considered likely to occur. The Commissioner, who has just visited Nuddea and knows the district well, reports that parts to the north of the district will require careful watching, but for the rest, the district is better off than it was in 1866. Work is provided for all who need it, and sums aggregating over Rs. 32,000 have been applied for as advances for land improvements. 1,900 people are employed on the district relief works, and many hundreds more on the works which are being opened by planters and zemindars for the relief of their ryots and for the improvement of their estates. The district stocks are believed to be good, save in the tracts above referred to, and the condition of the people generally is fair, though high prices will press severely on the poorer classes. In the 24-Pergunnahs there are some symptoms of distress in a part of the Satkhira sub-division bordering on the Sunderbuns, which is dependent for its crop on river floods, which were this year wanting. The rivers here are ordinarily brackish, and the cultivators have suffered, not only from want of the usual overflow of sweet water, but also from short supply in their tanks. Roads are being put in hand to give employment to the laboring class, and the Lieutenant-Governor has sanctioned the extension to the district of the relaxed rules for the grant of advances for land improvement. Government will pay one-third the cost of any works found really useful for water-supply.

Irrigation Department Works.

32. The daily average number of laborers on the Soane Canal works fell, in consequence of the rain and cold, from 36,000 to 32,000 during the fortnight under review. The laborers are in good case and draw their supplies from the neighbouring bazars. The Superintending Engineer has, however, intimated his intention to open the Government grain stores to workmen at places where the price of common rice has fallen below 10 seers per rupee. Of the Gunduck embankments in the Chumparun district the Irrigation Department writes: "the number of laborers "thronging to the works has been daily increasing. * * * At present 6,000 "is the average number employed." In last fortnight's narrative (paragraph 25) the number was 680. On the lower embankments in the Sarun district the daily number of workpeople has risen during the fortnight from 1,438 to 3,500. In the Burdwan division two other channels for leading the Damoodah water into the beds of old rivers have been lined. The great success of a similar work in the Kana Nuddee was reported in last narrative. 725 people are employed daily on an undertaking for the improvement of the head works of the Kana Nuddee.

Northern Bengal Railway.

33. The latest reports of progress from the Northern Bengal Railway are not very recent. There were then about 3,000 people on the works, and any quantity of work was ready for all comers. Bricks are being burnt on the lower lengths. The Government grain is being

delivered and stored along the line. The Government of India has passed preliminary orders upon the estimates, has called for further detailed information, has promised to expedite the supply of material from Europe, and has at the same time given full authority to the engineers to proceed with so much of the work as can help to relieve distress. The Superintending Engineer, Major Lindsay, wrote recently that, unless work-people came in much greater numbers, he would not be able to complete the railway bank all through from Nattore to Julpigoree, as he had hoped to do. Save in parts not specially distressed labor is not abundant. The completion of the bank this season is of special importance, because if it is thrown up before the rainy season, the engineers will be able to see exactly the effect of their bank on the drainage of the country, and to decide upon the waterway required. Accordingly, the Lieutenant-Governor has authorised Major Lindsay, if the time for completing his bank begins to run short, to import laborers from other distressed districts.

Central Relief Committee.

34. The proceedings of the public meeting of the 4th February, at which a central relief committee was appointed, will be found at enclosure No. 10. The subscriptions to the Calcutta fund have reached Rs. 2,50,000, which, with the 10,000*l.* already collected in London, makes a total of 35,000*l.* subscribed up to the present date. This is exclusive of the sums raised in the distressed districts, which sums will be spent by the relief committees of those districts, accounts and reports of such expenditure being furnished to the central committee. The detailed instructions which were to be issued by the central committee (see part IV, rule 2 of Appendix G. to the tenth Narrative*) have been framed by the central committee and submitted to Government; but they are to be finally settled at an early meeting of the executive committee, when Mr. Schalch, the chairman, will state the results of his recent conference with the Commissioner of each of the distressed divisions. The very distressed tracts are to be divided into small circles of about 100 square miles each, at the centre of which will be stationed a trustworthy officer of the standing of Deputy Collector, who will be responsible for finding out distress and relieving it in every village of his circle. Sir Richard Temple desires that as many as possible of the relief officers for Behar should be Europeans, and effort is being made to find fit men in sufficient number. The Lieutenant-Governor hopes that for Maldah and Dinagepore, where the language and people are familiar to them, selected Bengalee officers will make efficient superintendents of relief circles.

* Page 131.

Scheme of charitable relief.

Functions of Central Committee.

35. The Government of India has intimated that it will be undesirable to burden the central relief committee with directing the details of charitable relief, as the Commissioners of Divisions are responsible for directing the district officers.

Copies of the correspondence of the Lieutenant-Governor's instructions under which the Government of India orders were communicated to the central committee and to the officers of distressed tracts, will be found in Appendix K.*

* Page 43.

Labour test.

36. The Government of India has further expressed its view that, in tracts where distress is keen and general, the "labor test" must not, and in practice cannot, be strictly applied to applicants for relief; and has pointed out that the Irish famine was in the end successfully relieved by importing grain and distributing it through the local dealers. It may here be mentioned that the Government of India has accorded to the Lieutenant-Governor discretion to sell Government grain to the public through local dealers, in places where private trade may be insufficient or non-existent, and where the Government grain stores can bear so heavy a drain. The question of selling Government grain was first raised by this Government at the beginning of January on a representation from Mr. Robinson of Dinagepore. From Sir Richard Temple's minutes, and from the local officers' reports, it would appear that the Government grain stores may eventually have to be thus opened at places in the north of Chumparum, of Tirhoot, of Bhaugulpore, and of Dinagepore, where private trade does very little for the supply of the vacuum in the food stocks. Copy of the Lieutenant-Governor's orders regarding the exercise of due discretion in this matter, with extracts of the correspondence, will be found at enclosure No. 11.*

* Page 112.

Charitable relief actually begun.

37. Meanwhile active distribution ef charitable relief has been begun in parts of Tirhoot, Chumparun, Monghyr, Purneah, and Maldah. By the last accounts the daily number of persons in receipt of charitable relief was less than 2,000. The completion of the organization

of the relief circles is being pressed, though, except in the tracts above mentioned, distribution of such relief is happily not yet required. The Lieutenant-Governor has, however, pointed out (see Review of the Patna Narratives, enclosure No. 3),* that even though abundant relief works may suffice for all able-bodied people, yet there must be many poor creatures who, from age and infirmity, are unable to work, and who will, in times of scarcity and dearness, suffer much, and for whom charitable relief must certainly be provided.

Advances to private persons.

38. The total advances taken by private persons for purchase of grain was by the last accounts not much over six lakhs (60,000*l.*) Applications for loans for land improvements are being made in large numbers; but the unavoidable enquiries into questions of rights and security have taken some time, and as yet but few loans have been actually paid out. In view of these delays the Lieutenant-Governor anxiously considered whether he could propose or authorise the disbursement of part of an advance before the requisite enquiry had been completed. He came to the conclusion that, for the present, it would be inexpedient to do so. But he has sanctioned several additional executive officers for the prosecution of the necessary enquiries, and has invested some fifteen selected district and sub-divisional officials with powers of a Collector under the Land Improvement Act. Care has been taken that these powers shall be exercised subject to the control and within limits set by the Collector of the district in each case.

Increase to district staff.

39. More than thirty extra civil officers of different grades have been posted to the distressed districts for relief work. Still more are on their way, and the officers of other districts and divisions have been informed that the Government trusts to them to work short-handed, so that they help their brother officers in Behar and Rajshahye in bearing the heavy work now devolving upon them. The Government of India has sent twelve civil servants drawn from the North-Western Provinces, Bombay, and the Central Provinces. Some of them have already done very good work; one, as Sir Richard Temple points out, holds efficiently the very important post of relief officer at Ramnuggur, in North Chumparun.

Employment of military officers.

40. At paragraph 30 of the last Narrative, it was stated that certain officers of the Quarter-Master-General's Department had been posted to famine districts. Several junior officers of the same department have now been sent to work under Colonel McGregor. The Commissioner of Patna reports that these officers, acting under Colonel McGregor's orders, are of the greatest assistance in controlling and directing the transport operations, and in prospecting for new routes. In the Bhaugulpore Division, Captain Grant, also a skilled officer, has already, in concert with Mr. Hankey, done much to improve and systematize the Bhaugulpore carriage arrangements. Of Captain Ker's work in the Rajshahye Division, report has not yet reached Government; but from the alacrity with which he took up his duty, the Lieutenant-Governor has no doubt he will do good service. Major DeKantzow is spoken of as having begun specially well. The Government of India has been good enough to promise the services of eighteen more military officers to superintend relief operations.

Estimate of total famine expenditure.

41. During the fortnight under review the Lieutenant-Governor submitted to the Government of India an estimate (see Appendix L),* so far as it was possible to frame one, of the total expenditure to be incurred on relief operations during the present famine. The estimate published by the Government of India (namely, three millions sterling) has been taken as the first cost in Calcutta of the 340,000 tons of Government grain which have been provided. The items of the estimate are as follows:—

	£
Special temporary establishments - - -	50,000
Promotion of private trade in grain - -	150,000
Relief work expenditure - - - - -	1,000,000
Purchase and transport of Government grain -	4,445,000
Charitable relief apart from the supply of grain -	100,000
Government grants-in-aid to private relief works -	50,000
Advances for purchase of grain and for land improvements - - - - - -	500,000
Total - -	6,295,000

---

* Page 53.

* Page 46.

From which may be deducted probable recoveries—

	£	£
By sale of Government grain - -	1,445,000	1,945,000
Re-payments of advances - -	500,000	
Probable net expenditure - -		4,350,000

This estimate presumes that there will be a favorable season, and that good harvests will be reaped by the end of September or beginning of October 1874.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, 19th February 1874.

Appendix A.

1. Last return showed that the total export of food-grains to places beyond Bengal for the four months ending on the 31st January 1874 had been as follows:—

	Tons.
From Calcutta - - - - - - -	103,454
„ Chittagong - - - - - -	32,376
„ Orissa - - - - - - -	7,665
Total -	143,495

The figures, as regards some of the out-ports, were partly obtained by telegraph, but they have been generally corroborated by the regular returns.

The export beyond Bengal from Calcutta for the first 17 days of February was 13,796 tons. From Chittagong for the first 14 days it was 5,291 tons, and from Balasore 453 tons. The other returns have not yet come in. The total exports so far as ascertained are thus 163,035 tons from 1st October, and 144,333 tons from 1st November to date.

The import of food-grains to Calcutta from places beyond Bengal has, according to the Custom House returns, been as follows:—

	On Private Account.	For Government.	Total.
	Tons.	Tons.	Tons.
In October - - - - - - -	2	0	2
„ November - - - - - - -	1,652	2,064	3,716
„ December - - - - - - -	1,834	9,646	11,480
„ January - - - - - - -	5,071	23,533	28,604
Total -	8,559	35,243	43,802

The Collector of Customs believes that much of what is entered as private grain is really consigned to private firms on Government account, and the returns of the officers of the Government of India show much larger arrivals for Government, which may be accounted for partly as above, and partly because, in the statements submitted to the Government of India, much grain is treated as arrived which is in ships coming up the river or on the river, and which has not yet been entered in the Custom House returns. The whole matter will, it is hoped, be cleared up for the next narrative. It is understood that as calculated by the Government of India officers' in the above manner, 69,680 tons of Goverment grain have reached the port from places beyond Bengal up to date. The Custom House returns for the first seventeen days of February show a total import of 16,607 tons, most, if not all of this, being for Government.

2. The despatches of rice from Howrah by rail to stations above Rajmehal on Government and private account, between the 4th and 17th February were 730,800 maunds or 27,066 tons. From the beginning of October 129,451 tons of rice have gone up by rail, of which 62,260 tons was Government, and 66,191 private grain.

The railway carried into Behar from above Mirzapore 547,341 maunds, or 20,271 tons between the 25th January and 14th February, making 69,520 tons since the 1st of November last.

During the month of January 96,959 maunds, or 3,591 tons of food-grains, chiefly wheat, reached Howrah from Behar.

3. Between the 4th and 17th February 609,471 maunds of food-grains (22,574 tons) came into Calcutta through the eastern canals, making 127,472 tons since the 1st October.

4. The traffic on the Ganges is still trifling, the registering station at Sahebgunge showing in the first fortnight of February 46,769 maunds or 1,732 tons going up, and 18,537 maunds or 686 tons going down. At Goalundo, during the same period, 80,300 maunds or 2,974 tons were registered going up, and at Kooshtea 11,865 maunds or 439 tons passed down.

A. Mackenzie,
Junior Secretary to the Government of Bengal.

The 19th February 1874.

Appendix C.

No. 37, dated Camp Seeraha, the 5th February 1874.

From C. E. Buckland, Esq., with Sir Richard Temple, on Special Service, to C. E. Bernard, Esq., Officiating Secretary to the Government of Bengal, Statistical Department.

I am directed to submit copy of a minute (No. 10) recorded by Sir Richard Temple, reporting the state of affairs, and his proceedings, in the Tirhoot district, for the information of His Honor the Lieutenant-Governor.

No. 2.

Minute (No. 10) by the Honorable Sir Richard Temple, K.C.S.I.

Having visited the sub-divisions of Durbhunga and Mudhoobunee, which in respect to relief operations will probably be the heaviest in the Patna Division, and where the brunt of the whole work will mainly fall, I have to record the following remarks in reference to the general instructions forwarded under cover of Government Circular No. 2,678 R of the 26th ultimo.

2. Both these sub-divisions will be fit places for carrying out the instructions in Rule I, Part I, for having more than one sub-divisional committee.

For Instructions to Relief Committees, see page 131.

3. Under Rule 4, Part I, the Collector should be requested to state the places where he recommends such additional sub-divisional committees to be organized. I consider that there should be one such additional sub-divisional committee established in Alapore, the eastern part of the Mudhoobunee tract, and one at some point in the south-eastern part of Durbhungah tract. A selected civil servant should be appointed Chairman of each of these additional sub-divisional committees. Thus there would be four sub-divisional Committees in the two sub-divisions. If the Commissioner desires it, I will endeavour to obtain the services of any officer whom he may name. But it is essential that the officer should be specially selected for the duty.

4. The sub-committees mentioned in Rule 7, Part I, will be numerous in both these sub-divisions. I regard this as a matter absolutely essential to success. The area of each should be divided into circles. From the centre of each circle the radii should be from twelve to fifteen miles long, so that the officer resident at the centre should be able to frequently inspect every village. The officers in question should be European if possible; failing that, however, a selected Native may be appointed. I apprehend that ten such circles will be required in Mudhoobunee, and twelve or thirteen in Durbhungah, inclusive of circles in which the sub-divisional committee might be situate. The determination of the exact number is left to the discretion of the Commissioner.

5. A selected European officer should be appointed on each circle, and house accommodation should be at once provided for him. In Mudhoobunee I see that houses belonging to the Durbhungah Raj, and other houses, may be available; and there may also be some available houses in the Durb sub-division. But the Commissioner is authorized at once to cause such bungalows as may be necessary to be constructed so as to be ready by the hot weather.

6. The Commissioner is requested to see at once what staff of officers he has now available for these sub-committees. I shall be happy to apply for the services of any officer, civil, military, or uncovenanted, whom he may name as suited for this important duty.

7. I shall be glad to receive by early date lists of the gentlemen proposed for the sub-divisional committees and the sub-committees in both these sub-divisions, with the names of the places where their head-quarters are to be.

8. It will be the particular duty of the sub-committee to see to the persons described in Part II, Rule 3, Clause *f*. I fear that many Tirhootea Brahmins will have to be included in this provision, but great caution should be exercised in admitting such persons.

9. I apprehend that in both these sub-divisions many localities will come under the provisions of Clause *g*, which authorizes the sale of food from Government stores. The Commissioner will authorize the Collector to declare the places where and the date from which these provisions are to come into effect. It will be desirable to postpone the date as long as may be safely possible.

10. The attention of each sub-committee should be directed to Clause *h* which provides for establishment of relief centres in every village where severe distress may exist. It will be an essential part of the officers' duty to frequently inspect such villages, and see that all persons justly needing relief are relieved without any exception.

11. In conclusion I would impress on the local authorities that, in order to prevent loss of life in these two sub-divisions during the worst season, the organization of the sub-committees with manageable circles is absolutely necessary.

Camp Durbhungah, R. Temple.
The 1st February 1874.

Copy forwarded to S. C. Bayley Esq., Commissioner of Patna, for information and guidance.

Durbhungah, C. E. Buckland.
The 1st February 1874.

Dated Camp Seeraha (Border of Chumparun and Tirhoot districts), the 5th February 1874.

Minute by the Honorable Sir Richard Temple, K.C.S.I.

Having left the district of Tirhoot and entered that of Chumparun, I desire to record the following remarks for the information of the Government of Bengal.

2. I have visited five out of the six subdivisions of the very extensive district of Tirhoot, the Tajpore sub-division alone remaining unvisited; and I have had the advantage of meeting all the principal residents of the district, Native and European.

3. All the orders at present required, both as regards inland transport of grain and the formation of sub-divisional relief committees and sub-committees, have been given. But hereafter many supplementary orders will be required as matters advance.

4. The sub-committees throughout the Durbhunga and Mudhoobunee sub-divisions especially, and in part of Seetamarhee, will be numerous. For each sub-committee a European officer will be needed. Thus the staff of officers will require strengthening. Upon these points separate communication will be made. But I trust that only such officers may be despatched for famine work as may be selected for their aptitude. Indifferent men, if entrusted with such duty, will prove worse than useless.

5. I am highly satisfied with the district authorities generally in respect to relief business. They evince a zealous and intelligent appreciation of their duties, and merit the confidence of the local Government. To this however there is one exception regarding which I have written separately.

6. The presence of so large a body of indigo planters is a great advantage at the present time, both as respects the taking up of contracts for carriage and the distributing of relief. All the planters whom I meet give me cordial and unhesitating assurances that they will do their best to help in distributing relief among the villages with which they have connexion or relation.

7. The zemindars seem generally to be exerting themselves in the way of executing village works, tanks, and the like. I have suitably exhorted every zemindar whom I have met.

8. The Durbhanga raj has done something in the way of supplying grain and in executing relief works. But without any disparagement of its exertions, I do not consider that the raj has done enough as yet. I have impressed this view on the raj officers, and asked them to give large help in providing carriage, which I trust they will do.

9. The share which the raj has taken in constructing roads is very creditable. The raj Engineer, Mr. Stevens, deserves particular commendation.

10. The district generally is well provided with kucha roads, which is a great advantage at the present time. There is, and will be, difficulty in respect to drinking water for transport cattle along the main lines of road. But water, even in this year of deficient moisture, seems to be tolerably near the surface; so I hope that this difficulty may be remedied.

11. The cattle of the district are as yet in more than ordinarily good condition, having been fed on the stubble of the withered rice crop. The stubble has been largely stacked in most parts of the district. In some parts, however, I am informed that this precaution has been neglected by the people, and that some waste has occurred.

12. The European carriage contractors seem to think that their cartmen will be able to manage to scrape together fodder for the draught bullocks even in the hot weather. Looking to the uncertainty of this, and to the fatal consequences of a failure at the critical season, I am endeavouring to lay in a large supply of reserve fodder at Patna.

13. The golas or grain depots have been prepared all over the district, and the stocking of them with stores is proceeding rapidly. The eyes of the people seem to be much fixed on these depôts, and anxious inquiries are made as to when the stores will be opened. Every one who so inquires is told that the opening will be postponed so long as may be safely practicable.

14. The best informed opinions agree that the state and prospects of affairs are much worse now than in 1866 as regards the Durbhanga and Mudhoobanee sub-divisions, but better considerably as regards the Seetamarhee sub-division.

15. Several planters of long experience have told me that they had in the early part of the winter despaired of the safety of the lives of people. But when they hear of the arrangements which are being made by Government they express confidence, but also surprise at the extent of the efforts. They however consider that nothing short of these efforts would suffice to save the district from serious mortality.

16. All European residents express confidence as to a sufficiency of carriage forthcoming. Notwithstanding that, however, I consider it most desirable to introduce a certain amount of carriage from the North-West Provinces, which I am accordingly endeavouring to arrange.

17. The native merchants and bankers of the district seem to me to be generally deficient in enterprise and public spirit. Few of them, however, are of sufficient calibre for large undertakings. The grain trade of the district has hitherto been one of export only; and it has not caused the growth of large local dealers. The Patna merchants buy up the crop from the producers.

The producer sends the grain to Patna, where the merchants take delivery. Such is the description given to me. The large merchants might no doubt import now, if they were so minded; but they seem not to see their way to sending rice at a profit: they dread the cost of carriage and the distance of the localities, and they keep their grain at Patna.

18. The universal opinion in Tirhoot seems to be that neither the Patna merchants nor the Tirhoot merchants will or can supply in any large degree the wants of Mudhoobunee and Durbhunga and of the northern half of Seetamarhee. In the rest of the district (about two millions of population) the necessities will be on a more manageable scale; and there private trade will, I trust, do all, or nearly all, that is required. In the distressed tracts (somewhat over two millions of population) private trade will do a little, and the people certainly have stocks (though nobody can say exactly how much), and thus full fifty per cent. even of this section of the people may live without Government help. But the other half, numbering full a million persons, will be beyond the reach of trade, and will come in one way or other on the hands of Government. Such is the result of the best opinions, both official and non-official, collated to the utmost of my care, and upon that basis the general arrangements are being framed. We cannot depend on the case being better than this. It may become worse of course; and with this view in all our arrangements we shall provide a margin for safety.

19. The consequence practically is that we expect to import four millions of maunds of Government grain into the districts, and to ensure its being carried inland without fail. We try to provide carriage for five millions. The programme of dates, despatches, and consignments is arranged with a view to the four millions of maunds being laid down in the distressed districts by the middle of June.

20. I think that zemindars may be induced to help their tenants to a large extent: also, that grain-dealers in northern borders of Tirhoot will take advances to obtain grain from Patna. They have been duly invited to do this.

21. I regret that I cannot gather much hope from the district officers of any extensive emigration from Tirhoot to Burmah. Their attention is however being given to the subject.

22. The temporary telegraph lines to the relief centres will augment our administrative power. I earnestly hope that the tramway northwards from Barr to Durbhunga and Mudhoobunee, which has just been sanctioned by Government, will prove feasible. If successfully constructed, it will be a great relief to carts and bullocks along the principal line of transport.

23. There will, I fear, be some difficulty about procuring rice in husk (paddy) for seed for next harvest in the distressed districts. I will write further as soon as I am able to arrive at a conclusion on the subject.

24. There has been recently a fall of rain, from half an inch to a full inch, in some of the northern parts of Tirhoot, in which parts the hopes of the people have revived. Some coarse and quick-growing crops are being sown on vacant rice lands wherever this rain has fallen. But there will be no germination unless a further fall of rain shall occur in a fortnight hence. If these inferior crops shall be raised, they will afford some relief from the middle of April to the middle of May.

25. I have not been much beset—not so much as might have been expected—by persons or crowds of persons complaining of scarcity. But hundreds of fresh applicants in many parts of the district are daily coming to the relief works. Though probably there will be no widespread distress for some little time to come, yet I am very apprehensive of individual cases of severe distress occurring in every part of the district. It is difficult to be sure of finding out these cases at this stage of affairs. I have, however, addressed a most earnest warning to all the civil officers in the district, and requested them to communicate this warning to all landholders, European and Native.

26. The transit arrangements under Mr. Hewitt at Patna will work well on the completion of the two branch railway lines to the right bank of the Ganges. The country boats for the river crossing will, I believe, prove efficient. The steamers cannot be relied upon by reason of defects in channel. The organization at the two principal ghâts on left bank, Bunkur and Chumpta, is far from completed, but will be soon completed.

R. TEMPLE.

No. 105 F, dated Bankipore, the 6th February 1874.

MEMORANDUM by BABOO DURGA GATI BANERJEE, Personal Assistant for Commissioner.

FORWARDED to the Secretary to the Government of Bengal, Scarcity and Relief Department, for information.

NOTES BY SIR RICHARD TEMPLE.

MEMORANDUM of subjects settled, and instructions given by SIR RICHARD TEMPLE, in communication with the Commissioner and Collector of Tirhoot at Durbhangah.

1. Yes; this makes 1,60,000, which agrees with the 50,000, and the 1,10,000 in my minute of the 31st January.	1. The Collector of Tirhoot is to provide carriage from the resources of his own district for 1,00,000 maunds weekly from Chumpta Ghât to Durbangah, and for 60,000* maunds weekly from Bunker Ghât to Seetamarhee. This is independent of what the Commissioner may be able to arrange for carrying from Monghyr, or by means of the Government carriage ordered. The work is to be done by contract as far as possible and the agency of the police is to be in every way, discouraged.

* Since increased to 1,00,000.

2. Yes; this is most important. See my separate memorandum. I understand that Mr. Gale, the principal indigo planter in Mudhoobanee, and a large ticcadar in the Raj villages, has taken a contract for 30,000 maunds a week from Durbhangah to Mudhoobanee sub-division. The additional assistants in the Raj are agreed to.	2. The officers of the Durbhangah Raj are to provide for the carriage from Durbhangah, of all the grain to be distributed into the interior of the Mudhubuni sub-division. For this purpose the manager is authorised to take on the services of two additional assistants at Rs. 300 a month each.
3. I have sent my recommendation to Calcutta on the 31st.	3. A tramway, if sanctioned, is to be laid down from Chumpta Ghât *viâ* Dulsingserai and Hyaghât to Durbhangah, and eventually to Mudhobuni.
4. Arrangement about Mr. Stevens approved; he is an excellent man.	4. The work is to be placed under Mr. Stevens, and to enable him to carry out his duties efficiently, he is to be appointed Superintending Engineer of the special circle of Raj relief works and tramway roads.
5. The proposed establishment for him agreed to.	5. He should have under him for this purpose— 1 Executive Engineer } For tramway roads } To be paid by Government. 2 Assistant Engineers } 1 Senior Assistant for Purneah roads } 3 Junior Assistants to be lent to the Raj and paid by the Raj for Raj Relief works.
6. I have seen the place. The bund or dam should be put in hand at once. It will improve our water route at once; even if tramway should not be undertaken it will be essential to roadways. It will be a capital relief work.	6. He is to put a bund across the Koray for the tramway road, which it is hoped will also render available a water route *viâ* Rosrah to Hyaghât.
7. I concur in abandoning the Keray.	7. The water route *viâ* the Koosey, Telgoojah, and Korny is to be given up as it has proved a failure.
8. I have applied for Mr. Magrath's services accordingly.	8. The services of Mr. Magrath are to be applied for to the Government of Bengal, with a view of his being placed in charge of the Madhoobuni sub-division.
9. The digging out of old tanks along transport routes most essential for water supply. They will be capital relief works; see my separate memorandum.	9. Along all the routes of grain transport, old tanks wherever available are to be dug out, or new tanks or wells made, so as to provide a constant supply of water for transport cattle.
10. I have applied for the cotton seed to the Government, North-Western Provinces, and the Chief Commissioner, Central Provinces.	10. A lac of maunds of cotton seed is to be applied for from North-Western Provinces and Central Provinces, and to be stocked along the transport routes.
11. Yes; most proper. The present will be a good opportunity for permanently improving the tanks of the district by relief labour.	11. Officers are authorised to deepen old tanks wherever necessary, to provide relief works, and to secure water for the cattle of the district.
12. Quite proper; I shall be glad to be furnished with names of all officers.	12. A responsible officer is to be placed in charge of each main line of grain transport to employ permanent gangs of laborers thereon, and to be held responsible for its being kept in continual repair.
13. Yes; see my separate memorandum about Mudhubuni and Durbhangah relief circles. The immediate construction of the bungalows is authorised.	13. Relief centres are to be established in all the afflicted portions of the district; each centre to have a radius of about ten miles, and the sub-divisional officers are at once to construct temporary mat bungalows at each centre. It is estimated that twenty such centres will suffice for Tirhoot, and arrangements will be made for supplying an officer to each.
14. The cotton and puttooah have been applied for through Government North-Western Provinces.	14. A supply of cotton for weaving, and puttooah for making string, will be applied for to be distributed in the villages for some relief work.
15. & 16. Quite approved; but I shall be glad to have names of the officers.	15. In addition to the transport arrangements already mentioned, the following instructions have been given.
	16. A responsible officer is to be placed in charge of all the arrangements of each of the receiving stations of Bunker Ghât and Chumpta Ghât, and mat bungalows are to be put up at once for their accommodation.
17. Yes; I have officially addressed the Government of North-Western Provinces with this view.	17. Tenders have been invited through the North-Western Provinces Government, for contracts to carry a lac of maunds weekly from each of the above ghâts into the interior.

18. I have arranged to make this up to 1,500 carts with bullocks.	18. A reserve of 1,500 carts with bullocks, is to be placed at the Commissioner's disposal in case of any failure of contractors' arrangements.
19. I agree to buy the 500 spare bullocks. Commissioner will please arrange.	19. A supply of 500 bullocks is to be bought at the Berhampore fair, and kept in reserve along the transport lines to assist the contractors in case of their cattle breaking down.

S. C. Bayley.

No. 41, dated Motiharee, the 6th February 1874.

From C. E. Buckland, Esq., on special service, to the Officiating Secretary to the Government of Bengal, Statistical Department.

With reference to my letter No. 37 of yesterday's date, submitting copy of Sir Richard Temple's minute No. 10, I am directed to submit copy of a further minute No. 12, which may be regarded as a supplement.

Minute by the Honorable Sir Richard Temple, K.C.S.I., No. 12, dated Motiharee, the 6th February 1874.

As a supplement to my minute No. 10 of yesterday's date, I desire to add that I am highly satisfied with the condition, progress, and prospects of the local relief works in the Durbhanga and Seetamurhee sub-divisions, but not so as regards the Mudhoobanee sub-division. In Durbhanga the Raj Engineer, Mr. Stevens, and the sub-divisional officer, Mr. Macdonnell, are fully alive to the necessity of the case; the same remark applies to Mr. O'Reilly and Sergeant O'Farrell in Seetamurhee. Some relief works are planned in Alapur, the worst part of Mudhoobunee. The Commissioner and the Collector have proceeded thither, and also Mr. Anderson the Executive Engineer of the new or northern division of Tirhoot, and I expect very shortly to hear of the relief works being set on foot there.

2. The formation of a new Public Works Division there, will be very beneficial. There remains the southern, or Mozufferpore executive division, in which the signs of activity are less manifest.

3. I have ordered temporary bungalows to be immediately erected at every place where the European president of a sub-committee is to be placed. As there will be many such sub-committees in each of the distressed sub-divisions, several bungalows will have to be erected, while in several places accommodation already exists.

R. Temple.

No. 56, dated Bankipore, the 12th February 1874.

From C. E. Buckland, Esq., with Sir R. Temple, on special service, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I am directed to submit for the information of His Honor the Lieutenant-Governor of Bengal, copy of a minute No. 18, dated February 12th, recorded by Sir Richard Temple regarding the state of affairs in the Sarun district, and to express a hope that the arrangements therein mentioned may meet with His Honor's approval.

2. Sir Richard especially begs that Mr. Toynbee may at once be instructed to despatch 5,000 maunds of grain a day for the Sarun district to the Arrah station, instead of to any other station on the East Indian Railway, and to continue despatching this daily supply until the required amount of 500,000 maunds (of which some 130,000 have been received) shall have been acknowledged by the Collector of Sarun. At Arrah the grain will be taken charge of by Major Jackson, on special duty, for the Collector of Sarun: arrangements have been made for its transport to the ghât on the Ganges near Dooreegunj, where Mr. C. E. F. Tonnerre will take it over also for the Collector, and from whence it will be conveyed to Chupra and other places for distribution in the interior of the district.

3. The object of this proposal is to relieve the pressure at the Patna station, and to enable the Collector of Sarun to receive his consignments in the manner most convenient to him.

N.B.—Mr. Toynbee is sending 2,500 bags (5,000) daily to Arrah for Sarun as an emergent indent, Major Jackson having telegraphed that carts had been arranged for this quantity. The quantity is cut from the Patna ghât allotment pending order.

Minute No. 18, by Sir Richard Temple, dated Chupra, 12th February 1874.

1. Having travelled through the Sarun district from north to south, and having visited the western portions of the Hutwa estates where the distress is likely to be worst, I have to record the following remarks.

2. In the southern, or lower portion of the district on the left bank of the Ganges and Gogra, the crops are in fair condition. This comprises the thannahs of Digwara, Chupra, Manjlee, and Durowlee, with a total population of 680,000 souls.

3. In the rest, or upper portion of the district, of which the population amounts to 1,380,000 souls, the crops are more or less deficient. The Indian corn did not yield more than six annas, or half the average. The rice crop (which covers one-fourth of the whole cultivation) failed almost entirely. The rubbee crops did not, until recently, promise to yield more than two or three annas, or one-fourth of the average. They have, however, been much improved by the recent rain, and now a six-anna yield is expected.

4. In some localities, however, in the Berowlee and Bussuntpoor thannahs near the Gunduck, the failure is worse than that just described. And in some places, such as Booreh and Afrat, to the west of Hutwa, where there have been three unfavorable years in succession, or where the people mainly depended on the rice crop, a more severe degree of distress is to be anticipated than elsewhere.

5. On the whole, the deficiency of the food supply is serious in that portion which has a population of 1,380,000 souls. The district, too, is densely peopled (778 to the square mile), and the surrounding districts, Chumparun, Tirhoot, and Goruckpore are also distressed. Thus supplies can only be drawn from the south, or from distant districts to the west.

6. It is satisfactory to note that this district has many grain marts, and many grain dealers of substance and enterprise. Such places are Meergunj, Goorthnee, Siswan, Maharajgunj, Roopun, Chap, and Revelgunj ; and the Collector, Mr. J. S. Drummond, informs me that the importations of grain into these and similar places have been large of late, and that, too, from long distances.

7. In this important respect the Sarun district contrasts favorably with the Chumparun and Tirhoot districts.

8. Already, however, there are signs of distress throughout the upper part of the district. On the 10th February there were nearly 70,000 persons employed on relief works. Of these a large proportion consisted of women and others who would not ordinarily be resorting to labor of this sort.

9. The works consist partly of tanks, but chiefly of roadways which are being made or repaired all over the district in every direction. Captain May, the executive engineer, informs me that he has now 900 miles under operations. It is represented to me, however, that there will be difficulty in finding continuous work for so many people.

10. On the strong recommendation of the Collector, and the district engineer, I have ordered that the clearing out of the old inundation channels for irrigation, which run through the most distressed localities, be included in relief works. The Collector will arrange with Captain May accordingly to commence the clearing out immediately.

11. The district authorities appear confident regarding the resources of the district in carts and bullocks for the transport of the Government grain. Their view is fully confirmed by what I learnt from Mr. Donald Reid, the manager of the Sadowa indigo concern. There are native chowdreers (headmen) at Revelgunj and other marts, through whom the Collector obtains carriage without any difficulty, and without resorting to the police or such like agency.

12. After the middle of May the Gunduck will become navigable to the north-east part of the district. The Gogra also, with one of its affluents, will carry boats right up to the western part of the district.

13. I have now to consider briefly what is the number of persons for whom we should be prepared to afford assistance in some shape or other, and what is the quantity of grain which we should require, and what are the means of transport.

14. The Hutwa estates comprise the most distressed localities. I have carefully consulted Mr. Hodgkinson, the manager of the estates (which are under the Court of Wards). He thinks that at the worst season, which will last from 1st of June to the 15th September (when the new Indian corn will be coming in) or 3½ months, there may be 80,000 persons needing assistance in some shape or other, and the Collector informs me that this estimate is not too high. There are now 9,000 persons receiving assistance, and the number will gradually rise till it attains its maximum about the beginning of June. The population of the Hutwa estates amounts to 400,000 souls.

15. I consider that at least 180,000 maunds ought to be stored within Hutwa limits by the beginning of June.

16. Mr. Hodgkinson has provided 120,000 maunds by purchases from Bengal and elsewhere, some of which has arrived, the rest being on its way. The funds for this have been furnished from the Hutwa Raj Treasury. Mr. Hodgkinson states that that treasury is not at present able to advance more, and he asks for a loan of a lakh of rupees from Government under the rules, for purchasing wheat, barley, and Indian corn from Patna or from the north-west. I shall authorise the loan being made accordingly, and request him to endeavour to obtain the grain from Patna market which is said to be somewhat overstocked. If he fails to obtain it at Patna, we can resort to the north-west. This loan will suffice to bring up the provision from 120,000 maunds to 150,000 maunds. In order to make up the 180,000, maunds there remain 30,000 maunds to be despatched from the Government stores to be received by rail at the Arrah station, for which quantity a requisition must be duly made to Government. This grain will be advanced to the Hutwa Raj, and we shall expect Mr. Hodgkinson to use his best endeavours to recover the value for Government.

17. As regards the rest of the district, the Collector considers that provision should be made for 200,000 persons. The number of those now receiving relief is 60,000, which may rise gradually till it reaches its maximum at the end of May, remaining high till September. According to that I consider, after consulting Mr. Drummond, that there ought to be a provision of not less than 500,000 (five hundred thousand) maunds to be carried into the interior of the district by the 15th June, after which date water carriage will be to some extent available.

18. Already 250,000 (two hundred and fifty thousand) maunds have been allotted by the local Government from time to time, of which 130,000 (one hundred and thirty thousand) maunds have

arrived, the rest being in course of transit, thus leaving 250,000 maunds additional to be provided. I have accordingly to recommend that the despatches by railway of grain for the Sarun district may be regulated accordingly.

19. For inland transit the Collector is confident that the carriage of his district will suffice, and from what I have seen, I am disposed to accept this view.

20. The Collector, however, particularly desires that all the grain for the Sarun district may be sent to the Arrah station, where he has an officer of his own stationed, and where he can conveniently manage the crossing of the Ganges. He represents that he has tried the plan of obtaining some of his supplies from the Patna station, and that embarrassing delays always resulted, save when a steamer was employed for the purpose exclusively. This matter is indeed of great importance, not only to secure the efficiency of the service for the Sarun district, but also to relieve the already overburdened service at Patna.

21. I have accordingly to ask that all the consignments of Government grain for the Sarun district may be made to the Arrah station.

22. A district committee for relief should be formed at Chupra for the whole district of Sarun, which would, however, administer relief direct to the country round Chupra. There will be a sub-divisional committee at Sewan under the sub-divisional officer. This committee will administer relief to the whole sub-division, excepting the Hutwa estates. If, as distress developes itself, the Collector finds it desirable to form another committee towards the northern border, he can do so. For the Hutwa estates, Mr. Hodgkinson will be in the position of a sub-divisional committee.

23. The indigo planters and the principal zemindars will, I understand, be willing to assist in the distribution of relief among the villages in their neighbourhood. The indigo planters have taken some advances under the rules from Government for importing grain; and some of the zemindars have done the same. But the Collector is not able to make a very favourable report of the efforts of the principal zemindars on this occasion.

24. The Collector desires to make advances to ryots to sustain them through the coming trouble and I have authorised him to do so wherever the zemindar will stand security, or allow the land to be hypothecated, or where the ryot has property to pledge, or where, under the circumstances, the Collector considers there is a reasonable degree of certainty of the advance being repaid.

25. I have to state in conclusion, that the Collector, Mr. J. S. Drummond, evinces much care and thoughtfulness, and entirely appreciates the duties which devolve on him in respect to the scarcity. Mr. Hodgkinson, the Superintendent of Hutwa, is an able and excellent officer, and is sure to meet the impending trouble in a vigorous and efficient manner.

R. Temple.

No. 51, dated Camp Hutwa, the 10th February 1874.

From C. E. Buckland, Esq., with Sir Richard Temple, on special service, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I am directed to submit for the information of His Honor the Lieutenant-Governor of Bengal, copy of a minute, No. 15, recorded by Sir Richard Temple, regarding the state of the Chumparun district in relation to the impending scarcity.

Minute No. 15, recorded by Honorable Sir Richard Temple, K.C.S.I., dated Camp Hutwa, the 10th February 1874.

Having left the Chumparun district, I have to record briefly some general remarks regarding the condition of affairs there in reference to scarcity and relief.

2. There have recently been two falls of rain, amounting in various places to one inch, or one inch-and-a-half, even to two inches. The prospect of the spring harvest is much improved thereby. Much land is also being sown with such crops as cheena and moong, which will yield grain by the end of April, and afford some food supply by May. This supply may help to replenish the empty grain markets for some short period, perhaps for a month, some say for more than a month. There is much uncertainty as to the yield of this supplementary crop, which is sown largely when other crops fail, and but little in prosperous years. But it will afford some relief, and it will abridge somewhat the period of work. The recent rainfall after the long drought has raised the spirits of the people, and caused despondency to give way to undue hopefulness. More thoughtful people, however, advise me that the general situation as previously apprehended is not materially changed.

3. I believe that our precautions and preparations should go on without alteration or relaxation.

4. The local grain trade may do something to meet the demands of the central part of the district. But it is limited in its operations, and it will do little or nothing for the supply of those tracts along the north and north-western borders of the district which have lost their sole support from the withering of the rice crop. Neither at Motiharee nor at Bettiah (the two principal places of the district), could I find even one grain dealer of any capacity or position.

5. The district authorities do not give a favorable account of the public spirit and disposition of the zemindars. I have not heard of one who has behaved creditably. Three of the principal zemindars appear, indeed, to have evinced a disposition the reverse of satisfactory.

6. On the other hand the Rajah of Bettiah personally manifests a desire to behave well. His European manager (Mr. T. M. Gibbon, an able and excellent man,) has arranged to import 150,000 maunds of grain for the Bettiah estate and will arrange other measures of relief. But

the Rajah's treasury is impoverished and his finances are embarrassed. And I by no means undertake to say that the above measures, though *per se* considerable, are really commensurate with the moral obligations of the Rajah, or with the size of his estates.

7. The Rajah of Ramnuggur, the owner of a fine zemindaree, with a population of at least 150,000 souls, was reported to me as having done nothing. I visited Ramnuggur and admonished the Rajah. He afterwards came to Bettiah and agreed to import grain, to give advances to his ryots, and to stand security for advances to be made to them by Government. If he fulfils this agreement, I may yet be able to write in favorable terms regarding him.

8. I have met most of the European Indigo Planters, who are so numerous in this district, and have received from them cordial assurances of help in the distribution of relief.

9. In the eastern part of the district many complaints of scarcity and distress were made to me by villagers. But in the western parts of the district, where matters are so much more threatening, the people preserved a patient and uncomplaining demeanour, which can, I think, be attributed only to the sight of the Government preparations, and the conviction that succour is at hand.

10. All along the northern frontier there will be very serious scarcity, beginning at the eastern corner, and becoming worse and worse westwards till the north-western corner is reached, where the failure of food supply is utter, and where the case will be formidable in extent, and in degree.

11. In consultation with the Collector, I have arranged the additional sub-divisional committees and the sub-committees with a view to the effective administration of relief in these tracts, and have authorised the immediate erection of temporary accommodation for the European officers. There will be three sub-divisional committees, and five sub-committees, all under the district committee which has been duly formed.

12. Some of the European superintendence required is already available. If more European officers are found to be needed I will make a further communication.

13. The European officers in the Ramnuggur sub-divisional committee (they will be four in number, including Mr. Howe of the civil service), will be resident all through the rains in a very isolated and insalubrious situation. This cannot be avoided, and they are fully aware that as regards famine in Chumparun, the officers at Ramnuggur occupy the post of honor. I am in communication with Dr. Francis, Deputy Inspector-General, regarding the provision of medical aid.

14. Relief works are being commenced in every part of the district. These chiefly consisted of roads. The Collector had doubts as to whether village tanks could be regarded as relief works. I have ruled that they are to be so treated, and that the excavation and clearing out of old village tanks afforded the very best means of relief.

15. These works were largely attended up to the day when the rain fell. Since that day the attendance has fallen off, as the people have gone away to sow the supplementary crops, "cheena," "moong," &c.

16. The new executive constituted in this district under orders of the Lieutenant-Governor, will prove very useful in the supervision of relief works. I met the new Executive Engineer, Mr. Murray of Motiharee, and explained to him what was expected of his department. I authorised the construction of a temporary office building for him. He complains of the want of good overseers. This complaint is, however, universal; and I fear that there will be a deficiency. However, I shall communicate further with the Superintending Engineer, on the subject when I return to Patna.

17. Incendiarism, robbery, and crimes, which usually break out in times of scarcity, are reported as becoming rife along the northern border. I have, therefore, requested the Collector to entertain additional police up to the strength of 80 men, including petty officers, to watch incendiarism and to guard the grain depôts.

18. Many representations have been made regarding the danger of the seed-grain being used up for food, and the necessity of seed-grain being stored by Government. The matter is one of some difficulty; but after consideration I hope to arrive at some definite conclusion regarding it.

19. It seems probable that the sale of Government grain in the Ramnuggur tract cannot be much longer delayed. I have instructed the district authorities on the spot to adopt this measure on any day when they find that safety demands its adoption. Meanwhile, I have authorised them to advance grain to ryots on security being given either on the Rajah's security, or on the hypothecation of the ryot's land with the Rajah's consent; also to pay the relief work laborers in kind.

20. The utmost vigilance has been enjoined on all the district authorities regarding the immediate relief of cases of individual distress.

21. There are no signs yet of the temporary telegraph lines from Mozufferpore via Motiharee to Bettiah and Ramnuggur. I have again urged the need of expedition on the attention of Major Mallock, who has been deputed by the Director-General to supervise the work.

22. I have inspected the new Gunduck embankment on the east or left bank of that river. It will be very beneficial as protecting the rice lands from excessive inundation. This may be inferred from the experience of the long-existing embankments on the western or right bank. I am not equally sure of the need for the irrigation channel proposed to run marching with the embankment. Perhaps the money appropriated for the channel might be better spent in other ways. If the channel be not made, however, it will be necessary to make sluices and openings in the embankments to let out water for irrigation. The embankment itself will give employment to 20,000 laborers during the worst season along a line of 70 miles in length.

23. I have enquired particularly into the supply of boats and the navigable channel of the Gunduck. This navigation is regarded by the Chumparun authorities as a valuable resource. It is a resource of some importance; but the boats are not numerous nor capacious, and

the current is strong in the rainy season, and my information is not such as to warrant the abandonment of our land carriage on this account.

24. My minute No. 13 of the 8th February, shows that we expect to have to assist 400,000 persons, in some shape or other, during the worst season; and that we have arranged to import one million of maunds into the interior of the district by the beginning of June; to which may be added the 150,000 imported by the Rajah of Bettiah.

25. I had the satisfaction of seeing that the carriage contractors have got their system into effective working order. I saw strings of Government grain carts wending their way among the villages, especially among the tracts of the remote Ramnuggur estates. This is, indeed, exactly what I desired to see.

26. The local resources in carts and bullocks are large. The contractors are able to obtain, without any difficulty, six thousand carts for the performance of their contract. Much of the local carriage, however, will cease to be available as soon as the indigo manufacturing season commences in June.

27. At present the contractors are taking delivery of the grain at Bunkurghat, opposite Patna, and follow the route viâ Mozufferpore and Bettiah to Ramnuggur. I have, however, approved of their trying, for a part of their contract, an alternative route viâ the ghat opposite Dinapore, and thence through the Sarun districts to Gobindgunge on the Gunduck, and thence to Bettiah. This will relieve the pressure now beginning to be extreme at Bunkurghat.

28. I trust that it will not be necessary to resort to the North-West Provinces for carriage for the service of the Chumparun district.

29. The contractors state that at present the route is well supplied with water, save in one place, to which the attention of the Collector has been drawn. Instructions have, however, been repeated to the effect that tanks are to be excavated at the halting places.

30. The Collector and his officers evince every anxiety to understand and carry out the instruction they receive in reference to the impending scarcity.

R. TEMPLE.

APPENDIX D.

No. 20, dated Durbhanga, the 1st February 1874.

From C. E. BUCKLAND, Esq., with SIR RICHARD TEMPLE, on Special Service, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I AM directed to submit copy of a minute recorded by Sir Richard Temple regarding the transport arrangements for the Tirhoot district, and to express his hope that the arrangements therein described may meet with the approval of His Honor the Lieutenant-Governor of Bengal.

MINUTE by the Honorable SIR RICHARD TEMPLE, K.C.S.I., dated Camp Durbhunga, the 31st January 1874.

No. 1.

HAVING visited the Tirhoot district, seen some of the tracts most affected by drought, conversed with the Commissioner and the civil officers, and with most of the principal non-official residents, European and Native, I desire to state the amount of Government grain which we should be prepared to bring into the district, and the arrangements for transport from the left bank of the Ganges into the interior.

The principal relief officer, Mr. Worsley, calculates the amount of grain required for his operations at four millions of maunds, or 148,200 tons.

The Collector, Mr. Halliday, estimates 3,500,000 maunds, which estimate is approved by the Commissioner, Mr. Steuart Bayley.

It is borne out to some extent by Colonel Burne, manager of the Durbhunga Estate, which has a population of half a million of people situated in the most drought-stricken parts of the district. He states the requirement for his portion of the district at 740,000 maunds.

Mr. Macdonnell, civil officer of the Dhurbhunga sub-division, expects that, at the worst period, 400,000 persons will come on the hands of Government in his sub-division.

Mr. Cochran, civil officer of the Mudhoobunee sub-division, states his fear that at the worst period more than 400,000 persons will require relief in his sub-division in some shape or other from Government.

Mr. O'Reilly, the civil officer of the Seetamurhee sub-division, informed me that he expected to have 150,000 persons on the hands of Government during the worst months.

There will be distress throughout the north-west corner of the Tajpore sub-division. The Collector thinks that 30,000 persons may here come on our hands.

In the rest of Tajpore and in the two remaining sub-divisions of Hajeepore and Mozufferpore there is not likely to be any general distress. But in Mozufferpore there will be some thousands of persons seeking relief.

Thus the estimates of local officers give about one million as the number of souls who will come on our hands in the Tirhoot district out of a total population of upwards of four millions, or 25 per cent.; and this is the district most severely affected in the whole Behar province.

The estimate of a million of persons correspond very much with the estimate of 3½ millions of maunds, or 129,700 tons as separately made by the Collector.

These statements represent nothing more than anticipations regarding subjects wherein certainty is not possible. But the time has now come when we must make the best estimate we can of the amount which will have to be transported into the interior from the left or north bank of the Ganges.

Looking at all the statements together, I consider that it will not be safe to provide carriage for less than four millions of maunds of food-grain, or 148,200 tons, which gives a margin over and above the Collector's estimate. The worst two months will be May and June, though the month preceding that period (April) may be bad; and the three months subsequent, July, August, and September, will almost certainly be so. Up to July land carriage only will be available. From July there will be help from water carriage, but the land carriage would fall off, and it would be preferable to bring the whole, or four millions of maunds, into the northern part of the district by the 15th June, the distances for inland carriage being from 40 to 80 miles from the Ganges.

Such being the present requirement, I have to see how it is to be met.

It was ascertained at Patna that the transport agent there (Mr. Hewitt) had despatched from there 2,00,000 maunds to arrive in the distressed sub-divisions of Tirhoot by 15th February, and had arranged to send from that date 50,000 maunds a week, which arrangement would place 8,00,000 maunds in those sub-divisions by the 15th June, making up one million in all.

The Court of Wards (Durbhanga) has already arranged to bring 2,00,000 maunds.

The amount for which cash advances have been granted by Government to zemindars, indigo planters, and others, on condition that they bring the grain up in time, may be taken at 50,000 maunds.

The Collector, under direction of the Commissioner, has just made contracts with trustworthy European contractors to bring up 1,10,000 maunds a week from Chumpta Ghaut opposite Barrh from the 15th February, which arrangement up to 15th June would place 17,60,000 maunds in the distressed sub-divisions.

I have invited tenders, on the suggestion of the Lieutenant-Governor, North-Western Provinces, for contracts, to be concluded there, to carry 2,00,000 maunds a week from left bank of Ganges to these sub-divisions from 1st April to 15th June, which arrangement, if effected, would bring in two millions of maunds.

These figures give the following results up to 15th June:—

	Maunds.
Patna agency - - - -	10,00,000
Courts of Wards - - - -	2,00,000
Zemindars, indigo planters, and others -	50,000
By local contracts - - - -	17,60,000
By North-West contracts - - -	20,00,000
Total - -	50,10,000

These arrangements will, if successful, provide more than the four millions required by 15th June, and will leave a fair margin to cover those partial failures which must be expected in operations of this kind.

I have provided a reserve of carts to be at disposal of the Commissioner in event of need or accident, by ordering purchase of 500 pair of draught-bullocks in Nepaul, the carts to be made in Tirhoot; 500 carts with bullocks will be purchased on the frontier of Chumparun district, or failing that, the bullocks will be purchased at Shahabad cattle fair, and carts made up in Tirhoot; 500 carts with bullocks are being obtained through the Government of the North-Western Provinces. Thus the reserve will be made up of 1,500 carts drawn by bullocks.

I have further, at the instance of the Commissioner and the Collector, recommended the laying down of a tramway from the left bank of Ganges to Mudhoobanee viâ Durbhanga to relieve the country carriage during the hot season.

Again, the Commissioner hopes to conclude a contract for the carriage of 50,000 maunds a week from the 15th February from the Ganges opposite Monghyr to Durbhanga. This arrangement, if successful, would place 800,000 maunds in the distressed sub-divisions by 15th June, and may be regarded as a reserve to make up for deficiencies in other parts of the general plan.

We cannot be sure that the contracts asked for in the North-West Provinces will be taken up. If they are not, we have still time to purchase or hire large quantities of carriage in those Provinces.

Also, further purchases of draught cattle can, if necessary, be probably effected in Nepaul or elsewhere, the carts being made up in Tirhoot.

We can, if absolutely necessary, obtain pack-bullocks from Central India; but we are averse to that plan if it can be avoided, because of the difficulty of fodder.

We can, as a last resource, obtain camels through the Commissariat at Agra; but the expense and the distance detract from the value of this plan.

By the advice of the Commissioner and the Collector, I have sent a requisition to the Government, North-Western Provinces, for 50,000 maunds of cotton seed (highly recommended as fodder), to be sent by railway to Patna; and a similar requisition to the Chief Commissioner, Central Provinces, or 100,000 maunds in all. I am assured by the best informed persons in Tirhoot, that this supply will be most useful to the transport service during the hot months.

By excavation of wells and old tanks along the routes of the grain transit, the Commissioner and the Collector hope to provide drinking-water for the cattle employed in the transport. They have arranged their relief works with this view.

The resources of the Tirhoot districts in carriage are more than ordinarily great. The indigo planting and manufacture cause a large number of carts and bullocks to be kept up by the ryots and villagers. There is a large export trade, in prosperous years, of produce from the district (estimated, inclusive of rice, at five millions of maunds annually), which is chiefly carried to the

Ganges by carts. There are many European non-official gentlemen resident in the district engaged in trade or industry. Thus it becomes possible to effect contracts, the execution of which can be relied upon to a considerable extent. The Commissioner and the Collector have very properly decided to resort to contracts for carriage, and not to collect carriage by direct agency of police or other establishments.

Lastly, if notwithstanding all these precautions, something more should be required after 15th June, there would still remain two more months up to 15th August, during which supplies could be brought up to distressed districts by water carriage.

These transport arrangements hold good only as far as the principal points within the distressed tracts. There will still remain detailed arrangements for the conveyance of grain to the villages. These will be made separately.

It is assumed that the railway will bring the requisite quantities of grain to the south or right bank of the Ganges. There will remain the provision of boats for crossing the Ganges; and for this purpose from 400 to 500 boats will suffice. This number Mr. Hewitt will certainly be able to obtain, and he has been instructed accordingly.

According to the above estimate, I have, by the advice of the Commissioner and Collector, to recommend that 2,00,000 maunds a week may be sent forward from Calcutta for the service of the Tirhoot district, consigned to care of Mr. Hewitt.

I hope that the arrangements explained in this minute will not be thought larger than what the occasion demands. Unless we act effectively now regarding transport, the opportunity for action will pass away. The tracts most severely affected by scarcity happen to be those which are the most distant, the most isolated, and the most helpless. In most parts of Mudhoobanee and in many parts of Durbhanga, the September crop is always small, consequently the distress will be more than ordinarily protracted, will last through the autumn, and will not disappear at the earliest till December. And during the rainy season the rivers in that quarter (the Tiljooga, the Bolan, and the Kumla) are navigable only for small boats.

R. Temple.

Note on Sir R. Temple's Minute regarding the Supply of Grains for the Tirhoot district.

This Minute only reached me very late yesterday evening. I think that it should be at once laid before the Government of India, and therefore submit it early this morning with this general note, without delaying to refer to recent figures.

I confess that the estimate now made exceeds what I had thought that Government could undertake in any distressed district, and also exceeds my estimate of our powers of transport. I have always supposed that there must be some stocks; that the year's produce, small though it be, will one way and another last for some time; that private trade will do something; that something will be saved by pinching, and a resort to food not usually consumed; and that Government can only supply the margin left when all these resources are taken into account. Admitting that the people of this country are more self-reliant in the matter of food, and less inclined to throw themselves permanently on Government or the public than in some other countries, I yet feel that this may, to some extent, be due to the fact that they have been obliged to help themselves in default of other means. And though all humane men would be glad if it were possible to maintain the people in full comfort and health in times of scarcity, the attempt to do so might not only prove an impossible task, but, if it were possible, might have the effect of rendering the people much less self-reliant than hitherto. I believe, then, that it is necessary that we should hedge in our aid by severe tests; that, painful though it be, we cannot in practice do more than so much as will avert actual starvation, while the people must still submit to severe privation and suffering on such an occasion as that which has overtaken us.

I am certainly not one of those who place an undue reliance on private trade for imports of food from abroad into Bengal. I have had no reliance whatever on any such trade. But for the distribution of food within this country, I have throughout believed that private trade will, in most quarters, do much and should be permitted to do so, though there are some limited tracts in which it fails, and where Government must undertake almost the whole task. Wherever private trade exists or can be developed, I have not the least doubt that it acts in every way more beneficially than the operations of Government.

Now as regards a great part of Tirhoot private trade cannot be overlooked. Patna is in fact at this moment overflowing with private grain seeking an outlet, and if that outlet be found, farther private supplies are forthcoming in large quantities from the Punjab and the North-Western Provinces. Private trade certainly reaches Mozufferpore. We learned from the last report that 20 new grain shops had lately been established there by outside dealers. And by giving facilities for carriage and advances, I cannot doubt that private trade may be led to do much in Central and North-Western Tirhoot.

The last report stated that 200,000 maunds of grain had lately been imported from Nepal into the Seetamurhee division alone. In other quarters, by driblets, something no doubt finds its way into the distressed country. We have always then contemplated that the route from Patna by Mozufferpore should, as much as possible, be left open to private traffic, and that this traffic should be as much as possible stimulated by advances. I have relaxed the rule which originally required persons taking advances to import grain from a distance so far that the Tirhoot and other local dealers may have advances for importations from Patna and other railway stations. I cannot but think that Sir R. Temple has much under-estimated what may be done by these advances when he puts the amount to be obtained by this means at 50,000 maunds only. I hope it will prove to be very much more.

So much I have said regarding private trade merely to clear the ground; but I most entirely agree that we must not too much rely on private trade. For north-east Tirhoot, I believe we must ourselves undertake most of the work.

The tract in Tirhoot which chiefly depends on rice, and where the failure has been most excessive, is not the whole, but speaking roughly about half the district. In this view the estimate of a million people on our hands assumes nearer 50 per cent. than 25 per cent. of the populations of the most distressed tract—a very liberal estimate.

Accepting that estimate of the number to be supported, I still cannot but think that the supply of food for them is estimated too liberally. Sir Richard Temple says three and half million maunds tallies with the estimate of one million people. To be safe, he says four millions of maunds. This implies a provision of three and a half to four maunds per head. Now we have estimated the food required for the whole support of an adult male to be ¾th of a seer or 1½ lbs. per diem, viz. 1 lb. of rice or wheat and ½ lb. of pulse, vegetable, fish, &c. The failure has been chiefly a rice failure; the pulses are good. The present rain will allow some quick-growing grains and vegetables to be sown, fish, milk, &c. are still in the country. Many classes habitually eat meat even in the shape of dead bullocks, mice, &c. If Government supplies 1 lb. per head of rice or other grain, I think the people may find the remaining quantity of food necessary to subsistence; and the above estimate is for an adult male, and if we extend it to the whole population, men, women, children and infants, it becomes very liberal. I have been inclined to think, that if, infants and all included, we supply a maund of 82 lbs. for 90 days, or three months, that eked out in other ways will probably suffice. Certainly, 1½ maunds or 123 lbs. for four months would be a very ample provision.

As regards the time for which provision must be made, it must be remembered that it is not till comparatively late in the season, that the largest numbers come on our hands; then, if the people survive the worst months before the rains without being too entirely reduced, they gradually withdraw to cultivation. Tirhoot is a moist district; if the present genial fall moistens the ground well, and augurs the early rain-supply which very frequently follows a bad year, a good deal may be grown even in the hot months, and what is called the bhadoie, *i.e.*, the fast-growing maize, murwa, &c., come in in August. I have been inclined to think a four months' supply for the distressed population about a fair estimate, especially if we have some further reserve for the rains. That four months' supply would be 1½ million maunds.

At any rate it appeared to me that if we could secure two million maunds in the tracts distant from river and rail before the rains, and arrange for a reserve which could be thrown in early in the rains in case of necessity, we should have done our duty fairly by the Tirhoot district.

Now as regards transport. For some time I was not satisfied that so much in proportion had been done in Tirhoot as in some other districts; less has been despatched to Tirhoot than to Chumparun, and Tirhoot is certainly the district regarding which I have felt most cause for anxiety. Latterly things have got into better train, but seeing all that has passed, I was inclined to feel satisfied if the arrangements were such that 100,000 maunds per week were actually and without fail despatched by the direct land routes to the north of Tirhoot, the routes being so arranged as to leave room for a good private traffic on the Mozufferpore route. Latterly the local officers had promised more, and I have continued for some time past very distinctly to say that the need of the Tirhoot district exceeded the means of carriage on which we can rely, and that the local officers were simply to send forward as much as they probably could, any excess over my minimum demand being so much gain. Though they have held out hopes of more than the rate I have stated, still, looking to previous shortcomings, I had not ventured recently to calculate on more than 100,000 maunds per week by the direct routes. At this rate the supply would stand somewhat as follows:—

	Mds.
Despatched by Mr. Hewitt to end of January - - - -	200,000
I put aside grain imported on advances as private traffic, but there is in addition to the above despatch, imported by local dealers for Government - - - - - - - -	45,000
To be despatched in three months from 1st February to 1st May, say 13 weeks, at 1,00,000 maunds per week - - -	1,300,000
May be despatched in May, so as to be placed before the rains, say - - - - - - - - -	300,000
Arranged by Durbhangah estate (a quantity which may be increased) - - - - - - - -	200,000
Total -	2,045,000

This gives upwards of 2,000,000 maunds provided before the rains, exclusive of what I may call reserve side routes. These latter are the routes by Monghyr and the Ghugree rivers, which are being tried, and the route by the Bhaugulpore district and Soopool, whence we propose to assist Tirhoot if we can supply anything in excess of the needs of Soopool. I fear, however, we cannot calculate on much from this quarter.

I would, however, make sure that we have in boats taken as far up the rivers as they can get a very considerable supply, which would be ready to go forward to Durbhangah and other points the moment the rivers open, and further supplies would be stored at the riverside stations. In this way I calculated on our being able to supply two millions of maunds (or half what Sir Richard Temple proposes) before the rains, and say another million of maunds in the early months of the rains, if need be. If the rains are long delayed we can continue to cart; if they come early, our water arrangements would come into play early.

According to Sir R. Temple's statements it appears that the local officers now calculate on forwarding by local carriage much more than I had ventured to calculate on, that is, they have arranged to send forward 160,000 maunds per week. I can only say that if they really can do so I think they should. It will all be clear gain to get forward as much as we can as soon as we can. Now that we are a good deal relieved as regards our fears for some other districts, we can, I believe, supply for Tirhoot this amount of grain, or rather the whole 200,000 maunds per week, at which Sir R. Temple puts the present demand. But when we come to the additional supply of another 200,000 per week from 1st April, by means of carriage to be obtained from the North-Western Provinces, I confess I have the greatest doubts of the practicability of the measure. I doubt if the railway could supply so much to Tirhoot with due regard to the needs of other districts. I still more doubt if the enormous supply of carts from the North-Western Provinces, which is calculated on, is a possible thing. I understand that Sir R. Temple has contemplated obtaining 20,000 carts from the North-Western Provinces. To carry 200,000 maunds per week would require at least so many carts of a description superior to the ordinary 10-maund carts of our districts. We must allow at least 10 days for each trip; for more distant depôts a fortnight, besides an allowance for reserve, breakdowns, and rest. I am not sure that we have ever in India put 20,000 soldiers into actual active movement in one field of operations at one time. An army of 20,000 carts brought from a distance, with bullocks and attendants and all, would be an astounding undertaking. Whence are they to come? how are they to be brought down? and where are men and bullocks to get food and provender and shelter? And if it were done, this would be for one large district alone, without calculating the needs of other districts. My own view is, that if from the neighbouring districts of the North-West Provinces we can get carriage sufficient to assist and secure the immediately adjoining districts of Chumparun and Sarun, we shall do very well.

For Tirhoot I am inclined to think that if local means can do all, or nearly all, that Sir R. Temple calculates on obtaining from them, we may be satisfied with that supply with only moderate assistance from the outside for special purposes.

G. Campbell.

The 6th February 1874.

No. 474, dated Calcutta, the 13th February 1874.

From A. P. Howell, Esq., Deputy Secretary to the Government of India, Department of Agriculture, Revenue and Commerce, to the Secretary to the Government of Bengal.

I am directed to acknowledge the receipt of your letter No. 300A of the 6th instant, with enclosed note of the Lieutenant-Governor, upon a Minute by Sir Richard Temple, regarding the supply of food in the Tirhoot district.

2. These documents have been laid before the Government of India, and the Governor-General in Council cannot but express the disappointment which he feels at the local officers having for so long neglected fully to appreciate the requirements of those parts of the country, and thereby occasioned the postponement to the present time of arrangements for transport which should have been made many weeks ago.

3. Although it may hereafter be found that the estimates now sent forward are somewhat in excess of the actual requirements, yet, bearing in mind that those estimates have been made by the local officers who are immediately responsible, and, moreover, that subsequent information has been received to the effect that a considerable number of people in Nepal may not improbably come upon the hands of the British Government, the Government of India think that Sir Richard Temple has exercised a wise discretion in recommending that four millions of maunds of grain shall be provided for the district of Tirhoot, and that arrangements should be made for the transport into the interior of a larger quantity, in order that the probability that part of the transport arrangements will break down may be guarded against beforehand.

4. The Lieutenant-Governor expresses some doubt as to the advantage of obtaining the supply of transport for which tenders have been called for from the North-Western Provinces. His Honor will be glad to hear that Mr. Molesworth has reported that a tramway can be constructed from Chumpta Ghât to Durbhunga, and that orders have been given for the immediate commencement of the work. This may, perhaps, modify the views of Sir Richard Temple as to the requirements for transport after April when the contracts contemplated will commence; but the Government of India desire to comply with the requisitions which Sir Richard Temple may make after visiting the localities and conferring with the local authorities.

5. From information given by Sir George Campbell to the Viceroy, His Excellency believes that the Government of Bengal have taken measures to comply with Sir Richard Temple's request, that 2,00,000 maunds a week should be sent from Calcutta for use in the district of Tirhoot.

No. 50, dated Camp Bettiah, the 8th February 1874.

From C. E. Buckland, Esq., with Sir R. Temple, on special service, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I am directed to submit copy of a minute No. 13, recorded by Sir Richard Temple, regarding the arrangements for transport in the Chumparun district, and to express a hope that the proceedings and recommendations therein described may meet with the approval of His Honor the Lieutenant-Governor of Bengal.

Minute No. 13, by the Honorable Sir R. Temple, K.C.S.I., dated 8th February 1874.

Having visited the Chumparun district, travelling through it from east to west, and proceeding *viâ* Bettiah to Ramnuggur, I have to record the following remarks regarding the quantity of grain which ought to be conveyed into the interior of the district by the 15th of June next, and the means of conveying it.

2. First, as to the quantity; that depends, of course, on the number of persons who may be expected to need assistance in some shape or other.

3. Mr. Kean, the Collector, after carefully conferring with me, makes the following statement:—

Adapore.—This is a great rice-growing thannah: the greater portion of the crops failed. The cold weather crop (rubbee) are not much grown. Indian-corn, however, is grown; there will be a four-anna crop. The poppy is said to be good, but the rice crop having almost totally failed, and there being no rubbee or very little, I think at least 30 per cent. of the population would come on our hands in this thannah, which, as far as my present information goes, is the worst thannah in the Sudder division.

Dhaka.—In this thannah, also, the rice crop failed, but it produced an eight-anna crop of "makai," and the rubbee will be abou a six-anna crop. The poppy is also fair. I think 25 per cent. for this thannah.

Motihari.—In this thannah the rice crop was not so entirely a failure. The rubbee and poppy are also comparatively good. I would calculate 20 per cent. for this thannah.

Gobindgunge.—The same as Motihari.

Kessuria and Mudoban.—Mr. Weekes is making minute enquiries regarding the condition of these two thannahs. The poppy is said to be a failure, and lately unfavorable accounts of the rubbee have been received. The "rahar" has also been damaged by frost. A large crop of "kodo" and makai was gathered in these thannahs, perhaps 30 per cent,

Bettiah.—The accounts from this thannah have been all along comparatively good, *i.e.* no such entire failure of crops as in some other thannahs has been reported. I would rank this thannah with the adjoining thannahs of Gobindgunge and Motihari, and calculate 20 per cent.

Buguha.—In this thannah distress will no doubt be greatly felt, it ranks as the second worst thannah in the district. I would calculate 35 or 40 per cent.

Lowrya.—This is undoubtedly the worst thannah in the district. The rice crop failed entirely, and there is no rubbee or poppy to speak of. I would calculate 50 per cent.

This calculation would be:—

Adapore,	114,561	30 per cent.	= 34,350
Dhaka,	230,484	25 "	= 57,600
Motihari,	134,621	20 "	= 26,920
Gobindgunge,	141,986	20 "	= 28,380
Kessaria	150,863	30 "	= 45,240
Mudobun,	84,873	30 "	= 25,440
Bettiah,	289,522	20 "	= 57,900
Bagaha,	114,879	40 "	= 45,920
Lowrya,	170,760	50 "	= 83,350
			405,200

In round numbers	400,000 seers.
At ¾ths of a seer, deduct ¼th	100,000 "
	300,000 "
For two months full	600,000 "
" three " half	450,000 "
" two " one-third	200,000 "
Total	1,250,000 "
Dividing by 40 seers	31,250 maunds.
	30
	937,500
Adding average of 7 months for one month	133,928
Total	1,071,428

4. Mr. T. Gibbon, the manager of the estates of the Rajah of Bettiah, a gentleman of great knowledge and experience, makes a somewhat more favorable statement as follows:—

Adapore	20 per cent.	Of the population will require assistance in some shape.
Dhaka	15 "	
Motihari	10 "	
Gobindgung	10 "	
Kessuria	15 "	
Mudobun	15 "	
Bettiah	20 "	
Bugaha	50 "	
Lowrya	50 "	

In all, 316,000 persons will require assistance at one time or another.

I anticipate—

		Persons average per diem.
One-fourth	in February, *i.e.*	79,000
Half	in March	158,000
Three-fourths	in April	237,000
Full	in May	316,000
„	in June	316,000
„	in July	316,000
Three-fourths	in August	237,000
One-fourth	in September	79,000
	In all	1,738,000

or, on an average per diem 217,000 persons for eight months, at three fourth, a seer per head, requiring 4,068 maunds a day (about), or 976,320 maunds in all.

5. The worst part of all is the Ramnuggur estate, chiefly comprising the Lowrya thannah. Mr. Howe, the civil officer there, expects that 50 or even 60 per cent. of the people may come on his hands at the worst season.

6. Mr. Vertannes, the executive engineer of the Gunduck embankment, expects to have 20,000 laborers at work in hot season.

7. Mr. Cooper, the Deputy Opium Agent, also a gentleman of great experience, considered that in the thannahs of Kessuria and Mudobun the assistance required might prove much greater than that above indicated.

8. In general terms it may be said that the rice crop is the staple product of that part of the district which may be defined by the Nepal frontier on the north, the Gunduck river on the west, the Bagmuttee on the east, and on the south by a line drawn straight on the map from Bugaha on the Gunduck to Dhaka Ramchundra. That crop has failed, and the main food of the people there has been lost. In the rest of the district the spring crops are very poor. Besides these, the people have had only the bhadoi or Indian-corn, which yielded but half the average, except towards the southern border where the bhadoi crop was good.

9. These calculations are only anticipations which may fail to be realized. Still they represent the best opinions that can be formed; and such opinions must be acted on now, otherwise the opportunity of provining the supplies will slip away.

10. On the whole, I consider that one million of maunds of Government grain must be imported into this district by the 15th June, that is before the setting in of the rains. It remains to be seen how this requirement is to be met.

11. The transport-agency at Patna under Mr. Hewitt have already sent on 215,000 maunds to arrive in the district by the 15th February.

12. The Collector is now concluding an arrangement with European contractors of proved means and ability to cart not less than 50,000 maunds a week from Bunkur ghât opposite Patna after the 15th February, which would give 200,000 maunds a month for three and a half months from 15th February to 1st June, or 700,000 maunds.

13. For the works on the Gunduck embankment 24,000 maunds have arrived by the Gunduck river, and some further quantity is still in boats on the river. I believe that the total by river route will not exceed 50,000 maunds.

14. Thus the total Government provision may be set down at 975,000 maunds.

15. Then 150,000 maunds are being brought into the district by the manager of the Bettiah estates, and by the planters resident in that portion of the district, which will come by the river route: and this supply will help to support those who might otherwise come on the hands of Government. If this quantity be considered together with the Government provision, it will be seen that there is a margin to ensure safety.

16. I believe that the Government provision as above set forth will suffice, inasmuch as after the 15th May, the Gunduck will begin to rise and will afford navigation to the neighbourhood of the most distressed localities; so that if the land carriage were to prove insufficient it could be supplemented by water carriage, or if further supplies were still required they could be obtained by river route.

17. I consider that the preparedness, which I have myself seen, of the transport arrangements, even to the remotest localities of distress, is creditable to the administration of the Chumparun district, and the Collector informs me that this is in a large degree due to Mr. T. Gibbon, and to Mr. R. Lethbridge, both of whom will doubtless render still further public services during the coming crisis.

18. I believe that the arrangements of the carrying contracts which I have inspected are worthy of the confidence of Government.

19. I have instructed the Collector to have the transport routes examined specially with a view to excavating tonks for watering the cattle.

20. I have accordingly to recommend that fifty thousand maunds a week from 15th February may be sent forward by railway from Howrah, for the service of the Chumparun district.

No. 64, dated Barrh, the 15th February 1874.

From C. E. Buckland, Esq., on special service with Sir R. Temple, to the Officiating Secretary to the Government of Bengal, in the Statistical Department.

I am directed to smbmit for the information of His Honor the Lieutenant-Governor of Bengal copy of a minute No. 20, recorded by Sir Richard Temple, regarding the transport arrangements required for the Bhaugulpore division.

2. The Lieutenant-Governor of the North-Western Provinces has been requested to instruct Mr. H. Rivett-Carnac to arrange for the purchase of 1,000 carts with draught bullocks within the Benares division.

MINUTE No. 20, by SIR RICHARD TEMPLE, K.C.S.I., dated Barrh, the 15th February 1874.

1. I HAVE gone through, with Mr. Barlow, Commissioner, and Mr. Hankey, the transport arrangements of the Bhagulpore division. They report that carts are scarce, and that after all their efforts they are not able to find enough for the conveyance of the grain already allotted to them. It is also a grave circumstance that the tracts most distressed are those near the Nepal frontier, situate at the greatest distance from the Ganges, the base of operations.

2. It is probable that the allotment for the Soopool sub-division will have to be largely increased. But I hope to be able to decide that point within the next week.

3. Meanwhile Mr. Barlow and Mr. Hankey have given me a memorandum whereby they estimate that 3,000 carts are needed by the 1st April, to be supplied from beyond the limits of the Bhaugulpore division. It is essential to the safety of the distressed districts that this demand should in part, at least, be met.

4. As time presses, I have requested the Commissioner of the Patna division to purchase one thousand pair of draught bullocks at the fair now going on in the Arrah district, and to arrange with Messrs. Fox, the contractors, to make up or otherwise provide one thousand carts.

5. I have further asked Mr. Rivett-Carnac, Commissioner of Cotton and Commerce, to arrange to purchase, with the permission of the Lieutenant-Governor of the North-Western Provinces, one thousand carts with draught bullocks within the districts of the Benares division.

6. If these arrangements should succeed, then two thousand carts with bullocks, out of the three thousand, will be supplied.

7. Whether the remainder of Mr. Barlow's requisition should be supplied, I will determine after visiting Soopool.

No. 642—S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, in the Statistical Department, to the COMMISSIONER of RAJSHAHYE. Scarcity and Relief.

SIR, Calcutta, the 12th February 1874.

I AM directed to communicate the following instructions regarding the quantity of Government grain which the Lieutenant-Governor proposes to send to your division before the beginning of the rainy season. Your demi-official note of the 9th current says that you wish to learn, as soon as possible, how much Government grain in all is to go to your division.

2. Mr. Robinson estimates that 10 lakhs of maunds will be required to make Dinagepore safe; it is clear that part of Maldah may be very much in need of supplies; and that part of the north of Rajshahye will be in a critical state. The Lieutenant-Governor therefore proposes to make the total allotment for your division north of the Ganges, inclusive of what has been already sent or allotted:—

	Mds.
Dinagepore	10,00,000
Maldah	1,00,000
Rajshahye	1,00,000
Bograh	75,000
Rungpore	2,00,000
Northern Bengal Railway	2,00,000
Total	16,75,000

The Rungpore supply of 1,40,000 maunds has already been proposed by you, and the extra 60,000 maunds should be stored on or near the Berhmapooter at Kaligunge, or at such other site or sites as you may decide. If you desire to suggest any revision of these allotments, you are at liberty to do so.

3. You will have to decide how much of this supply should go by each route, and where it should be stored. It has already been pointed out that you must not rely much on Dinagepore getting any very large share of its supply through Purneah.

4. The principal object will be, for you to get all the grain across the Ganges, and to send as much as you can high up into the interior. The question of the place whence steamers and native boats should be despatched in the warm weather will have to be carefully considered by you; for Goalundo and the river around it is more or less unsafe for boats in the middle of March. Meanwhile, every effort should be made to send as much grain as possible by large native boats to Nownuggur, or such other stores as you may select on the Burrul and Oorasagor.

I have the honor to be, sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

No. 643—S.R.

COPY forwarded to Mr. Robinson, Relief Commissioner, to Major Lindsay, Superintending Engineer, and to Mr. Molony, Camp Rampore Beauleah.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

Calcutta, 12th February 1874.

APPENDIX E.

No. 572—S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL in the Statistical Department, to the DEPUTY SECRETARY to the GOVERNMENT OF INDIA, Department of Agriculture, Revenue and Commerce.

Scarcity and Relief.

Calcutta, dated 10th February / issued February 1874.

SIR,

I AM directed to submit copy of a minute recorded by Sir Richard Temple, regarding the threatened scarcity in that part of Nepal which lies below the Himalayas, and to the north of the British districts of Tirhoot and Chumparun. The Lieutenant-Governor has not seen Mr. Girdlestone's report of the 1st February, and he feels unable to advise any particular course until he knows more exactly what the threatened tracts are, where they lie, what is their population, and what their condition. He can, therefore, only submit Sir Richard Temple's minute for the orders of the Government of India.

2. The Lieutenant-Governor desires, however, to add that, though at the beginning of the scarcity there was some alarm about Nepal and the demands its people might make on the resources of our districts, yet recent reports from Tirhoot and Chumparun have contained no suggestion that considerable quantities of grain have been carried from North Behar into Nepal. On the other hand, the last Tirhoot narrative stated that above 200,000 maunds of maize had come from the Nepal Terai into Seetamurhee, but that the importation had now stopped. From some other quarters fear has been expressed that exportations to Nepal might affect the food supplies of North Behar, but, as above stated, the official reports do not give any facts or opinions in support of such an apprehension.

3. On the general question of assisting the Nepalese, the Lieutenant-Governor would submit his opinion that we cannot, on relief works, or at relief-centres, or at relief hospitals, make any distinction between British subjects and people from Nepal, but we must treat all who come for aid alike as well as we can.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

MINUTE by the Honorable SIR RICHARD TEMPLE, K.C.S.I., No. 11, dated Motiharree, the 5th February 1874.

THE Resident at Nepal (Mr. C. Girdlestone) having forwarded to me copy of his letter No. 27C, of the 1st February 1874, addressed to the Government of India in the Foreign Department, regarding the impending scarcity in the Nepalese Terai districts which march along with British territory, I desire at once to state my view on a matter which may at any moment become urgent.

2. On approaching the northern frontier of the Tirhoot and Chumparun districts, I was concerned to find that between our border and the Terai there is generally some narrow strip, of varying breadth, of Nepal territory, with villages much in the same circumstances and condition as the distressed British sub-divisions. I do not know what the population of the strip may be, but I see that in one sub-division of it, Jaleysur, the Resident puts the population at 225,000 souls; and possibly the adjoining sub-division of Sirha may have a similar number. Thus it may be that in contact with our distressed people we shall have half a million of equally distressed Nepalese. This circumstance constitutes an aggravation of our difficulties, which must be met.

3. On the civil officers inquiring whether Nepalese subjects applying in our territory for work or relief must be treated in the same manner as British subjects, I replied that they must.

4. But the larger question remains. How are the Nepal authorities to get grains which they may purchase in India conveyed upwards from the northern or left bank of the Ganges? Of course they may get carriage locally if they can. But practically they can hardly do so, when all available carriage is engaged for our grain transport. In this way I apprehend little or nothing will be done.

5. One thing the Nepal authorities could, I should think, do, which is this: Their distressed strip of territory has resources in carts and bullocks. They could collect such carriage and send it down to the left bank of the Ganges to fetch grain. The British authorities would give due protection to such convoys, deputing officials to take care of them, so that the carriage might not be detained or seized for other purposes. Even this plan, however, would not probably bring all the grain that might be needed.

6. Therefore, I think we must be prepared to let the Nepal authorities have a portion of the grain supplies which we shall be sending to the north part of Tirhoot, on payment of the cost which may have been incurred in purchase, transport, and the like, by the British Government. I should be happy to arrange this in negociation with the Resident of Nepal.

7. It will be found that we cannot properly refuse succour to the distressed people beyond our frontier, who cannot obtain supplies save through British jurisdiction.

8. Also if any starving or sick Nepalese present themselves at our hospitals or relief-houses we must, I think, admit them.

9. At the same time I think that the Resident would do well to impress on the Nepalese Government, the wrong and the mistake they commit in prohibiting free trade in grain between their districts and ours.

R. Temple.

No. 462, dated Calcutta, the 12th February 1874.

From Arthur Howell, Esq., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to the Secretary to the Government of Bengal, Statistical Department.

I am directed to acknowledge the receipt of your letter No. 572 of the 11th instant, with enclosed minute from Sir Richard Temple regarding the threatened scarcity in that portion of the Nepal territory which borders on Tirhoot and Chumparun.

2. In reply I am to inform you that the Governor-General in Council has been in communication with Mr. C. Girdlestone, the Resident in Nepal, on the subject of the assistance which may have to be rendered to the Nepalese Government to meet the distress which is apprehended in the above-mentioned districts.

3. The Government of India have offered the Nepalese Government 1,000 tons of rice at cost price; but, as Sir Richard Temple very truly observes, the difficulty lies mainly in arranging for its transport from the railway to Nepal. Mr. Girdlestone has accordingly been directed to place himself in communication with Sir Richard Temple, and in his communications with the Nepalese Government to be guided by the instructions that he will receive from him.

4. The Government of India entirely concur with the Lieutenant-Governor and with Sir Richard Temple that no distinction should be made between British subjects and subjects of Nepal if the latter should apply for relief in British territory, and that we should do what we can to assist the distressed people beyond our border with supplies. No interference, therefore, should be permitted with the free transit of food-grains on private account from British territories into Nepal.

5. At the same time it is the obvious duty of the Nepalese Government to provide as far as possible for the relief of their people, a duty which, from the information received from Mr. Girdlestone, that Government seem entirely to recognise.

6. As the arrangements will be carried out by Sir Richard Temple in communication with Mr. Girdlestone and the Nepalese Government, no further orders can with advantage be given by the Government of India. I am to request that His Honor the Lieutenant-Governor will furnish Sir Richard Temple with a copy of this letter.

No. 687—S.R.

Copy forwarded to Mr. C. E. Buckland, C.S., for submission to the Honorable Sir Richard Temple.

No. 688—S.R.

Copy of this letter, and of the letter to which it is a reply, with copy of Sir R. Temple's minute referred to therein, forwarded to Commissioner of Patna for information.

By order of the Lieutenant-Governor of Bengal,
R. Knight,
Assistant Secretary to the Government of Bengal.

Calcutta, Scarcity and Relief Department,
The 13th February 1874.

Appendix F.

Resolution.

Scarcity and Relief Department.

Calcutta, the 16th February 1874.

The Lieutenant-Governor has again had under consideration the question of making advances of grain or money to ryots. The Government orders of the 3rd February reviewed what had passed upon the subject and issued orders for future guidance. Since then other reports have been received, which make it clear that in very many districts, perhaps the most pressing want, and even in the most distressed districts one of the greatest wants, is for advances to tolerably reliable ryots who only want a little help to tide them over the worst time, and to enable them to sow their crops and provide for the future by their own exertions. The exceptionally poor ryots who have no credit, and to whom prudent land-holders and money-lenders could not safely advance, are properly the objects of charitable relief in the form of advances under Part II., Clause F., of the "Relief Committee Instructions." But there are probably much more numerous classes of ryots to whom advances may be prudently made and should be made by those whose rents, incomes, and loans, depend on the rents and produce of the ryots. Every effort has been and should be made to induce the land-holders and mahajuns to do their duty and fulfil their functions towards these classes. Postponement of revenue under orders No. 155—S.R., dated the 16th January, should be very freely allowed to those in distressed tracts who use their means in this way, that is (as described in the above orders) who distinguish themselves by sustaining their ryots during difficult times of scarcity, and equally to those zemindars-in-chief who allow their under-holders to postpone the payments due from them for the purpose indicated above. Advances for the purchase of grain to those who will use it for advances to the ryots should be freely made on the terms mentioned in paragraph 4 of circular orders No. 80 of 17th November 1873. Very special directions should be given to ensure that the necessary advances to the ryots are freely and well given in all wards' estates and khas mehals in distressed districts; and Commissioners are requested to issue sufficient orders on this point without delay.

2. As already ordered (see last sentence of paragraph 6 of the orders of 3rd February), special report must be made regarding those private estates so peculiarly situated that Government must undertake the function which for special reasons those whose proper function it is cannot perform. No time should be lost in making proposals for dealing with cases of this kind wherever the necessity is so great as to render necessary so emergent a procedure. Previous orders have already provided for advances to all under-holders and permanent ryots who have substantial interest in the soil under private landlords.

3. As regards those ryots who are fairly the objects for charitable relief, the machinery of the sub-divisional relief committees must be freely used to find out and aid the poor ryots described above whose case does not come within the ordinary rules of prudential business, but who may well, with aid of charitable assistance, raise some crop and support themselves for the future, even if the repayment of advances by them may be precarious. This function should be explained to the relief committees.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

No. 706—S.R.

COPY forwarded to the Commissioners of Patna, Bhaugulpore, and Rajshahye; to the Magistrate-Collectors of distressed districts in those divisions; and to Mr. C. E. Buckland for submission to Sir Richard Temple; also to the Central Relief Committee.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Calcutta, the 16th February 1874. Officiating Secretary to the Government of Bengal.

APPENDIX G.

No. 59, dated Bankipore, the 14th February 1874.

From C. E. BUCKLAND, ESQ., with SIR R. TEMPLE, on Special Service, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I AM directed to forward for submission to His Honor the Lieutenant-Governor of Bengal, copy of a minute No. 17, dated Hutwa, 10th February, containing Sir Richard Temple's proposals for an additional medical establishment for the Tirhoot and Chumparun districts.

2. Sir Richard earnestly begs that the Government of India may be moved to comply with these proposals, and that the officers may be directed to proceed without delay to the scenes of their labors.

MINUTE No. 17, by SIR R. TEMPLE, K.C.S.I., dated Hutwa, the 10th February 1874.

I HAVE proposed, or shall propose, the following additional medical establishment for the Tirhoot and Chumparun districts.

2. In Mudhobanee sub-division there will be ten sub-committee circles, including the sub-divisional committee, and twelve sub-committee circles in Durbhunga sub-division, including the sub-divisional circle. In Seetamurree sub-division there will be six sub-committees; in Tajpore sub-division one sub-committee; in Mozafferpore sub-division one sub-committee, exclusive of the sub-divisional circles.

3. For each sub-committee circle I shall propose the appointment of a native doctor and a compounder; according to that, then, there would be required in the Tirhoot district an additional establishment as follows:—

	Native Doctors.	Compounders.
Mudhobanee - - - - - -	10	10
Durbhunga - - - - - -	12	12
Seetamurhee - - - - - -	6	6
Tajpore - - - - - -	1	1
Mozufferpore - - - - - -	1	1
Total - - - - -	30	30

4. I have proposed that an Assistant Surgeon be posted to the Tirhoot district, to take charge of the civil duties at Mozufferpore, while Dr. Gayer, the Civil Surgeon, is on circuit inspecting the medical arrangements of the sub-committees.

5. In Chumparun district there will be seven sub-committees, exclusive of the sub-divisional committees, for each of which I shall propose a native doctor and a compounder. According to that, the following additional establishment would be required:—

Native doctors	7
Compounders	7

6. I shall also propose that a competent medical officer be posted to the Chumparun district, in subordination to Dr. Cullen, to take charge of the civil duties at Motiharee, while the Civil Surgeon may be on tour inspecting the medical arrangements of the sub-committees.

7. I earnestly hope that the Medical Department may be able to comply with these requisitions, having regard to the exigencies of the coming scarcity.

8. A copy of this minute is furnished to Dr. Francis, Deputy Inspector-General, for information.

No. 1,399, dated Calcutta, the 16th February 1874.

From J. C. Brown, Esq., C.B., M.D., Surgeon-General, Indian Medical Department, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honor to report for the information of His Honor the Lieutenant-Governor, that the following arrangements have been made up to date for affording medical aid to the work-people, &c., employed in the famine districts in Bengal:—

(a.) The services of one hospital assistant and 4 native doctors named in the margin, have been placed at the disposal of the Relief Commissioner of Rajshahye at Dinagepore.

1st class hospital assistant, Shaik Sabur Alie.
V. L. class native doctors Annud Chunder Roy.
Sosee Bhoosun Sircar.
Chunder Kanta Sen.
Apothecary class, native doctor Gooroonath Roy.

(b.) The Deputy Surgeons-General of the following circles have been directed to place the services of the number of medical subordinates noted against each, at the disposal of the Deputy Surgeon-General of the Dinagepore circle, with a view to their being employed in the famine districts under the orders of the Commissioners of the Patna and Bhaugulpore Divisions.

Lucknow Circle	6
Saugor Circle	4
Agra Circle	2
Nagpore Force	3
	15

Of the 15 medical subordinates, the under-mentioned hospital assistants and native doctors have already arrived at Dinapore and posted as follows:—

For the Bhaugulpore Division.

3rd class hospital assistant Moula Bux and Abas Ally.

For the Patna division.

1st class hospital assistant Tacoor Persaud.
3rd „ „ „ Peer Bux.
3rd „ „ „ Mohomed Syed Yousuf Ally.
Local native doctor Gyan Chund Doss.

In addition to the above, 2nd grade sub-assistant surgeon Ram Chunder Gooto has arrived at Patna for duty under the orders of the Commissioner of that division.

Sanctioned in Bengal Government letter No. 593—S.R., dated 11th February 1874.

(c.) On the 6th instant, according to the instructions received from Mr. Bernard, eight medical subordinates named in the margin, who were serving in the Dinapore circle, were directed to proceed as early as practicable to Tirhoot, and report themselves to the civil surgeon of that station for duty under his orders. The services of Surgeon D. Wilkie have also been made available as assistant civil surgeon of Tirhoot, in order to permit the civil surgeon more effectually to supervise the special relief establishment.

3rd class hospital assistant Roh Ally.
V. L. class native doctor Umbica Churn Doss.
Local native doctors Golam Russool.
Ditto Dilabur.
Ditto Bhika.
Ditto Kedar Nauth Chatterjee.
Ditto Meghoo Ram, and Chunder Kant Banerjee.

(d.) In accordance with the instructions lately received from the Joint Secretary to the Government of Bengal Public Works Department, Irrigation Branch, 3rd class hospital assistant Dad Ally, and local native doctor Koylas Chunder Soor, have been directed to proceed to Bettiah, and report themselves to the executive engineer of the Upper Gunduck embankment division for duty under his orders.

Letter No. 268 J. E., dated 3rd February 1874.

(e.) Local native doctor Hur Churn Sen, now on sick leave at the presidency, has been directed to proceed (on the expiration of his leave) to Dinapore and report himself to the Deputy Surgeon-General of that circle for duty in the famine districts.

This office memo. No. 1685A, of the 10th February 1874.

I would solicit His Honor's sanction to the arrangements noted in paragraphs B and C of this communication.

(*f.*) In addition to the above the services of one sub-assistant surgeon, and two hospital assistants have been rendered available for the Northern Bengal (State) Railway, and a proposal has been submitted* for the employment of one surgeon and seven native doctors (in all) in connexion with these works.

(*g.*) I have this morning received Mr. Bernard's demi-official letter enclosing a minute penned by Sir Richard Temple on the medical requirements of the famine districts. Sir Richard Temple intimates, that including, I presume, the eight native doctors already demanded for Tirhoot, and the four men required for Chumparun, the wants of the district are as follows:—

	Native Doctors.	Compounders.
Tirhoot district - - - -	30	30
Chumparun district - - -	7	7

An assistant civil surgeon is also proposed for Chumparun. I beg to nominate Surgeon William Edward Battersby for this post. I shall at once issue orders to Deputy Surgeon-General to direct 25 native doctors to join the districts mentioned in Sir Richard Temple's minute without delay. There are 61 such reported to be available in up-country circles, and these 25 will be brought down at once. Dr. Francis, Deputy Surgeon-General, Dinapore circle, will be asked to provide the requisite number of compounders.

Enclosures returned.

* This office letter No. 1,373 of the 10th February 1874.

No. 767—S.R.

From the Officiating Secretary to the Government of Bengal in the Statistical Department, to the Surgeon-General, Indian Medical Department.

Scarcity and Relief.

Sir,

Calcutta, the 17th February 1874.

I am directed to acknowledge the receipt of your letter No. 1,399, dated 16th February, reporting upon the arrangements you have made to meet the hospital requirements of the famine districts.

2. It appears that up to the present date the state of things is this:—

Rajshahye division—	
Native doctors and hospital assistants already arrived - -	5
Patna division—	
Twelve native doctors or hospital assistants, and one sub-assistant surgeon already arrived - - - -	13
Bhagulpore division—	
Hospital assistants already arrived - - - -	2
Gunduk Embankment work—	
Hospital assistants already arrived - - - -	2
Northern Bengal Railway works—	
One sub-assistant surgeon and two hospital assistants already sent - - - - - - -	3
Total - - -	25

Besides these twenty-five medical subordinates there are—

On their way, as per clause (B) of your letter - -	9	Hospital assistants or native doctors.
Ditto ditto clause E ditto. - -	1	
Under orders for the famine districts, as per clause (G) -	25	
Total - - -	35	

This will make sixty medical subordinates in all, and I am directed to request that they may be hurried down as quickly as possible.

3. The last sentence of your letter says that the Deputy Surgeon-General of the Dinapore circle has been directed to provide compounders for all these medical subordinates. But in case a sufficient number of competent compounders should not be available, I am to suggest that preparations be made for sending a certain number of compounders from Calcutta. The Lieutenant-Governor would request that instructions may be given for preparing at once, either at Dinapore or Calcutta, sufficient supplies of medicines, &c., for each of the camp hospitals. The Lieutenant-Governor believes that this has been already done to a certain extent; but the preparations should now be rapidly completed.

4. Surgeon D. Wilkie has, it is understood, started for Tirhoot, if not, he should go at once. The Lieutenant-Governor approves of your nomination of Surgeon W. E. Battersby as additional Civil Surgeon for Chumparun, and I am to request that he may join at once.

5. Orders will be separately communicated on the proposal (clause *f.*), that an assistant surgeon and five additional native doctors should be appointed to the Northern Bengal Railway. Meanwhile, as there are so many (sixty-one) native doctors available for special duty in the up-country circles, Sir George Campbell would ask you to order down forty instead of twenty-five additional medical subordinates, as the requirements of the Bhaugulpore and Rajshahye divisions will probably increase largely.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 768—S.R.

Copy, with copy of Sir R. Temple's minute, and of the Surgeon-General's letter No. 1,399, dated 16th February, forwarded to the Commissioners of Patna, Bhaugulpore and Rajshahye, and to Mr. C. E. Buckland for submission to Sir R. Temple.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, the 17th February 1874.

Appendix H.

No. 62, dated Barrh, the 15th February 1874.

From C. E. Buckland, Esq., c.s., with Sir Richard Temple, on special service, to the Officiating Secretary to the Government of Bengal in the Statistical Department.

I am directed to forward for the information of His Honor the Lieutenant-Governor of Bengal, copy of my letter No. 60 of to-day's date, to the Secretary to the Government of the North-Western Provinces, with its enclosure, regarding the supply of fodder from the North-Western Provinces.

2. His Honor will observe that Sir Richard Temple has earnestly solicited the assistance of the Lieutenant-Governor of the North-Western Provinces in obtaining the supply of 200,000 maunds of fodder in all.

3. I am to add that the Commissioner of Patna hopes to be able to recover a portion of the cost hereafter, by sale of some of the fodder to contractors and others.

No. 60, dated Barrh, the 15th February 1874.

From C. E. Buckland, Esq., c.s., with Sir R. Temple, on special service, to C. A. Elliott, Esq., Secretary to the Government of the North-Western Provinces.

I have the honor to forward for the perusal of His Honor the Lieutenant-Governor of the North-Western Provinces, copy of a memorandum given by Sir Richard Temple to the Commissioner of Cotton and Commerce, which perhaps Mr. Carnac himself has laid before His Honor.

2. After consulting with the Commissioner of the Patna Division, Sir Richard thinks it requisite to procure 100,000 maunds of fodder in addition to the 100,000 specified in the memorandum, i.e., 200,000 maunds in all, and desires that Mr. Carnac may be deputed with full power to arrange as best he can for the collection of the whole amount, which should be consigned to the care of the Commissioner of Patna.

3. The fodder may be to some extent obtainable from the rubbee crops now coming in. In selecting from them for fodder, two points should be especially borne in mind, (1) the relative cheapness, and (2) the nutritiousness of each kind of crop.

4. Sir Richard earnestly solicits the assistance of His Honor in obtaining this large supply of fodder for the cattle to be employed on the transport service of grain to Tirhoot.

No. 4, dated Bankipore, the 13th February 1874.

Memorandum by Sir Richard Temple.

In reference to the accompanying telegram * from the Central Provinces, and endorsements by the Commissioner of Patna, I shall be glad if Mr. Carnac will be good enough to undertake the completion of this order.

* Copy not sent herewith.

The offer from Central Provinces must be refused as too expensive.

The requisition was for 100,000 maunds of cotton seed, half from the North-Western Provinces and half from the Central Provinces.

The Central Provinces' reply shews the prices to be too high, and we must give up that part of the project unless Mr. Carnac can hit on some means of getting it cheaper.

The North-Western Provinces have arranged, as I understand, 20,000 maunds, are doubtful of getting more—but suggest that the required quantity be made up with other kinds.

I would leave it to Mr. Carnac's discretion to make up the 100,000 maunds in the cheapest and most efficient way he can.

"Bhoosa" would do. "Oil cake" is much recommended, and the more of that the better.

Mr. Carnac can shew this minute to the Government of North-Western Provinces.

APPENDIX I.

No. 689—S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL in the Statistical Department, to the DEPUTY SECRETARY to the GOVERNMENT OF INDIA in the Department of Agriculture, Revenue and Commerce.

Scarcity and Relief.

Calcutta, the 14th February / issued February } 1874.

SIR,

I AM directed to submit the appended copy of a memorandum by Mr. Toynbee, the Calcutta grain officer, and to invite the attention of the Government of India to the apparent inability of the East Indian Railway to carry away daily the full quantity of grain which the Lieutenant-Governor desires to send from Calcutta.

2. For the last three weeks, and for the coming week, the Lieutenant-Governor has, under the directions of the Government of India, advised the East Indian Railway Traffic Manager of the quantity of Government grain which was to be despatched from Howrah during each ensuing week. Sir Richard Temple's visit to Behar has resulted in a very large increase in the estimate of the necessities of Behar; and the Lieutenant-Governor has notified to the East Indian Railway officers, that he wished to despatch 30,000 bags (about 2,222 tons) a day during the current week, and 33,000 bags (about 2,444 tons) during the coming week.

3. But the East Indian Railway, though it has gradually and steadily increased its supply of wagons, has not yet carried* away more than an average of 18,167 bags (about 1,410 tons) a day. The East Indian Railway Officers, who have throughout most cordially and effectively aided this Government in a way the Lieutenant-Governor cannot sufficiently acknowledge, have not, indeed, stated that they cannot do more than this. The traffic manager (Mr. Batchelor) observed that the Government requirements for the current week amounted to fully eight train-loads a day, while his company was now carrying a daily downward traffic of 2,200 tons (of which about 1,350 tons is food-grains) past Mirzapore, and he truly pointed out that the railway was "carrying a very large traffic, apart from the large grain traffic from Howrah."

4. The Lieutenant-Governor had hoped that during the comparatively cool months the Government might be able to send up the East Indian Railway a good deal more than 2,000 tons daily, and on the 10th February he caused Mr. Cecil Stephenson to be asked whether his line could carry up to 3,000 tons, or even 4,000 tons a day. As yet Mr. Stephenson has not been able to reply, but the Lieutenant-Governor deems the matter to be so important and so pressing, that he directs me to lay this statement of the case before the Government of India.

5. The indents of the local officers, who under Sir Richard Temple's instructions have arranged for carriage up to the amount of their indents, already come to :—

For Tirhoot - - - - - -	2,00,000	maunds a week.
„ Sarun - - - - - -	50,000	„ „
„ Chumparun - - - - - -	50,000	„ „
„ Gya, Arrah and the Soane Canal - -	20,000	„ „
„ Bhaugulpore (must be increased) - -	30,000	„ „
„ Purneah - - - - - -	80,000	„ „
„ Dinagepore (viâ East Indian Railway Rajmehal) (must be increased) - - - -	7,000	„ „

The Bhaugulpore and Dinagepore carriage will, it is hoped, greatly expand. If the larger estimate of the Tirhoot requirements (four millions of maunds) is to be worked up to, the despatches for Tirhoot will have to be made more than 2,00,000 maunds a week. Meanwhile the despatches, merely to supply the above indents, must come to 4,87,000* maunds a week (or about 16,200 tons), equal to 2,330 tons daily, including Sundays.

6. The Lieutenant-Governor is much afraid that the East Indian Railway may not be able to carry all this grain away daily. Yet, as has been above said, the Lieutenant-Governor hopes that the local officers will be able to take even more grain than the above despatches contemplate; there will now be a demand for carriage of material for the Durbhanga tramway, and that demand will have to be treated as the most emergent of all.

The Lieutenant-Governor is also apprehensive, lest with heavy and continuous strain now put on the East Indian Railway, its drivers and guards should knock-up in the coming hot months. As Mr. Batchelor has pointed out, all this extra traffic on the East Indian Railway, and on the Punjab line necessitates the lifting and storing along both lines of so much extra coal from the Bengal coal fields. And there seems to be much ground for fearing that the resources of the East Indian Railway may be taxed beyond what they can perform, unless means of extending them can be devised.

7. Sir George Campbell would solicit that the advisers of the Government of India on railway matters may look into the matter, and that, if necessary, steps may be taken by borrowing wagons, engines and men from other lines, to enable the East Indian Railway to carry the whole of its ordinary traffic, to cope with the large and important down trade in private grain, and to despatch from Howrah to the distressed districts up to 3,000 tons of Government grain a day during the months of March and April.

---

* NOTE.—In past weeks the Government has sometimes not had sufficient rice ready stacked for despatch. But this failure will not, it is believed, recur.

* N.B.—The despatches notified to the traffic department for the coming week are (statement annexed to letter No. 632 of 12th February).

3. It may be well for the Lieutenant-Governor to add, while he is writing about railway carrying power, that so far as experience goes, the Eastern Bengal Railway, by which Dinagepore and most of the Rajshahye divisions are chiefly supplied, can fully and easily carry away from Sealdah all the grain this Government requires to send.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 690—S.R.

One copy of the above, with copy of enclosure, forwarded to Mr. Toynbee, for information.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, the 14th February 1874.

Memorandum by Mr. Toynbee, regarding the despatches of Rice from Howrah by the East Indian Railway.

Table showing the despatches advised to and actually sent by East Indian Railway, from January 26th to date.

Number and date of letter advising Mr. Batchelor.	For what week despatches advised.	Daily number of bags advised.	Daily average number actually sent.	Daily difference (less).	Remarks.
206, S.R., dated 21st Jan.	26th Jan. to 1st Feb. -	16,714	12,786	3,928	
336, S.R., dated 30th Jan.	2nd Feb. to 8th Feb. -	17,357	15,473	1,884	
489, S.R., dated 6th Feb.	9th Feb. to 15th Feb. -	30,000	18,167	11,833	four days' average.
632, S.R., dated 12th Feb.	16th to 22nd Feb. -	33,000	—	—	

From the above it will appear, that although a gradual improvement in despatches has taken place since we first advised the railway of our wants in the way of carriage, and though the railway very nearly worked up to the requisitions made on them in the first two weeks, there is reason to fear that the demand for carriage for 30,000 bags daily is more than they will be able to meet. This, at any rate, is the result of the last four days' average. For next week we require carriage for 33,000 bags, and I presume that arrangements are being made up-country to carry away this amount from the railway. We have never yet sent away 22,000 bags—the best day's work we ever did being yesterday's (21,920 bags). This is little more than is now required by Futwah Ghât and Barrh new stations alone. It would seem to be necessary either to reduce the present list of despatches, or to give the wants of certain stations precedence over those of others. I do not think that, under present arrangements, the railway can carry more than 20,000 bags a day on an average and continuously. We must, therefore, either (1) ask the railway to increase their present means, and let us know reliably up to what quantity they can work, or (2) reduce our despatch list to such a quantity as the railway can carry, and advise the mofussil officers to adapt their means of carriage to the real power of the railway.

No. 664, S.R. dated Calcutta, the 13th February 1874.

From the Officiating Secretary to the Government of Bengal, Statistical Department, to the Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce.

I am directed to submit, for the consideration of the Government of India, the following statement of the present outlook in regard to the despatch of Government grain from Calcutta.

2. In order to meet the demands made by Behar officers under Sir Richard Temple's orders, and in order to give full employment to the carriage which has been collected, the Lieutenant-Governor has had to notify to the East Indian Railway Company that he wishes to despatch 2,500 tons of grain daily from Howrah during the week beginning on the 16th February next. The despatches by the East Indian Railway notified for the current week were 2,000 tons a day. If the railway should be able to give wagons for all this quantity of grain daily, our despatches by the East Indian Railway alone will be from the present date (13th February) to the end of the month 35,000 tons. Besides this, we have to send before the end of the month from 7,000 to 9,000 tons by the Eastern Bengal Railway for the Rajshahye Division. The Eastern Bengal Railway can certainly carry all the Government wishes to send. Thus from 42,000 to 44,000 tons will be required for despatch during the present month.

3. So far as the Lieutenant-Governor is aware, there are not much more than 5,000 or 6,000 tons of Government rice available in Calcutta, and he is not sure whether further arrivals up to the amount indicated can certainly be reckoned upon. Sir George Campbell would be very glad if any certain information as to probable arrivals could be given him; for, if we shall not have enough rice in Calcutta to send up country and fully employ the railway and the carriage our

officers have collected or are collecting, it would be well that timely information should be given.

4. I am to explain that, though this Government has asked to have wagons for 2,000 tons a day this week, and for 2,500 tons a day during next week, still there has never yet been sent away more than 21,000 bags (about 1,500 tons) in any one day from Howrah. Still the Railway Company could with more confidence make its arrangements to meet our demands if we had sufficient rice always ready to fill all the wagons they can give.

No. 632 S.R.

From the Officiating Secretary to the Government of Bengal in the Statistical Department, to J. C. Batchelor, Esq., Traffic Manager, East Indian Railway, Jamalpore.

Scarcity and Relief.

Sir, Calcutta, the 12th February 1874.

I am directed to forward a statement showing the proposed despatches of grain from Howrah during next week. I am to express the Lieutenant-Governor's most earnest wish that wagons for this amount of despatches may without fail be given. There is plenty of rice in store at or in the river at Calcutta to maintain these despatches.

2. I am to point out, that as yet, 21,000 bags is the largest quantity sent off from Howrah in any one day.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 633—S.R.

Copy forwarded to the Commissioners of Patna, Bhaugulpore, and Rajshahye; to the Magistrate-Collectors of Patna, Gya, Shahabad, Bhaugulpore and Purneah; to Mr. Toynbee and to Mr. Urban Broughton of Howrah.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, the 12th February 1874.

Statement of proposed despatches of grain from Howrah, during the week beginning Monday, the 16th February 1874.

		Number of bags of two maunds to be despatched (if one-maund bags are used the number of bags will be doubled).	
		Daily.	Weekly.
Rajmehal		500	3,500
Caragola		2,000	14,000
Colgong		4,000	28,000
Sultangunge		2,000	14,000
Barrh Ghât		8,000	56,000
Futwah Ghât siding		11,800	82,600
Bihta Bukhtearpore Bankipore	For Gya	6,200	8,400
Arrah		2,500	17,500
Buxar and small station in Shahabad	For canal and district	1,000	7,000
	Total	33,000	2,31,000 or 4,62,000 maunds.

Appendix K.

No. 476, dated Fort William, the 13th February 1874.

From A. P. Howell, Esq., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to the Officiating Secretary to the Government of Bengal, Statistical Department.

As the Central Relief Committee will act in communication with the Government of Bengal, the Government of India wish to make some observations upon the subject of its action and functions, and upon the general conduct of relief operations.

2. The Government of India does not wish to interfere in any way with the discretion of the Central Committee in the allotment of funds to the different local committees; but in the exercise

of the general supervision over district committees, which under the rules agreed to at the meeting of January 24th was delegated to the Central Committee, His Excellency in Council thinks that it is essential that care should be taken lest any instructions to be issued by the Central Committee should clash with those issued by the local authorities, upon whom the responsibility of relieving distress will devolve.

3. His Excellency considers that unity of control and distinct responsibility are essential to the success of measures for the relief of distress when applied to a large area of country, such as North Behar. The whole force of the administrative machinery of Government, largely increased from its ordinary strength, must be directed to the transport and distribution of food. The responsibility for ensuring a supply of food to those who cannot obtain it by other means must rest with the Commissioner of the division and the local officers charged with this duty by him.

4. His Excellency is therefore of opinion that the functions of the Central Committee, when dealing with such areas of country as North Behar, should be mainly confined to the collection of subscriptions, and to arranging for the supply of food or money to district committees; that the supervision to be exercised by the Central Committee over the district committees should only be of a general nature; and that it would be undesirable that the Central Committee should issue detailed instructions for the relief of distress. These details must, in His Excellency's opinion, be very much left to the discretion of the district and sub-divisional committees under the direction of the local officers, who must necessarily possess more complete knowledge than can be attained by anybody, however zealous and efficient, acting at a distance from the actual scene of operations.

5. His Excellency does not doubt that the Central Committee will take this view of the subject, but he thinks that it is desirable to prevent the possibility of any misunderstanding arising.

6. It will probably be undesirable that the Central Committee should purchase grain except from Government stores, and any arrangements as to price will be made that may be considered equitable and proper by the committee.

7. In connection with this subject, I am to observe that where distress, as is the case there, arises from a general deficiency of the food-supply of a large area of country, which deficiency cannot be met by private traders, stringent labor tests are not applicable. The labor test was tried during the earlier portion of the Irish famine; it failed, and ultimately gratuitous distribution of cooked food was substituted. It was under the latter system, coupled with the sale of grain at market rates by Government where private traders could not supply it, that the Irish famine was at last successfully dealt with. The circumstances in India are not entirely similar, but it appears to His Excellency that where they differ, the difference would point to an extension of the system of gratuitous distribution of food, and especially to the establishment of a system of advancing supplies of food to cultivators. When distress extends to whole classes of the population, His Excellency relies upon the local knowledge of the persons entrusted with the distribution of relief to prevent abuses.

8. This subject is one of very great importance. The provision of employment for the laboring population upon public works was directed—and in His Excellency's opinion properly directed—at the outset of the period of scarcity as a preliminary and precautionary measure, so that the means of providing themselves with subsistence might be afforded to the laboring population and to the smaller cultivators who were not altogether unaccustomed to labor for hire. This application of public works has been proved to be sound by the experience of former periods of scarcity in India; but any system of relief by public works becomes impracticable when applied to a very large proportion of the population of a country. In order to apply it under those circumstances, unprofitable work must be found simply as a test by which to prove that the persons applying for relief are proper objects upon which to bestow it. Any application of such a test upon the scale that would be necessary in dealing with North Tirhoot would, in His Excellency's opinion, inevitably break down, and, moreover, by congregating cultivators at centres for the purpose of giving them employment, entail not only considerable hardships upon the people, but, as was found to be the case in Orissa, more serious evils.

9. These observations are by no means intended to imply that wherever useful work can be found, whether of a public or of a private character, advantage should not be taken of it as affording a most valuable aid to the general system of relief, but they have been made for the purpose of preventing the relief committees from considering the universal application of a rigid labor test to be recommended by Government.

10. I am to request that a copy of this letter may be furnished to the Central Relief Committee, to Sir Richard Temple, and to the Commissioners of Patna, Bhaugulpore, and Rajshahye.

No. 705—S.R.

From A. Mackenzie, Esq., Junior Secretary to the Government of Bengal, to the Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce.

Scarcity and Relief.

Calcutta, dated 16th February, issued February 1874.

Sir,

In forwarding for the information of His Excellency the Governor-General in Council a copy of a letter No. 703, dated the 16th February, circulating the views of the Government of India regarding the functions of relief committees, contained in your letter No. 476 of the 13th instant, and also a copy of the Lieutenant-Governor's resolution regarding advances to cultivators, I am to say that the Lieutenant-Governor hopes that these instructions will be considered to meet the case and will be approved.

2. The Lieutenant-Governor has, with the permission of His Excellency the Viceroy, omitted, in circulating your letter, the words in paragraph 7 which referred to a passage in a note of His Honor's, because he thinks that passage has in some degree been misapprehended. Sir George Campbell believes the passage referred to was that in which he refers to the painful necessity of hedging in our aid by severe tests. He there designedly and intentionally used the expression "tests" and not "labor tests," for he has never over-estimated labor tests alone. As a member of the Orissa Famine Commission and elsewhere, he has on previous occasions pointed out how ineffective such tests become when famine has gone beyond a certain point and labor become nominal; and while seeking to utilise labor to the utmost, he has never insisted on its usefulness beyond a certain point.

3. At the last conference at Government House the Lieutenant-Governor submitted to His Excellency the Vicerory as a question for discusion and instruction the question now under consideration as follows:—

V.—When the numbers to be relieved get beyond ordinary poor-houses and careful individual village relief, is it desirable to insist on labor on Government works in return for full rations, or strict poor-house tests; or is it better to give up the attempt to exact labor, and simply to give to all who seem to be poor a minimum of the poorest sustenance—gruel cooked by the Brahmin according to Sir George Balfour's recipe?

4. The Lieutenant-Governor trusts that the orders of the Government of India as he has explained them, together with the rules of the Central Relief Committee which he has sanctioned, will for the present sufficiently instruct the local officers and committees on the course to be followed in this respect.

I have the honor to be, Sir,
Your most obedient servant,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

No. 703—S.R.

From A. MACKENZIE, Esq., Junior Secretary to the Government of Bengal, to the SECRETARY to the CENTRAL RELIEF COMMITTEE; to the COMMISSIONERS of PATNA, BHAUGULPORE, RAJSHAHYE, BURDWAN, CHOTA NAGPORE, and PRESIDENCY DIVISIONS; and to the RELIEF COMMISSIONER of RAJSHAHYE.

Scarcity and Relief.

SIR, Calcutta, the 16th February 1874.

IN forwarding to you the accompanying copy of a letter No. 476, dated 13th February, from the Government of India, regarding the functioms of the Central Relief Committee, I am to say that it is not intended to make any great or sudden change in the system followed. The present orders do not conflict with the instructions issued by the Central Committee which are to be followed, though they should be read by the light of the present orders of the Government of India.

2. The Lieutenant-Governor has no doubt that the Central Committee will appreciate the considerations which induce the Government of India to deprecate in paragraphs 2 to 6 much interference with local details and too detailed regulations.

3. As regards paragraphs 7, 8, and 9, it will be understood that it is by no means intended to discourage the system of relief works which has been hitherto enjoined, or the employment of both the inmates of poor-houses and those receiving out-door relief in various ways as contemplated by the instructions. So long as famine does not reach an extreme point, the relief works and other employments will both utilise the available labor, act as a test of real need, and keep the people receiving relief engaged in a manner conducive to their well-being. It is only when want becomes so general that it is impossible to employ a whole population or to obtain any real and adequate work from great numbers employed on nominal work which they do not do, that the instructions of the Government of India become applicable. If such a state of things should unhappily come about, the Committee's instruction, that gratuitous relief must be given to those for whom work cannot be found, will come into play. In that case it may be necessary to give food to all the needy, and the test on which we must chiefly rely must be that on which the Committee has insisted, viz. that, as a rule, the gratuitous relief so given must be in the shape of cooked food. In this country the great mass of the people are little inclined to accept charity in this form, and this alone will be in their case a sufficient test of their needs. It would be impossible to dispense with this test, because if uncooked grain were distributed gratuitously to all, we should certainly be called on to support almost the whole population—a task beyond the means of Government, unless it be under extremely exceptional circumstances in limited tracts. The Committee's rules amply provide for searching out and relieving those who have good social or other grounds for objecting to the form of relief by cooked food, and are yet so poor and helpless as to require gratuitous relief, which in such cases is to be given by assignments of uncooked food.

4. Again, if famine does not reach the extremest degree of severity, or as soon as it begins in some degree to abate, it is of very great importance that no portion of the population hitherto self-reliant should be allowed to sink into confirmed paupers, and the utmost vigilance must be used to wean such people from dependence on charity and restore them to self-support. For this purpose, both as a test and as a step towards a return to habits of self-reliance, the exaction of labor will be most beneficial, and should in no degree be neglected.

5. As regards the advance of supplies to cultivators usually self-reliant and who only require temporary aid to enable them to continue their cultivation and support themselves, the Lieutenant-Governor had just drafted instructions when these orders of the Government of India were received. The instructions thus drafted seem applicable, and are issued along with this. The Lieutenant-Governor has no doubt that the Relief Committee will fully carry out their part of searching out and relieving the very poor cultivators who have not the means or the credit to render it possible to deal with them on ordinary principles.

I have the honor to be, Sir,
Your most obedient servant,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

No. 704—S.R.

COPY of the above letter and of the Government of India's letter, forwarded to C. E. Buckland, Esq., for the information of Sir Richard Temple.

By order of the Lieutenant-Governor of Bengal,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

Calcutta, the 16th February 1874.

APPENDIX L.

No. 681—S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL in the Statistical Department, to the DEPUTY SECRETARY to the GOVERNMENT OF INDIA, Department of Agriculture, Revenue and Commerce.

Scarcity and Relief.

Calcutta, dated 13th February / issued February 1874.

SIR,

WITH reference to the Financial Secretary's letter No. 3325, dated 26th November and other communications, I am now directed to submit an estimate, as far as it is possible to frame one, of the expenditure to be incurred in consequence of the drought of 1873–74 in Behar and Bengal. Much of this estimate must still be very conjectural, but it is given as well as this Government now can give it. The expenditure will be of two kinds, namely—

(*a.*) Expenditure for which there will be no money return.
(*b.*) Expenditure on advances and loans, most of which will be eventually repaid.

2. First, with reference to the absolute expenditure, this may be ranged under five heads, namely—

I.—Special temporary establishments.
II.—Direct expenditure for the promotion of private trade in grain.
III.—Relief work expenditure, either on roads or public works, or in the shape of aid to private relief works.
IV.—Purchase, handling, transport, storage, &c. of Government grain.
V.—Charitable relief.

I.—SPECIAL TEMPORARY ESTABLISHMENTS.

3. Under cover of my letter No. 3888, dated 11th December, was submitted a statement of establishments "likely to be required." The total charge shown was Rs. 38,000 a month. One or more of the higher appointments then proposed and sanctioned by the Government of India may perhaps not be required. But on the other hand there are,—

(1.) Mr. Hankey, as Inspector of transport arrangements, Patna.
(2.) An Additional Relief Commissioner for North Behar.
(3.) The officers of the Commissariat and Quarter-Master General's Department, and of the Staff Corps departments who are deputed on famine duty.
(4.) The Medical superior and subordinate staff which will be required.
(5.) The temporary Deputy Collectors and sub-deputies, whose appointment is now becoming necessary over and above the six sub-deputies shown at the foot of Appendix A, of the letter above mentioned.
(6.) The charge (Rs. 5 a month apiece) for sepoys employed on grain transport work, and the need, already becoming apparent in the Patna division, for a staff of extra police and guards in excess of the 250 men shown in Appendix B.
(7.) The apparent probability that the work of accounting for the expenditure of the large quantity of grain which is going forward will require more accountants than were estimated for in December last.

For these additional establishments the Lieutenant-Governor would estimate as follows:—

	Rs.
Cost of Mr. Hankey's deputation, he himself drawing only Rs. 500 special allowance, but his place being supplied by an acting officer	1,500 a month.
Cost of Relief Commissioner for the Patna division, similarly calculated on acting allowance	1,500 „
Twenty-five military officers of different departments, with an average deputation allowance of Rs. 400 each	10,000 „
Two extra medical officers, at Rs. 600 each; eight apothecaries or sub-assistant surgeons, at an average of Rs. 200 each, and sixty native doctors with establishments, averaging Rs. 60 each	6,400 „
Twenty-four temporary officers of the rank of Deputy Collectors, at Rs. 200 each, and twenty-four temporary sub-deputies, at Rs. 150 each	8,400 „
100 sepoys and 500 additional police guards, at Rs. 6 average	3,600 „
Twenty additional clerks and accountants above what was at first estimated, on an average of Rs. 80 a month	1,600 „
Total	32,000 a month.

Sir George Campbell will take care that no more temporary appointments are made than is absolutely necessary, and he is sure that Commissioners will also exercise every possible economy. The Lieutenant-Governor suggests no charge against "Famine" for the services of the police officers and others who are employed exclusively on relief work, as he considers that all other departments must be pinched and worked at something under full power, so as to make as many officers as possible available for famine work.

The total charge for establishments (exclusive of engineering staff), will then be as per letter of 11th December 1873	38,000
As now estimated in addition to the above	32,000
Per mensem	70,000
Or for, say, six months	4,20,000

But as the demands will probably increase, the Lieutenant-Governor thinks we should estimate for Rs. 5,00,000.

II.—Expenditure on promoting Private Grain Trade.

4. The Government has taken off road and ferry tolls, except such small dues at deep rivers, as may reimburse the ferry-men. The total ferry and road tolls income of—

	In 1872–73.
The Patna Division was about	2,57,000
„ Bhagulpore	22,000
„ Rajshahye	1,10,000
Total	3,89,000

of this total at least 2,80,000 Rs. will, it is expected, be lost by reason of the suspension of ferry and road tolls.

5. The other measure for promoting private trade has been the payment by Government of half the railway freight of all grain coming into the distressed districts, either from Bengal or the North-Western Provinces. It is not quite possible to estimate exactly the amount of this outlay; much of the private importations come from Loodiana, much from Calcutta, and perhaps it may be safe to reckon the average journey taken by private grain at 400 miles. The total imports of private grain into the distressed districts have been from 700,000 to 800,000 maunds a month. If import goes on at this rate for seven months in all, we shall have a total of about 5,000,000 maunds of private grain imported into the distressed districts before the middle of June 1874. The Government share of the railway freight on this quantity will be about one anna per maund for every hundred miles, or an average of four annas per maund all round. The total charge on this account may thus, if private trade continues to be as brisk as the Lieutenant-Governor hopes it may do, amounts to Rs. 12,50,000, which with the Rs. 2,80,000 of tolls remitted, gives a total of Rs. 15,30,000, or say, in round numbers, Rs. 15,00,000.

III.—Relief Works' Expenditure.

6. As yet the special grants for relief works have* amounted to only Rs. 16,25,000. The Lieutenant-Governor cannot hope that this will nearly suffice for the expenditure which will have to be incurred. Indeed, he trusts that as necessity arises much more will be spent. Already in the one district of Sarun, with a population of two millions, 33,000 persons are employed daily on relief works, and it is to be expected that when the pressure comes, Government will be able to find relief works for about one million persons daily, besides the regular laborers on the Soane Canal embankment and railway works. A million of workmen, women and children included, will cost at least thirty lakhs a month; and the Lieutenant-Governor thinks we may estimate for the spending at the rate of thirty lakhs a month for two months, and of ten lakhs for four

---

* See enclosure No. 9 to the Tenth Narrative.

months, or for a total expenditure of one million sterling. This estimate includes the cost of food supplied to the laboring classes at selling rates.

7. Some charges may also have to be made on account of the extra cost of bonâ fide relief works on the Soane Canal and embankment works. It is hoped that nearly all the non-remunerative and weakly labor may, in the Rajshahye Division, be kept on the road and other local works, only able-bodied persons being drafted on to the railway works.

8. The Lieutenant-Governor has recently had to make a special grant of Rs. 3,00,000 to cover the cost of providing tools for workmen. It was early found that there were not enough tools in the country for nearly all the relief works, and so large orders for new tools had to be given. By the end of March all the tools required will be on the spot.

9. It is not possible to foresee what may be the famine charge under the head of inefficient labor on "extraordinary" public works, but it may perhaps be possible to keep the total one crore of rupees (one million sterling) for all relief works, as being likely to cover all charges for tools and for inefficient labor on "extraordinary" works.

It will be observed that the works to be undertaken from these funds are over and above the ordinary provincial works on which provincial money is being expended.

IV.—PURCHASE, HANDLING, TRANSPORT, AND STORAGE OF GOVERNMENT GRAIN.

10. In the despatch published in the "Gazette of India" on the 31st January, the Government of India puts the prime cost of the 340,000 tons of Government grain at about three millions sterling. If the whole provision can be put down in Calcutta for this sum, then there will remain the charge for the bags,[*] for handling the grain in Calcutta, sending it up-country, transporting it to the interior, storing and watching and selling it. Into these charges will come the cost of the steamers which have been hired, the coal, &c. (but not the up-keep) of the Government steamers employed on famine duty; the establishment for selling the grain. The charge in Calcutta for handling will not be less than one anna a maund, and it may be more; the railway freight (which has to be paid at full rates), will not be less than six or seven annas a maund all round; the unloading and ferrying charges will be from one to two annas a maund; and the cartage or boat-carriage to the store-houses can hardly fall short of about fourteen annas a maund on the average.[†] Thus it will be unsafe to estimate the expense of transporting the grain to the interior, and of storing and guarding it there, at a lower average than—

	Annas per maund.
Handling in Calcutta - - - - - - -	1
Railway freight - - - - - - - -	7
Ferrying and handling and transhipment - - -	2
Cart and boat transport into interior - - - -	14
Add for storing, re-bagging, and miscellaneous - - -	2
Total - -	26

or about Rs. 42½ a ton. The total charge for transport and purchase, and storage of Government grain would thus be—

	Rs.
Prime cost as estimated by the Government of India -	300,00,000
Transport, &c., at Rs. 42½ a ton - - -	144,50,000
Total - - - - - -	444,50,000

Some of this outlay will be recouped by the sale of Government grain, or by disposal of surplus left at the end. It is quite clear that laborers on Government works alone will not be numerous enough to consume more than a small proportion of the Government provision of grain. There will, therefore, be a good deal of grain available for sale for those who can buy in parts where private trade does not supply the markets, over and above what may be required for charitable distribution. Some of the grain will perhaps be left unspent at the end of the famine, if happily Behar and Bengal have a good summer crop. Reckoning on a fair summer crop, Government may perhaps estimate the proceeds from sale of grain, and from the yield of surplus stores at the end of the famine to approach a crore, while the receipts from sale of grain to the relief laborers to be charged against their wages, may be taken at say 50 lacs; the total receipts on account of the sale of Government grain may be nearly 1½ crores of rupees (or 1½ millions sterling). These figures are necessarily conjectural, but if any estimate is to be made, the Lieutenant-Governor would take about these figures. The net cost of the Government grain transactions will thus be about Rs. 300,00,000. The Lieutenant-Governor is decidedly of opinion that in the end nothing will be obtained for grain from the charitable relief committees. He believes that it will be quite as much as they can do to meet their other expenses, and that whatever is in the first instance debited to them for grain (it will at first be so debited) will be balanced by additional grants which it will be necessary for Government to make subsequently.

---

[*] The Bengal Jails alone are manufacturing for the Government rice, about 45,000 to 50,000 Rs. worth of gunny bags per month.

[†] The most expensive cart route of which the Government has yet received report is that from Rajmehal to Dinagepore, where as much as Rs. 1¼ a maund has been charged, though the rate is now being lowered. On other long leads up to the north of Purneah and Chumparun, the cost of carrying each maund will not fall much short of a rupee. Seeing how much of the grain will have to go long distances by land routes, the Lieutenant-Governor can hardly estimate the average cost of internal transport at less than fourteen annas a maund. As the Government requires more and more carts, the rates of hire have to be raised. The Commissioner of Patna recently reported that the contract rate for 1,00,000 maunds a week was three pie per maund per mile, for a lead of up to 80 miles.

He therefore calculates on no returns for grain supplied for charitable relief, but assumes that the committees will meet other charitable expenses with the aid which Government has promised.

V.—Charitable Relief.

11. It is not possible to foresee what charge the Government may have to accept under this head. Subscriptions beyond those of a few leading individuals are, as yet, comparatively small. If the Indian and English subscriptions reach a total of ten lakhs, the Government share of the relief fund will be another ten lakhs as promised. Sir George Campbell can hardly hope that a total relief fund of 200,000*l.* will be able to compass all that the "Instructions to Relief Committees" lay upon them ; and he apprehends that Government will have either to give its grain to relief committees at reduced rates, or in the end to supplement their funds. He, therefore, would estimate the Government share of the charitable relief at not less than 100,000*l.* independent of the grain supplied to the relief committees.

12. There is one other item of Government expenditure which does not come within any of the above heads, and that is the Government subscription (paragraph 23 of circular No. 80, Appendix D. to the second narrative) towards private works "which contribute to the water-"supply or general well-being of the people of any village or tract" in the distressed districts. As will be seen from a subsequent paragraph, there are at present no sufficient materials for estimating what the amount of such subscriptions may eventually be. But they may perhaps be estimated at Rs. 5,00,000, or a sum of three lakhs for the estimated land improvements executed from advances, plus a sum of two lakhs to cover the Government subscription in the case of useful relief works undertaken by landholders from their own funds (see paragraph 18 of the tenth narrative, and also paragraph 5 of the first paper in enclosure No. 4 to the same narrative).

13. The total probable expenditure of public money upon the famine is thus estimated at—

	Rs.
I.—Special temporary establishments - - - - -	5,00,000
II.—Promotion of private trade in grain - - - -	15,00,000
III.—Relief works expenditure - - - - - -	1,00,00,000
IV.—Purchase and transport of Government grain, less by possible receipts, and amounts charged to relief works, &c. - -	3,00,00,000
V.—Charitable relief apart from the supply of grain - -	10,00,000
VI.—Government grants-in-aid to private relief works - -	5,00,000
Total - - -	4,35,00,000
	or £4,350,000

14. There remain the several kinds of advances, which, though they cause a present drain on the treasury will for the most part be repaid, in part with, and in part without interest after the famine is over. These advances or loans are of several kinds, namely—

(*a.*)—Advances for purchase of grain to be sold at cost price, made without interest, and advances for purchase of grain to be sold at the applicants discretion ;

(*b.*)—Advances under the "Land Improvement Act ;"

(*c.*)—Advances to municipalities or other bodies under the "Local Public Works Loans Act."

15. The total sum advanced for the purchase of grain up to the 10th January last was Rs. 6,14,500. In North Behar and other places, advances are still being taken, and the Lieutenant-Governor hopes (see paragraph 7 and enclosure No. 6 of the tenth narrative) largely to promote the transport of private grain into Tirhoot by private dealers, by relaxing the rules for giving small advances for the purchase of grain. The same policy is being followed elsewhere. The Lieutenant-Governor trusts that before the end of April next the total advances for the purchase of grain may amount to twenty lakhs (200,000*l.* at the very least) ; he has intimated to the Commissioners of divisions that the more money that can be safely and usefully spent on advances to petty dealers who will distribute grain for sale in the interior, the better Government will be pleased.

16. By the latest reports, the advances actually made for land improvements were comparatively small. But in Maunbhoom, Bancoorah, Nuddea, Monghyr, and some other districts the total sums applied for under the Act are already considerable. The assignments to meet these advances are as yet only twelve lakhs (as per paragraph 25 of circular No. 80, Appendix D. to the second narrative, and also paragraph 15 of the sixth narrative). But it is hoped that further advances will be largely taken both for land improvements, and also by zemindars for advances to their ryots. And the Lieutenant-Governor would estimate the possible outside expenditure under this head at thirty lakhs of rupees.

17. As yet only one or two municipalities have made proposals for loans, wherewith to undertake special relief works. Municipalities in Behar and Bengal are by no means rich bodies ; they have a very natural dislike to increasing taxation and undertaking burdens which they can possibly avoid. The Lieutenant-Governor is unwilling to put pressure on them ; and, as matters stand, he does expect that municipal or other local bodies will take very large loans, beyond a few thousand rupees in all, for special relief works during the present season. These small advances can be met from the assignments proposed in the next foregoing paragraph.

18. As has been explained in a foregoing paragraph (see paragraph 12 above), the Government has undertaken to contribute one-third of the cost of land improvements of general or public utility which may be undertaken during the current season. Most of these works will probably be tanks, reservoirs, and water channels, many of which will be of general use to the neighbour-

ing villagers and their cattle. So that the Government contribution will have to be paid in a large number of cases of private land improvements. As three lakhs out of the advances have been reckoned as absolute Government expenditure under paragraph 12 above, only nine lakhs of advances need be estimated for under the present heading. If, happily, landholders and others should come forward more freely for advances of this kind, the Lieutenant-Governor would very gladly indeed see the present estimate of thirty lakhs (300,000*l.*) exceeded.

19. The total expenditure according to the estimate now submitted, will therefore be—

	£
A.—Absolute expenditure of Government money, less by possible receipts for the sale of Government grain - - - -	4,350,000
B.—Expenditure on advances which will for the most part be recovered - - - - - - -	500,000
Total - - -	4,850,000

To allow for expenses not foreseen, we may say altogether 5,000,000*l.*

20. The Lieutenant-Governor desires to take the opportunity of the submission of this estimate, to invite the attention of the Government of India to the fact that the provincial funds are wholly unable to bear any considerable share of this immense outlay. The provincial funds were not intended, as it appears from the orders of March 1871, to bear any charges on account of "famine" or special disasters of that kind. Paragraph 18 of the Financial Secretary's letter No. 3003, dated 13th November (see Appendix C. to the second Narrative), directs that provincial and local public (relief) works should be in the first instance debited to provincial and local funds; and the same paragraph says that the portion of such expenditure which may be undertaken for the relief of distress will be transferred to "famine" charges, while that portion which represents value received by the different districts or local funds will be left at the debit of provincial or local funds, unless the aggregate of such debits be found to be more than the provincial finances can properly bear. Sir George Campbell would ask leave to submit that the provincial finances of Bengal cannot possibly bear the charge. He would hope that, when the time comes for making up the accounts of the famine expenditure, no larger sum may be charged against the provincial accounts than they can fairly be called upon to bear; and that the provincial balances may not be so far depleted as to prevent the Bengal Government from doing justice to the several provincial services, and to the many schemes which were in hand when the drought of 1873 unhappily intervened.

21. It should, perhaps, be added, that no very high estimate has been framed of the subscriptions which may come from England. If such subscriptions should be very large, the net cost to Government of the grain supplied to relief committees would be so far reduced; but on the other hand, there may remain at the end of the famine possible charges for orphanages and orphans such as have remained after other famines.

22. I am to add that, as regards the question how much of the expenditure is to be charged to the current financial year 1873–74, and how much to the ensuing year 1874–75, the Lieutenant-Governor is unable to offer an accurate estimate, as this will principally depend on the date on which the grain supplies are paid for. Since, however, it appears that the greater portion of these supplies are to be shipped and probably paid for in the present financial year, the Lieutenant-Governor would recommend that the money thus expended, plus all actual expenditure of the present year, should be charged as finally spent in the present year. Setting the part of the imported rice not paid for against the other expenses incurred, the Lieutenant-Governor would take 3,000,000*l.* as a fair estimate of the expenditure to be charged in 1873–74.

In 1874–75 much of the expenditure, but not the whole, will probably be recovered, including in the recoveries the whole of the cost of transporting and buying grain beyond the three millions to be charged in 1873–74.

Probably 1,350,000*l.* may be taken as the net expenditure of 1874–75.

Beyond 1874–75 we may hope that recoveries will balance any remaining expenditure.

I have the honour to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Enclosure No. 3.

Resolution.

Scarcity and Relief Dept.

Calcutta, the 16th February 1874.

Read—

The district narratives of the Patna Division for the fortnight ending on the 7th February.

Patna	narrative received on the	10th	February.
Gya	,,	13th	,,
Shahabad	,,	12th	,,
Tirhoot	,, not received till	16th	,,
Sarun	,, received on the	14th	,,
Chumparun	,,	13th	,,

The last narrative for Tirhoot was received very late, and the Lieutenant-Governor had occasion to remark that the narratives for this large and important district, the condition of which was so critical, must be sent in punctually. Mr. Worsley explains that he was unable to write the report as he was engaged in carrying out Sir Richard Temple's orders. It does not appear, however, why the narrative was not prepared by Mr. Halliday while Mr. Worsley was away. Both these officers, no doubt, should have their hands full; but the narrative has to be written some time, and if proper arrangements are made beforehand for procuring punctual reports from sub-divisions, it is quite as easy to send in the narrative on the proper date as to send it in a week later. Sir George Campbell desires that timely arrangements may for the future be made.

DISTRICTS SOUTH OF THE GANGES.

2. In the Patna, Gya and Shahabad districts, the supplies of grain in the local markets is said to be sufficient. The price of common rice was above 11 seers per rupee in Barrh, Behar, and in part of Gya. In the parts of Shahabad, regarding which there was anxiety, the condition of the crops is said to have improved. The Patna and Shahabad reports speak of prices having in the main risen, and the prices-current of Saturday, the 7th February, did show some rise. But the results of the rain of the previous week may not then have been fully felt. Private trade and private imports into Patna are very brisk; 2,57,524 maunds of private grain were imported by rail into the Patna district during the fortnight; the Shahabad import figures have not been received.

3. The effect of the rain has clearly been very good on almost all the spring crops. Mr. Mangles speaks of its having done "little or no harm to the pulses" and "immense good to the "wheat, barley, cheena, and late gram." Mr. Palmer says the rainfall has been "of incalculable "benefit," and he adds that the spring crops "are excellent and equal to any average year." He only wishes that the breadth sown had been greater. Mr. Alexander says the recent rain "has done much material good to all growing crops, more especially to the wheat and barley." One very satisfactory symptom is reported from Shahabad, namely, that the village bankers are advancing money on the security of the rubbee crop; and as they are practised judges, the crop prospects may be taken as being good.

4. There is said to be no distress in Patna; the condition of the people in Gya is still not bad; in Shahabad the condition of the people is said to be unchanged, except in the Sasseram division where it has improved. In Gya the Magistrate has opened a large relief work in one corner of the Jehanabad sub-division where "tightness is felt," and in Jehanabad sub-division several new relief works have had to be opened in parts away from the canals. In the Patna district over 5,500 people were employed daily on road works, and 2,522 were employed in Shahabad. The number for Gya is not given.

The Magistrate who is well acquainted with his district and the sub-divisional officers are agreed in anticipating that there will be no actual famine in Gya. But the Lieutenant-Governor is not quite without anxiety for this district, where prices by the last returns were high, and internal means of carriage are not very abundant. A review of Mr. Palmer's three monthly special crop reports shows that he estimated that only about five-eighths of the usual rubbee area had been sown. Mr. Palmer's reports do not offer any estimate of the area under rubbee food-grains; the Patna report makes the rubbee food-crop to be one-third of the food area of the district. The proportion in Gya can hardly be so large, seeing that Gya has no inundated (dearah) lands. If this be so, and if the bhadoi and aughanee (early and late autumn) crops were as bad as was feared, then the Lieutenant-Governor thinks that too much confidence must not be placed on the results of the rubbee harvest. The rice crop has in parts been, as Mr. Palmer points out, better than was at first feared. But looking to all the circumstances and to the way in which Gya suffered during 1866, the Lieutenant-Governor thinks that the district must be carefully watched. With reference to paragraph 11 of the Patna narrative, he desires that Mr. Mangles will, in discussing any question of supplying carts for the north of the Ganges, bring prominently to Sir Richard Temple's notice the needs of the Gya district, especially keeping in mind the object of leaving room for the carriage of the private grain trade to the Gya district.

5. The storage and transport of Government grain is going on sufficiently fast to the south of the Ganges. The question is, whether the railway will be able to carry up now enough grain to supply the wants of these districts as well as the very much larger requirements of North Behar. If not, probably South Behar may be supplied by private trade from the north, provided the local carriage is available. At Patna city and in Gya, preparations have been made for administering charitable relief, if unhappily it should be required; possibly there may be a large influx of paupers from other parts into Patna itself. In Shahabad the charitable relief arrangements of Bhaboaah, Chand, and that neighbourhood, must be more completely organised, so as to be ready whenever they are required.

6. It is satisfactory to find that advances for land improvements are being more freely taken in Gya. And the Lieutenant-Governor requests that an expression of his approval may be conveyed to Baboo Brother Sing, zemindar of the Patna district, who is reported to be providing relief work for his villages and helping his ryots with advances.

7. The following table shows that crimes against property are, except in Sarun, much more rife than in ordinary years. In Chumparun only, however, are violent crimes numerous, and there minor crimes are comparatively few:—

COMPARATIVE STATEMENT of Crimes against property during the month of January in the Patna Division.

	January 1874.				Total of all four crimes.		
	Dacoity.	Robbery.	Theft.	House-breaking.	1874.	1873.	1872.
Patna	0	1	143	156	300	167	208
Gya	2	2	110	349	463	247	221
Shahabad	Return not sent in shape required.						
Tirhoot	0	0	116	195	312	139	158
Sarun	2	2	50	269	323	293	299
Chumparun	6	0	26	43	75	59	52

NORTH GANGES DISTRICTS.

8. The districts of Tirhoot, Sarun, and Chumparun have been visited by Sir Richard Temple, and have engaged much of his attention during the last three weeks; and as he is on the spot giving orders, detailed instructions from the Lieutenant-Governor are not required. Sir George Campbell is quite sure that everything that is possible is being done to preserve the large tracts of these districts which are very critically situated. Now that Mr. Worsley is set apart for the relief duties of the three northern sub-divisions of Tirhoot, the Lieutenant-Governor would wish to have it made clear what Mr. Halliday is doing; as yet, the Government has heard and known very little of what he, the Magistrate of the largest and most important distressed district, has done and is doing.

9. In parts of Tirhoot the supply of food in the local bazars is very short, and the price of the coarser grains has gone up greatly. In Sarun, and even in Chumparun, the bazaars are fairly supplied with grain. Sales to the public of grain stored by the Hutwa estates have been begun through the agency of local traders. The Lieutenant-Governor thinks it necessary to caution the Commissioner and the district officers against opening the grain stores and selling to the public (*i.e.*, through the local dealers) too early in the day and without extreme necessity. With reference to what Sir Richard Temple has said of the trade capacities and facilities of the Sarun district, and seeing how very moderate is the supply of grain yet stored by the Hutwa estate, and how moderate is the provision estimated by Sir Richard Temple for the whole Sarun district, we must be very cautious about opening our stores for general sales too early. The representations made by the Durbhanga traders to Mr. McDonnell, show that by opening the Government stores to the general public too soon we may much check private enterprise. Still in out-of-the-way parts of Tirhoot, where there is no private trade, the Government stores will probably, as the present narrative says, have soon to be opened. The Hindee proclamation mentioned by Mr. McDonnell is probably the notice that Government intended generally to sell its grain on works only, and not to the public. The publication of such a notice may have been perhaps a little untimely now that the Government has admitted that it may have to let the public have its grain through the local dealers in tracts where private trade is non-existent.

10. The rainfall has done much good in North Behar also, especially in Sarun and Chumparun and South Tirhoot. In northern and north-eastern Tirhoot, comparatively little relief is expected from the spring crop, which covers but a small area. In Sarun the rain has been "of immense benefit to the crops," which have improved so wonderfully that an outturn of eight annas all round, or even more, may possibly be obtained. In Tirhoot not more than a 5-anna or 6-anna crop all round is expected.

11. From Tirhoot it is reported that the people are growing more anxious; vagrancy, begging, and crime is increasing, child desertion has begun, and it is feared that distress will be felt in parts of the head-quarters and Tajpore sub-divisions, as well as in the three easterly tracts. In the specially-mentioned parts of the Durbhangah sub-division, distress prevails "in a more or less "intense form" among the lower castes, and the signs of want and suffering can be seen on the persons of the men and women who come upon the road works. Village-to-village visitation has not yet begun, but occasional visits to distressed villages (such as are instanced in Mr. Worsley's 18th paragraph) show that the women and children are, in places, suffering from want.

12. The reports from Sarun show that distress is being "sufficiently coped with by means of "relief works." In the north of Chumparun, through the Rumnugger tract, a village-to-village visitation has been made by Mr. Howe, C.S., and he finds that even the ryots will soon be without food, while the condition of the lowest classes is still more deplorable. By means of works and of charitable relief the work of succouring these people has already begun.

13. In the Tirhoot district 18,988 persons were employed on relief works, but of these more than 12,000 were on Court of Wards' and private works. The relief works provided by Government officers in Tirhoot are as yet very inadequate indeed. Mr. Worsley and the sub divisional officers appear to recognise this fact, but still the increase in the number of persons employed during the fortnight under review has been very small. The results achieved in Sarun show that people will come to work, if employment is provided; the need for overseers exists equally in Sarun; yet there the officers have got 70,000 people employed on useful works. The officers of Durbhangah, Mudhebunnee, and Seetamurhee must use and make the best of local agency, while the Government is collecting and sending trained overseers as fast as it can. The Lieutenant-Governor very much wishes the Tirhoot authorities to get rid of the creed that people cannot be relieved without Public Works Department overseers. Petty relief works must be entrusted to local agency. With reference to paragraph 6 of the Tirhoot narrative, the Lieutenant-Governor observes that discretion should not be left to Assistant Engineers as to the main question what relief works are to be undertaken; the civil officers must decide that question.

14. In the Sarun district, as has been said above, plenty of work is provided in all directions; and the success of the arrangements in this respect is very creditable to the foresight and organization of Mr. Drummond and his subordinates, Mr. Hodgkinson and Captain May; 70,000 people are employed; most of them are able to do a full day's work, and belong to laboring castes; four-tenths of the laborers are men, three-tenths women, and three-tenths children. The wages for an able-bodied man average under two annas a day; women and children are paid in proportion. In Chumparun only about 6,000 persons a week were employed on the works, but the number was rising rapidly; the people supplied themselves with food (maize) from neighbouring bazars.

15. The private trade in grain is brisk in Sarun, into which 1,11,700 maunds of grain (principally maize) were ascertained to have been imported during the fortnight, besides probably a good deal not ascertained. Some small private importations of grain are being made for Patna into Tirhoot. In the rest of North Behar private trade seems to be very dull.

Arrangements have been completed for carting through contractors—

2,00,000 maunds a week into North Tirhoot,			
50,000	ditto	ditto	Chumparun,
50,000	ditto	ditto	Sarun.

It has been reported by telegraph that the contractors have begun their work well, and the present narratives say that the contractors can be relied upon, and that in Tirhoot alone they have already collected 12,000 carts. The Government of India has sanctioned the tramway from Chumpta Ghât to Durbhangah, which will very greatly facilitate the transport of grain into Tirhoot when it is ready. Sir Richard Temple has given on the spot great care and attention to augmenting the transport power of North Behar.

16. Advances are being taken by zemindars in North Tirhoot for land improvements and for helping their ryots; and advances direct to substantial ryots are proposed from Sarun. The Lieutenant-Governor has vested several selected sub-divisional and other officers with powers of a Collector under the Land Improvement Act, and has directed that such powers are to be exercised in strict subordination to the Magistrate-Collector of the district. In this way the prompt disposal of applications under the Land Improvement Act will, it is hoped, be facilitated.

17. Sir Richard Temple has arranged with the Commissioner and Mr. Schalch a complete scheme for dividing Tirhoot and Chumparun into relief circles, and for posting a competent relief officer to each circle. The Lieutenant-Governor hopes there may be no delay in carrying out this scheme and in beginning village-to-village visitation. He notices Mr. Kean's statement that at Ramnugger the charitable relief officer expects to have 2,500 paupers on his hands at once. He has regretted to hear from the Commissioner of Patna that the wealthy concerns of Messrs. Hills and Company have withdrawn from the subscription offered in their name to the Planters' Association of Chumparun; a body who are taking a great and important part in relieving distress throughout the Chumparun district. He also gathers that while Mr. Stevens and the officers of the Durbhangah public works have done all that is possible, there is room for improved energy and expansiveness in the proceedings of the Durbhangah Raj establishment generally.

18. Sir George Campbell observes that the charitable relief arrangements in Sarun seem (paragraph 31 of Magistrate's report) to be somewhat behind-hand. He considers that, even if happily general famine should not be felt in Sarun, there must be many poor creatures unable to work, and who in so poor a district must suffer terribly in times of dearness and scarcity. The Lieutenant-Governor thinks there certainly should be relief arrangements to find and succour such people.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 728—S.R.

Copy, with copy of the reports, forwarded to the Commissioners of Patna, Bhaugulpore, and Rajshahye, and to the Relief Commissioner of Rajshahye; to the Magistrate-Collectors of the six districts of the Patna Division; to the Central Relief Committee, and to Mr. E. C. Buckland, for submission to Sir Richard Temple.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, the 16th February 1874.

No. D, dated Bankipore, the 8th February 1874.

From A. C. Mangles, Esq., Collector of Patna, to the Officiating Secretary to the Government of Bengal, Scarcity and Relief Department.

I have the honor to submit the following narrative for the fortnight ending Saturday, the 7th instant.

A.—State of the Country.

2. The abundance of supply of all kinds of food-grains in the several markets of the district still continues, and I have no doubt that it will do so so long as the private importation is kept up

at its present rate by the dealers, and no extra inducements, besides the existing difference in rates, are held out to them to throw in larger quantities of grain than they usually do into the neighbouring districts.

3. The following are the prices of the several food-grains prevailing in the district:—

Patna.

	Seers.
Rice, best	11
„ common	13
Wheat	15
Barley	16½
Jowar	16
Maize	15
Gram	16

Barh.

Rice, best	10
„ common	10½
Barley	14
Wheat	12
Maize	13
Gram	15

Behar.

Rice	10½
Pulses	15
Gram	15
Wheat	12
Barley	16

While the price of common rice in the city of Patna has fallen by one seer as compared with last week those of wheat, barley, and maize have risen. I received last week a petition from the leading grain merchants of the Patna city complaining of the impediments thrown in their way at Loodhiana, in the Punjab, from whence they say no grain has been allowed to be despatched in large quantities for some weeks past. I have forwarded the petition to the Commissioner, with the view of his taking the necessary steps for removing the cause of complaint. These merchants had, at a conference held by Sir Richard Temple on the 26th ultimo, already brought their grievance to his notice and were promised redress.

The sub-divisional officer of Behar thus writes on the subject: "Rice was selling at 15 seers " only two weeks ago. This sudden rise is not owing to there being not a sufficient quantity of " it in the sub-division, but to an entirely different cause. When our golahs were stocked with " Government rice, the traders and zemindars were in dread of our selling the different kinds of " grain very cheaply; when it was notified to them that Government grain would not be sold, " and that they were intended for the coolies who worked on our roads, they understood their " position and saw how they could raise the price with impunity. At once they combined to raise " it to the high rates which prevailed in November. The rainfall during this and the last week " has quite improved the prospects of the crops, and it is hoped there will be a speedy falling " off."

4. Rain fell on the 31st ultimo, the 1st and 6th instant, amounting to ·61, and was genera. throughout the district.

5. Great anxiety was at first felt as to the probable effect of the rain on the crops as opinion differed about it; but I am glad to state that the result of a careful inquiry throughout the district has led me to believe that as it was not at any time heavy, and fell at intervals, unaccompanied by hail or wind, it has done little or no harm to the pulses in flower or in ear; whilst it has done an immense deal of good to wheat, barley and cheena, and also to grain of late sowing.

6. Though the masses of the people are hard up owing to the rise in the prices of food-grain, and some of them are said to have reduced their usual daily allowance, no case of actual misery or starvation was reported during the fortnight. The canal and local works, and the brisk demand for coolies at railway stations, serve to keep the laboring classes pretty fully employed.

7. No case of robbery was reported during the period under report. There were 36 cases of grain-theft, most of them of a very petty nature and from the fields.

I herewith annex the comparative statement of crimes called for by the Government letter No. 4801 of the 20th December last.

It is happily conspicuous for the absence of dacoity cases, while there was only one case of robbery which was prosecuted to conviction. The number of theft and petty burglary cases was certainly large as compared with the corresponding period of the last two years, but this must always be expected in a year of short harvest and high prices.

B.—Relief Works.

8. The latest returns of local funds works received from the Executive Engineer are those for the week ending the 31st ultimo. They show an average daily number of 6,576 laborers employed on them, while the number of non-laboring classes on some of the roads has fallen to 2, 3½, 5, and 6 per cent. It has risen to 28 and 30 on two of them, but I must say that I do not

consider these figures reliable. During the fortnight the Government, in its resolution dated the 24th ultimo, has assigned Rs. 30,000 for relief works to supplement the local fund grant of this district, but this sum having already been exhausted in meeting the several applications from the Executive Engineer for special assignments, I have asked the Commissioner to move the Government to make a further allotment of 50,000 maunds to this district; and in anticipation of the Government sanction, I have sanctioned the following special assignments asked for during the fortnight, some of which have already met with the Commissioner's approval.

	Rs.
Road No. 13 - - - - - -	2,000
" " 24 - - - - - -	5,000
" " 37 - - - - - -	3,000
" " 15 - - - - - -	5,000
" " 29 - - - - - -	3,000
" " 12 - - - - - -	4,000
" " 14 - - - - - -	1,500
" " 30 - - - - - -	3,000

The Executive Engineer has been repeatedly directed by me not to stop any work where there is any demand for labor because the local grant for it has been exhausted, but to go on in anticipation of the Government sanction.

C.—Transport of Food.

9. The subjoined statement will show the transport of food between the 18th and 31st January, as per latest returns received from the Railway Company.

	Rice.	Wheat, oat and barley.	Janera.	Other grains.
By rail - -	2,93,211	26,533	47,051	1,03,529
By river -	980	12	4,400	570
Total -	2,94,191	26,545	51,451	1,04,099

or a grand total of 4,76,286 maunds, whereof 2,18,762 were Government grain, leaving 2,57,524 maunds as private import.

10. The means of transport continues sufficient for the requirements of this district, and on this head I have nothing to add to what I wrote in paragraph 11 of my last narrative and the special report therein alluded to.

11. During the period under report I received two communications from Sir Richard Temple, one asking for the construction of 200 carts in the Patna district, for use in Tirhoot; but as the carts are to be of a particular shape, not in ordinary use in this district, I am afraid there will be some delay in getting the required number, as many of the local builders will not undertake the work on any terms, and those who do, demand very high prices; however, as the orders I received were peremptory, I am doing the best I can, and have advanced Rs. 2,000 to those contractors who have undertaken the work. The other was inquiring whether this district could conveniently supply 500 carts for Tirhoot, and to this I have replied to the effect that, taking the unusually large amount of private trade in this district and its consequent requirements, as well as the large demand on our resources from the Gya district, into consideration, I could only spare 300 carts for Tirhoot in case of necessity, provided that the prospects in my district remain as they are at present and nothing occur to render it necessary for me to apply for my full consigment of grain; and I further wrote: "Taking everything into consideration therefore, I am of opinion that if our prospects continue favorable we might, at a pinch, though it would be a great strain on us and a hindrance to private trade, raise 500 carts for use in other districts; but if Tirhoot is to have them all, we could render no assistance whatever to Gya, to which district I believe another lakh of maunds has still to be sent from the new consignment."

D.—Storage of Government Grain.

12. Almost all the golahs in the sudder sub-division, and some in the other sub-divisions, have been furnished with machans to secure the grain stored in them against damp and white ants. Up to the end of the fortnight I have received 51,048 maunds for the use of this district, whereof 44,061 maunds has reached its final destination as detailed in my statement No. 2 for the last week forwarded to Government on the 6th instant.

13. I have applied for a further assignment of 17,500 maunds, half in rice and half in mixed grain, whereof 5,000 maunds will be for Dinapore division, which had only received 5,000 maunds out of the first allotment, and 12,500 to Behar, in addition to a similar quantity already sent there. Of the above quantity above 2,500 maunds of mixed grain have already been consigned to Bankipore station for this district, and will be sent to Dinapore by carts on arrival.

E.—Advance to Private Party.

14. No advance for purchase of grain was made during the fortnight, but three applications for Rs. 10,000 each, under clause A, paragraph 4 of the Government circular No. 80, from leading zemindars of the Patna city, have been forwarded to the Commissioner for sanction. The applicants propose to buy food-grain at a distance and sell it to the poor people and small bunnias in the mofussil at cost price. Now that it is our object to throw in as much private grain as possible from the city to the Tirhoot markets, some such measures as the above seem to be urgently called for with the view of keeping this district as fully supplied as possible with its own necessaries.

15. I am glad to be able to bring to the notice of Government another instance of liberality on the part of a native gentleman of Patna, Syud Walaet Ali Khan, a leading zemindar and banker of the city, who has sent Rs. 8,000 from his own purse to import food-grain from a distance and to sell it to the poor at cost price. He has informed me that he has set aside altogether a sum of Rs. 15,000 for this laudable purpose. I have accordingly thanked him for his liberal conduct, and I trust that I may also be allowed to convey to him the thanks of Government and to Syud Abu Syied, whose munificence I brought to His Honor the Lieutenant-Governor's notice in paragraph 17 of my last narrative.

16. During the fortnight advances for 35 village works amounting to Rs. 4,000 were sanctioned. The works which have already been commenced are situated in the south of the head-quarters, and the canoongo has been told off to see that the advance-holders act up to their agreements.

E.—Charitable Relief.

17. In the sudder sub-division fair progress has been made in providing sheds for the charitable relief centres selected for this district. The sub-divisional officers, fully confident of the favorable prospects of their divisions, and of there being no probability of famine, have not as yet taken active steps in this direction. I have, however, drawn their attention to the advisability of our being prepared for the worst, however distant its chances may be, and I hope they will attend to it.

18. I have also selected sites for digging tanks in the south and south-west of the sudder sub-division, where, if there is to be distress, it is likely that it will first show itself, to be taken in hand in case of necessity; and in that case I propose employing the sum of Rs. 2,000 placed at my disposal by Syud Mahomed Abu Syied for the purpose, supplementing it with an equal grant from Government as a beginning.

19. I am also sending a project for the Commissioner's sanction, whereby Rs. 49,828, the balance of the Wahabee fund available for the improvement of this district, will be expended on reclaiming a large filthy swamp in the heart of the Patna City called "Sheik Mathao Gurhi," which is supposed to have been the standing cause of the yearly epidemics of cholera, fever and small-pox, and improving it into a moderate-sized tank, and its environs into a garden for the city. The municipality has consented to pay Rs. 3,557 as the cost of obtaining the land, measuring about 44 beegahs. This work, irrespective of its being a real blessing to the city, will be the best relief work I can decide upon, and will keep thousands of laborers employed for months.

20. I have also much pleasure in bringing to the notice of Government the praiseworthy conduct of Baboo Brother Sing, a zemindar residing in the south-west corner of the sudder sub-division, who has commenced digging a tank in his native village, and thus proposes affording relief to some 300 or 400 of his ryots for some time to come.

No. 305 C, dated Gya, the 9th February 1874.

From A. V. Palmer, Esq., Collector of Gya, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit my report on scarcity and relief in the Gya district for the fortnight ending Saturday, 7th February.

A.—State of the Country.

2. The bazars still continue to be fairly supplied. In Aurungabad the supply for some three days almost ceased in consequence of the weather, it being difficult for pack-bullocks to travel whilst the surface of the ground was wet and greasy. The Deputy Magistrate reports that grains have since come in as usual.

3. The following table will show the ascertained importations during the past fortnight in the principal bazars:—

Local Bazars.	Wheat.	Barley.	Rice, 1st sort.	Rice, common.	Millet.	Maize.	Gram.
Gya	460	81	199	1,171	9	265	210
Jehanabad	125	70	55	120	100	70	80
Aurungabad	20	—	3	40	—	—	60
Daoodnuggur	150	36	310	225	150	78	150
Total	755	187	567	2,556	259	413	500

4. These figures, as I have previously remarked, must not be taken as conclusive evidence of the entire importations. The Jehanabad sub-divisional officer reports that there are more small stocks of food for home consumption with the well-to-do ryots than he previously thought. These small stocks are chiefly of rice.

5. It is with the greatest satisfaction that I have to report a good rainfall throughout the district.

Gya	2·2
Nowada	2·46
Aurungabad	1·59
Jehanabad	1·04

6. I annex in the margin, for easy reference the quantity of rain registered at each sub-divisional head-quarters.

7. This rainfall, though slightly injuring the barley and poppy in flower, has on the whole been of incalculable benefit.

8. It has given vitality to the grass; it has given strength to those rubbee crops which could not be supplied with water artificially; it has given a general moisture to the surface of the earth, which has enabled agriculturists to commence ploughing, and has given all the wells a rest. I cannot be too thankful for this rain. It would have done more good had it come a fortnight earlier, but, as I have said above, the good resulting from it is incalculable.

9. All my sub-divisional officers unite in one opinion as to the rubbee prospects. It is only to be regretted that a larger area of land has not been sown down in rubbee.

10. The crops are excellent, and equal to any average year.

11. The rain has now disappeared, and bright weather, with a keen west wind, has set in.

12. In fact, we could not be having more favorable weather than that with which we are now blessed.

13. The condition of the people remains good. I have no information of any classes, other than those who earn their livelihood by manual labor, having come to the relief works. Each sub-divisional officer has reported that no case of starvation has come to notice, and all superior police officers and excise darogas have been authorised to relieve any real cases of distress that may come to their knowledge, reporting at once to the sub-divisional officer, who will arrange for some light work being given to such persons in exchange for means of subsistence.

14. Grain thefts and robberies have not increased to any alarming extent. There has been during the past year a steady increase of crimes. A statement, which I have called for, and hope to be able to submit with this report, will show at a glance how this matter stands.

15. The sub-divisional officer of Jehanabad reports that to the north-east of his sub-division tightness is felt, and that there have been some cases of desertion or expulsion of women. It does not appear whether this latter is a direct consequence of the tightness; but I have deemed it right to authorise his opening a relief work in that vicinity (Jehanabad and Hoolosgunge road), which will give ample occupation for some months.

16. I have no reason to withdraw from the opinion I expressed in paragraph 19 of my last report, to the effect that I do not anticipate famine, and it is satisfactory to be able to state that my sub-divisional officers, whom I have since consulted, concur in the opinion I have expressed.

17. I believe that the Sudder sub-division is perhaps in the least prosperous state. Fortunately a large proportion of the lands are uncultivated waste, and the people sparse.

18. Towards the south of the district the rice crop has been by no means bad, and if the mowa flowers well there will be large quantities of food obtainable from that source for the more indigent classes.

B.—Relief Works.

19. I have already reported that all my proposed relief works are ready for operations as soon as relief is necessary. The statement, which I shall submit to the Department Public Works branch of the Bengal Secretariat two days hence, will show concisely the points on which information is required under this heading.

20. The Commissioner of Patna has allotted me 5,000 tools, for the delivery of which application has been made. These will, I anticipate, suffice for my requirement.

C.—Transport of Food.

21. I have already, in replying to the first head of the Government circular, given a statement showing the approximate account of private food importations, and in replying to head E. I shall report on advances to traders for purchase of food from outside.

22. The relaxation of the rule mentioned in paragraph 14 of Government Resolution dated 2nd instant, on last fortnightly reports, making it a condition of the advance that grain should be brought from outside, applies, I take it, to the north of the Ganges alone.

23. I annex a comparative statement, showing the private importations into the Sudder Bazar of Gya alone, as compared with previous fortnight:—

	This fortnight.	Last fortnight.
Wheat	460	463
Barley	81	77
Rice, first sort	199	57
Rice, second sort	1,171	1,392
Millet	9	40
Maize	265	199
Gram	261	190
Total	2,446	2,418

24. The Aurungabad sub-divisional officer reports 2,300 maunds to have been imported during the fortnight into his sub-division, and the Jehanabad officer 740 maunds.

25. Our local "means of transport" has shown itself to be sufficient for our requirements, and that we can transport from 2,500 to 3,000 maunds of food daily.

26. It will be seen by last fortnight's returns, and by the returns submitted on the 7th instant, that the entire assignment of one lakh of maunds was received, transported, and stored by the 31st January.

27. Captain Taylor, s. c., has just arrived, and he will have charge of the transport arrangements for the future.

D.—Storage of Government Grain at Relief Works.

28. The major storage centres are the sub-divisional head-quarters, viz. Gya, Jehanabad, Aurungabad, and Nowada.

29. The minor storage centres for the present are as follows:—

	Mds.		Mds.
Gya - - -	28,820	Sherghotty. Bela - - - Utree.	2,006
Jehanabad - -	17,224	Gundhur. Urwul - - - Hoolosgunge.	13,876
Aurungabad - -	16,131	Ruffeegunge. War - - - Kootoomba.	964
Nowada - -	19,554	Ragowlee. Jukriborwan. Kadergunge - -	2,884

30. For easy reference, I record in red ink the quantity of grain stored at each.

31. Houses at all these places have been secured, and in most the machans on which the bags will be placed have been completed.

32. The wet weather prevented grain from being transported into the interior during the past week, and consignments not having been received at Bihta or Buktearpore railway, station (as anticipated from Government Notification No. 206-S.R.), also retarded operations. These will now be pushed on vigorously.

33. The returns submitted on 7th instant show the amount of food grain actually stored to be 1,00,673 maunds, and the amount received at railway stations, 1,07,116 maunds.

34. I have communicated with Mr. Hewitt regarding the proportions and localities at which I wish to have my further assignments of 50,000 maunds, and I am aware that that gentleman will do his best to meet my wishes.

E.—Advances to Private Parties and their Results.

35. Two applications for the purchase o grain have been made at the sudder sub-division.

36. In one case, the security tendered was altogether insufficient, in the other the party withdrew his application on learning that he would have to import from outside the distressed districts.

37. At Jehanabad one application has been made by the zemindar of Erkee; but the result is not known, the sub-divisional officer having omitted to point out that the importation must be from without this division.

38. In Aurungabad Rs. 8,000 has already been advanced to traders under clause b, section 4, of the Government circular No. 80.

39. Parties are coming a little more freely for land improvement advances. The purposes for which advances under this head are applied for are only two—embankments and pucca wells.

40. In the Jehanabad sub-division eight applications have been filed, of which two have been disposed of and advances given, and six are under inquiry.

41. In the Aurungabad sub-division 67 applications have been made; of these 18 have been complied with and the money paid out.

42. I append a statement of transactions completed. *Vide* Appendix C.

F.—Charitable Relief.

43. No operation beyoud the starting of relief works have been commenced, nor are they required. Arrangements have been made for houses and establishments at each charitable relief centre fixed upon. This subject has already been disposed of in my No. 156 C of 15th January, and the Government orders received thereon.

No. 218, dated Camp Bhubbooa, the 10th February 1874.

From H. W. Alexander, Esq., Collector of Shahabad, to the Officating Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit my fifth fortnightly report for this district.

A.—State of the Country.

(1.) There appears to be no scarcity of supply in the principal local marts of the head-quarters sub-division, and the same appears to be the case in regard to the bazars in the Sasseeram, Bhubbooa and Buxar sub-divisions. The recent rain may to a certain extent have temporarily affected the supplies in some of the smaller and more distant village marts.

(2.) The annexed table gives the kind and price of grain selling at the principal marts in the district. In comparing this return with that submitted with my last fortnightly narrative, it will be seen that prices have more or less risen throughout the district. In Arrah rice, barley, and maize have risen 1 seer. In Bindawlia there has been a slight increase in most grains. In Sahar the price of rice, gram, maize, peas has risen 1 to 1½ seers.

In Buxar there has been a slight increase in prices. In Doomraon there has been a fall in the price of rice and barley of ¼ seer, and a slight rise in regard to wheat and bajrah. In Rughunathpore rice has fallen, whilst wheat, gram, bajrah, and peas, have gone up in price.

In Sasseeram rice, wheat, and gram have risen one seer, peas have fallen one seer. In Chenari wheat has fallen ½ seer, rice risen 6 chittacks. In Nassrigunge rice has gone up 2 seers 8 chittacks, and wheat, peas, and gram one seer each. The sub-divisional officer reports that he has great doubts as to the accuracy of the rates sent from this last mart.

In the Bhubbooa sub-division, prices have risen generally for all grains. In Mohuniah itself rice has risen one seer, peas and gram 8 chittacks. In Doorgawti rice has risen and gram fallen 1 seer. In Chinepore rice, wheat, peas and gram have all risen one seer; in Hatta rice has risen 1 seer 4 chittacks, wheat fallen 8 chittacks, and peas fallen one seer.

3. I have nothing to add to my last report in regard to the stores of grain in the hands of zemindars and others.

There is little doubt that the majority of landholders have grain in store, but not to a very considerable extent, whilst it may be accepted as true that the Koormi proprietors in the Bhubbooa sub-division have large supplies of grain in store.

I do not believe that the traders are hoarding their grain, as the demand being great it is more profitable for them to sell than to store.

I am not disposed to think that petty cultivators have grain in stock excepting perhaps those who live in the villages in the dearah lands north of the railway; many of those, I am informed, have grain, although not in any large quantity.

4. As far as I have ascertained up to the present date, rain seems to have fallen throughout the district on the 31st January, and on the 1st, 4th, and 5th of February; in quantity it may be estimated at 1½ inches. This rain it is admitted on all hands has done much material good to all growing crops, more especially to the wheat and barley crops; it has done some harm to peas in flower, but it has generally been beneficial, and has enabled cultivators to plough their lands for the July rice sowings, for sugar cane and cheena; in every direction ploughs are now seen at work. The frost which I referred to in my last narrative has, it is said, injured one-eighth of the pea crop, and to a less extent damaged the masoor and gram crops in the Arrah sub-division.

In the Buxar sub-division these crops have suffered to a like extent; the above estimate is not in any way under-stated.

It seems to have done more damage in the Bhubbooa than in the Sasseram sub-division. The Deputy Collector at Bhubbooa estimates the crop destroyed to have been—

¼ of the peas.
⅛ of the masoor.
⅕ of the sugarcane.
⅓ of the rahar.

I am now and have been for the last week in this sub-division, and from what I have seen of these crops I should certainly say that the above estimate was over-stated.

In spite, however, of the above loss I am of opinion that the condition of the crops has generally improved since the date of my last narrative, and that prospects are considered fair, may be judged from the fact that grain is being freely advanced on the security of the rubbee crop.

The condition of the people remains unchanged; no known cases of misery and starvation have been brought to my notice, nor have any such come under my own observation whilst I have been marching in the district, since the date of my last narrative. The demand for labor is increasing, and will be satisfied as relief works are opened wherever they are considered necessary. There has been no increase in the number of grain thefts and robberies.

The monthly return called for in Circular No. is under preparation, and will be submitted at once.

In regard to the condition of any special tracts.

In the Arrah sub-division money has been placed to the credit of the Department Public Works for commencing work on the Arrah and Sahar Road, and thereby giving employment to the laboring poor in this direction.

In the Buxar sub-division money has been made over to the sub-divisional officer for commencing work which it is considered is required as a relief measure in the south-western portion of the Chousa pergunnah.

In regard to the Sasseram and Bhubhooa sub-division Mr. Eyre reports that "the condition " of Chand has improved, and the condition of south-western Sasseram, and south-east Bhubhooa, " and of Rohtas, has also improved." It seems however advisable notwithstanding, that relief works should be commenced in these parts. In Chand and the surrounding neighbourhood work will be started on the road leading from Halta viâ Chand to Duramli on the boundary between this district and Mirzapore, and on the road from Chand to Kudjura on the Grand Trunk Road.

In south-west Sasseram, and south-east Bhubhooa, the continuation of the main-western canal and the road from Chenari to Mulhipore will supply labor. For Rohtas instructions have been given to commence work on the road between Akberpore and Juddonathpore. These, as far as I have seen myself and have ascertained from others, are the particular portions of the district where at present relief in the way of work should be offered to the laboring poor and others who may seek to avail themselves of it.

B.—Relief Works.

I have mentioned in the preceding paragraph the relief works which it has been thought advisable to start and to arrange for the commencement; these are in addition to the relief works (including district road repairs) which are in progress, and in regard to which full particulars will be furnished in the statement due on Wednesday the 11th instant, as called for in Circular No.   , dated the 3rd December 1874.

Private importations by rail are given in Appendix B.* Grain still continues to be imported by private traders. I am glad to be able to report that the means of transport appear quite sufficient to meet the demands of Government and other importers; the grain privately imported finds its way into the interior of the district. In addition to this, in the Arragh sub-division, 1,175 maunds of grain have been imported by river from the districts of Sarun, Ghazipore, and Goruckpore; and in the Sasseram and Bhubbooa sub-division 2,200 maunds have been imported from other districts during the fortnight under report.

* Will follow.

D.—Storage of Government Grain at Relief Works.

In my last narrative I gave full particulars in regard to the places selected for storing grain in the district. In the Arrah sub-division at two places, Mulloor and Saketa, the golahs are still unfinished, as buildings had to be constructed for the purpose, no existing ones capable of storing grain being found available. During the fortnight under report 902 maunds of grain have been received for this sub-division. This includes the weight of bags. This makes a total of 20,856 maunds (including weight of bags) as per railway bills received up to the end of the fortnight. I have actually stored in the central depôts as shown below 20,784 maunds.

	Mds.	S.	C.
Arrah Central Depôt - - - - - -	3,000	0	0
Oodwant Nuggur - - - - -	1,935	3	7
Gurhum - - - - - -	3,372	20	0
Peroo - - - - - - -	3,571	1	0
Powna - - - - - -	1,969	31	0
Ageeawn - - - - - -	2,421	36	0
Sahar - - - - - - -	2,742	25	0
Sundais - - - - - -	1,772	20	0
Total - -	20,784	16	0

Including weight of bags.

In the Buxar sub-division Mr. Armstrong reports:—"Up to date the grain received by me amounts to 17,083 maunds, from which I have 100 bags missing, to get from the Railway Company, which will bring my first consignment up to something like 18,000 maunds instead of 16,000. The amount shown on the margin has been actually stored at Saraya, Itari, and Saranja, making a total of 10,629; it would have been more had not the transport been almost stopped since last Saturday night by the weather."

Saraya - - -	5,414
Itari - - -	1,761
Sarenja - - -	8,452
Total - -	10,629

Of the central depôts in the Sasseram and Bhubbooa sub-divisions, as already reported in my previous narrative, Mr. Eyre reports that "in Sasseram, Telathoo, Chennary, Nobha, Nassri-" gunge, Kochus, Bunowl, the depôts are ready. Akberpore and Mudkopea, Dangain, and " Dinareh, are not yet constructed. Bhubbooa, Jehanabad, Ramgurb, Kudjora, Chand, Chyne-" pore are ready. Mohunia and Doorgawti are being built."

Up to the 5th current there had been received at Zummaniah and Doomraon 21,193-13-6 maunds of grains of all kinds. The distribution of this grain and its position on this date is noted below. I have been transferring in some few instances grain stored at depôts to other and more remote depôts not at the time of receipt prepared to receive and store it, but I subsequently got ready.

Total Amount delivered.	Name of Central Depôt.	Amount received.	Amount in Transit.	Balance at Delivery Station.
21,193 13 6	Sasseram - - -	5,236 23 0	1,850 25 0	
	Telathoo - - -	1,995 31 8		
	Nassrigunge - -	2,004 10 10		
	Chennary - -	204 12 8		
	Bhubhooa - -	3,113 3 4		
	Chynepore - -	1,662 19 0		
	Jehanabad - -	1,314 26 12		
	Chand - - -	376 2 . 8		
	Total - -	15,907 36 2	1,850 25 0	3,434 2 4

In all these there have been received at the delivery depôts for the

	Mds.
Arrah sub-division - - - - - -	20,856
Buxar ditto - - - - - -	17,083
Sasseram and Bhubhooa sub-divisions - - -	21,193
Total - -	59,132

And of this amount there have been stored in the central depôts of the—

Arrah sub-division	20,784	16	0
Buxar ditto	10,629	0	0
Sasseram and Bhubhooa sub-divisions	15,907	36	2
Total	47,321	12	2

In regard to the sufficiency of stocks for Government purposes, a special report has been submitted on this subject through the Commissioner in reply to circular No. 61—S.R., dated the 9th January 1874. I have therein mentioned that the further requirements for the district will be—

	Mds.
For the Arrah sub-division	17,500
„ Buxar „	14,000
„ Bhubbooa „	18,500
„ Sasseram „	22,000
Total	72,000

With this amount stored, I am of opinion that I shall be in a position to meet any probable emergencies that may arise. It is calculated that the whole of this further consignment of grain will be stored in the central depôts in the district by the end of April.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

(1.) For purchase and storage of grain no advances have been made during the period under report to zemindars or planters, and traders are unwilling to give security for such advances, so none have been made to them. Large quantities of grain are, however, being regularly imported by rail, which find their way into the interior of the district.

(2.) Advances to municipality for works, and description thereof.

An estimate has been prepared for a market place to be constructed in the municipality of Arrah, at a cost of Rs. 5,441, and an application will be at once forwarded for the loan of this amount and in addition a sum of Rs. 2,600 will be asked for, in order to introduce a system of latrines in the town.

Estimates for the improvement of the streets in the Sasseram city have been submitted. Estimates for the town of Chennary are in course of preparation, and will be submitted shortly No other municipalities have applied for loans.

(3.) Advances to private parties for land improvements.

In the Arrah sub-division during the fortnight under report, besides one advance of Rs. 105, which has been given for digging wells, seven applications have been made, aggregating a sum of Rs. 2,435; of these two have been rejected as inadmissible in every way, and in regard to the remaining five, enquires are being made as to whether the "status" of the applicants is sufficiently good to admit of the money asked for being advanced in each case.

In the Buxar sub-division in regard to the applications made by the zemindars of the estate named Sonpa (mentioned in my second fortnightly narrative), Mr. Armstrong now reports that he finds "that there are several mortgages in the Sonpa property, the maliks of which have " applied for a large advance for wells and aharas." No other advances of this nature have been applied for in this sub-division.

In regard to the Bhubbooa and Sasseram sub-divisions, Mr. Eyre reports: "An advance of " Rs. 100 has been given to Kadir Beebee, proprietress of Sissera, pergunnah Chynepore, for the purpose of digging a reservoir to collect the hill-torrents south of the village for irrigation of bhadoi, khureef, and rubbee crops. Many other applications have been received, and the usual and necessary testing of the security offered is now being made. I may here note that throughout the country the village embankments and drains are undergoing repair. This is especially the case in pergunnah Chynepore, Bhubbooa, where the repairs undertaken this year are of some extent and magnitude, the Maharajah of who is a proprietor in the pergunnah, alone estimating the value of the improvements to be made at Rs. 900.

CHARITABLE RELIEF.

No actual relief operations have commenced as yet; meetings have been and remain to be held in order to collect subscriptions for this purpose, the result of which will duly be reported an appeal for subscriptions is being circulated among the European residents of the district, and a Hindee translation is in course of circulation among the native gentlemen and others.

In reply to circular No. 9—S.R., dated a full report has been submitted, through the Commissioner, of the relief centres selected, together with a map showing their position with reference to existing roads, relief works in progress, and those approved of, but not actually commenced. In this report the subject of the machinery by which it is proposed that this charitable relief should be worked has been fully discussed. Tin tickets for distribution to the recipients of this charitable relief have been and are being made, and metal measures for weighing the grain to be distributed have been and will be sent to each relief centre.

No. 245F, dated Mozufferpore, the 12th February 1874.

From—C. F. WORSLEY, Esq., Covenanted Deputy Collector, on special duty, Tirhoot.
To—The Offg. Secretary to the Government of Bengal, Statistical Department.

I HAVE the honor to submit my Narrative of Scarcity and Relief in Tirhoot district for the fortnight ending Saturday, the 7th February 1874.

A.—STATE OF THE COUNTRY.

2. In Seetamarhee sub-division the bazars at Seetamarhee, Madhooban, and Shewhur are reported to have been sufficiently supplied with grain; but at markets in the interior, especially at Majorgunge, Julleh, Baraher, Byrama, and Madhowapore, the supply has been scarce. The highest prices prevail at Julleh, where common rice is selling at 9¼ seers, and "marua" and "makai" at only 11¼ seers per rupee.

3. In Durbhangah sub-division prices have risen, and all kinds of grain have become very scarce in the eastern and south-eastern tracts. The sub-divisional officer writes: "Draw a line on the map due north and south through Bahera thannah, and in all the bazars east of that line every sort of food-grain, where procurable, is now at famine prices. In Rowsera the prices are lower than elsewhere. The prices current in Durbhangah bazar are higher than in the interior. In the tracts east of the imaginary line I have specified, that is, in the greater portion of Baheyra and in all Singhiya thannah, the supply is very scarce." Mr. MacDonnell attributes the rise in prices at Durbhangah town to a combination among the bunyas and mahajuns, and explains it in the following words: "The chief mahajuns of the town waited on me a few days ago, and after a hypocritical laudation of our efforts, revealed the purpose of their visit which was to protest against my selling rice in Durbhangah (as at Baheyra and Singhiya) at 10 seers the rupee, and so ruining the market. I again explained to them the policy of Government, and next day I received and published a Hindee notification on the same point; the day after the rice had risen in the Durbhangah bazar 20 per cent."

4. In Madhoobani sub-division grain is getting scarce, especially in Madhoobani itself. Wheat and maize are now almost as dear as rice. The enormous rise in price of maize during the last ten days, *i.e.*, from 14 to 10 seers per rupee, is explained by the increased scarcity of this grain in Seetamarhee, from which sub-division the Madhoobani bazars have hitherto been mainly supplied. The sub-divisional officer fears that "we shall have to sell grain very soon," and does "not think that the present stocks can last much longer."

5. In Hajeepore sub-division there has been little or no change in the state of the markets. The small bunyas import grain from Patna in quantities sufficient for the daily and weekly demands of the people. Prices generally in this sub-division are more favorable than in other parts of the district.

6. In Tajpore sub-division there has been a slight fall in wheat and barley in the southern markets owing to the improved prospects of the deara crops; on the other hand the prices of Bhadia grains have risen.

The sub-divisional officer regards "the very slight difference that the recent rain has had on prices in the same way that he recently viewed the absence of effect of Government importations on prices, as indicating limited stocks in the country."

7. In the Sudder sub-division prices keep very high, but I have not heard of grain being anywhere unprocurable at the prices quoted.

8. The subjoined statement shows the kinds and prices of grain selling at some of the principal marts on 7th instant and 24th ultimo:—

Name of Marts.	Wheat.		Barley.		Common rice.		Lesser millets.		Maize or Indian corn.		Gram.	
	7th February 1874.	24th January 1874.	7th February 1874.	24th January 1874.	7th February 1874.	24th January 1874.	7th February 1874.	24th January 1874.	7th February 1874.	24th January 1874.	7th February 1874.	24th January 1874.
	Sr.	Sr.	Sr.	Sr.	Sr.	Sr.	Sr.	Sr.	Sr.	Sr.	Sr.	Sr.
Mozufferpore	12	11½	18	13⅓	10	10	—	—	12	12½	12	14
Seetamarhee	11¼	11¼	14	17	10½	11¼	12	16	12	14	14	16
Rosserah	12	13	—	18	12	12	14	16	—	—	13¾	14½
Bahera	12⅓	11¼	—	—	10	10¾	13¼	14¾	12½	13⅛	—	—
Madhubani	10	10	16	18	9¼	10	12	14	11	14	11	12
Madheypore	10¾	12¾	17¾	18¾	12½	13	14¾	16	16	15	13	13¼
Khijowlie	12	12	20	20	12	12	11½	15¼	13½	13¼	15¼	15½
Hajeepore	18	13½	15¾	19	11	11⅓	—	—	13¾	15¾	15¼	17¼
Tajpore	13	13	15	16	11	11	14	16	13½	14	15	15½

9. I have not much to report on the subject of stocks. The sub-divisional officer of Seetamarhee reports that certain zemindars (large holders of grain) are sending their supplies to markets for sale, and in some villages of pergunnah Besoutra he "learnt on the spot that ryots in 1 out of 10 houses have rice." He adds: "The villagers are careful to keep what rice and grain they have. No outsiders going to a village in the interior to buy rice get any. I think the Government-

imported rice should soon be sold." I am myself quite satisfied that there are very small stocks in the hands of the grain-dealers and ryots, and that the principal holders are zemindars. The common people, contrary to their usual practice in times of scarcity, acknowledge that the bunyas have very little grain. It is of course possible that they are exaggerating the deficiency of grain in the hope of inducing Government to import enough to bring down prices to their ordinary rates; but my own opinion is that such is not the case. I have lately passed through many villages in the south and south-east of Seetamarhee sub-division, and have spoken freely with the people. They say one and all that there is scarcely any grain stored, and their statements are certainly confirmed by the appearance of village granaries, which are invariably empty. The quantity of buried grain cannot, I think, be large; indeed, the space required for the storage of a few thousand maunds is so considerable, and the difficulty of concealing their existence is so great, that few persons are likely to have buried much inside their houses. To give some criterion of what large zemindars in the north may be supposed to hold in ordinary years, I may mention that when the Sheohur Raj, with a rental of Rs. 1,39,100 came under the Court of Wards in 1867, the stocks of grain owned by the late Rajah in all parts of his estate amounted to about 35,000 maunds.

10. In the other sub-divisions stocks are believed to be small. In Madhubani sub-division "mahants," it is said, "have a good deal of what there is, and they seem disposed to do nothing for the people."

11. During the fortnight rain has fallen throughout the district, the falls having been as follows:—

Seetamarhee	·80 to 1·10
Durbhangah	·69 to 1·20
Madhubani	·55
Hajeepore	·80
Tajpore	·30 to ·80
Mozufferpore	0·80

In all the sub-divisions except Durbhangah and Madhubani, the rubbee crops have been greatly benefited by the rain. In Hajeepore an average nine-anna crop is expected. In Tajpore a four-anna crop is expected over three-fourths of the Seraissa pergunnah, and a six-anna crop over the remaining one-fourth; and in Balagatch pergunnah there is good prospect of a ten or twelve-anna crop. In the former pergunnah there are about 105,000 acres under rubbee crops, in the latter only 13,000 acres, consequently the average outturn for the whole sub-division will not be more than five and a half annas. I am unable to say at present to what extent the previous estimates of rubbee outturn for the Seetamarhee and Sudder sub-divisions may now be increased. From Durbhangah it is reported that though "the rain will do much towards helping on the rubbee crop, it is evident now that from this crop no material aid can be expected," and the Madhubani officer fears that "the rain is too late for any crops but cheena and moong."

It would be unsafe I think to estimate the average outturn for the whole district at more than five to six annas.

12. Cheena, moong, and kowni have been sown more or less in all sub-divisions since the recent falls of rain. The largest sowings have been made in Seetamarhee, Madhubani, and Tajpore. The Durbhangah officer has not heard of such activity in this direction as he could have wished. These crops are very precarious and require rain within a month after they are sown. Strong west winds at this season would prove very injurious to them. From all I can learn, I am of opinion that a supply of six or eight weeks' food is the utmost that can be obtained from cheena and moong crops.

With regard to the condition of the people, the Seetamarhee officer thinks that they are now becoming alive to their danger, and are throwing off the apathy usually evinced. "The Brahmins," he says, "are much disquieted, and all classes feel very anxious about the future." "*Sub log bohut dhol giya*" (every one has become very shaky) is the usual reply made by zemindars and village headmen when questioned as to the state of the people. Frequently, while passing through a village in Seetamarhee, I have been surrounded by half the inhabitants and asked what will be done for them; and my own observations, so far as they have gone, quite confirm the sub-divisional officer's accounts. The people undoubtedly are gravely anxious.

14. Cases of child desertion are commencing in the neighbourhood of Darbhungah, and the number of beggars is fast increasing in the town. Three deserted infants have been brought to the sub-divisional officer, and several women have come to him with their children declaring that they could not support them, and begging to be relieved of their charge. Mr. Macdonnell, with the Collector's approval, has arranged temporarily with the Baptist Mission for the custody and maintenance of all orphans and deserted children.

15. The Madhubani officer reports: "The people of course are pinched by the unreasoning dearness of food, but I have not yet heard of any authenticated cases of actual starvation. There has been a very great increase of crime, and this is certainly owing to the famine. The people seem willing to go to jail as they are sure to be fed there. With the exception of perhaps a few villages near the Kumla and Balan both food and water must be getting very scarce.

16. The Hajeepore officer reports: "The condition of the people cannot be said to have altered materially; there are plenty of works for them, but difficulty in obtaining labor. The small maliks, men with a rental from Rs. 20 to Rs. 10, are suffering most from not getting rents and not being able from their position to labor. There is an increase of professional vagrancy. I can at present at least relieve all isolated cases from the dispensary, there not being enough to employ the machinery of a relief committee."

17. In Tajpore sub-division improved prospects are said to have "made the relations between " debtor and creditor smoother, and if grain is not to be had more readily in the bazars, it is to

"be had more easily from the village bunyas." Misery, however, is reported to be "daily "increasing," the worst tract being that to the north and north-west of Tajpore. The sub-divisional officer states that in the early part of the fortnight he found people collecting roots on the banks of the Tal Beryla "to eke out the balance of their bhadai crops."

18. I fear there is likely to be more distress in the Sudder sub-division than was at first anticipated. I do not apprehend that it will be general or widespread, but that here and there it may be very severe in certain villages. This apprehension is grounded partly on what I have heard lately from different sources, and partly on a report made by a Deputy Collector (Babu Ishree Pershad) whom I deputed to visit a village in which the police had heard of cases of distress. The village in question is named Chajan. It is about ten miles south-west of Mozufferpore and has a very large population. The Deputy Collector found several women and children there in a feeble and emaciated state, whom he relieved on the spot. He also made over a small sum of money to the village headman for their future support. The manager of the Danapur factory has been asked to suggest some work in the neighbourhood of Chajan, and to supervise its execution.

At Toorkee, fifteen miles north of Mozufferpore, there is also likely to be distress. The rahar crops in this quarter have been nearly all destroyed by hoar-frost, and there is not much in the way of rubbee crops. On my way to Seetamarhee, I saw many large fields there in which the rahar plants had been entirely stripped of leaves, and there was nothing but the bare stalks and shoots to be seen.

The Sudder sub-division is rather at a disadvantage in having no executive officer corresponding to the ordinary sub-divisional Magistrate. For my knowledge of the state of this sub-division, I have had to depend chiefly on reports of the police and such information as the Abkaree Deputy Collector has been able to collect. I have had few opportunities myself of visiting the interior.

19. Petty cases of theft are increasing, and there has been a large grain-theft on Sunkwarpore and Dearah, between Hajeepore and Patna. The case is at present under investigation.

20. *Special tract of Mahind and Kanhowley, No.* 1, *Seetamarhee Sub-division.*—In this tract all classes are said to be "much distressed." Several public and private works are being carried on which give employment to many persons, but still the sub-divisional officer writes that "much more work is needed." A large scheme of relief works for Madhubani sub-division has now been prepared, and the Executive Engineer, Northern district, has been directed to give his immediate attention to the wants of Seetamarhee sub-division.

21. *Special tract of Singhya, No.* 1, *Durbhangah Sub-division.*—The following is the sub-divisional officer's report on this tract: "Did I not think that it might inconvenience you in drawing up your report, I would have included all the portion of my sub-division east of the imaginary line drawn through Bahera thannah as one special tract. I shall, however, follow your division."

"In Singhya the condition of the people gives ground for much anxiety. You are already aware how nearly complete the failure of the rice crop has been there, and how insignificant is the rubbee cultivation. In my last tour through the thannah, I had interviews with some of the important landholders, and the reports they gave me confirmed in every respect what I had heard from other quarters, that the people were approaching that limit beyond which they could not procure food; they were obliged to search for food to eke out a daily meal. They are mostly cultivators, and doubtless have managed to get along hitherto on the very small produce of last rice crop; it must be nearly if not wholly consumed now. Judging from what I had seen and heard, and from high prices (9 seers) prevalent in the bazar, I thought the time has come to open our rice-stores. Having made the necessary arrangements I opened sales on the 26th January, and the increased number of labourers who came on our relief works showed how necessary was the step I took. I have already communicated with you on the necessity of scattering our relief works more thickly over the country. I have also written to Lieutenant Wright on the point. He is quite ready to act on my suggestion if he had only overseers. This is a most pressing want, and one which I am wholly powerless to supply."

The sub-divisional officers have already been authorised to excavate old tanks wherever employment is required. This work can be carried on, I think, without professional overseers, but such men are urgently needed for our large road works. The Executive Engineer is endeavouring to get fit men, but the difficulty of finding them is very great.

22. *Special tract of Bahera, No.* 2, *Durbhangah Sub-division.*—The Sub-divisional officer writes:—"In the country about the village of Bahera and eastwards towards Bhaugulpore, there is a large population of Musahars, Dosads, and other low caste people, who subsist generally on labour. Their occupation being gone when the rice was harvested, and the harvest having given them nothing to go on with, they about a month ago sunk into distress, and the pressure of want first made its appearance among the women and children.

All through the Bahera thannah the rice crop has been a very great failure, and with the exception of the southern portions of the thannah there is but little hope of rubbee. The result is that now all through the thannah, distress prevails in a more or less intensified form; among the lowest castes it amounts at the present time to actual want; among the better classes to privation, increasing in severity day by day. The steps that I have taken hitherto to assist them are offering labour and selling the labourers rice at 10 seers.

It is quite impossible for me to give you the actual facts of all or any of the cases of misery with which, during the last fortnight, I have become acquainted. My time is far too fully occupied to permit of my instituting such inquiries, nor do I think it to be the intention of Government that now, when things are coming to a crisis, I should intermit my efforts to alleviate misery in order to investigate its cause. Suffice it to say, that among the labourers on the Durbhangah-Bahera road, you will see women, children, and old men presenting manifest signs of extreme want."

B.—RELIEF WORKS.

23. Under orders issued by the Commissioner on 29th ultimo, eight new tank works have been opened in the Seetamarhee sub-division. The total number of public works now being carried on is 19, and of private works 54, exclusive of works under the Court of Wards. The number of labourers daily employed is as follows:—

Public works	2,254
Private works	5,124
Court of Wards' works	2,500
Total	9,878

In the Durbhungah sub-division the figures are given as follow:—

Bahera-Durbhungah road	2,000
Hather-Singhiya road	479
Court of Wards' works	3,105
Durbhungah municipality work	113
Total	5,697

In Madhubani sub-division the figures are as follow:—

Motipore road	404
Beniputtee road	44
Mirzapore road	31
Two private tank works	1,670
Total	2,149
Total for three distressed sub-divisions	17,724

In the remaining sub-divisions there are 1,264 persons daily employed on district works and 229 on Gunduck works. The grand total for the whole district is 19,217.

24. Want of time and the importance of getting this report ready for despatch by this day's post (13th instant) have compelled me to submit the above information in a general shape instead of in detail.

25. In Durbhungah sub-division there are other works than those mentioned, which are under the supervision of planters, and for which returns have not been received.

26. The Assistant Engineer of the northern district has just submitted, through the sub-divisional officer of Madhubani, a scheme of relief works for that sub-division. The scheme provides for 17 road-works at an estimated cost of 5 lakhs of rupees. Pending sanction of the Commissioner, to whom reference will be at once made, I have directed the Executive Engineer to immediately commence one large work (Madhubani and Itwara road, 10 miles long, and estimated to cost Rs. 16,000), and have authorized him to take in hand such other roads as he may think fit. The sub-divisional officer considers the proposed works as the "most likely ones " to afford relief and be of real use afterwards."

C.—TRANSPORT OF GRAIN.

27. Some traders in Seetamarhee and Sheohur are importing grain from Patna, but not to any great extent. The managers of Doomra and Kamtoul Factories in Seetamarhee sub-division have received 1,500 and 1,600 maunds of grain respectively, imported with Government advances.

In Durbhungah sub-division private importations are at a stand-still; in Madhubani they have never been very large since November, and are now next to nothing; in Hajeepore small quantities of grain are being daily imported; in Tajpore some 1,500 maunds have been imported by private persons *viâ* Chumpta Ghât during the fortnight, besides quantities of 2,000 and 1,000 maunds brought in by the managers of Khan Mirzapore and Hursingpore Factories.

The amount of grain imported into Mozufferpore town during the fortnight is 17,000 maunds. Of this quantity only 4,000 maunds are rice, the rest being gram, oorid, makai, wheat, barley, and paddy (1,000 maunds). Every kind of grain in the town has become cheaper by ½ seer this week.

Hitherto the means of transport have been generally sufficient.

Contracts have been concluded with two associations of planters for the conveyance of 12 lakhs of maunds to the store-houses in Durbhungah sub-division by 15th June, and for the delivery at Durbhungah of 8 lakhs maunds destined for Madhubani sub-division. The carts secured already are said to be over 12,000.

For the conveyance of grain to Seetamarhee sub-division (probably 8 lakhs of maunds) we are negotiating contracts with two other associations of planters.

28. I suggested to Sir Richard Temple at Seetamarhee, that a good portion of the grain assigned to the northern sub-divisions, say one-fourth, should be stored in the first instance at Poosah, as it might be found hereafter that some tracts were worse than we had anticipated, and there was no other depôt so commodious, and at the same time so conveniently situated for the purpose of a reserve centre. Sir Richard strongly approved of the suggestion, but I am not aware whether any official orders have been passed on the subject.

D.—STORAGE OF GOVERNMENT GRAIN.

29. The amount of grain already stored is as follows:—

	Mds.
Seetamarhee sub-division	47,793
Durbhungah "	32,400
Madhubani "	36,065
Tajpore "	17,575
Hajeepore "	—
Mozufferpore "	33,841
Total	167,674

In Durbhungah sub-division 50 maunds of grain have been already issued.

30. In my next narrative I hope to give a complete list of all the new sites selected for golahs; at present the Durbhungah officer's arrangements are the most forward. He has selected twenty sites in all, and golahs capable of holding 1,200,000 maunds are expected to be ready by 15th instant.

E.—ADVANCES.

31. During the fortnight Rs. 8,100 have been advanced to private persons at 6 per cent. for purchase of grain, and Rs. 2,400 for land improvements. Two large landholders in Seetamarhee sub-division have applied for advances of Rs. 10,000 and 3,000 respectively to lend to their ryots, and the applications have been sanctioned.

F.—CHARITABLE RELIEF.

32. The sub-divisional officer of Seetamarhee is actively carrying out the scheme for employing women and others in twine-twisting, spinning, &c., and pending the appointment of superintendents of relief circles, he has been authorised to place small funds in the hands of planters and police officers for the relief of destitute persons in special cases.

In this sub-division, as well as in that of Durbhungah, the necessary circles have been fixed and orders have been given for the construction of mat bungalows where there is no other accommodation available for the superintendents. Baboo Ishree Pershad, Deputy Collector, has been deputed temporarily to Jhunjharpore in Mudhoobani sub-division to organize relief measures.

No. 681F, dated Sarun, the 11th February 1874.

Memo. by—J. S. DRUMMOND, ESQ., Officiating Magistrate and Collector of Sarun.

FORWARDED to the Secretary to the Government of Bengal in the Statistical Department, Calcutta, for information, with reference to his circular No. 80 of the 17th November 1873.

Narrative of Scarcity and Relief in Sarun District for the fortnight ending 7th February 1874.

A.—STATE OF THE COUNTRY.

Abundance or scarcity of supply in the Bazar.—1. There is no actual scarcity of supply in the bazars except in the north and north-west of the Hutwah estate, where sales from the Raj stores have been commenced on a moderate scale; but prices are also high in the Pursa thannah and in portions of the Mashrakh and Chupra thannahs in the Sudder sub-division, as well as in the Sewan and Barowli thannahs of the Sewan sub-division.

2. The private importations in the Sudder sub-division during the fortnight were—to Revelgunge, 1,11,700 maunds, of which 56,100 were maize, 10,500 rice, and the rest, other grains; to Dooreegunge 4,601 maunds, mostly rice, and at Maharajgunge 1,790 maunds; while the imports at the Gunduck ghâts were—from Chumparun 357 maunds, and from Tirhoot 699 maunds. The exports of grain to Chumparun and Tirhoot were 3,829 and 2,436 maunds respectively.

3. Of the Sewan sub-division, the following is Mr. Wright's account:—

"The bazars still continue fully supplied. Importation is yet going on, and reports state that there is no likelihood of its stopping. Private importations of grain during the fortnight at the three stations—Darowli, Siswan, and Ghutni—amounted to 12,781¼ maunds. This quantity was made up of 5,320¼ maunds Indian-corn, 1,909 maunds rice, 1,105 maunds paddy, 1036 maunds peas, 910 maunds wheat, 900 maunds gram, 821 maunds urid, 530 maunds barley and peas mixed, and 250 maunds mixed barley and gram. The above grain was imported principally from Azimgurh and Goruckpore; a small quantity, 400 maunds of rice came from Bhaugulpore, and 250 maunds of makai from Patna. The above does not of course include importations made by the Hutwah Raj, an account of which will no doubt be furnished by Mr. Hodgkinson."

4. Mr. Hodgkinson writes regarding the Hutwah estate as follows:—

"During the past fortnight importations on a small scale has gone on from Revelgunge and Goruckpore; but the grain imported is almost exclusively *makai* for immediate consumption, and no stock is being laid in to meet the coming emergency. The grain dealers are saving up their funds to buy largely of the new grain, which will be reaped in March and April; and this they will store till prices rise very high. When this grain is gathered in prices will fall considerably, and the dealers by putting off their purchases till then will obtain a much larger margin for profit than if they laid in stocks now by importation. Prices have not altered materially since last report.

		Hutwah.	Meergunge.
Indian-corn	-	24 seers kutcha. = 14⅖ pucka.	24 seers kutcha. ——
Common rice	-	19½ seers kutcha. = 11¼ pucka.	20 seers kutcha. = 12 pucka.

The food-supply in Bhorey and Dhoboul tuppahs has begun to run short, and sales from our stores have been commenced on a moderate scale. The sales are made for the present exclusively to bunneahs who do not import grain but invariably obtain what they sell by purchases in the neighbourhood. The following rates and conditions were laid down:—

Rates.

Rice	-	11	seers pucca,	or	18⅓	seers kutcha.
Makai	-	14⅖	„	„ or	24	„ „
Gram, &c.	-	13	„	„ or	21⅔	„ „

Conditions.

(1.) Sales at the fixed rates are to be made to *bonâ fide* bunneahs only, living and trading in the distressed localities.

(2.) Sales of amounts exceeding 10 maunds pucca should only be made after the officer selling the grain has satisfied himself that the purchaser intends to bring the grain into consumption at once, and that he is not buying it for export or for storage.

(3.) Cash should be received at the time of sale.

(4.) No interference is for the present to be exercised in the rates at which the bunneahs sell, but the rates will be carefully watched, and means will afterwards be taken, if necessary, to prevent excessive profits being reaped by them.

Beyond writing that the scheme was working well, Mr. Browne has submitted no detailed report. A supplement shall be sent to this narrative as soon as the details I have asked him to send me come to hand. The grain first sold came into the local *ghâts* at once, and was in great demand. Very little other rice is procurable in this neighbourhood. Sales will be commenced during the ensuing fortnight in tuppahs Dungoree and Afrad, which lie to the north of Hutwah, towards the Goruckpore frontier. This is a rice country, with no bazar, and the tehsildars report "that the labouring classes who are largely employed on tank-digging begin to "find difficulty in changing their pice for food. In all other parts the food-supply available "has been sufficient."

5. *The kind and price of grain.*—The kind and price of grain at the principal marts and at different thannahs and outposts are given below:—

	Coarse rice, per rupee.	Indian-corn, per rupee.	Barley, per rupee.	Wheat, per rupee.	Gram, per rupee.
1. Chupra - -	12¾	15¼	18	13¾	16
2. Gurkha - -	11	15	—	—	15
3. Mirzapore - -	12	16	—	14	—
4. Goldengunge - -	12¾	15¾	—	14	16
5. Revilgunge - -	12¼	15¾	19½	15	16⅓
6. Manjhi - -	12	16½	—	13	—
7. Bussuntpore - -	13	15	—	13	14
8. Moharajgunge -	12	15½	18	13½	15
9. Dighwarah - -	10¾	11	—	11	14
10. Sonepore - -	11	14	—	14	16
11. Pursa - -	11	15	—	13	15
12. Amnour - -	11	—	—	14⅓	17
13. Mushruck - -	12	16½	18	14	15
14. Baniapore - -	10⅛	16	—	13	14
15. Sewan - -	11	14	17	12	14
16. Barerhia - -	12⅓	15⅓	16⅓	13	14⅝
17. Darowli - -	11 2/11	14⅜	15⅜	13 5/16	14⅝
18. Mergunge - -	11 5/16	14¾	16⅓	12⅓	13⅝
19. Bhorey - -	12	15	—	16	—
20. Barowli - -	10⅓	14	16	11	13
21. Kuttya Bazar -	12⅓	13¾	16¼	13¾	13¾
22. Simariya - -	11 2/11	14⅜	—	—	—
23. Gopalgunge - -	11 2/11	15⅝	17 13/16	11 2/11	13
24. Raghoonathpore -	11	14⅓	14⅝	13	14⅓
25. Guthni - -	11 2/11	15⅓	15⅓	13⅝	14⅝
26. Siswan - -	11¾	14¾	16⅓	13	14⅝

6. *Stock of food in the hands of the people.*—There is nothing to add to what has already been reported under this head.

7. *Rainfall.*—The rainfall during the fortnight has been ·87 here, ·77 at Sewan, and ·88 at Hutwah. Here it only fell on the night of the 31st January and on the 1st and 2nd instant; but in the Sewan sub-division, rain also fell on the 5th and 6th; and Mr. Hudson, writing from the Bussuntpore thannah, mentions that it rained there too on the 4th, 5th, and 6th.

8. *State of the Crops.*—The recent rain has been of immense benefit to the crops, which have improved so wonderfully that an outturn of 8 annas all round, or even more, may possibly now be obtained, while sowings for cheena are also being largely undertaken. This may make all the

difference between famine and no famine, but it would be imprudent to relax any precautions in the way of storage of grain on this account. On unirrigated lands, however, without more rain the cheena crop cannot come to anything. Nearly 3,000 beegahs of poppy lands have also been made available for cheena in the districts. The prospects of the crops are best in the Darowli and Dighwara thannahs, and worst in the Bussuntpore, Mashrakh, Barowli, and Barragaon thannahs. Several of the planters have kindly favored me with estimates of the probable yield of the crops in their neighbourhood. At Arwah factory, in the northern portion of the Chuprah thannah, three-fourths of an average crop, or 9 annas, are hoped for; while similarly Mr. Llewhellin, of the Ramcollah factory, in the south-eastern portion of the Mashrakh thannah, writes:—

"The prospects of the crops are very much improved since the rain, and I should say there will be a 9-anna crop—at the very least a full 8-anna one—in my neighbourhood." In the north-eastern portion of the Sewan thannah, Mr. Smith of Togapore factory estimates the crops at 8 annas. On the other hand, Mr. Reid of Sadowa factory, in the Barowli thannah, only expects a 4-anna crop; and in the northern portion of the Mashrakh thannah, Mr. A. Murray of Barowli factory gives only the following as the estimate: Peas 5 annas, barley 6 annas, wheat 6 annas, massoor 2 annas, gram 4 annas, and rahar 3 annas; while at Rajapatty factory, also further north in the same thannah, the gentleman in charge of the factory writes that though with another fall of rain the yield will possibly be from 8 to 10 annas, if no more rain falls a crop of from 4 to 6 annas is all that can possibly be expected, and that, "owing to the present state of scarcity in the country, it will not, however, counterbalance the loss of the rice and other crops." The Mashrakh thannah has an extensive rice-growing area, as also has the Bussuntpore thannah to the west of it. The damage by frost is now believed to have been exaggerated in many parts of the district. The canoongo after inquiry now reports the damage in the Dighwara thannah to be—rahar and cotton 4 annas, peas 2 annas, castor oil, burrah, and mussoor 3 annas.

9. The following is Mr. Wright's report of the Sewan sub-division:—

"There has been a great improvement in the state of the crops on the ground, and hopes are now entertained that the rubbee crops will yield on an average fully an 8-anna outturn, if not more."

The Sub-Deputy Collector writes as follows of the crops in the western part of the Sewan thannah:—

"The rubbee crops in general in this tract are seen very good and excellent. Large tracts of land are seen very good and excellent. Large tracts of land are seen covered with good barley and wheat crops. Peas crop is seen to be sown in small area, but where it was sown it is excellent, with the exception of a few fields that were not irrigated. Rahar crop is also seen very good; plants are full-sized and having numerous branches. In some fields they are already full of beans, and in others full of flowers. The effect of cold is not at all visible in this tract, except in some fields at Sewan and Husunpoora."

Of the crops in the Darowli thannah he writes: "The state of the crops between Darowli and Guthni is very good. About four-fifths of barley and wheat plants have given out the stalks,* and the stalks in some fields are seen half nourished. All the remaining barley and wheat shall now within a week give out the stalks. Rahar crop is still more successful. The plants are now full of beans, and in about a fourth of the crop the grain in beans are fully nourished. The crop has already commenced to relieve the poor to some extent. The injury by cold in this tract is seen very little."

* The Sub-Deputy Collector evidently means that ears have begun to form.

In the tract between Guthni and Chilmarwa he says that the rahar crop has suffered a good deal, but still an 8-anna crop may be expected.

Of the crops in the Barragaon thannah he reports as follows:—

"The prospect of the pea crop seems altogether changed. The plants that looked miserable before are now seen in full growth and blossom and bearing a good number of beans. In some very successful fields the crop having reached maturity, is being harvested. Barley and wheat crops are also seen very good and excellent. The stalks almost in all fields being now out, are progressing towards nourishment. More than half of the rahar crop is already full of beans, and somewhere it has reached maturity too. The remaining part being in full blossom is in course of bearing fruit. People have been seen very busily employed in preparing paddy-fields, and the plantation of sugarcane is very widely carried on. In suitable fields cheena is also being sown."

Of the country to the north of Myrwah in pergunnah Chowbarrah and of pergunnah Pachlakh, Mr. Rattray writes as follows:—

"Wheat and barley promise an outturn of 2 to 4 annas within the tract of country mentioned above, and will not, so far as I can judge, give more than a 6-anna crop at the best. Rahar, peas, and other pulses, especially in the vicinity about Semaria, have been nearly all destroyed by frost. The average outturn anticipated may be put down at 4 annas. The sugarcane crop has been a 4 to 8-anna crop, the latter having been the outturn in the eastern parts of pergunnah Pachlakh where it is extensively cultivated."

The above, it must be remembered, was written by Mr. Rattray before the rains of the 31st and subsequent dates. Since then I have seen Mr. MacDonald of Pertabpore factory, whose lands lie in the vicinity visited by Mr. Rattray, and he told me that now the rubbee is expected to give an 8-anna outturn.

Writing of the north of pergunnah Barey and the southern portion of pergunnah Sipah and western portion of pergunnah Dangsi, Mr. Rattray says of the crops as follows:—

"Barley and wheat look backward to the west of Barharaiya, but promise better in the neighbourhood of Maujhi. With the heavy rain we have had during the week, the outturn which I anticipated at about 6 to 8 annas, will probably be 12 annas. Rahar and peas look stunted and poor, especially to the east of Barharaiya, and the outturn will not probably be more than 6 to 8 annas. Injury by frost has been slight. The sugarcane crop is said to be much the same as it was last year, but there are not many fields under cultivation in this part of the country. The crop looks dry and stunted. Much good has been done by the heavy rain there has been during the week and owing to this favourable circumstance the rubbee will probably be a 12-anna crop."

Mr. D. N. Reid of Sadowa has been kind enough to furnish me with the following information regarding the crops in the vicinity of his factories:—

"Early in the morning of the 2nd instant there was a thunderstorm accompanied with 2-10ths of an inch of rain. Again last night (the night of the 5th instant) we had slight passing showers from the west; all this has greatly benefited the crops that are at present in the ground, although the rain was not sufficient to admit of the cheena germinating freely and benefiting to any extent. The agriculturists, however, have commenced sowing the low lying paddy-fields and cheena in the empty poppy-fields. The rubbee crop here is a poor one, as most of it is unirrigated; where the rubbee has been irrigated, the yield will be good. My estimate of the rubbee outturn in this neighbourhood is a 4-anna or 4-16th one.

The rahar, although slightly touched up by the frost last month, is promising, and will yield well."

10. Mr. Hodgkinson writes as follows:—

"The cloudy weather led to fears of blight; but the bright sunshine and west wind of the last two days has completely dissipated those fears, and the rain may be said to have been an unmixed good, both in bringing forward the standing crops and in affording an opportunity for sowing of sugarcane, cheena, and dhan."

11. And the general court of wards' manager reports thus:—

"Scarcely any harm has been done during the last fortnight by frost or west wind; on the contrary, the rains that fell during this period have changed the condition of the country from worse to better, and have done much good to the rubbee crops, though it is reported that a very small portion of the rubbee was spoilt by the hails that come on with the last rains at Lawa, pergunnah Bal, in the ilaka of Bassuntpore police station. No doubt the importations from the up-country have greatly kept up the supply of food in the district; and had not the common grains been exported into the district of Chumparun, the price of the grain should have been lowered."

12. *Condition of the People.*—The condition of the people has not materially been altered during the past fortnight, but as fresh works are opened, the numbers on the relief works increase enormously, plainly indicating that there is everywhere much need of employment amongst the poorer classes of the people as a means of livelihood. Additional relief works are nevertheless only opened where an increased demand for labor is believed to exist. Mr. Grant, the late Superintendent of the Salt Department, writing of a relief work in the south of the Bassuntpore thannah, states:—

"Some of the people on the tank are in bad condition, and employing them on it has probably saved their lives."

13. The sub-divisional officer of Sewan reports as follows:—

"Distress amongst the people in this division is not worse than it was when I submitted my last report. Owing to the high rates in the bazars the poor are pinched for food; but so long as they can obtain employment on relief works, which are being provided for them throughout the division, there is little likelihood of any cases of actual want or death from starvation occurring. The prospects also are much more cheering since the rain of the 31st ultimo and subsequent dates, and prices of food-grains in the bazars have fallen slightly, and I have no doubt that they will go down still lower as the prospects of the rubbee crops become more certain." The Sub-Deputy Collector writes as follows under this head of the people in thannah Darowli:—

"As to the condition of the people, I have the pleasure to inform you that it is not bad at present; sugar has been and is the chief means of subsistence of the poor agriculturists. Relief works also are now going on in several places; for example, tanks are being dug at Admapore and Chitour; fuel, &c., are also being collected for burning kilns at Patar. Besides these many wells are being dug in different villages from advances made by Government. After all, agriculturists have now begun to prepare their fields and employ laborers."

In writing of the country to the north of the Darowli and north-west of the Sewan thannahs, the Sub-Deputy Collector says: "Laborers are seen digging and ploughing fields, and sugar plantation is very busily carried on. People are very much relieved by the fall of rain, which has given them hope for present as well as future goodness. The rain having fallen, the apprehension of the threatened calamity must decrease by degrees. During the present state of things there can be no apprehension of starvation during the next four or five months. I have heard agriculturists saying that the drops of rain have not been of water but of grain. The rain has doubled the yield of the crops hoped before its fall."

Of the Barowli thannah, the Sub-Deputy Collector says: "The condition of the people is not so bad; the common suffer on account of high price and live upon a reduced scale of food; but extreme distress is nowhere heard in the distance I have travelled. Laborers are getting employment on relief works. An old tank is being cleared at Thawey, and the road from Meergunge to Barowli is being repaired. Work has commenced on the old tank at Rattun Serai, and besides this the agriculturists have now commenced to employ labourers in their fields. Labourers have now, I think, sufficient employment."

The following is what Mr. Rattray says of the condition of the people about northern Choubara and pergunnah Pachlakh:—

"There is distress to some extent among the laboring classes, but grain is still to be had, though at almost prohibitive prices to the poor. The manufacture of molasses, which gives employment to many, is at present almost the sole means of support to the poor in every village.

Wells and tanks are being dug within the Hutwah jurisdiction in the northern part of pergunnah Pachlakh, also about Simeria, and advances made on account of indigo will enable many to tide over the present scarcity. Advances have also been made on behalf of Government for wells by Mr. MacDonald of the Pertabpore indigo factory, who has also men at work on roads.

Of the people in the country on the north of pergunnah Barey, south of pergunnah Sipah, and west of Dangsi, Mr. Rattray writes: "Distress prevails so far that the poorer classes are glad to obtain work. The manufacture of molasses gives employment to many at present, and will be a help for the next two months, till the prospects of the rubbee are more definitely known. There is some work in hand on the roads under the Public Works Department. There are also four tanks being excavated as relief works, one at Maujhi, a large one, giving employment to 250 people daily, at the expense of the zemindar of Maujhi; nor is there any serious distress to be apprehended amongst the many who in this part of the country are engaged in the cultivation of indigo."

Mr. D. N. Reid of Sadowa says of the people in his neighbourhood: "Distress is great amongst the poor of the laboring classes. There are over 2,000 of them at work daily on the roads under my superintendence."

Mr. Reid mentioned to me the other day when we met that he has commenced selling rice to the laborers at the works under him, and that he is giving it to them at the rate of 12 pucca seers per rupee. This may account for so many flocking to his works.

I would also add to what has been said by Mr. Rattray, that the opium advances given last month must have been of great assistance to the people. Mr. Tytler, the Sub-Deputy Opium Agent of Sewan, advanced, I believe, a lakh and thirty thousand rupees to the opium cultivators last month; and in another six weeks the opium weighments will commence, when some five or six lakhs of rupees more will be paid out.

14. Mr. Hodgkinson has made no remarks under this head.

15. The general wards' manager reports that the number of higher classes of people who now resort to labor is daily increasing.

16. *Known cases of misery and starvation.*—Isolated cases of distress are reported from time to time, but no cases of starvation have occurred.

17. Mr. Wright reports as follows:—

"No such cases have come to light. Under this head Mr. Rattray says that neither through the police nor from personal inquiries in the villages has he heard of a single case of death from starvation, and that although prices are much above the usual means of the laboring classes, general distress is not apparent."

21. *Condition of any special tracts.*—The worst tracts continue to be the parts of the north-west of the Hutwah estate, the Bassuntpore and Pursa thannahs, and portion of the Mashrakh thannah. It is believed, however, that the distress is being sufficiently coped with by means of the relief work provided.

B.—RELIEF WORKS.

22. *Progress of relief works, &c.*—The annexed statements show the relief works in progress in the district, and the number employed thereon. The number on the works, as entered in these returns, has increased enormously during the fortnight under review, the total number at present employed being 68,146, and the mean daily number 51,204. Some of the planters' returns also had not been received.

23. Much inconvenience in the plan of relief operations has been caused by the delay in starting the proposed irrigation and drainage schemes along the Gunduck and in the south-eastern corner of the district which are under the Irrigation Department, and it is hoped that the commencement of these works may now be no longer delayed.

C.—TRANSPORT OF FOOD.

24. *Approximate account of private food-supplies.*—The available information regarding the influx of private food-supplies has been given in paragraph 1. Regarding the Hutwah grain supplies, it appears from Mr. Hodgkinson's last weekly grain return that of the 1,20,000 maunds engaged for the Raj, 35,582 maunds had been received into the district, of which 30,748 maunds had arrived at final destination, and 4,834 maunds were in transit from points of receipt.

25. Concerning the storage of grain on the other wards' estates, the general manager reports as follows:—

"I have to add no more to my former remarks on this head than that I have already got a loan of Rs. 60,000 from the Government for purchasing and storing grains to advance to the ryots; and as the time of harvesting the rubbee crops is approaching nigh, and the last rains have made the prospects better, I am not satisfied with the rates now offered by Chooni Lall, who is willing to make a contract to supply the grains, and I am trying to secure cheaper rates, if possible; if however I fail therein, I may enter into a contract with him."

The manager has been directed not to delay in making his arrangements.

D.—STORAGE OF GOVERNMENT GRAIN.

26. *Places of storage and amount of grain received.*—The accompanying statement shows the storage places, the distribution thereat of the grain allotted, and the amount of grain received at the different storage places up to the end of the fortnight. The total amount of grain

received is 1,33,524 maunds, and the amount finally stored is 1,09,376 maunds. It is hoped that there may be no difficulty in ensuring the arrival of 5,000 maunds of grain daily at the Arrah Railway Station.

27. *Construction of golahs and arrangements for custody of grain.*—The subjoined statement shows the storage arrangements made at the different places of storage; and the following extra establishment for the custody of the grain has been proposed and is being entertained as from time to time needed.

Names of places where Golahs have been or are being constructed at Government expense.

	Rs.	As.	P.
1. Pursa	60	0	0
2. Maujhi	114	12	0
3. Bassuntpore	100	0	0
4. Paigumberpore	100	11	0
5. Sewan	242	11	6
6. Barowli	107	11	0
7. Gopalgunge	100	0	0

Names of places where existing Government or private houses are being made use of for storage of grain.

1. Chupra	Bunwaree Lall's Serai.
2. Buniapore	Abkaree godown at Paigumberpore.
3. Bassuntpore	House of Ramgoolam Singh, &c.
4. Maharajgunge	House of Mathoora Kalwar.
5. Amnour	House of Rajendar Pershad and the Abkaree godown.
6. Mirzapore	House of Goona Doobey.
7. Dighwara	House of Ramanongra Singh, &c.
8. Mashrakh	House of Baboo Debi Pershad, zemindar, and Government bungalow at Sarungpore.
9. Pursa	Indigo factory belonging to Moulvie Abdool Hai.
10. Sewan	Opium godowns.
11. Darowli	Government serai and house of Behari Sahu.
12. Rughoonathpore	Indigo factory at Hurpore, in charge of Moulvie Golam Abas.
13. Barowli	Thannah buildings.
14. Baragaon	House of Lachuman Koondoo.
15. Gopalgunge	Abkaree distillery.

Establishment proposed for the custody, &c., of the Grain.

1 Mohurir, at	Rs. 8 per month.
1 Duffadar, at	„ 6 „ „
4 Burkundauzes, each at	„ 5 „ „
Oil and other contingencies	„ 1 „ „

E.—Advances to Private Parties and their Results.

28. *Advances for purchase of grain and for land improvement.*—Rs. 13,175 have been advanced during the fortnight for purchase of grain for sale, and Rs. 6,281 to zemindars for grain or money advances to their ryots, making up the total as yet advanced on these accounts to Rs. 1,45,625 and Rs. 6,281 respectively; and for land improvement Rs. 13,142* have been advanced, bringing up the total on this account to Rs. 30,203.

* Including Rs. 5,625 for relief works on the estate of a lunatic ward.

29. With reference to the orders of Government in the resolution on the last narrative, sanctioning the employment of extra officers to facilitate the making of these advances, it is observed that one extra officer empowered to make such advances of his own authority would be of far greater assistance than two extra subordinate officers, who could only be employed in making inquiries as to the propriety of making the advances. What is wanted is more officers who can deal with applications on the spot.

30. Mr. Hudson has recently sent up 88 applications from ryots for advances on good security for their subsistence, and it is proposed to take the orders of Sir Richard Temple on these.

F.—Charitable Relief.

31. Subscriptions are still in course of collection, but there appears no immediate occasion for organized charitable relief, the demand as yet not being beyond the scope of private charity.

No. 847F., dated Motihari, the 9th February 1874.

From—H. Kean, Esq., Collector of Chumparun,

To—The Offg. Secretary to the Govt. of Bengal, Scarcity and Relief Department.

I have the honour to submit the fortnightly narrative of scarcity and relief for this district for the fortnight ending Saturday, the 7th February 1874.

A.—STATE OF THE COUNTRY.

1. Rice is scarce in the smaller bazars, though procurable in the larger marts. Makai (maize) is readily obtained in most places, and is being imported into the district from Goruckpore.

2.—*Rainfall and State of the Crops.*—During the fortnight under review, there has been a most timely fall of rain. This occurred on the night of the 31st January, and again on the 1st, 2nd, and 6th February, and was general throughout the district. It has been not only of great benefit to the rubbee and poppy crops (increasing the probable outturn of the former from ⅛ to ¼ in favourable localities, that is, south of the Bettiah sub-division, and in thannahs Adapur, Dhaka, Gobindgunge, and Motihari in the Sudder sub-division, or in the country lying between a line drawn from Ratwal to Bulthur and one drawn from above Kesseria to Pipra, and drawn through Seeraha to the Tirhoot boundary), but has enabled the cultivators to sow "cheena," "moong," "early rice," and other spring-crops. The prices of food-grains have also, in consequence, somewhat fallen, and the people are perhaps on the whole looking forward to the coming crisis with more confidence. These favourable symptoms do not, however, apply to the north-west portions of the district, that is, Ramnuggur and that neighbourhood. In this tract very little rubbee had been sown, and that little had been dried up. This portion of the district, moreover, being almost entirely a rice-growing tract, very little land is devoted to the rubbee or to the spring-crops.

Condition of the People.—As intimated in my last fortnightly narrative, I deputed Mr. Howe to make special inquiries into the condition of the people in this portion of the district, and the following is a brief resumé of the information received from him. From time to time Mr. Howe has visited every portion of Ramnuggur, and the accounts of what he has himself seen and heard fully bear out the information which I have hitherto received of the condition of this tract and of its prospects. He is of opinion that the people are in great distress, their condition being "scarcely distinguishable from that of a famine-stricken population." In a short time even the cultivating classes will have no food left, while the privations endured by the lower classes will render many of them incapable of work, and they will have to receive charitable relief; in fact, as reported in a previous fortnightly narrative, the people of this tract at least are on the "eve of a terrible famine." As previously reported, Mr. Howe has personally superintended the preparation of lists of persons unable to work and without means for every village. These lists have been tested in every possible way, Mr. Howe having himself visited a large proportion of the village, and thus checked the returns. In this way very accurate information has been obtained as to the actual condition of the people, and immediate relief afforded where necessary. An outbreak of small-pox is reported at Harnatour, and a native doctor has been deputed there. Rice is now selling in these tracts at famine prices, that is, at 9, 8, and in some places 7 seers for the rupee, and Mr. Howe has therefore been authorised to open out local depôts on the relief works, and generally to carry out the rules laid down in appendix A, circulated with circular No. 80 of the 17th November 1873. As European agency is necessary to carry out these rules efficiently, they have for the present been introduced only at Harnatour and Shikarpore, Mr. Howe's head quarters being at the former place (for the present) and Colonel Boulderson's at the latter, (marked Singapore in the map). The Executive Engineer has, however, been requested to depute an Assistant Engineer to Ramnuggur to assist the above-named officers, and, generally, to take charge of relief works. This latter measure is necessary, as the country referred to is rough and wild, and it is found in practice to be no easy matter to make a road through it, or even to repair an existing road where it has become a mere tract over paddy-fields or across bleak jungly plains. Moreover, it will of course be necessary to extend our relief works, for, although up to the present time as many works as are necessary have been opened, more will be required, and several projects are in view, hence the necessity for professional assistance. With regard to the rest of the district, the accounts from thannahs Kesseria and Madhubun, regarding the state of the "rubbee," are not so favourable, and I have therefore deputed Mr. Weekes, C.S., who has lately joined, to make detailed inquiries in those thannahs; and should it be found necessary to increase the number and extent of relief works and to organize charitable relief measures, Mr. Weekes will (if necessary) open a charitable relief sub-divisional committee with his head-quarters at Myhesi or Madhubun, and if more extended action becomes necessary, will establish a sub-committee (under his supervision) at Kesseria. The condition of the north-east portions of the district is much the same as last reported; but as distress is increasing, more works have been opened out, which will be mentioned in heading B. Grain-thefts and robberies are increasing, especially in the Bettiah sub-division, where three or four cases of robbery have occurred, and the perpetrators are under trial.

B.—RELIEF WORKS.

The following new works have been sanctioned:—Ghorashan to Tilhura, No. 29; in the north-east of the district; Dhaka to Pudumkeer No. 24; Pudumkeer to Tirhoot boundary and Seeraha to Pudumkeer No. 26; Bara to Rajpore No. 32; Bara to Mudhubani No. 31 (south-east portion); Gobindgunge to Burhurwa No. 30 (south-west); and the following tanks (1) Sorryapore No. 33 (Peepra), (2) Kullyanpore No. 34, (3) Peeprabazeed (north of Dhaka) No. 35; also a road from Soogang to Bettiah No. 27. In the Ramnuggur tract a road from Shikarpore to Bulthur is in contemplation, and another across the north-east portion of that part of the country. These and other projects in view will be started on the arrival of the Assistant Engineer, who, as stated above, will be deputed there. The scheme in the north-east portion of the district for connecting and clearing out a number of old tanks, and thus forming them into a series of reservoirs for irrigation purposes, has been finally declared by the Assistant Engineer (Mr. Eckstein) impracticable, that is, as an irrigation scheme; but the digging out and deepening many of these tanks will be of much benefit, and will afford a large amount of work, extended over a considerable area. This work has been sanctioned (the villagers being unwilling in most cases to incur the expense) and the work commenced. The works on the Gunduck embankments have been commenced in three different places; about 39,000 persons were employed during the last week, and 28,000 the week before on the portion between Doomuria and Bugaha. The Executive Engineer in charge anticipates that the number will shortly rise to 1,500 or 2,000 daily. They are at present living on "makai," which is readily procurable, and which is also being imported from Goruckpore. The labourers, it is said, prefer this grain to rice. The Executive Engineer has been requested to make an experiment of the Burmah rice and report results. A large quantity of grain for these works has just arrived by boat at Gobindgunge, and been made over to the Executive Engineer.

C.—TRANSPORT OF GRAIN.

This has been going on briskly during the fortnight under the contract system already reported, viz., Mr. Lethbridge contracting to bring up 20,000 maunds to Moteehari and Gobindgunge weekly (10,000 to each place), and Mr. Kelly bringing up 20,000 more, 5,000 being sent by boat. The latter mode of transport having been found to be very dilatory has been finally abandoned, and the transport arrangements have also been modified as follows :—

With the sanction of Sir R. Temple (who has lately passed through the district), from the 15th February Mr. Lethbridge will convey 50,000 maunds per week to Gobindgunge and Moteehari. (Mr. Kelly's contract being cancelled from that date.) This amount of grain to be punctually conveyed up to the 1st June.

D.—STORAGE OF GOVERNMENT GRAIN.

Grain has been, as stated above, steadily poured into the district during the fortnight. The following is the amount of grain stored :—

	Maunds.
Ramnuggur Sub-Division :—	
Ramnuggur	24,000
Chamardaha	1,926
Harnatour	3,800
Chauki	1,960
Shikarpore	4,800
Bettiah	13,692
Peepragurh	8,976
Ratwal	1,940
Choonaha	292
Bugaha	3,896
Bhourah	504
Lahurya	2,310
Lowriah	2,800
or about	71,000

In the Sudder Division the following has been stored :—

Seegowlee	10,000
Ramgurwa	8,000
Dhaka	2,154
Tirkowlia	5,000
Ghorasham	6,000
Rajpore	5,000
Adapore	1,000
Kutkenwa	1,000
Motihari	11,986

Besides this about 24,000 maunds have been stored for the Gunduck embankment, and at least that quantity has been just received (the exact quantity is not as yet known); more is in the river.

As the total allotment for this district has been greatly increased under Sir R. Temple's authority (the total quantity being now assigned at 9,75,000 maunds), the storage room will have to be proportionately increased, and this will be done.

E.—ADVANCE TO PRIVATE PARTIES.

The following sums were advanced during the fortnight under this head :—

		Rs.
I.	For storage and purchase of grain (Circular No. 80 of 17th November)	Nil.
II.	For assistance to ryots (Government Circular No. 4020 of 29th December 1873)	2,000
III.	For kutcha and digging out old tanks	4,511

The total amounts expended up to date under the three heads are—

	Rs.
No. I.	60,000
" II.	2,000
" III.	4,789

F.—CHARITABLE RELIEF.

The following steps have been taken under this head :—

A district committee has been formed, consisting of all the officials at head-quarters, all the European residents in the Sudder division, some of the more influential native residents in Sudder division, with power to add to their number. A list of these gentlemen has been submitted to the Commissioner.

A sub-divisional committee has been formed at Bettiah, consisting of the gentlemen marginally named, and the sub-division parcelled out among the members.

C. A. Samuells, Esq.	J. Macleod, Esq.
T. M. Gibbon, Esq.	W. B. Bourke, Esq.
W. B. Hudson, Esq.	S. Christein, Esq.
A. E. Macdonell, Esq.	Rajah of Bettiah.

with power to add to their number.

A sub-divisional committee has also, under Sir Richard Temple's instructions, been formed at Ramnuggur,* with sub-committees under it at Harnatour, Bugaha, and Bulthur (Bhoura), and temporary bungalows have been directed to be constructed at those places, (including Ramnuggur). A sub-committee will also be formed for thannahs Adapore and Dhaka, with head-quarters at Kutkenwa, a temporary bungalow being constructed at that place. Another sub-committee will also be formed for thannahs Kesseria and Madhubun, with its head-quarters at Madhubun, and Mr. Weekes has been deputed to take preliminary steps towards its formation. The following sums have been raised for the District Committee :—

* Ramnuggur Committee.	Sri Antour Misser.
Mr. W. Howe.	Sri Gyadin Misser.
Colonel Boulderson.	Dhora Chowdry.
Rajah of Ramnuggur.	Parasi Chowdry.

with power to add to their number.

The Rajah of Bettiah having most liberally subscribed Rs. 20,000 (10,000 for the Sudder division, 10,000 for the Bettiah sub-division), a sum of Rs. 8,500 has also been promised.

Subscriptions have also been raised by sub-divisional committees at Bettiah and Ramnuggur (exact amount not reported as yet), and they have been directed to commence operations. Mr. Howe calculates that he will have 2,500 persons on his hands at starting per day ; establishments at the places selected at head-quarters of sub-committees have been sanctioned. Under this head I may mention that an arrangement has been made under Sir Richard Temple's instructions, by which an immediate advance of 5,000 maunds of grain will be made through Mr. Howe to the cultivating classes (assamees) in the Ramnuggur estate, who are urgently in need of food-supplies, the Rajah having executed a deed or "ekrarnamah," binding himself to refund to Government the value of the grain advanced. He has also promised to import some grain on his own account for the use of his ryots. Further, under Sir Richard Temple's authority, the police in Ramnuggur has been strengthened, a first class thannah having been directed to be formed at Ramnuggur, with outposts at Harnatour, Chamardeeba, Chauki, and Rampoora, and a native doctor has been sent to Harnatour.

DISTRICT.	Wheat.	Barley.	Rice, best sort.	Rice, common.	Murwa and Checna.	Maize or Indian-corn.	Gram.	Salt.
Motihari - -	11¾	18	9½	11¾	15½	14½	12½	7
Bettiah - -	13	17	9¼	12	—	14	14	7¼

H. KEAN,
Collector.

Enclosure No. 4.

No. 415, dated Calcutta, the 9th February 1874.

From—A. P. HOWELL, Esq., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce,

To—The Officiating Secretary to the Government of Bengal, Statistical Department.

IN reply to your Letter No. 322, received on the 7th instant, I am directed to state, as it appears clear that tank-works are in some places the only works upon which the people in want of employment can usefully be employed, and as the urgency of the case prevents recourse being had to legislation for the purpose of distributing the cost of such works upon those who would receive benefit from them, the only course open to Government seems to be that indicated in the 6th paragraph of the letter under acknowledgment, and the Governor-General in Council gives the Lieutenant-Governor full discretion to act accordingly.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 11th February 1874.

READ—

Letter No. 322, dated the 29th January last, from this Government to the Government of India, Department of Agriculture, Revenue and Commerce, regarding the provision of adequate relief works in the distressed tracts.

Reply to the above from the Government of India, No. 415, dated the 9th February 1874.

In a reference made to the Government of India, this Government pointed out the necessity that exists for undertaking tank-works, and other such works for relief purposes, and asked for a settlement of the question as to whether public money could be expended on works situated on, and which would more or less improve, private permanently-settled estates. It was stated that there were many zemindars who had done, and were doing, much for their estates, but that there were several estates where nothing had been done, and with regard to which no measures could be taken without recourse being had to legislation. It was suggested that when proper public works cannot be found, either the Government or the relief committees should undertake works which are not public works in the ordinary acceptation of the term in order to provide employment for the people. It was suggested that the Government should confine itself to such works as appeared most beneficial to the people, the best bargain being made with the landholders in each case.

2. The Government of India now approve of the views as above expressed, and desire that His Honor the Lieutenant-Governor will use his discretion in the matter.

3. The first point to be considered is from what source the money required is to come. It is clear that the amount cannot be given from the District Road Fund. Special grants will therefore have to be made for the purpose. The following grants are accordingly made to the districts named below:—

	Rs.
For Tirhoot	1,00,000
„ Sarun	50,000
„ Chumparun	50,000
„ Monghyr	30,000
„ Bhaugulpore	40,000
„ Purneah	30,000
„ Dinagepore	60,000
„ Maldah	20,000
„ Rungpore	30,000
Total	4,10,000

It is not necessary to expend anything on wealthy wards' estates which have sufficient funds of their own.

4. In ordinary cases, one-third of the cost of such works may be borne from the Government grant under previous orders; but the Commissioner may, in the case of special tracts, sanction half cost being so borne on the estates of petty or impoverished landholders. In special individual cases, the Commissioner may also sanction even a larger proportion than half being borne by the Government, and where it is necessary to clear tanks, to facilitate traffic on roads, and such purposes, and the zemindar is unable to assist, Government may bear the whole cost. This course may also be followed in such cases where works are emergently necessary to save life. Every effort must, however, be used to arrange that the zemindars on whose estates the works lie should bear their fair share of the burden.

5. Great care must be taken to secure a record that the works, aided in the above manner by public money, shall be for the use of the public, and shall remain so for ever.

6. Petty works estimated to cost not more than say Rs. 200 should be undertaken by relief committees under Part II., Rule 3, clause *e* of the "Instructions for Relief Committees." In cases which cannot be thus dealt with the expenditure must be met from the present grants, which will, if need arises, be increased hereafter.

Order.—Ordered that a copy of the above Resolution, and of the correspondence quoted therein, be forwarded to Commissioners of the Patna, Bhaugulpore, Rajshahye, Burdwan, and Presidency Divisions; to each Magistrate-Collector, Deputy Commissioner in the distressed districts named in paragraph 3, and to the Relief Commissioner, Rajshahye, for information and guidance, with the intimation that special attention should be paid to paragraph 6 of this office letter, No. 322, of the 29th January 1874, to the Government of India.

Ordered also, that a copy as above be sent to the Public Works Department of this Government, the Financial Department of this office, to the Accountant-General, and the Deputy Comptroller-General for Scarcity and Relief.

By order of the Lieutenant-Governor of Bengal,
A. Mackenzie,
Junior Secretary to the Government of Bengal.

No. 617.—S.R.

Copy as above forwarded to

Calcutta, the 11th February 1874.

By order of the Lieutenant-Governor of Bengal,
A. Mackenzie,
Junior Secretary to the Government of Bengal.

Enclosure No. 5.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 16th February 1874.

READ—

The narratives of the districts of the Bhaugulpore Division for the fortnight ending on the 8th February—

Monghyr report received on the 11th February.
Bhaugulpore ditto ditto 11th „
Purneah ditto ditto 10th „
Sonthal Pergunnahs' report received on the 11th February.

RESOLUTION.—All the narratives have been despatched with fair punctuality. The Monghyr narrative is a very good one, and gives a satisfactory account of what is done and designed. The Bhaugulpore narrative is good, but the Lieutenant-Governor had hoped to see larger results. The Purneah narrative is somewhat meagre and unsatisfactory, the Sonthal Pergunnahs narrative very much so.

A.—STATE OF THE COUNTRY.

The supply of grain in the bazars of Soopole and Mudheypoorah appears to have fallen short; at the smaller village markets of Jamooee, too, rice is not to be had. Prices are, however, said to be somewhat easier* after the recent rain. Neither the Purneah nor the Sonthal Pergunnahs narrative speak of any shortness in the supplies of those districts, though the previous narrative had given bad accounts from Kusbah, Kudbah Amour, and from Rajmehal. In Soopole, and in one part of Purneah, prices are very high.

2. The rainfall of the fortnight has clearly done very great good. The magistrate of Monghyr says it has not only raised the expectations of the rubbee crop (but he still does not expect a full crop), but it has also given much hope of fodder for cattle, and the opportunity to all ryots of sowing Indian-corn, cheena (small millet), and moong (pulse). The Magistrate of Bhaugulpore writes: "The rain generally has fallen lightly, and the good effects are satisfactory to a great degree. The people are ploughing as fast as they can, and are getting in more *cheena*, *chikna*, and *moong*, a grain which will come to maturity in a short time." He adds: "As far as I can hear or ascertain, the outturn of rubbee ought to be a full average crop." From Purneah it is reported that—"the late rains have been most beneficial to the rubbee crops; the country is looking quite green, and it is expected that from gram and other pulses a full crop will be gathered. Wheat, too, looks well, but it has not germinated to the same extent as the pulses." The Deputy Commissioner of the Sonthal Pergunnahs says that the rain has benefited what rubbee there is, and there is in Gedda a good deal of rahar looking well. It seems to be generally expected that, if the season continues favourable, a good early crop of cheena (small millet) will come in during the next six weeks and will give much relief to the poor, and in the Monghyr district Indian-corn is being sown in the hopes that a showery spring will ripen it.

3. the condition of the labouring classes in Monghyr is said to be getting "worse and worse;" but so far as the accounts given in the narrative go, it would seem that it is only the lame, halt, and blind, and outcast races like the Mussahirs, who are as yet feeling actual distress. Seeing how many Mussahirs there are in the district, the Lieutenant-Governor is very glad indeed that their forlorn condition has received early attention from Mr. Lockwood and his officers, and especially that the more helpless and needy are being sought out and relieved. In North Bhaugulpore the condition of the people is said to be "giving anxiety," and from parts there is reported "severe suffering." There are, however, it would seem, no strong indications of severe distress, though the ryots much want temporary help' to enable them to tide over the month of March.

4. The comparative statements of crimes against property for the month of January, give the following results:—

	Crimes occurring in the month of January 1874.				Total of all crimes under the foregoing headings for the month of January.		
	Dacoity.	Robbery.	Theft.	House-breaking.	1874.	1873.	1872.
Monghyr - -	2	0	38	52	92	70	75
Bhaugulpore -	0	2	48	80	80	45	88
Purneah - -	8	0	59	12	79	53	55

The prevalence of dacoities in Purneah is lamentable; that district has long been in a very bad state in this respect; but on the whole the increase in petty crimes against property is not so very great as might have been expected.

B. RELIEF WORKS.

5. The account given by Mr. Lockwood of the many relief works undertaken by zemindars in Jamooee is most satisfactory, and shows what can be done by persuasion. The proposal for the

* The last published price-current (*Calcutta Gazette*) of the 11th instant did not show any general fall in prices.

"immense tank" at Khero Pranpore has not reached Government, and should not be delayed. The number of persons on relief works in Monghyr has come down to 2,548, besides about 3,400 on the Khurrukpore irrigation work. The condition of the labourers is said to be "good" except at Buktiarpore, where grain is very dear and the Government stores have been opened. In Bhaugulpore the number of relief labourers has fallen to 3,335 per diem; in the north of the district their condition is said to be bad. As food is very dear in Soopole and Mudheypoorah and there are but scanty spring crops, it seems strange that the number of labourers should have been reduced by one-half in Soopole. In Purneah, too, the number of relief labourers, 1,058 per diem, is strangely low. The Lieutenant-Governor hopes Mr. Taylor and Mr. Kemble will satisfy themselves very fully that proper facilities are given and wages are regularly paid by trustworthy men, and that weakly men are not turned off the works by contractors or petty subordinates. The Lieutenant-Governor has caused a separate letter to be sent to Purneah, drawing attention to an entry in the statement which shows that labourers are paid irregularly. In some other districts abuses of this kind have been detected and corrected, and Sir George Campbell hopes that there are no such defects in the management of the Bhaugulpore and Purneah relief works. He is glad to see that the manager of the Kurrukpore works has arranged for receiving and employing persons who cannot do a full day's work. In the Sonthal Pergunnahs there appears to be as yet little demand for relief work.

C.—PRIVATE TRADE IN GRAIN.

6. The Lieutenant-Governor is much satisfied with Mr. Lockwood's account of the steps he has taken to leave room for private trade in grain, and to contract Government operations with that view; but he hopes that the estimate now offered of the available cart power of the Monghyr district (only 150 carts daily for a short lead), means that much private trade is doing. A rich district, with 1,800,000 people and 330,000 houses, might be expected to possess very many carts everywhere, except in the hilly country or in large towns. The private grain importations into Bhaugulpore seem to have been small; but the Lieutenant-Governor notes with satisfaction that the wheat consigned to Howrah during the fortnight was only 6,641 maunds. The Lieutenant-Governor is glad to learn that the private grain trade into and about the Purneah district appears still to be brisk, for he had feared lest occasional impressment of carriage might have checked private operations in that district. The Sonthal Pergunnahs appear still to be exporting maize from the north and rice from the south of the district.

D.—STORAGE OF GOVERNMENT GRAIN.

7. The Monghyr assignment of 150,000 maunds has been all received and all stored, and no more will be sent until it is asked for. It is satisfactory to receive Mr. Lockwood's favourable report of the very small damage done by the recent rain to grain in transit. In Bhaugulpore only 73,000 maunds were stored out of 205,000 maunds received into the district; it seems that the transport arrangements are halting somewhat on the north of the Ganges, and the Lieutenant-Governor has caused a separate letter to be addressed to the Commissioner and Magistrate on the subject. He fears that the Magistrate, in his very proper concern for Government interests, has offered too low rates for carriage. Mr. Taylor is quite right in thinking that Government officers of adjoining districts should not bid against one another, and run up prices to exorbitant rates. But in a time of special need and special pressure, very full rates of hire must be given to draw out the full carrying power of the district, and Mr. Taylor must offer rates more nearly up to the Tirhoot standard, or as high if necessary. By one means or another, the means of transporting grain to Soopole must be increased. The Lieutenant-Governor thinks this absolutely necessary, and trusts that no effort and no cost will be spared to effect it. In Purneah 128,000 maunds had been finally stored up to the 6th February; but it is not clear how only 13,000 maunds are in transit, if 4,000 maunds a day are despatched from Caragola on long leads such as Mr. Kemble describes to the north of the district. The Purneah authorities must remember that the Government looks to them largely to help the very afflicted district of Dinagepore, by carrying from one to one and a half lakhs of maunds a month from Caragola to the Dinagepore border.

E.—ADVANCES TO PRIVATE PARTIES.

8. The Lieutenant-Governor appreciates the difficulties felt by Mr. Lockwood in disposing promptly of the applications for advances for land improvements, but he looks to the energy and zeal of the Monghyr officers to overcome those difficulties as rapidly as possible. Powers of a Collector under Act XXVI of 1871 have recently been given to selected sub-divisional officers and others, and thus the work of disposing of application for tuccavee advances will, the Lieutenant-Governor hopes, be lightened. A further credit for advances for purchase of grain has already been given to the Bhaugulpore division, and under no circumstances are these operations to be delayed for allotments. All the advances that the rules allow may be given in anticipation of allotments. It is satisfactory to learn both from Purneah and Monghyr, that traders in grain are getting over their fear of Government competition.

F.—CHARITABLE RELIEF.

9. The Lieutenant-Governor is glad to find that relief committees are actually at work in Monghyr and are relieving, daily—

250 destitute people at Monghyr.
300 ditto ditto Luckeeserai.
200 ditto ditto Shaikpoorah.
100 ditto ditto Buktearpore.
A large number of destitute people at Jamooee.

Mr. Lockwood speaks of these persons as being "indigent," "very emaciated," "half-starved," and says that many of the Luckeeserai paupers "must have shortly died of starvation if not relieved." Sir George Campbell fears that in parts of Bhaugulpore and Purneah there must also be need for early and careful charitable relief. In Modhubunnee, to the immediate west of Soopole, such need has been recognised and met; and the Magistrate of Bhaugulpore must be good enough to put the Charitable Relief Committees in the north of his district into immediate active operation; as Mr. Taylor is now in that part of the district he will doubtless not leave Soopole before this is done. In Purneah, as yet no action seems to have been taken beyond appointing committees, building sheds, and collecting funds; in Kudbah and Kusbah Amour, at any rate, charitable relief committees must be put into active operation each under a competent Chairman who will himself actively engage in the work.

By order of the Lieutenant-Governor of Bengal,

C. Bernard,

Officiating Secretary to the Government of Bengal.

No. 700—S.R.

Copy, with copies of the district reports, forwarded to the Commissioners of Bhaugulpore, Patna, Rajshahye, and Relief Commissioner Dinagepore; the Magistrate-Collectors of Monghyr, Bhaugulpore, Purneah, Sonthal Pergunnahs, Central Relief Committee, and Mr. C. E. Buckland, for submission to Sir Richard Temple.

By order of the Lieutenant-Governor of Bengal,

C. Bernard,

Officiating Secretary to the Government of Bengal.

Calcutta,
The 16th February 1874.

Narrative of Scarcity and Relief of the District of Monghyr for the Fortnight ending 7th February, 1874.

A.—State of the Country.

Although the principal bazars in the district are well supplied, it has been brought to my notice that grain is not procurable at the petty marts between Gungta and the Jumui station, and that it is only procurable at the market held once a week at Bucktearpur, in the extreme north of the district. Regarding the first-mentioned place, Babu Umbica Churn Sen, who has taken an advance to purchase grain, has agreed to supply those that require it at cost price, and I have sent a notice, inviting petty traders at Khagaria and Bucktearpur to take an advance for purchasing grain at the nearest large bazar, in order to sell it in the country around Bucktearpur. With the above exceptions, I believe that grain is easily procurable throughout the district by those who have money to pay for it.

There has been a slight tendency to a fall in prices consequent on the recent rain, and as the merchants and petty traders are generally ready to transport grain to any place where they can sell it at a profit, I have no reason to fear a lack of supply in the bazars except in exceptional instances.

I annex a statement marked A, which will show the kinds and prices of grain selling in the district.

Regarding the amount and kind of grain in the hands of zemindars and others, I have no reason to alter the opinion expressed in former narratives, that those who form the better classes have sufficient to carry them on until the next harvest, whilst the lower and despised labouring classes, who depend on the crops being good, have little or nothing.

Since my last report 1¼ inches of rain has fallen at Monghyr. The rainfall was general throughout the district, but it was most plentiful in those parts where it was most wanted. At Sheikpura the country was flooded for some hours, and a mountain stream, which was almost dry on Monday, was nearly impassable when I recrossed it the following day.

There is a divided opinion regarding the rain. Many persons say that it has done harm, and one zemindar went so far as to declare that the rubbee crop was destroyed. Whether these opinions are given wilfully or from ignorance, it is not worth while to inquire; but there is no doubt that the rain, which was not sufficiently heavy to do any harm, has not only raised the expectations of the rubbee crop twenty-five per cent., but it has given much hope of fodder for cattle, and the opportunity to all ryots of sowing Indian-corn, cheena, and moong. The opium crop has probably increased in value by a million sterling, and the other crops in a like proportion. Mr. Campbell at Jumui considers that the rain will double the outturn, but I think that it came too late to raise the general rubbee crop above a ten-anna one. Directly the ground was sufficiently moist, Mr. Campbell obtained a *carte blanche* from the Maharajah, Sir Joymungul Singh, who has immense estates in the sub-division, to direct the sowing of Indian-corn around the impoverished Mushir villages, and on Saturday last Mr. Campbell showed me several villages where sowing was going on under his direction, and in some instances the plants had already sprung up above the ground. There is a divided opinion whether the crop will come to perfection without irrigation, but, as Mr. Campbell pointed out, the land sown is not too extensive to prevent the people watering it, if necessary, by hand, even where there are no wells. On the dearahs the ryots are busy sowing cheena on the lands where the kulai crop has been reaped, and all over the district portions of land are being sown with Indian-corn and other bhadoi crops. The Indian Zadkiels rule the ryots' actions to a very considerable extent; but as their predictions last year entirely failed, I have taken advantage of the want of confidence in them, to advise immediate sowings on the general expectation that the past two dry years will be followed by an unusually wet one, and that occasional showers during the next two months will probably bring the bhadoi now sown to perfection. The rubbee harvest has begun, and the mussoor and peas are being cut in a few places, but the harvest will not become general for some time yet.

Whether the outturn of the extensive rubbee in this district will bring down the high prices or not will depend on the demand for grain in other districts.

Regarding the condition of the people, the upper classes and the ryots who have land remain well-fed and strong, and no signs of distress has yet appeared among them. The condition of the low and despised labouring classes, particularly in the rice pergunnahs, is getting worse and worse, and relief cannot be too soon afforded to those who are unable to work. The number of afflicted people, who, had they lived in Europe, would be shut up in hospitals and workhouses, but who in India are to be found in every bazar and village, and subsist on the charity of their neighbours, is immense. Even in years of plenty these persons only get sufficient to keep them alive, and when the price of grain is high, and charity is necessarily stinted, unless relieved by Government, they must starve to death by inches. The fortitude of these people is extraordinary, and the only way to find them out and relieve them is to hunt them up in their villages. Anyone on examining a map of the country around Jumui will find the word "Mushiree," which indicates a hamlet inhabited by the tribe of Mushirs, very frequent. This despised race are, as I have before remarked, bondsmen to the neighbouring ryots. They are employed to cultivate and reap the fields when their aid is necessary, and left to starve when their services are not wanted. They depend on the crop being a good one to put by small stores of grain until the next harvest, and they supplement their grain with jungle roots and the flesh of their filthy swine. Where the crop has failed—and they are most numerous where it has failed—these people are now becoming very badly off. Mr. Campbell took me to a village called Katwara, within two miles of Jumui on Saturday last, and showed me some 40 people, who could not, I believe, have survived another week without the relief which Mr. Campbell has afforded. Previous to my arrival most of the adults had left the village and joined the Government works, or the irrigation works at Khurrukpore; some, I was told, having old men and women dependent on them, had emigrated to the Mauritius, and there were several cripples in the last stage of disease and destitution. The ticcadar who inhabited the village appeared to take the matter very calmly, as though he classed the Mushirs in the same category as their pigs. Besides affording immediate relief to these people, Mr. Campbell has had the surrounding land sown with Indian-corn, which, failing rain, may be watered by hand from the neighbouring rivers. The condition of this place is worse than any of the many villages which I have visited, but in nearly every village may be found objects for charity more or less numerous. An immense amount of relief to the able-bodied has been afforded by the Government and the irrigation works at Khurrukpore, and I annex copy of a letter lately received from the Assistant Manager in charge at Khurrukpore, which mentions how the number of labourers is increasing. Every effort is being made to spread out the number of relief works through the distressed tracts, and the zemindars have, at a recent meeting convened by Mr. Campbell at Jumui, and attended by the Commissioner and myself, engaged to commence works at an estimated cost of Rs. 15,000 immediately. I left the Commissioner at Jumui, intent upon removing some difficulties between the joint proprietors, the Maharajah Sir Joymungul Sing and Babu Ram Narain Sing. If he succeeds, irrigation works on a very extensive scale will be commenced at once on the southern parts of the Jumui subdivision. I have found the zemindars, although somewhat apathetic, generally willing to assist, if their personal ease is not interfered with; and besides Rs. 6,000 already advanced for tank digging to zemindars in the distressed pergunnahs, I have had other applications for more than Rs. 20,000. These applications, however, cannot be disposed of at once. The local investigation, examination of records, and other forms, take up time, however anxious we may be to advance the money. I have already made many local investigations myself, and, as recommended by Government, promised the zemindars that there shall be no third party to the transaction. From what I have seen in the matter hitherto, I believe that when the procedure is generally known, a large amount of money in small sums will be applied for. There is a slight difficulty as regards interest. The orthodox Mussalman will neither give nor receive interest, and it was not until I had the savings bank rule about interest relaxed, that any Mussalman deposited money in the bank.

I must not omit here to mention the names of the zemindars, Shah Abdul Hossen, Mahomed Ally Khan, and Ally Khan Sahib of Hossenabad; the two former are each digging out large tanks in pergunnah Umrithu; the latter gentleman is about to take large advances for cleaning out three immense tanks on various parts of his estates. I have visited these tanks in company with the zemindars, and the proposal to dig them out was received with acclamation by the villagers; with the exception of a few wells, nearly dry at this season of the year, there is no water within several miles. I propose returning to Jumui on Wednesday, and looking up the zemindars of pergunnah Besthazaree, which is in equally bad state as Umrithu. The proposed road from Secundra to Luckeseri, running straight through this distressed tract and which is now being commenced, will afford much relief.

I hope the late rules regarding emigration to Burmah will also afford relief to the district, and induce the people to doubt the truth of their proverb, "better a seat of thorns at home than Solomon's throne in a foreign land." If due care is taken in the matter, I believe that large bodies of able-bodied men may be induced to emigrate, notwithstanding an almost universal opinion to the contrary. The subject of emigration as a safety valve for the surplus population has not received so much attention as it demands. The chief difficulty in the way is that the persons who would make the best emigrants are generally serfs, or rather bondsmen, and their masters won't let them go. In company with the Maharajah, Sir Joy Mungul Singh, I addressed a large crowd of people at Jumui on Saturday, and the crowd was invited to let us know what they thought about emigration. A man who acted as spokesman stepped forward and said he would go to-morrow, if a little account of Rs. 3, borrowed many years ago, and held *in terrorem* over him whenever he showed any disposition to leave his village, could be settled. His case, he said, was but one instance among a thousand similar ones.

A serious point of consideration, however, is that the would-be emigrant is almost sure to have one or two old people dependent on him: these should be provided for. I have written to Dr. Payne on the subject, and shall give him all the assistance in my power. I asked the ticcadar in village Katowaria, mentioned above, if he would allow his able-bodied Mushirs to emigrate. He replied certainly not; but if I could devise any scheme to get rid of the old people and cripples he would be most grateful.

I annex a statement marked B, showing the number of thefts and robberies during the past fortnight.

B.—Relief Works.

Besides the Government relief works already commenced, the projected road between Secundra and Luckeseri, running through the most distressed parts of the district has been pegged out during the fortnight, and order to commence the earth-work at once has been passed. I shall pay the works a visit during the week. The Shah Sahib's tank at Barrara, mentioned in my last report, to be dug out at a cost of Rs. 3,000, has been commenced. I happened to be passing that way last week, and paid the place a visit; directly I arrived a violent altercation commenced between the Shah Sahib's men and the labourers. The former declared that the labourers did nothing, and the latter that the overseer did not pay them properly. I did my best to put matters straight, and reported exactly what I saw and heard to the Shah Sahib, who, I am sure, will see that the money is properly spent; but I have no doubt that if any one, professional or non-professional, who chooses to work is admitted and paid a day's wages for his work, whatever it may be, the zemindar will not gain much in a pecuniary light, although a third of the cost is written off by Government. Other tanks, for which advances have been taken, have been commenced, and are affording more or less relief to the surrounding villages. A list of the various works put in hand by the zemindars in Jumui sub-division is being prepared by Mr. Campbell; the total estimate will probably amount to nearly half a lakh of rupees. These works will be visited by me and other officers as often as possible in order to see how they are getting on.

I may mention here that I am sending up a proposal for digging out an immense tank where water is much needed, in the Government estate Khero Praussur, Pergunnah Nurhutt, in Umrithu. I have no doubt that the proposal will be approved by the Commissioner, as the estate adjoins the worst part of the district. The expense will be defrayed from accumulated funds for the improvement of Government estates. I shall keep this work in my own hands, and see that it is properly done and paid for.

C.—Transport of Food.

I have reason to believe that the food supplies coming into the district are equal to the demand, and that the rivers, roads, and railway, are freely used by merchants according as they promise profit by importation. A gentleman who took an advance of Rs. 1,000 for the purchase of grain, has just come in to ask me how he shall act, seeing that grain is selling at a certain ghât on the Ganges near his house cheaper than he can possibly obtain it from Calcutta, and the merchants are using so many of the carts which I employed in storing the first lakh of maunds, that I find considerable deficit in transporting the subsequent 50,000 maunds allotted to the district. I have however told the merchants that I have no intention of interfering with them, and indeed that I will give up some of my carts if they require them, as I can keep my grain in the central golas for the present. I find, on personally going into the question, that the cartage power of the district has been much exaggerated by zemindars, nazirs, and inspectors, who are apt to frame their reports as occasion requires, and the wishes of their superiors appear to dictate. I find that thousands of carts said to be available have dwindled to hundreds, although there appears to be truth in the report that everyone who has a few rupees and a pair of bullocks is making a cart to carry Government grain. I do not believe I could procure more than a continual daily supply of 100 carts, carrying 1,500 maunds, between Luckeseri and Shiekpura, or more than 50 carts carrying 750 maunds daily between Gogree and Bucktearpur. This scarcity of available carts is accounted for by the fact that so many are used by the zemindars and merchants. I am, however, particularly careful that every valid inducement is held out to people to bring their carts when I require them, and I have had numerous applications from cartmen to be kept continually in Government employ.

There has been no block anywhere so far as my grain is concerned. I have kept the Monghyr golah, capable of holding 10,000 maunds, empty; in case of difficulty of transport elsewhere, I am now filling it again to afford breathing time to Luckeseri, and in order to have a fresh supply for Bucktearpur. The only damage done by the rain was to Government grain on carts; a few bags at Luckeseri got wet; but I had an extensive khalian, or threshing-floor, swept out by a crowd who had assembled to see the paupers fed, and the damp rice was emptied out in my presence, dried, and re-bagged in a very short space of time. I shall soon have all the grain allotted to this district stored, and shall not apply for more until I see necessity for doing so.

D.

Grain is now stored in twenty-four golahs, as mentioned in former reports. These places have been selected and grain stored in quantities varying according to the state of the surrounding country: 158,993 maunds have been received for the district and stored; 82,386 maunds have been received at Luckeseri; of this all but 14,000 maunds stored there has been sent to Sheikpura. I have told my agent to empty the Luckeseri golah as soon as possible, and with the assistance I am giving him, I think he will be able to do so during the week. I shall not ask for any more grain in that part of the country until I see necessity for doing so. At Jumui all the grain received has already been stored. The Maharajah has built a golah which can be expanded to almost any extent. I visited it with the Maharajah on Saturday, and found everything satisfactory. At the recommendation of the Commissioner, I have enlarged the golah at Bucktearpur on the north of the district towards Soopool, and am emptying the Khagaria and Gogri golahs in order to fill it. The latter places can be replenished when necessary from Monghyr. Directly the rubbi harvest is cut, and relief centres are in full play, I shall be able to form a more definite opinion regarding the requirements of the district.

E.

The advances made for the purchase and storage of grain have been considerable, and can be increased to almost any amount, if necessary. I have, however mentioned, that rice can hardly now be imported from Calcutta at a profit, and I am anxious to see the effect of the rubbi harvest on the price of grain before pressing further advances. Application for a loan of Rs. 5,000 has been made to the Commissioner by the Monghyr Municipality, and the Jamalpore Municipality is prepared to follow this example, if necessary.

I have also mentioned above that advances for land improvements, chiefly for digging tanks and embankments, are coming in fast. I think there are few zemindars in the district who would not gladly take an advance, If I only had the time to explain the matter to each individually.

Local investigations and the other matters of procedure, however, take up a considerable amount of time, although it is difficult to suggest anything simpler than the law as it now stands.

F.

Charitable relief has commenced at Monghyr. Subscriptions amounting Rs. 1,000 in ready money and a monthly subscription of over Rs. 500 per mensem, has been given. Relief was commenced on Sunday last in Monghyr, when about 250 persons, passed by the committee, received grain at the centre erected at some distance from the town. At Jumui also Rs. 1,240 was collected at a meeting convened by Mr. Campbell and attended by the Commissioner and myself; and at Beguserai nearly an equal amount has been subscribed.

I have, however, been obliged to put several centres in distressed tracts into active operation, as the condition of the people was found to be such that they must die of starvation unless relieved.

A meeting attended by every available officer was convened by the Commissioner at Jumui on Saturday last, and the new rules regarding relief were regularly gone into, and arrangements made for setting the approved machinery at once into operation.

The following centres, however, have been opened and are being managed by committees, who, although keeping regular accounts, have not submitted them punctually :—

Monghyr.—About 250 indigent persons passed by the Civil Surgeon, Mr. Dear, Colonel Murray, Baboo Gonga Persad, and other members of the Committee.

Luckeseri.—The committee have passed about 300 persons, many of whom must have shortly died of starvation, if not relieved.

Sheikpura.—About 200 persons in a very emaciated condition have been passed, and are being fed daily.

Jumui.—This relief centre is being started under Mr. Campbell; a large number, including the Katowria villagers before mentioned, will be fed here.

Bucktearpur.—Under Mr. More, Mr. Christian, and native members, about 100 half-starved persons are being fed.

Orain pergunnah Surujgarah.—This centre was set in motion under my directions by Moulvie Abdul Jubber, Deputy Magistrate. He found forty-two persons who would shortly have died of starvation had they not been relieved. This village is within five miles of the Patna road relief work. The zemindar, Meer Inayet Hossein, is about to take a loan of Rs. 300 for digging out a tank at the village.

As I have previously remarked, great efforts are being made to set the relief going according to the rules approved by Government.

C.—Progress Report of Relief Works actually open during the Fortnight ending 7th February 1874.

Name of Road and Number.	Progress in marking out Relief Work.	Progress in opening Relief Work.	Number of Laborers on.	Supply of Food thereat.	Condition of Labourers.	Mode of Payment.	Rate of Wages.	Arrangement for Tools.	Disbursement during the fortnight.		
									Rs.	A.	P.
Monghyr Sub-Division.											
Patna Road	16 miles marked out	All who present themselves get work.	578	From the nearest bazaars	Tolerably good	Advance given every day and measurements made every week.	Rs. 1-9 per 1,000, and daily wages at 1 anna 6 pie to men, 1 anna to women, and 6 pie to children.	Mostly supplied by Government.	811	0	9
Bhaugulpore Road	More than 5 miles marked out.	Ditto	155	Ditto	Good	Ditto	Ditto	Three-fourths bring their own tools.	199	9	8
Baktearpore to Bhootea	About 2¼ miles	Ditto, save beldars	93	Ditto	Workpeople seem to suffer a great deal for want of sufficient stock of grains in the neighbouring bazaar; order given for sale of rice.	Daily Labourers paid daily. Piece-work paid for every week. Explanation on the latter point has been called for.	Ditto	About one-sixth do do.			
Balkur to Rosra	About 2¼ miles	Ditto	120	Ditto	Good	Ditto	Ditto	Ditto	502	11	11
Burriarpur Road	Petty repairs only								50	13	8
Kujrah Road	Ditto	Ditto		Daily coolies are employed to keep the road in good order.					8	1	8
Begooserai Sub-Division.											
Tirhoot Road	About 12 miles marked out.	All who seek for work get it.	752	From the neigbouring bazaar.	Good	Twice a week in cash	Rs. 1-9 per 1,000, and daily wages at 1 anna 6 pie to men, 1 anna to women, and 6 pie to children.	More than one-fourth bring their own tools.	658	8	9
Jumui Sub-Division.											
Gyriak Road	4 miles marked out		25	Work stopped. Orders since given to commence work on the second section of the road.					116	14	0
Shaikpura to Secundra	More than 12 miles marked out.	All who seek for work get it.	65	From the nearest bazaars	Good	Daily advance given and measurement made every week.	Rs. 1-14 per 1,000	More than one-fourth bring their own tools.	364	7	6
Secundra to Jumui	12 miles marked out	All who come get work	350	From the adjacent bazaars	Not reported.				16	9	9
Chakis to Simultollah	Work stopped								65	7	0
Gungta to Mullehpoor	9 miles	Ditto	410	Ditto	Ditto.			Ditto.			
Jamui to Luckeserai	No earthwork is required.	Bridge work in progress.									
Jamui to Mullehpoor	Report not received.										
			2,548				Total amount paid in wages		2,799	12	5
							Brick manufacture and Tirhoot Road, &c.		756	9	0
							Establishment, &c.		271	11	6
							Tools and Plant		157	14	6
							Bridge-work, masonry &c.		220	7	8
							General contingencies		115	11	9
							Petty repairs		46	4	0
								Grand Total	4,369	6	5

N.B.—On the 7th, the last day of the week or fortnight, there were 11 Brahmins, 14 Rajpoots, and 6 Baniahs on the works. It is supposed that the Rajpoots of this country are in some measure used to agriculture, and can therefore be reckoned among the agricultural classes. Besides the above there were some Dhobies, Weavers, and other castes who do not always resort to this sort of work unless hard pressed.

RAM RUTTON MAZUMDAR,
Assistant Engineer in Executive Charge, Monghyr District.

NOTE BY THE MAGISTRATE.

The rain appears to have kept many workmen away. When I was at Jamui on Saturday, the contractor told me there were 1,100 men working on the Gungta road, 300 on the Jamui and Mullehpoor road, and 500 on the Jamui and Secundra road. The works will soon be deserted by the workmen, who will find employment in cutting the rubbee harvest.

E. LOCKWOOD, *Magistrate.*

No. 169—S.R., dated Bhaugulpore, the 9th February 1874.

From—V. T. Taylor, Esq., Collector of Bhaugulpore,
To—The Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit my sixth fortnightly narrative called for in Circular No. 80 of the 17th November last.

A.—State of the Country.

2. *Soopole.*—"Complaints are heard on all sides regarding the increasing difficulty of purchasing grain in the various bazars throughout the sub-division, and the prices are now closely approaching the limit at which, under existing orders, we should open our stores for issue to the laborers employed on relief works. In fact at Bungaon, in the vicinity of which the road towards Monghyr is now in progress, rice is already selling at 10 seers per rupee." At Soopole itself, rice is selling at 11 seers, and at Bheemnuggur to the extreme north at 13 seers, though at Pertabgunge it is selling at 10½ seers. *Murwa* is selling at 12 seers in Bungaon, and 13 seers at Soopole and Pertabgunge, while at Bheemnuggur at 16 seers.

3. Since the rain of the past fortnight *murwa* is decidely more plentiful than it was before, and it may still be unnecessary to open out Government stores; but I leave for Soopole for thorough inspection of the people and villages, to see to all the relief sub-committees immediately this narrative is despatched, and will on the spot pass all necessary orders.

4. *Mudehpoorah.*—The sub-divisional officer reports rice is unobtainable in the bazars at Mudehpoorah; in Kissengunge it is selling at 10 to 12 seers per rupee. There are no large stores of grain in the country of which any correct information can be obtained, though if mahajuns and zemindars holding such as are *known* to exist would open out their stocks, there would be a sufficiency for same time to come.

5. At head-quarters there are beyond question ample stores and trade action, but no one takes the trouble to send grain to the north of the district. Prices are now as follows:—rice (old) 10 to 11¼ seers; Indian-corn 14½; wheat 12 seers 10 chittacks, and gram 16½ seers.

6. *Banka.*—The prices in this sub-division have risen during the fortnight, the rise being about ½ to 1½ seers of rice, ½ to 2 seers of Indian-corn, 1 to 5 seers of koorthee, and 1 to 1½ seer of wheat. These rises are attributed by the sub-divisional officer partly to extensive exports being carried on to Monghyr, and partly to retention by holders with view of subsequent profit; but the sub-divisional officer remarks notwithstanding "that food articles are available everywhere, and there is no distress."

7. The following table shows approximately, as far as can be ascertained, the difference in prices of some of the food-grains *now* and at the corresponding period of 8

	Rice, 1st sort.		Rice, common.		Murwa.		Indian-corn.		Wheat.

6th „	·38	·7	·83		·44
Total	1·69	1·89	1·42	1·00	1·09

The weather is now splendid with a west wind, and everything that could be desired for the crops. The rain was very general throughout the district. The rain over a small tract near Sonebursa, in a south-easterly direction, through Phoolout, 12 miles north of the Ganges, was accompanied by very high wind and vivid lightning, but no damage has been ascertained to have resulted to the crops. The rain generally has fallen lightly, and the good effects are satisfactory to a great degree. The people are ploughing as fast as they can, and getting in more "cheena," a small seed called "chikna," and "moong," a grain that will come to maturity in a short time. Some of the early-sown "cheena" has begun to ripen; the wheat is coming into full ear, and making a great start; the cultivators generally have plenty of occupation, and from March their prospects will greatly improve. As far as I can hear and ascertain the outturn of the rubbee ought now to be a full average crop, and I trust it will be so. The rain from Mudehpoorah is reported as "very beneficial," and "has allowed of ryots ploughing for the rice crops which they expect to be able to sow in the south of the sub-division in a few days." With the rice they will sow "moong.

9. The condition of the laboring classes is giving anxiety; but I shall be able on reaching Soopole to satisfy myself as to actual facts. The reports are not good, but they are not quite intelligible; for, if the people are as badly off as they are represented to be, they would go to the works more freely than they do. There has been a general falling off in attendance on the relief works throughout the north, ascribed partly to the workers declining to follow the works, but leaving them as soon as the piece in the immediate neighbourhood of their village had been completed; partly to opening out of tanks by private individuals without applying for any advances, but with their own money, on which the workmen are paid in grain; and partly to the works undertaken by the Court of Wards; but notwithstanding the fact that the workmen at one of the Court of Ward's tanks near Bhaptiahi are paid in grain, not more than 400 persons are attracted to it, whereas one would have expected if distress were very bad, large numbers would flock to it. Mr. Smith reports, moreover, that cases of distress had been reported "in a village only three miles from a large tank in progress, amongst some Jolahas and Musahirs, who cannot possibly have any prejudice on the score of their caste as to joining the works with their whole families." I am not as yet aware of the private works undertaken referred to, but I shall see them all in a few days.

10. The Mudehpoorah officer says the whole of the western portion of his sub-division is suffering severely, and ryots are begging assistance for the present month of Phalgoon only, after which they will have their own grain from the crops now on the ground. I am going myself over this part, and shall report specially to the Commissioner after personal observation. The relief committees will be fully organized in this part of the country.

11. In Banka there is no distress as yet nor any heard of in the head-quarter sub-division, and even in the town of Bhaugulpore there does not as yet appear to be a beggar more than usual, and the blind, lame, and faqueers generally are fed gratuitously by several of the inhabitants according to their usual practice. As long as this is done it is unnecessary for other relief to be organized for them. The municipality will look after the poorer labouring classes as soon as they are in need of assistance. The general condition of the people south of the Ganges is still satisfactory.

12. The statement of thefts, &c., for the month of January is annexed.

B.—Relief Works.

13. The statement given below shows what is being done on this head.

Name of Road and Number on Map.	Progress in Marking Out Relief Work.	Progress in Opening Relief Work.	Number of Labourers.	Supply of Food thereat.	Condition of Labourers.	Mode of Payment.	Rate of Wages.	Arrangements for Tools.	Disbursement up to as far as known.		
									Rs.	A.	P.
Soopole Pursurma to Bhootia No. 19 (N.)	All done	9 miles in eight different places.	1,315 coolies daily on average, consisting of 70 per cent. ordinary labouring and 30 per. cent. non-labouring classes.	All draw their supplies from bazar.	Turning to worse, murwah and rice are both becoming severe, but the rain that fell in this part of the country on the 30th ultimo and 6th instant will tend to reduce the prices of articles of food, and it is expected that there will be a change for the better. The falling in of the number of labourers is partly owing to some of them having resorted to works undertaken by zemindar and some to ploughing their own lands.	Daily	Men, As. 1-6 Women, A. 1 Children, A. 0-6	Those who are actually poor and have no tools are supplied from stores, others bring their own tools.	1,645	0	0
Singheesur to Nathpore, No. 10 (N.)	Not necessary	In one place	536 coolies daily on average, all belonging to labouring class.	Half of the workpeople bring their food from home and the rest from bazar.	Condition of the labouring class is said to be bad.	Ditto	Mate at As. 2, and rest as above.	Nooniahs have their tools and the rest are supplied from Government stores.	621	0	0
Singheesur to Soopole, Nos. 16 and 17 (N.)	Ditto	Ditto	204 coolies daily on average, all belonging to labouring class.	Ditto	Ditto	Ditto	Ditto	Ditto	237	0	0
Milkee Road, No. 5 (N.)	Finished	In five places	620 coolies daily on average, consisting of 70 per cent. labouring and 30 per cent. non-labouring class, 15 Rajpoots only.	Supplied from bazar.	Growing bad every day. Rice selling at 10 seers per rupee, green oats and their leaves have become the chief food.	Task work	Rs. 1-12 to Rs. 2 per 1,000 cubic feet.	Ditto	612	0	0
Mudehpoorah 1st section, No. 1 (N.)	Not necessary	One mile in one place.	119 coolies daily on average.	Ditto	Ditto	Daily	Men, As. 1-6 Women, A. 1 Children, A. 0-6	Supplied from Government store.	101	0	0
Mudehpoorah 2nd section	Ditto	In four different places.	213 coolies daily on average, all belonging to labouring class.	Partly from bazar and partly from home.	Coarse rice is sold at 10 seers and murwah at 11 seers per rupee.	Ditto	Ditto	Those who are actually poor are supplied with tools, and others bring their own tools.	215	0	0
Mudehporre to Sookhasun			47 coolies daily on average.	No information.		Ditto	Ditto		30	9	6
Soopole to Peepra, No. 15 (N.)	Not commenced.										
Pertabgunge to Beerpoor, No. 11 (N.)											
Bungaon to Phoohat, No. 21 (N.)											
Nareinpoor to Nurkurtia and Soneburas, No. 4 (N.)			114 coolies daily on average.	No further information received.							
Bowsee Road, No. 1 (S.)	Not necessary		59 coolies daily on average, all labouring class.	From bazar	Owing to the present rain some people are cultivating their lands, but others who have not any food at their houses go to the work.	Contract work	Rs. 2 per 100 cubic feet metalling.	Beldars bring their own tools, and the rest are supplied from Government stores.	99	0	0
Banka to Kutooria, No. 26 (S.)	Not commenced.										
Kutooria to Seemultullah, No. 27 (S.)	Complete	In nine places	204 coolies daily on average consisting of 4 per cent. non-labouring and the rest labouring class.	Ditto	As the number of workpeople is not increasing rapidly it appears that the condition of the people is not bad as yet.	Task work	Men, As. 1-6 Women, A. 1 Children, A. 0-6	Ditto	272	0	0
Kutooria to Chundun, No. 28 (S.)	Not commenced.										
Pointee to Barahat, No. 16 (S.)											
Bhaugulpore to Umerpore, No. 3 (S.)											
Umurpore to Banka, No. 4 (S.)											
Bhaugulpore to Ghoorghat, No. 18 (S.)											
Sultangunge to Urjusgunge, No. 19 (S.)											
Mudhai to Pootia, No. 12 (S.)											
Ghoga to Moheeanwan, No. 13 (S.)											

14. The above statement shows a considerable falling off, most notably on the Soopole to Bhootea road, on which almost 3,500 men were working daily at one time.

C.—Transport of Grain.

15. From the Bhaugulpore railway station, from the 25th January to 7th February, the exportation has been 14,963 maunds against imports of 6,926 maunds. The exportations are as usual headed by wheat (6,641) maunds for Howrah, then Indian-corn 3,976, rice 2,127, and Indian-corn 1,452 maunds, nearly all up, for distressed districts, Dinapore, Lukheeserai, Monghyr, Burhia, Patna, Jamalpore, and Jumooi. The imports are as usual headed by wheat, 3,912 maunds from Loodhiana, Saharanpore, Meerut, Delhi, &c.; 806 maunds of grain from Delhi; and rice 652 maunds from Howrah and Chandernagore.

16. The returns from the other stations, Colgong, Ghoga, Pointee, and Sooltangunge, are only up to 24th January, and show next to nothing except Colgong, and the return apparently includes Government grain, so is not of much use.

17. There is no private importation to report from Soopole or Mudehpoorah. The Court of Wards are importing for Naridigur still. The Banka sub-divisional officer reports imports to a small extent from Godda, and "considerable" exportation to Monghyr. From Soopole it is said exportations have stopped.

D.—Storage of Government Grain.

18. Up to date about 205,000 maunds of grain of all kinds have been received into this district either at Bhaugulpore or Sultangune, and of this, with the exception of a little over 6,000 maunds of disputed grain, nearly the whole has been sent across the Ganges; about 73,395 maunds have been stored; it *may* be a little less, as the Mudehpoorah officer was instructed, if he had carts available at Mudehpoorah, and the grain had not arrived from the Phoolout Ghât, to send off part of his own rice already stored to Soopole, and it is just possible he has done this, though I do not gather from his remarks that he has actually; any how, about 29,372 maunds have been safely stored at Soopole. Matters as regards this transport will soon be satisfactory I hope; but from information just received I am a little anxious. Mr. Smith writes: "The Tirhoot people (not " stating to whom he refers) are offering very high rates for carts, and have offered Messrs. Duff " and Meiselback (residents in Soopole sub-division) contracts for the cartage of rice for Allapoor, " the pergunnah adjoining Naridigur. I hear they are paying to contractors as high as one pice " per maund per mile." If we are to enter into a competition for carts, the carriage will be ruinous, and of course higher rates than we pay (which are really ample) will cause many desertions, which cannot be afforded with the *comparatively* few carts we have been able to procure for our large requirements. If it comes to this, I shall be obliged to raise my rates.

19. Two new store golahs will now be entered on the map, one at Putterghat, south-west of Mudehpoorah, and one at Chandpeeper between Soopole and Dugmurrah on the Nepal frontier, to be marked M and N respectively. Chandpeeper will be for the Tirhoot rice only.

E.—Advances to Private Parties.

20. No fresh advances have been given during the fortnight; four applications have been received, and the matter referred to the Commissioner for orders, the allottment being exhausted. Both Soopole and Mudehpoorah officers report the probability of several more applications at an early date, and a further allotment will be necessary.

21. The Deputy Collector of Soopole writes he is inquiring into several applications for advances for tank-digging, but he has not as yet sent up any, and I can deal with them on the spot myself, or send those necessary to the Commissioner. Many persons, however, are reported to be excavating tanks without asking for advances; this if true is very satisfactory. I shall be able to ascertain the mode of payment to those employed; if they get better paid either in money or in grain than on the Government works so much the better.

22. The Bhaugulpore municipality have applied for a loan of Rs. 5,000, to be held available for the moment it may be necessary to start relief. Projects are under preparation as to the works those to be relieved are to be employed upon, but no relief is at present necessary.

23. Mr. J. Hennessy has applied for a loan of Rs. 5,000 to advance to his ryots. This loan has been sanctioned by the Commissioner, and the money will be paid as soon as Mr. Hennessy signs the necessary undertaking.

F.—Charitable Relief.

24. The district committee meets to-morrow to discuss matters. The sub-divisional officers of Mudehpoorah and Soopole hold their meetings in a day or two. All the sub-divisional relief committees have been nominated excepting one small one in Soopole, three in Mudehpoorah, and the few in the head-quarter sub-division which were not immediately necessary. Matters will be fully discussed, but of course actual plans cannot be finally arranged until the relief rules are finally sanctioned and supplied.

No. 911F, dated Purneah, the 8th February, 1874.

From—W. Kemble, Esq., Magistrate and Collector of Purneah.
To—The Secretary to the Government of Bengal.

I have the honour to submit my narrative for the fortnight ending February 7th.

A.

The late rains* have been most beneficial to the rubbee crops. In the neighbourhood of Arrareah and Kishengunge the country is again looking quite green, and it is expected that from gram and other pulses a full crop will be gathered. Wheat, too, looks well, but it has not germinated to the same extent as the pulses.

Cheena and kanni in large quantities everywhere, and early rice in Kishengunge and in the south has begun to be sown. Notwithstanding the rain and the greatly improved rubbee prospects prices at the beginning of last week suddenly fell. At Kishengunge common rice is now selling at 10 seers, gram at 11, and wheat at 10½, and near Arrareah on Friday at the Gouramoni Hât I found rice of a very inferior quality selling at 9 seers, kurthi at 11 seers, keshari at 13 seers, kanni for seed was selling at 8 seers.

There was very little rice taken away unsold when the market was over, but kanni was plentiful.

This last-named crop as well as cheena is reaped 90 days after the sowing; the first crop ought to come in next month, and is expected to give great relief to the people.

Mr. Rattray, the sub-divisional officer at Arrareah, and many others expect that distress will only last during the next month and a half, and that after the rubbee harvest prices will fall. I hope that this opinion is correct; the same persons however maintain that the mahajuns have large stores unsold. I think that in this they are mistaken. In some pergunnahs the villagers have stores, as I find that from the north of the Sripore pergunnah and from pergunnah Futtehpore Singhia grain is coming into Kusba, and that people from all the villages south and east of that place are bringing their supplies there. Kusba also supplies the retail shop-keepers in the town of Purneah, and from what I see and hear I think that the Kusba imports cannot much exceed its exports. If the mahajuns had grain, and prices are likely to fall soon, they would not hoard their stores. In Purneah city I see grain brought up from Calcutta by rail and cart being sold almost from the very carts as they arrive in front of the large mahajuns' shops. Two of the town mahajuns came to me yesterday for an advance to buy grain; I asked why they had not applied before, and they said that they had heard that Government was going to sell at 16 seers and they were afraid that they would lose money by importing. This does not look as if they were hoarding.

During the fortnight reports of distress have been received from all quarters and not confined to the limited areas of Kudba and Kusba Amour. There has evidently been a great drain upon the comparatively good crops on the Koosi and in the northern pergunnahs, and the poorer classes all over the district have begun to feel the scarcity.

There have not yet been any what I can call proved cases of death by starvation. I left Mr. Rattray at Arrareah, however, making inquiries into the deaths of some lepers, which look like the result of starvation.

From the south Mr. Shillingford has just reported "that the rubbee crop promises to be a full one, and the prospects of the early rice sowings are good," and that he anticipates nothing more than "a little scarcity next month before the cheena is cut."

The prices about Bulrampore and Kudba appear to vary very much, the Deputy Collector reporting them at 8, 9, 10, and sometimes 11 seers.

Neither in Bulrampore nor Kusba Amour however has there been any rubbee worth mentioning.

The condition of the people I can see myself is daily becoming worse; women are seen picking herbs from the fields and unripe fruit from the trees. The number of beggars however is yet very small.

The number of grain-thefts reported this fortnight is 19, and the value of property stolen Rs. 220.

The comparative statement of dacoities, &c., is annexed. The Arrareah return was manifestly incorrect and has been excluded. Dacoities have largely increased this month, I am sorry to say; they are mostly undetected; but I trust that the arrival of the new District Superintendent with two new Inspectors will have a good result. The Inspectors were much wanted.

			7,406						405 7 6

The accompanying table shows the progress on each road on which work has been opened by the District Engineer. Grain at 10 seers the rupee has begun to be sold on the Bulrampore and Barsoe road (No. 7), and orders have been issued to commence sales at roads Nos. 5 and 6 at once. To these last-named roads I intend to proceed to-morrow to meet the District Engineer. The total number of labourers has risen to 7,406, or average daily of 1,058, being more than 200 over the number reported last fortnight. 65 per cent. of these labourers are village girhasts. The number of women and children employed, 1,183 and 412, have increased largely. This does not include the people employed on village roads. The returns have been called for from the persons to whom the work is entrusted. Of the persons who have undertaken these works in Kishengunge, Ahmed Hossein and Asruf Ali are zemindars, Doolar Jha is a putnidar, Kali Bhagut a well-to-do ryot.

At Arrareah Mr. Rattray reports that the villagers, among whom beldars are more numerous than in other parts of the district, want work. I have given over to him the repairs of some of the ordinary district roads, and directed him to put in order the cart tracks leading up to Koorsakatta, a grain depôt on the northern emigration road, upon which work has been ordered to be commenced. It is probable that we shall have to draft men from the more distressed parts of the district up to this work.

At a road cess meeting held last week, it was resolved to make over some district road repairs as shown below to planters who kindly undertook to supervise the work and send in returns :—

Road No. 19, Gondwara to Sowraguddi } To Mr. Cave.
" " 21, Koori to Sohoria }
" " $\frac{36}{8}$, Chaklah to Koori, to Mr. J. Shillingford.

The road Mutiari to Jelalghur was made over to Mr. Rattray, and Rs. 400 were given to Baboo Rojonee Nath Chatterjea, Deputy Collector, to start village roads between Kudba and Saifgunge. Rs. 200 were also given to Mr. C. Shillingford for the repair of the road between the large mart of Haflagunge and Mokam Bhownipore on the Ganges, a road much used by petty grain traders during this time of scarcity. The Purneah Municipality have also ordered the excavation of some tanks to be commenced, but up to date there has been no great demand for labour* in the town. Mr. McQueen, the Sub-Manager of the Dhurrumpore Estate, reports that the poorer class of ryots will always get assistance and obtain work from the larger cultivators, and that the beldars only will come for work on the roads. These men will, for the present, be employed on the repairs of the district roads. The villagers on almost all the roads have brought their own tools, and at Arrareah Mr. Rattray has arranged that those who have none can buy them from a neighbouring blacksmith, a small deduction being made from their wages for their cost. The plan works well, and will be extended, as I hear the work-people at Bulrampore have expressed a wish to have a similar arrangement made with them.

P.S.—I forgot to note above that Rs. 80 and Rs. 50-1 have been advanced respectively to Khurshed Ali and Bokai Shaikh, headmen of Belgachi and Kanharia, and Rs. 90-1 to Mr. F. Cruise, for the making of village roads through the country lately visited by Mr. Wyer and myself, and where the deaths were reported.

C.

Naulakhan Das at Purneah is importing; when I last passed through the town he had just brought up 500 maunds from Calcutta, and was sending down carts to meet a fresh consignment expected from Sahibgunge. Shere Singh at Raneegunge has brought up 2,000 maunds from Calcutta, and is purchasing on the Koosi.

At Kissengunge large supplies are received from Julpigori; all over the district I find carts either going or returning from Caragola, but it is difficult to get the cartmen to work continuously They all say they like to go home and rest their cattle for a few days after one or two trips. I believe that we are working on equal terms with private traders; we both find it difficult to get the amount of carriage required just as we want it. I was also glad to find during my last tour that the rates of cart-hire fixed were well known; carters stopped and asked me whether such and such rates which they had heard were correct. I almost invariably found that they were right, and that they had been paid. The ferry has been improved at Caragola; bridges built over some small streams.

The late rains have interfered with the transport of fodder, but 1,200 cart-loads were reported as ready for despatch from Arrareah last week.

D.

Weekly return No. 2, for the week ending Friday, 6th February, shows that 141,738 maunds of grain had been carted away from Caragola, of which 128,238 maunds had reached its final destination. It must be remembered that we have hitherto been carting up to the most distant points, and that when the Kishengunge allotment has been completed we shall work our carts much faster. The rain has hindered operations very much, not only by preventing rice being loaded, but also on account of all the bullocks being wanted for ploughing. I would rather see them employed in the latter than the former work.

I have directed that accommodation shall be found at Sirsee, near the Lower Koosi Road, and in the north of the Dhurrumpore Estate, for 3,000 maunds, as it seems that nearly all the surplus stock in this neighbourhood has been exported, and that difficulty will be found to supply the labourers with food unless we lay in a store. The building of golahs has progressed satisfactorily, and is in advance of our requirements except at Caragola, where special orders to provide for the custody of a far larger quantity than we had anticipated had lately been received.

---

* Thirty men only employed.

E.

I have made advances as noted below :—

Foodoo Lall, Rs. 2,000. This is a very enterprising man; he has been to Cuttack himself, and has brought up one consignment in a satisfactory manner. I have advanced him Rs. 2,000 more.

Ram Persad Thakoor, Rs. 125-1. This man had Rs. 500, and required a further advance for cost of transport.

	Rs.
Ram Suk Das	2,000
Tara Chand	2,000

These are two well-known traders, who had not taken advances before, as they were afraid of Government competition.

Gopal Bepari, Rs. 50. A petty trader to whom I advanced, under Commissioner's order No. 426—S.R., dated 27th January 1874, for retail operations in the villages.

The advances which I have made to zemindars to help their ryots are as follows :—

	Rs.
Yad Hosein	300
Syud Hafiz Ali	200
Syud Amjud Ali	150
Gobind Lall Das	500-1

I have also promised a loan of Rs. 1,500 to Mirza Mahomed Hosein; he will take the money to-morrow. This, I am sure, will be well spent, as the Mirza can be trusted and his estates lie in a bad part of Kusba Amour.

Meer Mahomed Kazim, to whom I advanced some little cheena seed (45 maunds) reports that he has sown this and other seed of his own on 4,000 beegahs of land, which he irrigated by bunding up the River Purwan.

He has also made a road from Pirwaha Saifgunge to Kusumba, on the Nepal frontier, at his own expense. I hope to see more of this work and report further next fortnight. The Deputy Collector, Rojonee Nath Chatterjea, has been directed to make some advances (Rs. 50) to some ryots in Kudba for digging tanks, but has not reported that the order has been carried out.

F.—RELIEF OPERATIONS.

A meeting was held at Purneah on the 28th January before the receipt of the rules about relief committees. As a beginning, only Rs. 1,000 were subscribed as donations, and monthly subscriptions to the amount of Rs. 31 were promised.

A relief committee was appointed, which held a meeting on 1st February. A copy of the proceedings was sent to the Commissioner.

The sub-divisions were arranged as follows :—

Kishengunge and Arrareah, under sub-divisional officers.	Conterminous with their magisterial jurisdictions.
Kudba, under Baboo Rojoni Nauth Chatterjee, Deputy Collector.	Kudba and Mumhari thannah and half of Bulrampore thannah.
Kusba Amour, under Baboo Srinauth Bhodra, Deputy Collector.	Kusba Amour thannah and half of Bulrampore.
Sudder, under Mr. Wyer, Joint-Magistrate.	Thannahs Sudder Gondwarah and Dhamdaha.

Instructions were sent to the sub-divisions. Mr. Wyer at head-quarters was requested to arrange with Dr. Picachy for sheds at once. Sub-divisional committees were directed to meet at once, and to send in a report of their proceedings and requirements to the district committee on or before Wednesday, the 11th.

Up to date I hear Mr. Craven at Kishengunge has raised Rs. 1,430 by donations. Mr. Rattray reports that he is getting monthly subscriptions from each village, which amount to Rs. 83 at present. I am going to attend his meeting at Arrareah to-morrow, and shall go on from there to Kusba Amour. I have received no detailed report from the last-named place, but some time ago I know a small subscription amounting to Rs. 111 had been collected.

Baboo Rojani Nath Chatterjea has held a meeting of his branch committee at Barsoe, where Rs. 50 were subscribed.

Mr. Wyer held a meeting of his sub-committee on the 6th, nominated additional members, and arranged for the building of sheds and store-houses; drew up rules for a working committee, and made arrangements for providing work, such as husking dhan, spinning, &c., for women and others. Arrangements for distributing relief in the city were made.

After the next meeting of the district committee I hope to report more definite arrangements. I have sent money to Arrareah and the Sudder committees to begin operations, and arranged with the other committees to draw funds when wanted.

Since writing the above I have heard that Baboo Rojoni Nauth Chatterjea has been active in instructing branch committees and collecting funds in Kudba.

No. 9Ct., dated Camp Godda, the 9th February 1874.

From—J. BOXWELL, ESQ., Officiating Deputy Commissioner, Sonthal Pergunnahs.
To—The Secretary to the Government of Bengal, Statistical Department.

I HAVE the honour to submit a narrative for the fortnight ending 8th instant.

A.

1. I have not heard of any failure of supply in any market during the past fortnight. The Rajmehal return has not come in, but I am travelling, and it is most likely on the road.

2. In Deogurh prices are either the same or slightly lower. I found rice selling 14 seers to the rupee at Norie, and 12 seers at 8 miles north at Hansdiha. This latter place gets its supplies chiefly from Norie, which may account for the difference. Export of *janera* continues. I passed 15 carts one day, and 12 another, all for Bhaugulpore.

B.

1. I cannot give figures this week. Both I and the District Engineer have been travelling. We met to-day. Without figures I can give general information. Our three most important relief works are three roads in the north. The first is from Godda to Barahât, intended to join Godda to Pierpointee railway station, running through Maniharee Pergunnah.

2. The line has been chosen. The centre line has been partly pegged out; work can be opened within this week.

3. The second is from Bareo to join the first road at Pratuppoor. The line has been chosen, and the centre line partly pegged out. Work can be opened within ten days. The third is from Barhait to Sahibgunge *viâ* Baria.

1st. The line has been chosen, and pegged out, and it was reported on the 4th instant that work would open next day.

2nd. These three roads run through the middle of our worst country. They will open communications with the loop line at four points, by the help of the Bareo and Barhait feeder roads.

3rd. There is no great demand for work yet, and we are not trying to force it.

C.

1. Mr. Wilmot has supplied me with a table of grain traffics on the chord line. The return is from 11th to 17th January 1874.

Rice outward up	- -	1,738 maunds.
Other food-grains	- -	67 „
Total	-	1,805

Inward and down all blank.

2. The *janera* crop, as I have reported, was bad in the west and good in the east. Hence the chord line exports *dhân*, and the Bhaugulpore road janera. I shall give loop line results next time.

3. We have had heavy rain all over the district as far as I can tell. I have not had the latest returns from Doomka nor any from Rajmehal. There was rain all Saturday night, January 31st, and Sunday at Norie; and again at Hansdiha on Thursday, the 5th, there was very heavy rain all day. On Friday horses were over the fetlocks in paddy khets that were as hard as bricks a week before. The people are hard at work everywhere ploughing. They look well and as far as I can learn are hopeful about holding out till their new crops come in.

4. The rubbee is, as I have said, scanty everywhere, but it will be immensely helped by this rain; wheat is looking well in Godda, and there is a good deal of rahur doing fairly.

5. There are no known cases of misery or starvation. I have no grain-thefts or robberies to report.

I have nothing to say about any special tract. No distress has been reported from the north of Rajmehal and Godda. The District Engineer has just come through the parts called the worst, and has nothing particular to report.

D.

I have no further information to give on this or any other head.

E.

Inquiries are in progress regarding the advances applied for by ryots reported last fortnight. No new applications have been made.

F.

There are no charitable operations.

G.

I have not my figures.

Enclosure No. 6.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 16th February 1874.

READ—

The District Narratives of the distressed districts in the Rajshahye Division, for the week ending 7th February 1874.

1. The rain has done good everywhere throughout this division. It was particularly heavy in Rungpore and Bograh. Although its effect was to raise prices for a few days in some of the

smaller markets by preventing the cultivators from bringing their stocks for sale, this result was only temporary, and generally it is reported that the anxieties of the people have been much lightened by this most seasonable fall. Here and there it may have done a little damage to crops in flower, but it has benefited the cold weather crops as a whole, has done immense good to the spring rice, has filled the tanks which were failing from drought, and above all, has enabled the ploughings for the summer and autumn crops to be every extensively begun.

2. Supplies are still sufficient in all the districts except in isolated tracts, and prices have not shown any further upward tendency as yet. Indeed, in that part of Maldah where last fortnight they had risen to eight seers a rupee, they have now again fallen to 10 or thereabouts.

3. Taking the districts one by one, it appears that in *Moorshedabad* exportation is still going on from the Rampore Haut and Jungipore sub-divisions; while on the other hand, grain is imported into other parts of the district. Liberal subscriptions have been made for charitable relief, and assistance is being given to a few indigent persons here and there. There is no very general flocking to relief works; about 2,900 persons in all being at work on roads. The district report is on the whole satisfactory, active efforts being evidently made to meet possible needs. It is only necessary to note that people seeking labour should not be turned away from relief works because they are not residents of the district. The Commissioner has already been told that, if necessary, some Government grain may be stored in this district. He must keep watch and take steps to have this done in any out-of-the-way places that may require it, before the rains interrupt communications.

4. In *Rajshahye* only about 400 persons daily are on the relief works, while supplies are good and private imports increasing. No charitable relief has been found necessary as yet, though the organization is ready to be used if required. The Lieutenant-Governor hopes that we need not be under much anxiety about this district. The Magistrate's report shows, as regards transport arrangements, that about 2,000 maunds of rice a day have gone forward from Godagari; but the Lieutenant-Governor does not understand why nothing has been despatched from Nowgong. Nothing also is said of receipts and despatches at Rampore Beauleah and Dhapari. The transport returns of this district must be much more clearly drawn up; the receipts and despatches for (1) the district itself, (2) for the railway works, and (3) for Dinagepore, being carefully distinguished, and *every* point of receipt being shown whether reserved for railway grain or not. The Lieutenant-Governor hopes that the district officer may be able to arrange at once for very much larger despatches by each of the routes lying through Rajshahye to Dinagepore. Hitherto progress has been extremely slow on the whole, and every effort must be made to expand the transport arrangements in a manner adequate to the great needs of Dinagepore.

5. The *Maldah* report is a very good one and creditable to Mr. Alexander, who seems to have all his district arrangements well advanced and well in hand. The north-west corner of this district has already been recognized as the tract most requiring attention, and the Magistrate has defined on a sketch map the distressed portions of the district. Other parts are fairly well off. The Lieutenant-Governor is glad to see that the Magistrate has himself gone to the north-west, and hopes that the advance of Rs. 50,000 lately given to the Chunchul estate, as well as the other advances made, will be fully utilised, and sufficient work be provided by the estate and Government to meet the demand. The charitable relief arrangements should be completed at once. Already there are demands upon charitable funds. The Magistrate's plea for liberal treatment as regards the allotment of charitable funds will be forwarded to the Central Committee for consideration.

6. A very important part of the duty falling upon the district officer of Maldah is in connection with the transport of grain to Dinagepore. An effort will be made to give Mr. Alexander another officer for head-quarters, as it is most important that he should be able to look after those matters himself. It is stated that the local carriage is inadequate to carry off the grain at the rates at which it is now arriving, especially by the Rajmehal and Sahebgunge routes. The Commissioner and Mr. Robinson will be asked to give their most urgent attention to this question. Large depôts should certainly be formed on the north of the Ganges. They will be used freely hereafter. But no effort must be spared to carry off the grain to the interior, both by all the local carriage that can be got and by carriage procured from the districts to which the supplies are consigned. Dinagepore must do what it can to help up its own supplies. Orders have been given for the use of one-maund bags as much as possible in future, which will enable the local officers to employ pack-bullocks. The Commissioner or Mr. Robinson must arrange that some officer shall at once on the spot go thoroughly into the question whether the Sahebgunge route is really preferable to that by Rajmehal, or whether both should be used simultaneously. Mr. Molony will also note and inquire into what Mr. Alexander says about plenty of good-sized boats being available at Godagari, and the Lieutenant-Governor much hopes that more may be sent forward from that point than has hitherto been the case. Very special and early report is expected on the questions embraced in this paragraph.

7. The *Dinagepore* report has been dealt with in separate orders No. 638—S.R., dated 12th instant. The condition of a large tract in this district is very critical. The Lieutenant-Governor has allotted 1,000,000 maunds of grain to Dinagepore, and all the energies of the district officers must be concentrated on getting this up as fast as possible and on providing adequate relief works for the population.

8. The *Rungpore* district officer's report seems intelligent though brief. The Relief Commissioner has recently reported the results of his visit to this district, and the tract likely to be distressed has been now tolerably accurately ascertained. The Lieutenant-Governor is glad to be able to hope that Rungpore generally will not suffer very severely. But an adequate supply of rice will be provided, for the distribution of which it appears that local means will suffice. Some

mistakes had been made in the conduct of relief operations which Mr. Robinson has taken steps to rectify, and the Lieutenant-Governor will only beg Mr. Glazier to concentrate his best attention on the specially distressed parts, and to see that adequate relief is given in a prompt and sufficient way. The orders recently issued permitting advances to substantial jotedars who will aid their under-tenants, should do much to facilitate arrangements in this district of small but well-to-do under-tenants.

9. The *Bogra* report is not very precise, but the result seems on the whole satisfactory. The bad tracts are known, and relief is being afforded on a scale equal to the necessity of the case.

By order of the Lieutenant-Governor of Bengal,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

Narrative of Scarcity and Relief in the Moorshedabad district for the fortnight ending Saturday, the 7th February 1874.

(A.)—STATE OF THE COUNTRY.

Abundance or Scarcity of Supply in the Bazar.

The supply of food-grains in the bazars and hâts of the Sudder sub-division, although not very abundant, is sufficient, except in the Gokum police station jurisdiction from which reports of scarcity have been received. The recent rain is said to have somewhat affected the supply in many places by rendering transport on village paths and roads difficult for bullocks and carts, and indirectly by the ryots being wisely engaged in breaking up the ground for the next crops. Grain has not been readily brought into the markets and hâts for sale. In the Rampore Hât and the Lalbag sub-divisions the supply is reported to be abundant. The sub-divisional officer of Jangipore reports that the stock of rice, specially in the Chapghati and Mongulpore bazars in Sooty is much less than last year, and that merchants are importing from Gooshkara and other stations *vià* Pakour.

Kind and Price of Grain selling at one or more specified Principal Marts.

The average price of common rice, taking 12 of the principal markets, is reported to be 12⅓ seers per rupee. Prices in the mofussil fluctuate very much, as the stock in the hands of the petty dealers is generally small, and depends greatly on the weather and other causes which affect the ryots who bring in the rice to the dealers for sale. The range of prices is from 11 to 14 seers per rupee for coarse rice, and from 9 to 13 for rice of the best quality ordinarily in use. The highest prices appear to prevail in thannahs Bhorutpore, Assampore and Shahanuggur, and the lowest in Saktipore, Nowada, and Doomegram.

Any information obtained regarding the Amount and Kind of Grain believed to be in Stock in the Hands of Zemindars, Traders, Ryots, and others.

The stock of food-grains in the hands of zemindars, mohajuns, and others in the Sudder sub-division, is reported to be about 2 lacs and 60 to 70 thousand maunds; if this and the estimate given in the last narrative could be depended on it would show that the supply was very well kept up. The sub-divisional officer of Lalbag is still of opinion that people have large stocks of grain. The sub-divisional officer of Rampore Hât reports that people are selling and using what they thrash now, and that it is very difficult to estimate the amount of stock. Exportation still seems to take place from the Rampore Hât and Jungypore sub-divisions. From the former sub-division, 18,849 maunds of food-grains were exported by the railway alone, and only 441 maunds imported for the week ending the 24th January. From the Moooraroee station, sub-division Jungypore, there were sent off for the north-west districts in the month of November last 5,499 maunds, in December 19,734 maunds, and in the first fortnight of January 11,171 maunds of rice, and this export seems to be still steadily continued. The exportation in boats *vià* Roghonathgunge and Notungunge appears to have ceased.

Rainfall, if any, and state of the Crops.

Special reports of rainfall have been sent during the fortnight. Rain fell on the 24th, 25th, 30th, and 31st January, and on the 1st, 2nd, and 5th of this month at the head-quarters. Within the last fortnight the following amount of rain is reported to have fallen in the various parts of the district:

Head-quarters	3·28
Lalbagh sub-division	2·82
Rampore Hât	3·13
Jungypore	1·70

The Magistrate-Collector is of opinion that the rain of the 24th was heavier at Bharatpore than at Moorshedabad and Berhampore on the night of the 31st, as the Magistrate has already reported there was a severe hail-storm in a portion of the Bharatpore thannah which caused damage to the cold-weather crops especially to linseed and gram. Near Ramnuggur large boats were blown high and dry and keel up, and the hail-stones were of such a size as to destroy many birds and fish. The late rubbee crops and such spring crops as were in the ground, as well as mulberry, indigo, and all sorts of vegetables, have been benefited very much by the rain, and the ryots have been enabled to plough their land. The rain will also to some extent remove the scarcity of water in many places, and both in this respect and by making the grass spring up, will improve the condition of the cattle, which are the mainstay of the agricultural classes of the district. At the same time the rain has done some injury to the rubbee crops and oil-seed crops, which are now approaching maturity. It may also slightly injure the mustard crop, gathered but not yet stored. The cultivation of the boro crop will be very much aided by this rain, and thus a good deal of employment will be afforded to the cultivating classes. Ploughing is being actively carried on in most parts of the district.

Condition of the People, and actual Facts as to any known Cases of Misery.

Reports have been received stating that some old and infirm persons are suffering from want. Supplies of money from the relief fund have been sent out for giving relief in cases where persons are unable to work, and are actually in want of food. The condition of the labouring classes has improved, in so far as the rain has given them employment in the fields. There is a good deal of exaggeration in the accounts of the distress under which the people are said to be labouring. In one case the police reported great desire for work on the part of the labouring class of people in the Peertolah outpost. The Executive Engineer was communicated with on the subject, and it was found that a relief work existed at a distance of about two miles from the outpost of which only 20 men on an average took advantage. The Magistrate-Collector whilst at Bhorotpore cites in his diary of the 2nd instant the following instance:—

"In the course of conversation with some of the people of the village, I was informed that men had gone to work on the Kandhi and Synthia road, but had left the work because the ground was too hard. This does not look much like distress of a severe kind. There has, I think, been a good deal of exaggeration as to the condition of the people at and about Bharotpore."

Again, in another case, an application was presented to the magistrate by certain persons of Kalupun praying for help. From their appearance they did not at all seem labouring under distress. The sub-divisional officer of Jungypore reports that maskalai bread has come into more general use on account of the general rise in the price for rice.

Grain-thefts or Robberies.

Eight cases of grain-thefts have been reported during the fortnight in the head-quarters sub-division, but none of them are very heavy. There has been one case of theft of paddy under section 457 Indian Penal Code and some petty grain-thefts reported in the Lalbag sub-division. In the Rampore Hât sub-division five cases of grain-thefts have been reported. A statement of dacoities, &c., is annexed.

Condition of any Special Tracts.

The police of *Gokum* has submitted a list of 60 persons, women and children, who are in want of food. Relief is being sent to them. The sub-divisional officer of Rampore Hât reports that the labouring class of people residing in Khurgram, Pulsa, and Nulhatty are in want of labour. Relief works will soon be started in that portion of the country. The police have reported that 72 persons, most of whom are helpless widows are in great distress in the Khurgram and Nulhasty stations. Coarse rice is stated to be selling at 14 seers per rupee in the latter station, and as I am inclined to be sceptical about the alleged distress, further inquiries will be instituted. Funds have been supplied to the sub-divisional officer for relief purposes, and he has sent out the sums of Rs. 30 and 10 to the sub-inspectors of Khurgram and Nulhatty respectively. There is likely to be a little distress in thannah Mirzapore, and in the north-west of Sooty, where the population almost entirely depend on the late rice harvest. In order to obviate this, the sub-divisional officer has recommended the establishment of grain depôts at Mirzapore and at Bohotali thannah, Sooty.

(B.)—RELIEF WORKS.

Panchgram road.—About 350 men have been employed daily on this work. They can get food without difficulty; the men are in good condition, are paid regularly in cash at the rate of 0-2-9 per 100 cubic feet; kodalies are supplied to them.

Kandhi road.—About 60 coolies are employed daily on this work, food easily obtainable; the men are in good condition, are paid regularly in cash at the rate of 0-2-6 per 100 cubic feet. This work is just on the boundary of the Beerbhoom district. Men of that district seek employment on our works. The overseer in charge of the work has been directed not to encourage them, but at the same time to give all that are in distress work.

Madhaghat road and Nulhatty road.—From 80 to 90 coolies are employed daily on this work; food easily obtainable, men are in good condition and paid regularly in cash at the rate of 0-2-6 per 100 cubic feet; they provide their own tools, a few are given to those who have none. There does not appear to be any great want of labour near Azimgunj.

Jungypore and Kanora road.—From 40 to 50 coolies are employed daily on this work; food easily obtainable, men in good condition, and paid in cash at the rate of 0-2-3 per 100 cubic feet. They provide their own tools.

Dewanserai to Jeagunj road.—About 50 coolies are employed daily on this work; food easily obtainable, men in good condition, paid in cash at the rate of 0-2-6 per 100 cubic feet; they provide their own tools.

Joroor and Nowadah road.—The number of labourers employed on this work rose to 950 on the 28th January. Since then heavy rain fell making the country so wet and muddy, that there has been a total cessation of work for four days. It is also expected that in consequence of the rain there will be work for the ryots on their fields. The demand for labour here will, however, probably rise considerably. The men can easily obtain food, are in good condition, and paid regularly at the rate of 0-2-6 per 100 cubic feet; they supply their own tools. This road passes through the parts of Mirzapore thannah where some distress is felt.

Dewanserai and Khamra road.—About 30 men are employed daily on this work, food easily obtainable; men in good condition and paid at the rate of 0-2-6 per 100 cubic feet; they supply their own tools.

Jellinghee road.—About 20 coolies are employed daily on this road, there does not appear to be a demand for labour; food easily obtainable, men in good condition; paid in cash at the rate of 0-2-3 per 100 cubic feet.

Old Calcutta road.—About 50 coolies are employed daily on this road, food easily obtainable, men in good condition; paid in cash at the rate of 0-2-3 per 100 cubic feet; the men bring their own tools.

Kishnaghur road.—About 50 coolies are employed daily on this road, food easily obtainable. men in good condition, paid in cash at the rate of 0-2-3 per 100 cubic feet; they bring their own tools.

Sukteepore and Ramnuggur road.—From 700 to 800 men have been employed daily on this road by Mr. Malcolm. In consequence of the heavy rain there was no work from the 1st to the 4th instant. Rice can be obtained easily at from 12 to 13 seers per rupee; the men are in good condition, paid in cash at 2-6 per 100 cubic feet; they provide their own tools. While the Magistrate-Collector was at Ramnuggur, Mr. Malcolm informed him that the inhabitants of the Nuddea district had been, and were applying to him for employment on the roads which are being repaired in this district, and that Mr. Malcolm was compelled to refuse their applications as there was not sufficient work for the residents of the Moorshedabad district who have superior claims. The Magistrate-Collector of Nuddea was addressed on the subject, suggesting that relief works should be opened in that part of the district where, owing to the failure of the rice crop, and to the prevailing high prices of food, there is already some distress, and so great a demand for labour that it is now difficult, and will shortly be still more difficult, to give employment to all who seek for it in this district. It was suggested that it would be well if the repairs of the Kishnaghur road were carried on in the direction of Kishnaghur. The Magistrate-Collector of Nuddea has written to say that he has given orders for the commencement of work in the neighbourhood above alluded to.

Bohotali and Rajgaon road.—About 120 coolies have been employed daily on this road; the men are in good condition, paid regularly by a canoongo; they supply their own tools.

Barromassia and Jellinghee road.—About 108 coolies have been employed daily on this road by Mr. Lang; food is easily obtainable, men in good condition; cash payments made, the coolies provide their own tools.

Gowas and Azimgunge road.—From 20 to 30 coolies have been employed daily by Mr. Macdonald, food is easily obtainable, cash payments made, the men supply their own tools.

Furreedpore road.—Mr. Dixon reports that he has no relief works going on, and that they are not at present necessary in that part of the country.

Mirzapore and Monigram road.—This work is under a Sub-deputy Collector; on the 6th instant 41 labourers were at work.

In the Lalbag sub-division, in addition to the repairs on roads, 108 extra coolies are being employed by the municipality on relief works, *viz.*, road-making and tank-excavating. They are paid at the rate of Rs. 2 per 1,000 cubic feet. The deepening of tanks at Amaipara has been begun. The municipality supplies most of the coolies with tools.

The branch road cess committee of Rampore Hât has sanctioned the improving of the village roads of Rampore Hât, the repairing of the road from Pulsa to Nowagram, and making of a road from Nulhatty to Khanpore, and the works will be started as soon as funds are supplied. The excavation of two tanks at Nobogram, thannah Kullyangunge, has been sanctioned, and work has already been commenced on one of these. Four tanks on the Nushipore estate, as well as one at Gowas, have been sanctioned. The tank at Dewanserai has been commenced, and five others have been started in villages belonging to the Maharanee of Cossimbazar. The Rajah of Nattore has promised to employ labourers in digging and improving tanks. Baboo Gopi Mohan Mazumdar of Islampore, has also commenced the digging of a tank in that village.

(C.)—Transport of Food.

The sub-divisional officer of Lalbag reports that, from what he has seen when in camp by the Ganges, about 2,000 maunds of paddy came into the district per week *viâ* Allatuli and Patibonah and from the number of carts he sees coming and going, he has no reason to think that importation *viâ* these marts is falling off.

It appears that a quantity of paddy has been imported into Dhoolian from Cutwa and other places *viâ* Pakour.

(D.)—Storage of Government Grain at Relief Works.

The Commissioner in reply to the recommendation reported in the last narrative, states that there is at present no necessity for importing Government grain in this district, but that a supply will be sent when required, and that in the meantime report should be sent regarding the most convenient spots for landing by steamer, rice for Jellinghee and Gowas. The relief committee have resolved to store 500 maunds of rice at Kandhee, and to send out 100 maunds at once to Choa to meet any emergency.

(E.)—Advances to Private Parties and their Results.

Several applications have been received for advances for tank-digging and tank-improving. In many cases inquiries have been ordered to be made with regard to the properties pledged, and in others the applicants have been directed to apply in the prescribed form of application. The rules for taking advances appear to be well known by the people. The Magistrate has furnished the following instance showing how very cautiously advances should be made.

"In the morning and afternoon went to see some tanks, with reference to which applications have been made to me for advances for excavation and improvement. I judge that the rules regarding such advances are well known in these parts, from the fact that nearly all the applications received by me have been from this thannah (Bhurtpore) and from this fact observed to-day. Two brothers owning a tank between them, applied for advances of Rs. 500 each, dividing the tank into two portions by means of a small ridge thrown across. They said that this ridge had been put up, as they have by amicable settlement divided the tanks. They were, however, compelled to admit that during the rains there was but one tank; as far as I could judge on a rough estimate, the improvement of the tank could be effected for a sum of Rs. 300 or Rs. 350, and I cannot but believe that these applications were made in the hope of obtaining money without interest, and with little intention of improving the tank. I have of course told these and others that some work will be expected for the money advanced; and further that as a rule I should give the advances by instalment, the receipt of second and subsequent instalments depending upon the results of inspection of the work already performed."

In a certain case with regard to the application for advance for purchasing rice, it was found out that the applicants had evidently intended to buy up rice in the vicinity, and the applications were apparently not *bonâ fide*.

In two other cases of similar applications the sub-divisional officers of Lalbag and Jungypore have been requested to advance money on the execution of the necessary bonds on properly stamped paper, one of the conditions to be stated in the bond being that the grain will be purchased at a distance from places where distress does not extend, and that they should satisfy themselves hereafter that the grain has been so purchased.

In a fourth case the applicant having applied for a sum of Rs. 10,000 for the purchase of grain, sanction has been applied for from the Commissioner to make the advance. In the Jungypore sub-division, Rs. 950 have been advanced for the improvement tanks.

(F.)—CHARITABLE RELIEF.

A detailed report, together with a relief map, has been sent to the Commissioner.

The total amount raised on account of private subscriptions is as follows:—

Donations	Rs.	16,669
Monthly subscription	,,	303

Funds have been placed in the hands of each sub-relief committee for the purpose of affording casual relief.

In the Lalbag sub-division, the poorer people of the city are fed here by private and public charity. In addition to several private charities here, there are two public charities, "Khairats" or religious endowments for charitable purposes, *viz.*, the "Khairat of Bussunt Ali" at Kadamsherif where cooked food is given daily to from 50 to 100 persons, and the "Khairat of Syud Nadir Hossein" where every Friday rice and money are distributed to about 150 persons. The sub-divisional officer wrote to the gentleman in charge of the "Bassunt Ali Khairat" urging on him the propriety of increasing the amount of food distributed, and he assured him that he would try and feed as large a number of persons as possible. The sub-divisional officer held two meetings at Azimgunge and at Baloochur to collect subscriptions, and some gentlemen have been helping him in collecting subscriptions for him in the city. He expects to get about Rs. 4,000 or perhaps upwards, as the agent to the Governor-General has promised to get him some nizamut subscriptions.

At Jungypore a branch committee has been formed, and five persons have subscribed Rs. 26 per mensem.

BERHAMPORE,
The 9th February 1874.

C. D. C. WINTER,
Officiating Justice-Magistrate of Moorshedabad, in charge.

No. 41—S.R., dated Dinagepore, the 9th February 1874.

From—E. E. LOWIS, Esq., Officiating Magistrate of Dinagepore,
To—The Officiating Secretary to the Government of Bengal, Statistical Department.

I HAVE the honour to submit the narrative for the fortnight ending 9th February. The present report is somewhat lengthy, for having now ascertained as far as possible the state of things after the harvest, I have made calculations and entered at some length into details which it will not be necessary to repeat on future occasions. The duty of compiling this and other returns has been, during my absence from head-quarters, entrusted to the Joint-Magistrate, who had reports from the relief officers direct, and who was kept informed of all I learnt regarding the condition of the country visited by me. I found on taking charge of this office that bad accounts were coming in from Ghoraghat, the south-east corner of the district towards Bograh, a part of which had not been visited recently, and which was supposed by Mr. Robinson to be not badly off. I was obliged therefore to go at once and inquire personally into the state of things there, and had I undertaken the duty of preparing this and other returns myself in camp, great delay would have occurred in their submission; I therefore made over the duty to the officer in charge of the station.

A.—State of the Country.

There has been a failure of crop in a tract running across the district from north-west to south-east. The thannahs affected are Ranisonkoil, Peergunge, Kaliagunge, Hemtabad, Bunsihari or Tamboolee, Gangarampore, Patiram, Patnitola, Porsha, and Ghoraghat, containing as near as possible half the population of the district, in round numbers 750,000. Throughout this tract in some places there has been a little rice, more particularly in thannahs Patnitola and Parsha, but, taking all in all, there has not been a one-anna crop altogether. The other half of the district has had a rice crop varying from a one or two-anna crop to a twelve or fourteen-anna one; the cold-weather crops vary in much the same manner. In the distressed tract the return has been sometimes meagre, sometimes pretty fair; in the rest of the district there has been an average crop. The same remarks apply to sugarcane. Jute cultivation is almost entirely confined to the north of the district, where there is no distress. The crop was a fair one, but there was some difficulty in procuring sufficient water to steep the stalks. Wheat, oats, and pulses are not much grown in this district; what there is is mostly grown in a distressed tract to the north-west, on the banks of the Mahananda. The prospects of this crop were very gloomy, but the recent rain has done it an immense deal of good. The distress will be more acutely felt in some thannahs than in others, partly because there has been a semblance of crop in places, and partly because the inhabitants of some portions are better able from their means and position to meet want. In thannahs Ranisonkoil, Kaliagunge, Hemtabad, and Goraghat, and to a certain extent Gungarampore, the majority of the inhabitants are small cultivators; there are few well-to-do munduls or resident zemindars. A considerable amount of the work of planting out and reaping the rice of the southern thannahs is performed by inhabitants of Ranisonkoil and those parts, who, after finishing the work on their own small holdings, travel south for temporary employment as agricultural labourers. On such men a season of distress like the present presses very heavily, and it is from this class that the coolies employed in such numbers by Mr. Jones and Baboo Huri Mohun are recruited. In Bunsihari, Patnitola, and Porsha, on the other hand, there are many well-to-do ryots and munduls who have plenty of dhan in store in their houses, who assist their poorer neighbours, and will, I am confident, prove very useful on relief committees. I have not come across any instance of actual want, *i.e.*, of a person without food or the means of obtaining any; but I have often heard from villagers of their being reduced to one meal a day, and that one meal sometimes eked out with *kuchoo* or plantain stems, the means to procure food being supplied by the sale of their jewels, cattle, &c. I heard of more distress at Ghoraghat than in any other part of the district visited by me. This may be partly accounted for by the fact that until I went there it was supposed that the people were not badly off. I hope things will mend now, for I at once gave directions to mark out a road, sent a relief officer to the spot, and obtained sanction from Mr. Robinson to store 10,000 maunds of rice. The country about Ghoraghat has been saved up to the present, from the want of water in the Jaboona having prevented export of rice from Birampore and Hillee. I found no local grain in the market either new or old; all apparently was brought by Biparees from the supplies of last harvest in the bundurs mentioned above. As soon as the relief work is fairly begun, I hope the surplus harvest of Nowabgunge, where there has been some return, will find its way down. With the exception of Ghoraghat the rest of the distressed tract is supplied almost entirely with new rice brought for sale from the north and west of the district, or sold by ryots who obtained some return and have been compelled to sell to satisfy claims for rent; nor does the demand for rent extend only to those who have gathered some rice, the very labourers on the works do not escape. Mr. Finucane the other day saw some men whom he recognized as his coolies driving cattle to the hât; on his asking them why they were doing so now that they earned wages, he was told that the zemindar, one Kishori Mohan, was pressing for rent, so they were obliged to part with their cattle. Rice is now being sold where relief works have been opened at rates varying from Rs. 3 to 3-5 and 3-7 per maund of 80 tolahs. Baboo Huri Mohun reported that he had been obliged to purchase rice and sell it to his coolies; at my suggestion, however, he has already induced a moodee to set up a shop at the roadside, and no further difficulty has been experienced. Mr. Jones again, at Raigunge, complains that the export of rice from the Julpigoree direction has been stopped, he believes, by order of the zemindar or zemindars at Chukla Boda. His supplies now come principally from the north and west of this district. Heavy rain has fallen lately, which will do much good, enabling the ryots to break up land and sow their bhadoi earlier than usual. The rain will also induce the Mahajuns to lend money. As long as a ryot who had had no winter crop has no prospect of a future one, the mahajuns won't lend, there being no security to pledge; once the villagers can get their bhadoi sown they will get advances on security of the coming crop.

B.—Relief Works.

Mr. Jones is still pushing on with the roads in the vicinity of Raigunge. He employs on an average some 6,000 men a day. Mr. Scanlan, in charge of the Ranisonkoil division, is progressing with his work. His latest accounts show that he affords at present employment to an average of 1,500 persons per day. Baboo Huri Mohun is still employed at Gangarampore. He is continuing work on the roads mentioned in the previous narratives, and has also to superintend the digging of tanks, funds for which have been supplied by private individuals; he employs about 5,000 persons daily. Mr. Finucane has nearly finished the road to Koomargunge; he will soon take up the road to Foolbaree from Patiram, and will join the road towards Patnitola with the portion attended to by the sub-inspector of that division. Mr. Finucane and the sub-inspector between them give employment to a daily average of some 3,000 persons. Baboo Poorno Chunder Goopto has gone to open relief works in the Ghoraghat direction; he has only just begun, and I have not heard how many men he is employing. The Public Works overseers in charge of the

Darjeeling, Maldah, Purneah, and Godagaree roads, are, by the latest accounts, giving employment to 1,663 persons per day. Some difficulty arose as to the work done on the Maldah road; as soon as I heard of it I directed the Executive Engineer to proceed to the spot and see what was the matter. An attempt has been made to introduce task-work. Mr. Finucane first got the men under him to dig 100 cubic feet of sandy soil at the rate of 2½ annas per day; he afterwards reduced the amount to 80 cubic feet, but obliged the coolies, instead of throwing the earth in irregular heaps, to smooth it as they proceeded. Baboo Huri Mohun has introduced experimentally the following rates:—Khiar or stiff clay six annas, pali or lighter soil three annas, and sandy soil two annas per 100 cubic feet. Mr. Jones, again, has some method of pitting one gang against another which results in more work being done. The relief officers are all working right well, and my thanks are due to them for the zeal and promptitude displayed in carrying out my directions. The work on the roads is being pushed on so rapidly, that it will soon be a question whether relief operations should not include the digging and clearing out of tanks and other public improvements. Something will have to be done to supply work for those who want it, for it may be assumed that the number of coolies now employed will have to be kept on, with a probable increase in numbers up to the end of July or beginning of August. The population of the distressed tract is in round numbers 750,000. Out of this I calculate that perhaps three-sixteenths or 140,000 have stores in hand or means to carry them on for a year; four-sixteenths or 190,000 persons have means to carry on for five or six months from 1st January; the remainder, 420,000, have means to enable them some way or another to hold out till March or April next, or having no present means of subsistence, are on the relief works. The above numbers of course include women and children who don't work on the roads. Class I. will not require help at all; Class II. will require help just to tide over the last month or so before the early bhadoi is cut, and Class III. require help now or will require it in another couple of months. I have alluded to the introduction of task-work. I hope to be able, by settling fair rates, to enable an ordinary ryot to earn more than 2½ annas per day. It will not answer to cut the coolies down to a bare subsistence, for they have to provide not only for themselves, but for their wives and children. I have ascertained that many of the coolies manage to live on five or six pice per day, sending the balance home. It is advisable that their earnings should enable them to do so, for if the women and children are not supported by the males of the family, they will have to be supported at much greater expense hereafter by gratuitous relief. I may add that in opening relief works the necessity of the work being within reach of those to be relieved must not be lost sight of. The coolies, as I have pointed out, are recruited largely from the lower class of cultivators; these men will not work at a distance, they cannot or will not leave their families: their little holdings, moreover, tie them to the spot, for the present necessity does not make them forget that a future harvest has to be provided for. The rain during the last fortnight has had the effect of, in some places, diminishing for a few days the attendance of coolies, the men having taken advantage of the rain to go and make arrangements about having their lands ploughed.

C.—Transport.

Baboo Khettro Mohan Singh, the active and intelligent manager of the Rajbaree estate, is importing 20,000 maunds of rice for the relief of his tenants in Kaliagunge, Hemtabad, and elsewhere; 2,000 maunds have been stored, the rest is coming. I hear also that Syama Sankur Chowdry, a Furreedpore zemindar, is sending 3,000 maunds of rice to Jaigunge in thannah Beergunge by boat. I know of no other importation. I have made every effort personally and through the relief officers to induce the mahajuns to import, but without success. It must not be supposed that because a large export trade is carried on from this district that local agency is available for importation. The export trade, to begin with, is not in local hands at all, it is in the hands of traders residing at Coomercolly, Dacca, Calcutta, &c. Their agents located at the different marts on the rivers, buy up the rice from the ryots and ship it off to their masters. This year there being no rice to export, the agents in many instances have not come at all, or if any have come, they are generally subordinates. Koomargunge and other places that at this time of the year are always full of life and bustle are now quiet and deserted; and the agents who are there being appealed to, reply that if their masters see their way to making more money by importing than by employing their capital in any other way they will import, but not unless: the idea of their masters requiring advances is scouted by them as ridiculous. Local agency for distribution within the district there is plenty of; all the traffic of the country is carried on in the hâts, and there are numbers of Biparees and others who frequent the fairs, selling and buying grain, jute, &c., and these men are now busily employed in taking rice from Birhampore and Hillee to Ghoraghat, distributing rice obtained from well-to-do ryots' stocks through the hâts of Gangarampore and Patiram, and bringing the surplus harvest of Thakurgaon and Habra for the relief of Hemtabad and Kaliagunge. It is a question, I think, whether Government should not import rice and sell to these Biparees for distribution through the country; at any rate, I am sure the mahajuns will not import unless rice reaches a price that will put it beyond the reach of the mass.

D.—Storage of Rice.

1,95,000 maunds of rice have been allotted for this district and another lakh available at Purneah. I subjoin a list of golahs showing the amount so far allotted to each, with the points from which supplies will be drawn. A further allotment will be made as soon as I can meet the Relief Commissioner. The allotment, so far as given, has been settled for some time, and the rice is being brought in. I mention this, for an impression that no arrangements have been made seems to have been conveyed by the last narrative.

Name of Golah.	Points of receipt into district.	Total grain allotted.
		Mds.
1. Dinagepore	Rajmehal and Godagaree by road	80,000
Bochagunge		2,000
2. Tamboolee Kali Kamora	Rajmehal by road	20,000
3. Patnitola Patiram	Nowhatta and Sahibgunge, Zillah Rajshahye, by boat	20,000
4. Neetpore	Godagaree by boat	10,000
Gangarampore		5,000
Kardaha		5,000
Nowbazar		5,000
5. Raigunge	Godagaree by boat, Dingraghat, Zillah Purneah by road, Hyatpore, Zillah Maldah *vid* Chooramon by road	44,000
Ajnabad		2,000
Malone		2,000
Bindole		5,000
Minapore		2,000
Hemtabad		5,000
Kaliagunge		5,000
Peergunge		5,000
6. Rani Sonkoil	Kishengunge, Zillah Purneah, by road	5,000
Bodessari		2,000
Nekmard		2,000
Haldibaree		2,000
Bonbaree		2,000
7. Ghoraghat	Govindgunge, Zillah Bograh, by road	10,000

It will be observed that the north-west of the district contains a large proportion of the allotment, the reason being that in that quarter there are very few well-to-do ryots with old stocks of rice in hand.

As to the transport of this allotment, the carriage at our command will hardly bear any strain that may be put on it, as the Joint-Magistrate seems to think, though I hope to get in 1,000 maunds a day. To begin at the north, Mr. Scanlan will probably have to draw his supplies from Purneah; he can collect some 600 carts for this purpose. Mr. Jones draws his supplies through Hyatpore, the rice being sent as far as Chooramon by the Maldah authorities and taken on by Mr. Jones by boat to Raigunge. He also draws from Dingraghat by cart or ponies; for this he cannot I suspect muster more than 150 carts and 150 ponies. Mr. Jones also draws from Godagaree by boat up the Mahananda. Tamboolee, and Dinagepore are supplied from Rajmehal direct by road. For this purpose 500 carts and 1,000 pack-bullocks could be collected through the Dowlutpore and Mahipaldighee mandals. Gungarampore is at present supplied by boat from Neetpore, plenty of small boats being available. It could also afford 400 carts if necessary. Neetpore is supplied by boat from Godagaree and Patnitola and Patiram by the same means up the Atrai. Ghoraghat supplies are forwarded through Bograh to Govindgunge thannah, whence it goes by cart. For this work Ghoraghât can muster about 100 carts. The amount allotted for the district in round numbers, three lakhs of maunds, will not suffice for the requirements of the population; a further allotment must be made. The mahajuns as I have said are not to be depended on to supply grain; the zemindars shrink from undertaking a work for which they have no agency, and of which they have no experience. It rests, then, with Government to sustain the burden, and in order to ascertain what amount will be required I have made a calculation based on the census returns and on figures supplied by the sub-deputy specially deputed to ascertain certain facts. The calculation is a rough one, but it is the most accurate the figures at my disposal will enable me to make out. The district is calculated to comprise 13,59,125 acres of rice cultivation; calculating the yield at 8 maunds of dhan per beegah, or 24 maunds per acre, we have 3,26,19,000 maunds of dhan, or about 163 lakhs of maunds of rice as an average outturn. From this must be deducted the annual consumption of the inhabitants, which at the rate of 6 chittacks for each child, and 10 chittacks for each adult per day amounts to 73,63,575 maunds of rice. The statistical officer, also, after inquiry found that about 67,00,000 maunds of rice were exported last year. The total of consumption and exportation, then, for 1873, amounts to 140,63,875 maunds. This amount, deducted from the estimated outturn leaves about 22,50,000 maunds in stock at the beginning of this year. In this amount is included the rice stored in the marts along the Jaboona, which could not be removed owing to the river not being high enough; a good deal of this rice has since been taken into Rungpore. I have, however, taken credit for the whole. To this amount, 22,50,000, in store must be added the outturn of the present harvest, which I calculate to have been a two-anna crop, perhaps a little more all round, say 20,00,000 maunds. I would also add one lakh of maunds for the Borâ Dhân which ripens at the end of May. The total amount that we can calculate on, then, to last us till the Bhadoi ripens in August, is about 43½ lakhs of maunds. From this we must deduct local rice, say 6½ lakhs which leaves a net balance of some 37,00,000 for the support of the population. This is as near as possible six months' supply for the whole district: supposing the grain to be equally distributed we have enough to last till June, and provision need be made only for July and part of August. In fact, however, the grain is not equally distributed; one half of the district, as I have pointed out, having a sufficiency, the other half very little. Those who have rice will take care to keep an eight months' supply at least. It follows then, there being only six months stock, that the other half will only have four months supply, and this is in fact the conclusion the villagers themselves have arrived at, for I have constantly been told that the supply will be kept up till March or April, and that after that they do not know where rice is to come from. I do not think the villagers are far out in their calculation; in other words a four months supply for 7,50,000 persons is required=ten lakhs of maunds. A smaller amount will probably suffice, for the people have not for some time been living at full rates or consuming the old stocks as fast as usual. The present outturn, too, may be computed as something over a two-anna crop, and some small amount will probably come in from Maldah, Julpigoree, and elsewhere. I would estimate the requirements of the district at seven or eight lakhs of maunds. I may add that it is important the people should be supplied with rice soon, otherwise there is a fear of their consuming a portion of the reserve keep for seed, thus diminishing the prospects of the coming harvest. The above amount will not be required for the supply of relief work labourers alone, but I do not think Government should restrict themselves to their original intention in the matter of storage; rice should be distributed from Government golahs not only for relief works but throughout the distressed tract. Biparees should be permitted to supply the hâts and zemindars encouraged to buy wholesale for the relief of their tenants. If this plan be adopted a great deal of inconvenience to the inhabitants and of expense to Government will be saved for any expense incurred on transport, and loss sustained in sale of such large quantities will be more than compensated by the saving in gratuitous relief.

E.—ADVANCES.

No advances have yet been taken either by traders or zemindars, the former don't require them; if they find it to their interest to import they will do so without asking help from Government; the latter if pressed to take advances to import, urge that they do not know how to set about the business; the zemindars have now again been addressed on the subject of taking advances for the relief of their tenants—it remains to be seen what action they will take. I would suggest that in place of advances for the purposes of importation the zemindars should be permitted to take advances of grain from the Government golahs for distribution among their ryots, on the same terms as to repayment in cash as are now allowed for money lent. It seems to me it is much the same thing whether a zemindar gets 5,000 rupees or 5,000 rupees worth of rice; he will, according to my proposal, at any rate have no longer any excuse for not taking the advance.

F.—CHARITABLE RELIEF.

I have already addressed the Special Commissioner, and submitted a plan for a central committee at the Sudder station and Sub-committees at various points throughout the distressed tract.

The following table shows the number of criminal cases in connection with scarcity, that occurred during January 1874:—

			Number of cases reported excluding cases declared by the Magistrate to be false, and never to have occurred.
DACOITY—			
Heading 30 and 31 of Crime Return.	Month of January	1874	6
	Ditto	1873	5
	Ditto	1872	0
ROBBERY—			
Heading 32 and 33 of Crime Return.	Month of January	1874	3
	Ditto	1873	2
	Ditto	1872	0
THEFT—			
Heading 43 of Crime Return AI exclusive of cattle theft.	Month of January	1874	63
	Ditto	1873	29
	Ditto	1872	17
HOUSE-BREAKING—			
Heading 35 of Crime Return.	Month of January	1874	64
	Ditto	1873	28
	Ditto	1872	13
Total of cases	Month of January	1874	136
	Ditto	1873	64
	Ditto	1872	30

No. 501F, dated Camp Bhalooka, the 10th February, 1874.

From—F. J. ALEXANDER, ESQ., Officiating Magistrate-Collector of Maldah,

To—The Officiating Secretary to the Government of Bengal, Statistical Department.

IN continuation of my No. 341F of the 27th ultimo, I have the honour to forward the sixth fortnightly narrative of Scarcity and Relief in the district of Maldah, for the fortnight ending 7th instant.

Narrative of Scarcity and Relief in the Maldah District for the fortnight ending 7th February, 1874.

A.—STATE OF THE COUNTRY.

PRICES are generally rather easier at the close of the fortnight, especially in the north-west of the district (Thanah Khurbah), where at the close of the previous fortnight and beginning of the present fortnight, they had risen to famine rates. This is no doubt generally owing to the late rainfall, but in the north-west tract small importations affect the market, showing only too clearly that the local stocks in that quarter are deficient.

Supplies, except in the north-west tract, are generally plentiful at the local bazars and markets.

It is noticed that paddy finds a readier sale, as compared with rice, than in ordinary years. Those who have stocks do not wait to husk it, being anxious to sell, while those who buy get rather more for their money in paddy than rice.

The following are the latest prices of paddy and ordinary rice at the undermentioned principal markets in different parts of the districts:—

CENTRAL PART OF THE DISTRICT.

(*At Englishbazar.*)

Paddy	Not given.
Ordinary rice	13 to 13½ seers per rupee (80 tolahs).

(*At Balia—Nowabgunge.*)

Paddy	21 seers per rupee (80 tolahs).
Ordinary rice	13 ditto ditto.

NORTH-EAST OF THE DISTRICT.

(*At Bamangolah.*)

Paddy	19 seers per rupee (80 tolahs).
Ordinary rice	13 ditto ditto.

NORTH-WEST OF THE DISTRICT.

(*At Chanchal, Toolsigunge, Shumsi, Abadpore.*)

Paddy	Not given.
Ordinary rice	10 seers per rupee (80 tolahs).

(*At Hyatpore and Futtehpore.*)

Paddy	19 seers per rupee (80 tolahs).
Ordinary rice	12 ditto ditto.

SOUTH-WEST OF THE DISTRICT.

(*At Kaliachak.*)

Paddy	18¾ seers per rupee (80 tolahs).
Ordinary rice	12 ditto ditto.

SOUTH-EAST OF THE DISTRICT.

(*At Rohunpore.*)

Paddy	21 seers per rupee (80 tolahs).
Ordinary rice	13¾ ditto ditto.

Rainfall.—On the night of the 21st January 1874, and on the morning of the 1st February, rain fell, 0·87 inches being recorded at the Sudder station, and again on the 5th and 6th February, rain fell, 0·27 and 0·05 inches being recorded. On the 25th and 26th January rain also fell, viz., 0·46, making the total rainfall of the fortnight 1·65. This rain has done immense good to the cold weather crops.

State of the crops.—As previously reported the kalai crop now almost harvested has been quite an average one, ditto the sursoo (mustard seed). The *former* has been sufficiently good to admit of a portion been exported, and is a valuable addition to the food supply as it forms the staple article of at least one meal of a great portion of the population in the "deara" lands.

The cold weather crops—wheat, barley, cheena, peas, &c., are looking in excellent condition over a large tract bordering on the Ganges, and generally everywhere, since the rain, promise quite an average yield.

The "boro dhan" is being still busily transplanted. This rain will do it great good; as soon as the transplating is completed, I will give an estimate of the extent to which it will add to the food-supply.

Condition of the District.—Small-pox is still very prevalent in the north-west of the district (Thannah Khurbah), otherwise the general health of the district is good.

The late rain has given the ryots ample occupation in ploughing their lands, and with the prospect of good cold weather crops which may now be safely expected, all the western and south-western portion of the district may be considered safe from anything like general distress or great scarcity.

In the north-west of the district especially, and to a less degree in the eastern tract, there is, however, considerable cause for anxiety. Distress has already shown itself in the north-west tract, and the villagers are many of them glad to get employment on the relief works. I annex a comparative statement of theft cases, &c., for January 1872, 1873, and 1874, respectively. As yet grain-thefts do not call for any very special notice, but two cases reported are clearly attributable to the scarcity and indicate that distress has already commenced.

B.—CONDITION OF ANY SPECIAL TRACTS.

The condition of the north-west tract (Thannah Khurbah) is already critical. At the close of the previous fortnight and for a few days prices had risen as high as eight seers, while the local supplies fell short of the demand. Since then and up to date, I am glad to be able to report that things are easier, prices having fallen and supplies increased (by importation).

When I wrote my last fortnightly narrative, I was at the very south of the district, but on hearing that distress had commenced in the north-west of the district, I hurried up there, and I am now encamped in the neighbourhood, inspecting relief works, organising charitable relief operations, and hurrying on the grain by the north-west route (Sahibgunge *cum* Hyatpore) to Dinagepore and Khurbah.

Relief works have been commenced throughout the distressed tract, and during the last week the number of those coming to the relief works has largely increased; the number employed will be found below, and I annex a rough sketch map for reference showing relief works in progress and which will be started as required in the tracks alluded to.

It has been necessary to open the Government stocks to those employed on the relief works in this tract, but as yet the wages are paid in cash, and the workmen know they can buy rice at the store-houses at Khurbah and Soroopgunge at Rs. 4 per maund, and up to date 12½ maunds have been thus sold from the Khurbah stocks.

Charitable relief is also being given at Khurbah and Chanchal to the old, the lame, sick, and blind, and those who are unable to work; the numbers thus relieved up to date are given below.

We intend to get out of our kangal (beggar) squad such slight work as we can in the way of spinning cotton, twisting thread, and husking rice, &c.

The manager of the Chanchal estate has already found it necessary to advance grain to his tenants to be repaid hereafter, and they daily come in to him in numbers to receive such assistance. He has already thus advanced 509½ maunds. As regards tenants and other zemindars who are giving them no assistance, I have instructed Mr. Reily to offer to purchase and import grain for them out of the districts, if they make a purse to meet the expense. Such an arrangement is absolutely necessary to enable those who cannot leave their agricultural occupations to go to the relief works to keep from starving and deserting their fields.

I shall stay in this tract till the relief works and charitable relief requirements are in thorough working order, at the same time I am receiving great assistance from Mr. Reily, the Manager of the Chanchal estate, and I can place entire confidence in him to carry out whatever is necessary to be done.

Since writing my last report, I have travelled over 150 miles and visited a great portion of the eastern and south-eastern tract, where the likelihood of the failure and the water-supply was causing anxiety. I have arranged to start several tanks where they are most needed, and ordered wells to be dug along the Dinagepore and Godagaree road which intersects that tract.

My presence is needed at all points, and the urgency of pushing on the Dinagepore grain as well as the supplies for my own district adds considerably to the pressure. I urgently require another officer at head-quarters, one of my deputies (Moulvie Fyzoolah) having recently died.

(B.)—RELIEF WORKS.

Work is going on on almost all the ordinary district roads; between 400 and 500 labourers are employed on an average daily according to the latest reports.

In the north-west tract the number of labourers has largely increased, daily average of over 1,000 (men, women, and children) being reported as employed during the last week of the fortnight under report.

Relief work is now going on on all the following roads—*vide* annexed sketch map, *viz.*,

1. Chanchal to Khurbah.
2. „ to Toolsigunge.
3. „ to Bhadovia, Maltipore, and Shunsi.
4. „ to Soroopgunge.
5. Maltipore and Hyatpore.
6. Khurbah to Matarapore and Khanpore—

Tanks have also been commenced at two places (*vide* map), viz., Gopalpore and Sarbowa.

As soon as the above works are completed it will be observed that they are spread over the distressed tract. Work will be commenced on seven other tanks, and a proposition has been forwarded to the Commissioner for sanction to open out the old bed of the Mahanada, an important work in itself and one which will afford ample relief to large numbers.

C.—TRANSPORT OF FOOD.

The local importation and transport of food is rather more active. The small traders and more well-to-do ryots are, I am glad to see, importing from Sahebgunge and elsewhere, but the zemindars are in many instances doing nothing to assist the local food-supply though well able to do so and well aware of the facilities afforded by Government.

In the "Barivdo" tracts, paddy and rice seem to be still plentiful, and this supply feeds all the central markets and the Sudder station.

Kalai is being exported along the Ganges.

The transport of Government grain is being pushed on as rapidly as the available carriage enables us to do, but at the rate the grain is *now* arriving, the local carriage will be quite unequal to carry it away as fast as it arrives. I refer especially to the Rajmehal and Sahebgunge routes, and it will now be necessary to establish large depôts on the Maldah side opposite the Rajmehal and Sahebgunge routes and store the grain and work it off as it arrives gradually to the extent of the carriage available, as has hitherto been done from the Godagaree receiving station.

Hitherto the boats available have sufficed to carry off the Godagaree receipts, and, as I hope this route may still be open to boats of 200 to 300 maunds for sometime to come, I would have much wished and still would urge that a very large portion of the grain be still sent by that route.

The Rajmehal route I would put but little pressure upon; the crossing is a difficult and tedious one. I would send the main portion of the rail despatches to Sahebgunge, and the *Teesta*, with two flats, would be able to keep both the depôts on the Maldah side of the Rajmehal and Sahebgunge route supplied with quite as much grain as the available carriage can possibly carry away.

It must not be forgotten that with the harvesting of the cold weather crops, the supply of local carts is likely to be less plentiful than now.

If part of the despatches were sent in one-maund bags it would enable us to use pack-bullocks, a mode of transit which we cannot at present make use of on account of the grain being in two-maund bags.

In the above view I am arranging to erect store-houses to contain 20,000 maunds each, as receiving depôts both for the Rajmehal and Sahebgunge routes.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

The latest information of all receipts and despatches has not reached me.

Up to 31st January, *vide* my No. 404 F, dated 31st idem, out of 20,000 maunds allotted to *this* district, 13,257 maunds had been received and stored, and 47,322 maunds were in transit through *this* district to Dinagepore.

Since then the quantity stored in this district has been increased only to about 13,850 maunds, it being thought advisable to push on the Dinagepore supplies first, this will account for the quantity stored here being shown as *less* this fortnight than in the previous fortnight, the deficiency will be filled up from subsequent receipts. In addition to the 47,322 maunds mentioned above as in transit to Dinagepore, 12,276 maunds have since been despatched from Godagaree and is on its way, and 7,000 maunds have been despatched from Hytpore, all of which has been carried through this district to the Dinagepore border. A further despatch of 5,000 maunds, since received from Sahibgunge, is now being despatched to Dinagepore, so that 71,596 maunds have been received and sent on to Dinagepore through this district up to date. This is exclusive of Mr. Westmacott's despatches from Rajmehal of which I have no intimation.

(E.)—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

The Famine Commissioner has sanctioned an advance of Rs. 10,000 in one case, and an application for sanction to an advance of Rs. 50,000 to the same applicant is under reference to Government.

I have also applied for sanction to make further advance of Rs. 20,000 to the manager of the Chanchal estate and Rs. 2,100 have been advanced in other cases.

All of the above are advances for purchase of grain.

Besides these, Rs. 5,000 has been advanced to the manager of the Chanchal estate for village improvements, such as digging tanks, and a recommendation has been made for an advance of Rs. 3,000 for a similar purpose to the manager of the Sohirpore estate.

Other applications are under disposal.

(F.)—CHARITABLE RELIEF.

Besides the places previously mentioned, subscriptions have been raised at the following places, *viz.*, Chanchal and Rohunpoor.

The total amount locally subscribed hitherto is Rs. 3,638, and Rs. 500 has been drawn as the Government donation towards the Chanchal Relief Fund as it was urgently needed.

The formation of sub-divisional and sub-committees is in a forward state, but only at Chanchal and Kurbah has it yet been thought necessary, beyond relieving a few casual cases, actually to commence charitable relief. At both of these places the old, lame, sick, &c., who are unable to get work are being relieved; at Khurbal up to date 415 men have received relief at an expenditure of 10 maunds, 25 seers, 14 chittacks of rice, and at Chanchal 760 people at an expenditure of 9½ maunds.

I take this opportunity of urging on the Government the necessity for liberally assisting this district through the Central Relief Committee, inasmuch as there are no Rajas or very rich people here from whom assistance can be expected.

Many of the traders are well off, but they are proverbially backward on these occasions.

I conclude, of course, that any assistance which the Central Relief Committee may give is quite irrespective of the amount which the Government has already promised to give, *vide* circular No 80, as a supplement to the local subscriptions.

(G.)—FINANCIAL RESULTS OF THE FORTNIGHT.

Total expenditure since November from the District Treasury up to date of last narrative (*i.e.*, January 24th) is 20,114-4-0.

No. 1393, dated Beauleah, the 9th February 1874.

From W. H. D'Oyly, Esq., Collector of Rajshahye.

To—The Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honour to forward my narrative for the fortnight ending on the 8th instant.

A.—State of the Country.

The effects of the plentiful rain which has fallen throughout the district have been beneficial in more ways than one; not only have the cold-weather crops generally been much improved, but the prices of rice have fallen. There has been a great addition to the water-supply, which in many places was beginning to get alarmingly short. The river Attrai has, I am informed, risen 6 inches, and the ploughing of land for next year's rice has been facilitated. On the other hand, the roads have become somewhat heavy, but the clear weather and westerly winds we are now having is fast drying them up; some of the crops in flower have a little suffered, though not to any great extent; and some of the Government rice in transport has got wet, though I am glad to say that only a small quantity has been damaged. What was wetted has been taken out of the bags and exposed to the sun and air and replaced in bags.

The bazars are generally well supplied, importations have increased rapidly, and altogether people's minds are easier than they were a short time back. There have not been any cases of starvation; poor people have undoubtedly stinted themselves to some extent in their food, but beyond this the effects of the scarcity have not been felt. There has been an increase in crimes against property, but not to such an extent as would justify the conclusion that the increase was owing to the scarcity. In the dacoity case the chief man was a known bad character.

The prices of rice are as follows:—

	Seers (of 80 tolahs.)
Beauleah	13½
Nattore	14¼
Nowgong	13
Gobindpore Hât	13

B.—Relief Works.

The following statements show the progress of relief works. Many of the labourers have returned to their homes to plough their lands. This was to be expected. Mr. Abbott has been told that he can employ a mohurrir to keep and submit returns.

C.—Transport of Food.

There have been more importations of food during the last fortnight than there were in the previous one; nearly 30,000 maunds of rice and about half that quantity of dahn have been brought into Beauleah. The Nattore bazar has also received large supplies.

In both instances the rice has been brought from Dacca and Backergunge, and some also from Jessore.

Boats are going down past Noonnagur daily for rice, and as many are coming up daily laden with rice and paddy.

D.—Storage of Government Grain.

The following statement will show the progress in transport and storage of Government grain. The Godagaree depôt has done very well, considering the means at our disposal. I was at Godagaree last week, having gone up in the steamer with Captain Ker, and I can confidently state that everything that was possible has been done to secure the quick despatch of rice: we were able to store and shelter all the cargo taken from the two flats which the *Sir William Peel* brought up, and despatches by cart and boat continue daily. I have, at Captain Ker's suggestion, applied for a number of pontoons which are in Calcutta, and I trust they will be sent up shortly. From inquiries made by me it appears that they will carry 100 maunds each, and the draught is only about 12 inches. I believe that about 100 of these are available.

F.—CHARITABLE RELIEF.

Relief centres have been decided on and committees (district and sub-divisional) organized. No charitable relief has been necessary as yet.

No. 6, dated Rungpore, the 9th February 1874.

Memo. by—E. G. GLAZIER, Esq., Officiating Magistrate.

FORWARDED to the Secretary to the Government of Bengal.

Narrative of Scarcity and Relief, Rungpore district, for the fortnight ending Saturday the 7th February 1874.

* * * * *

A.—STATE OF THE COUNTRY.

THE supplies in the different markets keep up well; imports now come by land from Julpigori and Cooch Behār to the north of the district, and from Ghoraghat and Bograh to the southern parts. The late abundant rain has caused prices to be a little easier in most parts, though in some places higher quotations are made.

Market quotations are as follows:—

Rungpore, per rupee - - -	11½	of 80 tolahs.
Gyebunda - - - - -	11½ to 12	” ”

In very few places is the price above Rs. 4 to Rs. 4-6 per local maund of 90 tolahs weight. I received a report from one place to the east of the Teesta of the local price being over Rs. 5, but the strain was only temporary and confined to a very limited area, as it is not far from the zemindary of Maharani Soorna Mohi, where the price is kept at Rs. 3-8 per maund by regular supplies and sales on her part at the different markets.

We have had a great deal of rain during the fortnight; the register at the Sudder station shows five inches. During the last week we have had rain almost every day and the fall has been general throughout the district. The first rains have done an incalculable amount of good and the wheat and kalai are looking very flourishing and promise well, especially towards Bhowanigunge. The later rains, however, are more than were wanted and will do some harm to the mustard and tobacco. Hail has fallen near Burihat and damaged the latter crop. The spring sowings are now being delayed on account of the constant showers and cloudy weather, but there has been a vast extent of land prepared for the rice, and with seasonable weather the crop will be a good one, much more than the average. A considerable amount of cheena and kaon has also been sown, and there is every hope of their doing well. Towards the south-east, where the sowing is early, the spring rice has already reached a fair height.

During the fortnight I travelled through part of Thannahs Moluny and Sundergunge and the north part of Sadullapore, all lying to the south and south-east of the station. This is by far the most distressed part of the district. I came upon several cases of emaciation and met many beggars in distress for food. Several deaths, too, were reported, but from the inquiries I had made, they rose from disease, old age, and debility, accelerated no doubt in some cases by neglect and unwholesome food. No case, however, has come under my notice where death could be ascribed to starvation simply. In the two specially distressed tracts, Pyrabund in Moluny and Sundergunge, I have had special road relief works opened, and employment is thus provided for all who come, and charitable relief has been organized and commenced at those places and at two other places in Thannah Sadullapore. The cry, as I have before reported, is for advances for the poorer agriculturists. In Pyrabund, I have arranged with the five sharers to take advances to the amount of Rs. 10,000 for the purpose, and they have already commenced help in that way. Throughout Sundergunge, the zemindars as a rule will not take advances, having money of their own, and they are lending it out to the ryots, but then they charge interest and will not assist the very poor. I have placed the Deputy Magistrate of the sub-division there to do what he can to arrange matters, to organise the local relief committee, and to see the new road works in progress.

Another bad tract lies to the west of Gobindgunge and measures for charitable relief have also been taken there, the condition of the people has become on the whole worse in the bad parts and better in the less distressed quarters. Durwani, Nagasuri, and other parts are improving, Panga and Purbabhag are much the same, and special measures are being taken for their relief. The rain has abated much of the fear of scarcity and raised the spirits of the people, but many thousands will have a difficult time to tide over before the new crops are harvested. I have parcelled out the district among responsible officers to keep every part under constant inspection, to institute where needed measures of relief, and to see that the relief works are properly carried out under the supervisors.

B.—RELIEF WORKS.

Our labourers are now fast increasing in the centre and south. In my last tour I had several complaints from several batches of men about irregularity of employment. Most of our men in charge being new to the work it has not been found possible to initiate an extensive system of relief works without a hitch here and there, but I am in hopes that matters have now been put on such a footing that nothing of the kind will occur again. We have over 1,000 men at work on the roads previously in progress. The new roads opened are being flocked to. I have not at hand any reports to show how many are at work there; on tanks being dug by zemindars at least 500 more men are being employed; one large one is being repaired in Bahirbund.

The following roads are now reported as in progress:—

	Men employed.
Dinagepore road	69
Kishoregunge to Bhoydabri	36
Gyebunda to Govindgunge	41
Peergunge to Kallygunge	245
Naldanya to Sadullapore	—
Bograh road	172
Dumduma to Naldanga *viâ* Pyrabund	111
Rungpore station road	66
Chillakhal road	48
Julpigoree	69
Bhowanigunge	—
Cooch Behar	43
Bagwa	61
Kisharegunge to Chittakhal	64
Batashun road	—
Kawninghat road	—
	1.025

The men are paid at the rate of three annas per 100 cubic feet. I consulted with Mr. Robinson this week about raising the rate to 3½ annas, but he advised working on at the old rate for the present, as the men would probably increase with certainty of employment. All are paid at present by task work, but as charitable relief has now commenced, light labour gangs will have to be organised for those who can work a little, but cannot give a fair day's work. The labourers purchase their food at the local markets.

C.—Transport of Food.

Large supplies of rice have been received at Kallygunge for the Baharbund estate, and as noted under A, supplies by land come regularly to the markets. Transport of Government rice is going on steadily; no block has yet occurred and there will be no difficulty in getting rid of the first 70,000 maunds sanctioned for the district. I was down at Kallygunge a week ago; the second lot of 20,000 maunds brought by the *Bombay* was almost landed and has since been done so within the time, 30,000 maunds have been sent away from Kallygunge, and 26,000 maunds remain to be sent off, which will take about 10 days to a fortnight.

D.—Storage of Government Grain at Relief Works.

The total amount of rice received and distributed up to date is as follows:—

Receipts.	Mds.
January 22nd, country boats from Seerajgunge	1,000
„ 25th, „ from „	734
„ 26th, „ from Goalundo	2,922
„ 28th, „ from Seerajgunge	1,257
February 2nd, steamer *Bombay* from Naraingunge	20,000
„ 2nd, „ from „	10
Total	25,923
Previously received	32,246
Grand total	58,169

Despatched.	
To—Gyebunda	1,690
Peergunge	1,190
Naldanga	1,660
Rungpore	1,160
Chillakhal	9,037
Kureegram	3,700
Total	18,437
Previously despatched	13,221
Grand total	31,658
Balance at Kallygunge	26,511
	58,169

The steamer *Benares* was expected on the 4th February 1874, with about 4,000 maunds; no other advices have yet been received. A second allotment of 70,000 maunds has been applied for.

E.—Advances to Private Parties and their Results.

Advances for the purchase of grain have been made during the fortnight to three persons at Rs. 1,000 each, and another advance of Rs. 2,000 has been sanctioned, but the money has not yet been paid. No rice has yet been imported by any to whom advances were made.

As before remarked, advance to the amount of Rs. 10,000 has been sanctioned for loans to ryots; the deeds are in preparation and the money will soon be paid.

F.—Charitable Relief.

Relief operations have commenced at Naldanga, 127 persons aided; Rs. 500 locally subscribed.

Luckhipore 60 to 70 persons assisted; Rs. 300 locally subscribed.

Pyrabund distribution commenced; no report of number yet received. This is under control of the Central Committee.

Mahegunge—An unnachotra has been opened by Baboo Roy Luchmeeput, and 60 persons receive cooked food.

Elsewhere half a seer of uncooked rice is given, as preparations for cooking the food have not yet been matured.

Other centres will be immediately opened for Sundergunge, Batashun, and Govindgunge.

No. 997, dated Bogra, the 9th February 1874.

From—C. A. Kelly, Esq., Officiating Magistrate and Collector of Bogra,
To.—The Officiating Secretary to the Government of Bengal, Statistical Department.

I am at head-quarters, and will write and despatch this fortnightly narrative before leaving again for the interior.

Narrative of Scarcity and Relief in the Bogra District for the fortnight ending the 9th February 1874.

A.—State of the Country.

There is as yet no deficiency of supplies in the bazar. Ordinary rice at Bogra selling at Bogra market 12¾ seers of 80 tolahs, at Sultangunj 13½, at Dupchanchea 14 seers:—

12,000 maunds at Dupchanchea,
2,100 „ at Sultangunj,
2,500 „ at Kechak,
1,000 „ at Bogra, and
20,000 „ at Hilli,

are reported as in the hands of traders and petty dealers. My remarks in the last fortnightly narrative with respect to grain in the hands of ryots may be considered as repeated now. The rainfall in the last fortnight has been separately reported upon. The weather looks more settled now, and it is to be hoped that we shall have no more rain for some weeks, as enough, and indeed more than enough, has already fallen for present agricultural purposes. Cold-weather crops may be said to be doing well. Of the two principal crops—mustard and sugarcane—a 12 annas and 13 annas yield respectively may be expected. The cutting of both these crops is being proceeded with. The condition of the people cannot be called critical. There are no known cases of misery and starvation calling for any special remarks. A few cases of distress, such as might be expected in any season of high prices, have been reported, and steps have been taken for their relief. There were 14 cases of grain-thefts reported during the fortnight.

I need not add anything to my previous remarks (in the last narrative) with respect to the condition of special tracts, except that I was pleased to find on a recent visit to Shibganj thannah that the late rains have decidedly improved matters there, and I saw no signs of severe distress.

B.—Relief Works.

The work of altering lines originally laid out so as to meet the views of the Relief Commissioner has been prosecuted. Besides the roads previously reported upon, labourers are at work on the repairs of the Dinagepore and Nattore roads. A list of the lines of road (similar to the last) is subjoined, showing the number of labourers employed on the 7th February on each. This does not include labourers employed by the municipality.

	Men.	Women.	Children.
Shareakandi road - - -	169	—	4
Sultangunj - - -	127	67	29
Matidali - - -	150	2	8
Khuttal - - - -	300	—	20
Dupchanchea - - -	Report is not received.		
Dinajpur - - - -	500	—	40
Nattore - - - -	12	—	—
Total - -	1,258	69	101

A correction should be made in the last report under this head—for "up to the 24th," should be read on the 24th. Some women have recently taken employment on the Sultangunj road, a new feature in our labour operations; but crops in that part of the district (it is in Bogra thannah) have suffered severely. I need not report more with respect to mode of payment, rate of wages, and arrangements for tools.

C.—Transport of Food.

From the reports received it appears that 3,100 maunds of rice has been imported by way of the Daokona and Bangali Rivers, and 600 maunds rice and 100 maunds paddy from Rajshahye.

Means of transport sufficient; but on this head it may be noted that there is some deficiency in procuring carts at Serajgunge, and I have sent some out to help. We are only, however, importing 5,000 maunds from there, nearly 3,300 of which have been received. The recent heavy rain inundated the tracks between Joka and Dupchanchea, and part of the rice was consequently forwarded by boat. No block can be said to exist. The bad point between Serajgunge and Bogra previously referred to is reported as all right now. Some carts have been sent to Sultanpur for conveying grain on the requisition of Major Lindsay. A large number of carts and some small boats have been employed in conveying rice from Jonka, and several have been sent to Serajgunge to aid in bringing in the rice despatched from there.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

I add the names of other storage places selected in addition to those mentioned in my last narrative :—

1. Gakul.
2. Gayeshpur.
3. Jamalgunj.
4. Deoli.
5. Punat.
6. Baguni.
7. Hatshahar.
8. Jambooban.
9. Sherhati.
10. Dhekarpara.
11. Kalandarpur.
12. Hilli.
13. Panchbibee.

A number of store-houses have been supplied gratuitously. We are building large store-houses at Bogra and Khetlal (the one at Khetlal should be nearly or quite finished by now), and another has recently been ordered for Panchbibee. Arrangements for guarding these store-houses have been previously reported. Amount of food-grain received up to date is 18,331-3-11-3, of which 1,285 maunds has been sent to Ghoraghât, Dinajpur district. I am now informed that we are to receive in all 40,000 maunds more, 30,000 for this district and 10,000 for Ghoraghât (Dinajpur). 8,000 maunds of this rice will probably go by river to Govindgunge, and the remaining 2,000 (part of which has already gone) by carts.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

The only advances made to private parties up to this time have been four advances for tank-making under the Land Improvement Act (including the two previously reported upon), amounting in all to Rs. 1,445. In another similar application local inquiry has been ordered, and another application (incorrectly drawn up) will shortly be dealt with. Two applications were presented on the 6th February 1874 for Government loans under paragraph 4 of the Government letter No. 4020 of the 18th December 1873 ; they will be attended to. It has since been found that these applications are not of the kind contemplated by Government.

F.—CHARITABLE RELIEF.

I have previously reported upon our relief meeting and subscriptions and selection of relief members. A few more sums have, in the last fortnight, been sent out for distribution in cases of need. A map has also been drawn up showing sites for storage houses and grades of condition of country.

ENCLOSURE No. 7.

SUPPLY OF STEAMERS FOR FERRYING GOVERNMENT RICE ACROSS THE GANGES.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

Calcutta, the 19th February 1874.

THE Commissioner of Patna has represented that he requires two more steamers with flats to work the ferries at Futwah ghât (near Patna) and at Barrh ghât, as well as an extra steamer to carry the railway material. He wants them to be of light draught, and he has, by a subsequent telegram, asked that for each steamer four flats instead of two may be provided, as a steamer can work more economically and rapidly if she can have a pair of flats for each side of the river. Sir Richard Temple supports the Commissioner's recommendation, and telegraphs that the draught of the steamers should, if possible, be not more than three feet.

2. The Lieutenant-Governor has, in communication with the Master-Attendant, considered the best way of meeting these requirements. The river steamers and flats belonging to and hired by Government are at present employed as follows:—

Steamer "Peel."—Draught 4 feet, with two Government flats, the "Tirhoot" and "Isla," is working the Kooshtea crossing to Godagaree, &c.

Steamer "Koladyne."—Draught 3 feet 9 inches, with one hired flat the "Gogra" is employed on the same station.

Steamer "Teesta."—Draught 3 feet, with Government flat "Kanaye," is working the ferry from Sahebgunge to the Malda road.

Steamer "Jaboona."—Draught 2½ feet, with Government flat "Ganges," is under the Chief Commissioner's orders in Assam.

Steamer "Koel."—Draught 3 feet 9 inches, has been in dock for some time, but will be ready by Saturday (21st February), and can work with the second flat, which is under the Lieutenant-Governor's orders, being hired from the New River Company.

Steamer "Prince Albert."—Draught 3 feet, is still in dock, as her bottom had entirely gone. She cannot be ready until the end of March.

India General Steam Navigation Company's Steamer "Chunar."—Draught 3 feet 9 inches, working with two hired flats at the Barrh ghât ferry.

India General Steam Navigation Company's Steamer "Patna."—Draught 3 feet 6 inches, working with two flats at the Futwah (Patna) ghât ferry.

Further, the Lieutenant-Governor has ascertained that the Eastern Bengal Railway can let to Government, from the 15th March, one of their large steamers and two flats. These steamers draw nearly four feet of water. The India General Steam Navigation Company will also be able to let to Government one or more steamers with flats. Mr. Joakim, who used to trade to Dacca, has offered to Government a steamer and two flats, which are smaller than ordinary river steamers, and are said to draw only two to two and a half feet of water. Mr. Joakim's steamer is not quite ready for work, but she is being surveyed.

3. There are no spare flats in the port for hire, without steamers, though possibly the Master-Attendant may be able to obtain a loan of one additional flat from the Eastern Bengal Railway. The largest of the ordinary Hooghly cargo boats carry little more than 1,600 to 2,000 maunds; but there are several large lighters belonging to the Telegraph Department, two of which the Master-Attendant has been able to borrow for famine. They, however, draw over four feet of water.

4. While these orders were under issue, a telegram was received from Sir Richard Temple to the following effect: "From Mokameh.—My telegram of 15th about steamer. The following vessels are recommended: the "Success," sister ship to "Patna," the "Calcutta," and the "Bombay," also light draught, all believed to be available and belonging to the India General Steam Navigation Company. If sent to Barrh and Futwah should be sent with two flats each and without cargo, so as to arrive in 14 days; each should have six extra lascars. Have seen the steamers working at both ghâts, and hope they will prove successful."

5. It is quite clear that there is very great urgency for the immediate despatches of additional steamers to the Patna division, and the Lieutenant-Governor has ascertained that the "Success" and two flats can be at once hired from the India General Steam Navigation Company. The Lieutenant-Governor accordingly directs—

(1) that the "Teesta" and her flat be at once moved up from Sahebgunge to the Patna division. She should go empty and call at Barrh ghât for orders. Her place must be supplied by the "Koladyne" and her flat which can supply Manikchur either from Kooshtea, Sahebgunge, or Rajmehal according as Mr. Molony may direct. But the supply from the Rajmehal route must on no account be allowed to run short.

(2) that either the "Success," which is light and can be most readily available, be hired and sent at once up to the Patna division with two flats. She should run empty, and should tow up an empty cargo-boat or lighter, and should call at Barrh for orders.

(3) that the "Koel," with the hired flat and with one lighter, should be despatched empty to the Patna division, with orders to call at Barrh.

(4) that either the "Lucknow," or the Eastern Bengal Railway steamer and flats, be hired and put on to the Kooshtea and Godagaree berth.

5. There will thus be four steamers, six flats, and two lighters for the Patna division, and the same complement as before for the Rajshahye division. The Master-Attendant should hire either Mr. Joakim's steamer and flats, or another steamer and pair of flats from the India General Steam

Navigation Company, and send them up empty to Barrh as soon as he can, so that there may be an additional steamer and flats for crossing railway material.

6. The Lieutenant-Governor trusts to Captain Baker to see that there may be no delay in despatching the steamers, flats, and lighters for the Patna division; he will hope to hear from Captain Baker that they have all been despatched by Tuesday next at latest.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 844—S.R.

Copy forwarded to Mr. C. E. Buckland for submission to Sir Richard Temple; to the Commissioner of Patna; to the Master-Attendant, whose very earliest attention is invited to the matter; to the Accountant-General, and to Deputy Comptroller-General (Famine Department), and to the Commissioner of Rajshahye, whose attention is specially drawn to paragraph 5, clause (1).

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, 19th February 1874.

Enclosure No. 8.

No. 701—S.R.

From the Officiating Secretary to the Government of Bengal in the Statistical Department, to the Commissioners of Patna and Bhaugulpore, the Magistrate-Collectors of Patna, Gya, Shahabad, Sarun, Tirhoot, Chumparun, Monghyr, Bhaugulpore, and Purneah.

Scarcity and Relief.

Sir,
Calcutta, the 16th February 1874.

With reference to my endorsement informing you that the Government grain despatches by the East Indian Railway were to be 2,444 tons a day during the present week, I am directed to inform you that there seems to be some doubt whether the railway can, at the present moment, lift all that quantity of grain from Howrah over and above the ordinary traffic.

2. The railway authorities appear to hope that in a few days arrangements may be made to carry all that amount, and a good deal more if (as appears possible) the Government despatches have to be still further increased. But the Lieutenant-Governor deems it right that you should know how the case stands. He desires that on no account should any carts or boats that are engaged or collected for employment be turned off, owing to the insufficiency of the railway consignments. You should arrange to pay them full demurrage, and to have such demurrage paid through trustworthy hands. You will use your discretion about temporarily lending any surplus carts or boats collected for Government to private dealers; but even in such cases you should arrange that the carriage so lent should return to you.

3. Mr. Toynbee has been instructed on no account to let—

The Sarun dispatches viâ Arrah fall below	2,500	bags daily.
„ Colgong and Caragolo despatches fall below	3,000	„
„ Sultangunge despatches fall below	2,000	„
„ Rajmehal „ „	500	„
„ Futwah ghât „ „	8,000	„
„ Barrh ghât „ „	6,000	„
Total	22,000	„

And he has been directed to raise the despatches as more wagons become available for the several stations in the following order:—Futwah ghât, Barr ghât, small places for Gya, small places for Shahabad, Colgong, and Caragola.

4. I will let you know when there is a certainty of the railway working up to the full demands of Government. Meanwhile carriage must on no account be turned away.

I have the honor to be, Sir,
Your most obedient servant,
C. Bernard,
Officiating Secretary to the Government of Bengal.

No. 702—S.R.

Copy forwarded to Mr. Toynbee for guidance, and to Mr. C. E. Buckland for submission to Sir Richard Temple.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, 16th February 1874.

ENCLOSURE No. 11.

No. 817—S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL in the Statistical Department, to the COMMISSIONER of RAJSHAHYE.

Scarcity and Relief.

SIR,

Calcutta, 18th February 1874.

Mr. Robinson's letters, Nos. 125, dated 25th December 1873, and 153, dated 27th January. Copies forwarded herewith.

WITH reference to the correspondence noted in the margin, I am directed to enclose copies of the letter of this Government to the Government of India, No. 534—S.R., dated 9th February, and the reply of that Government, No. 496, dated 14th February. You will see that the Government of India has accepted the principle of the proposal of this Government, viz., that in certain very exceptional circumstances Government, if it has the grain to spare, may sell grain wholesale, leaving it to the people themselves to distribute it retail, and has given this Government a discretion to permit grain to be so sold in such exceptional cases.

2. The conditions under which this permission can be granted are two-fold; viz., first, that Government has a sufficient supply of grain to enable it to sell in this manner without stinting its relief works and poor-houses; and second, that there is an absolute dearth of grain in the country, and a want of trade at the chief marts, but a sufficiency of local trade and local activity to distribute the supplies sold by Government. It is the character of wholesale transactions at large centres that distinguishes the plan now permitted from the charitable sales which are permitted under certain circumstances by the charitable relief rules. The latter presumes that food is brought almost the people's doors; the present plan will enable Government to stop short at the main marts without undertaking the task of further distribution, thus making the Government task much easier.

3. It is evident that wherever such a system is tried, it will be necessary to take great precautions that the food-grain is not allowed to fall into the hands of monopolists and regraters, who will hoard it up for their own profit. The system can only be permitted in rare instances. The place which was originally mentioned by Mr. Robinson as fitted for the trial of this system is Raigunge. Supposing then, for instance, that there really is not, and we cannot by advances or otherwise create a private wholesale trade to Raigunge, and that we have ourselves arranged for sufficient supplies there (which is by no means apparent yet); and supposing we find the country to be really denuded of supplies, then with the precautions above indicated we might allow individuals and petty dealers to buy and carry away quantities varying from, say, 20 seers to 10 or 20 maunds, or large quantities in some cases when it can be allowed safely under an arrangement which should ensure its use or its speedy sale to the people of some distressed village.

4. You are requested, in communication with Mr. Robinson, to work out and report the details of any action you would recommend in this matter, and to give the Government your and his opinion when we shall be in a position safely to make such sales, and the country in such a condition as to require them.

5. Before recommending such sales at Raigunge or anywhere else, you should satisfy yourself thoroughly that private trade cannot reach the place. You should state it there are any other places in the division besides Raigunge where you think such a system may be required. Will grain find its way up the Berhampooter by private trade? or may it be necessary to establish a Government depôt at Goalundo or at Kaleegunge? You will be very careful and cautious in making any such recomendations.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

No. 818—S.R.

COPY of present letter with extracts from the enclosures, and of Mr. Robinson's letter No. 125, dated 25th December 1873, showing the circumstances of Raigunge, forwarded to Commissioners of Patna and Bhaulgulpore for information and guidance. The Lieutenant-Governor, however, observes that he doubts whether the system is so applicable to these divisions. It may there be better to induce the local traders to import from the railway stations by aid of advances, &c., as already sanctioned. But if the private traders find it impossidle to get carriage to bring supplies, or if for any other reason private trade cannot be looked to, it may be possible in some cases to ease the pressure of distribution by a system of this kind, if it should happen that the supplies of the country are reduced to the lowest ebb, while those of Government are abundant. Such a system can never be permitted where private trade is possible.

No. 819—S.R.

COPY of this letter with enclosures, and of the letter of the Government of India quoted in paragraph 1, forwarded to Relief Commissioner, Rajshahye.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

Calcutta, 19th February 1874.

EXTRACTS from Correspondence about Condition of the Dinagepore Tracts where it is proposed to sell Government Rice.

No. 125, dated Dinagepore, the 25th December 1873.

From W. LEF. ROBINSON, ESQ., Relief Commissioner, Rajshahye Division, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

WITH reference to the question of golas for the storage of rice in the Dinagepore district, it will, I am convinced, be necessary to provide more golas for the west and north-west of the district. On the west side of the district no golas have yet been sanctioned north of the Raigunge on the Koolik, to which point only is there water communication. I have during the last ten days ridden over across the country north of Hemtabad thannah as far north as Laharee in thannah Thakoorgaon to the Purneah border on the west and to the Tangon on the north-east. Taking it roughly, this is a track of country 45 miles long by 30 broad, and throughout the length and breadth of it there will not be more than a four-anna crop of rice in the best parts, dwindling down to none at all in the worst. That there is no large amount of rice in store I have satisfied myself by personal inquiry; one or two men here and there have a fair supply, but nothing like a stock sufficient to keep the country, and in many cases the amount they are said to have is exaggerated by their poor neighbours. For instance, when riding yesterday I heard accidentally of a mundul who was said to have five large golas full, and to refuse to sell any; it was six or seven miles out of my road, but I thought it worth looking into, and went to his house; he had five golas, but two were empty, one was three parts full, another half full, and the fifth had only a small quantity in it.

There are no large native gunjes or marts in this part of the country. In ordinary years the rice exported is all taken to Raigunge and shipped off from there.

From all I could learn after many inquiries from all classes, the impression among the people is (and I must say I think they are right) that in a couple of months' time there will be a great want of rice in this part of the country, and that in fact the present supply will be about exhausted.

* * * * * * *

It appears to me that the great thing to do is to establish a large reserve at Raigunge available for drawing upon. I wish here to point out forcibly that there is no one in this part of the country (I allude to the north-north-west of Raigunge) who is at all likely to import on his own account as a mercantile speculation, and indeed throughout Dinagepore generally I do not think private enterprise to be depended upon at all.

The rice trade is here essentially an export one carried on principally through local agents by firms in Calcutta or elsewhere. The local agents report that there is no rice for export, and there the interest commercially of the firm and the local agent ceases; they do not care about supplying the country with food even as a speculation. The only people likely to exert themselves are the "paikars" or inferior agents who visit the village hauts and markets, buy rice as cheap, and sell it somewhere else as dear as they can, and these of course are the men who run up prices; in fact they combine for the express purpose. Where a profit is to be made, these men will try and make it for themselves; but they are by no means to be relied on to assist in time of need, nor have they any capital to enable them to import largely from a distance, or the kowledge of how to do so. Where there is a private trade, I should be very unwilling to interfere with it in any way; but when I have to face the great probability of having to feed the majority of the population before many months are over (though God grant I may be wrong), I cannot help thinking that something more is requisite than merely providing rice on relief works. I am strongly of opinion that if Government were to establish a good supply of rice at any fixed point, and sell to the people who require rice at the market rate, or slightly under it perhaps, people would do all the transport for themselves, and buy in a stock, as far as the better-off are concerned, enough to last them till next crop can come in; the well-to-do have the money, but not the rice; the poorer have neither, and we must give them work to enable them to buy.

Say we take Raigunge as a centre, and Government puts down a large stock of rice there and would sell. I believe the whole country up to Laharee that could afford it would go and buy and save Government all the trouble and expense of importing to distant localities. A limit might be put on what each man should be allowed to buy at a time; but I should not be chary on that score. If a local man would take 400 or 500 maunds to an out-of-the-way part of the country from the Government depôt as a speculation for profit, I would let him do so; if he does not do it, Government must if it comes to actual famine.

I am quite aware that the course I am proposing is opposed to the orders of Government on the subject; and those orders of course will be strictly attended to; but I do not think I should be doing my duty unless I pointed out, as forcibly as I can, that I do not believe private trade will do anything perceptible to avert famine in this district, and that I do believe the people, or at any rete some portion of them, will do what they can to help themselves if the means are put within their reach. Many men who would die sooner than work on the roads would think nothing of going 20 or 30 miles to buy rice to keep themselves and their families alive, and village mundula and large cultivators are quite aware of the importance of helping their poorer neighbours as much as possible if only for safety's sake.

To put the question in another form: when actual famine begins, as I fear it must in some places, would not Government strain every nerve to save people from dying of hunger? If so, anything that will mitigate that strain must, it appears to me, be beneficial even in a £ *s. d.* point of view; and if the people will themselves do the transport inland, it must be cheaper to Government than doing it for them, no matter what interference there may be with the strict rules of political economy.

I trust I shall be excused for having ventured to state my opinion on the point, but the subject is one so terrible to contemplate that I do not think I should be justified in avoiding a declaration of my opinion which, however faulty it may be, is at any rate genuine and sincere.

No. 153, dated Camp Gyebandha, the 27th January 1874.

From W. LEF. ROBINSON, ESQ., Relief Commissioner, Rajshahye, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

* * * * * * *

H.—LOCAL TRADE.

As I said in my last letter, the trade is entirely an export one as far as food is concerned; it is carried on by non-resident firms chiefly, who send agents yearly to buy up rice for export, but there being no rice to buy this year the agents will not come, and the firms who export have not the slightest interest in importing rice into the district. Not being able to get their rice here, they simply send their agents to some other place where rice is procurable. If I saw the slightest hope of an import trade springing up in consequence of a rise in prices, I should not have urged the course I did; but I say unhesitatingly that no such trade will spring up. There is no one with either the knowledge, capital, and energy combined which are necessary to enter into such an undertaking on the scale required. Trade connections are not formed in a month or two; the routes are long and difficult, and the risk of partial or total loss is proportionate.

Taking the present price of rice at Calcutta, which I believe is Rs. 3-2 to Rs. 7-6 per maund, as compared with the latest price I know of at Raigunge, viz., 10 seers per rupee, no private speculator could import rice from Calcutta to Raigunge and sell at 10 seers per rupee at a profit, and Calcutta is the most accessible point from which to get rice to Raigunge. I may be wrong in my calculation, but I base it upon this—

Price of rice in Calcutta, at Rs. 3-4 - - - - -	3	4	0
Rail ⅛th pie per mile—1 anna for 96 miles per maund; Sahebgunge is about 250 miles from Calcutta, say 2½ annas per maund, Calcutta to Sahebgunge - - - - - - -	0	2	6
Sahebgunge to Hyatpore by boat, loading and unloading, &c., about 0-1-6 per maund - - - - - - - -	0	1	6
Hyatpore to Kurbah I know is - - - - - -	0	6	6
Kurbah to Raigunge is about half - - - - -	0	3	0
	4	1	6

say 3 annas a maund, to say nothing of risk and losses in transit, establishment and other expenses incident to opening a new trade.

It has been suggested to me that Government might sanction rice being sold through a relief committee if one were nominated. I am not the least wedded to any theory of my own, and perhaps this may be the intention of Government; in case it is, I submit herewith a nomination for members of a relief committee at Raigunge:—

MEMBERS.

H. L. Jones, Esq., District Superintendent of Police.
The Moonsiff of Hemtabad.
Baboo Janokinath Gus Gossein, the native doctor attached to the Rajbarry Dispensary at Raigunge.
The Naib of the Rajbarry estates at Raigunge.
The head-master of the school at Raigunge.

I would suggest that they should, as an experiment at any rate, be allowed to dispose of 10,000 maunds of rice, say in all February, at 10 seers for the rupee, and that they should not sell more than 50 maunds, or less than a whole bag to any one person, though for my own part I would prefer no restriction beyond keeping a sufficient supply in hand for relief work labor. If such a scheme meets with Government approval, I would suggest that another sale depôt should be formed at Godagaree, and a third at Patnitola. If this were done I believe the people of the district and the petty local traders would do all the transport into the worst part of the country for themselves, and thereby save Government enormous expense. I enclose a copy of a letter from the present Magistrate and Collector of Dinagepore, which also recommends some such course being adopted.

I base my recommendation to sell, on the grounds that there is some money in the country and very little grain; that if the people can get rice within a reasonable distance at a fair price they will go and buy it and take it themselves to their home (or to neighbouring markets if petty dealers), and so supply places difficult of access. I argue that all the better class will do this in preference to first spending all they have and then resorting to relief works, while their families are left either to starve or to be supported by Government. If the working portion of the population is employed on relief works and paid in rice, Government will have to provide for their families or let them starve; but if the men who can afford to buy now were enabled to purchase even one or two months' supply, it would immensely lessen the strain on the Government resources. I also urge the plan as a measure of economy to the Government itself. Indeed, it appears to me to be the only way of recovering a portion of the enormous expenses which must be incurred; if things come to the worst, Government will then have to feed at least 70 or 80 per cent of the population, whereas if rice is sold, I firmly believe that 50 or 60 per cent. would provide for themselves.

* * * * * * * *

No. 3 Ct., dated Camp Bhaduria, the 15th January 1874.

From E. E. Lowis, Esq., Magistrate of Dinagepore, to the Special Relief Commissioner, Dinagepore.

* * * * * * * *

8. The local agency for the import of rice consists of the local mahajuns, the commercial population residing at the various marts or bunders, and the zemindars. The local mahajuns cannot be trusted to import rice on the scale required, for they are not men of sufficient capital, nor have they been in the habit of dealing in grain, except in a very small way; the harvests in Dinagepore have up to date always been abundant, and with rice bought up by large traders or their agents on the spot, the ryots have not had much occasion to deal with the village mahajuns except in their capacity of money-lenders.

9. The mahajuns, I mean the small village ones, have had little or nothing to do with the large trade in rice, traders at the marts on the rivers having dealt either personally with the ryots or through their paikars and agents who buy at the hauts. In such a case it may be asked why should these traders not be available for import, as well as for export? The reason is that the traders at all the large bunders are not trading on their own account, but are mere agents or gomashtas for firms in Calcutta, Coomerkally, Dacca, the North-West, &c.; and this year there being no rice to export, the agency has been withdrawn altogether, or only some inferior servant, sent probably to try and recover any advances that have been made to the ryots for grain.

10. I do not consider that we can depend on the village mahajuns or the commercial population at the marts to import rice in the quantity that will, I am sure, be required. If it were a question of getting rice in from Rungpore or Rajshahye, I think the local trade might be trusted to rise to the occasion; but when it comes to be a question of getting rice from Burmah, or Madras, it is a different thing. The firms who are engaged in the export trade of this district undoubtedly could do so, but the principals are not here to appeal to, and such of the gomashtas as I have seen say they will write and ask their masters, but that in their opinion the profit is not worth the risk. I may add that the people generally are convinced that the Sarkar is going to help them in the matter of rice, and this may account in some measure for the traders' gomashtas thinking that their masters will not make much profit by importation.

11. There remain the zemindars and other well-to-do inhabitants; many of these are willing enough to import if they could see their way to do so. They say, however, the importation of rice from distant places is not a business they are acquainted with, or which they have any means of starting; if it were a question of mere inland transport, then many of them profess their willingness to accomplish that, but importation from a distance they shrink from.

12. Rice, however, must be brought into the district if not by the local traders then by Government, and this can be done without a very ruinous expense. There is no difficulty in this district about inland transport; Government need not trouble about that, if rice is put down at certain bunders on the river, and if it is known that rice is to be had, I am quite sure the paikars and beparis who frequent the hauts, to say nothing of the well-to-do monduls, will see that it is distributed at the different hauts wherever wanted. There was a large quantity of rice stored on the banks of the Jomoona, at the end of the rains, which could not be exported, owing to want of water in the river; that rice has since been gradually distributed all over this district and Rungpore, and the process is still going on. I saw strings of carts belonging to beparies going to and from Berhampore bunder; again in Kallygunge thannah I asked the people where, as they had no crop and no old stock, they got their rice; they said, "the beparies bring their rice to the "hauts from Dinagepore or elsewhere."

13. It may be that firms in Calcutta or elsewhere may see their way to pushing rice into Dinagepore; if they will only do so and sell at the existing bunders on the river bank where plenty of golas are to be had, they may depend on the beparies buying from them, and taking grain into the interior. Whoever brings in rice it should be imported speedily, for the pinch of want will be felt soon; in fact it is being felt in some places already, and will be more manifest when what there is of new rice in the market has been consumed.

14. If no one else comes forward to import, Government must, and by doing so now the expense will be very much lessened, for once the people get beyond a certain stage, and have neither money nor strength to labor to get any, Government will not only have to convey and store rice at the bunders but will have all the trouble and expense of inland transport, village distribution, relief committees, &c.

15. In riding about the country I am in the habit of conversing with the villagers, and I have not yet met a man who hoped to get any help in the way of importation from the local traders;

they all seemed to think that it was the duty of the Sarkar to supply the market in some way. In fact, as regards the mahajuns, the very general complaint is that they will not now advance money or grain on any terms; one respectable old Mahomedan even asked me, if Government would not take the place of the money-lenders and undertake to make advances to enable the villagers to tide over their difficulties.

16. I may be mistaken in my estimate of the resources of the district, but the fact remains that no rice has as yet been imported except by Government, and none, I fear, will be, and I would submit, in deference to your opinion, it would be wiser for Government to send rice now to almost any amount into the district, and let it be known that it is for sale at a certain price, than to incur the future expense of keeping the country from starvation by gratuitous door-to-door relief.

LETTER from DEPUTY SECRETARY to the GOVERNMENT OF INDIA, No. 498, dated 14th February.

I AM directed to acknowledge your letter No. 554—S.R., of the 12th instant, with enclosed correspondence with Mr. Robinson, the Relief Commissioner of Rajshahye, in connection with his proposal to sell Government grain in certain exceptional tracts of the Dinagepore district, and in reply to the inquiry made in your 3rd paragraph, I am to state that the Government of Bengal is authorised to sanction the sale of Government grain in special and exceptional cases of the kind under notice.

No. 100.

EXTRACT from the Proceedings of the Government of India, in the Department of Agriculture, Revenue, and Commerce, dated Calcutta, the 14th January 1874.

[Agriculture and Horticulture.]
Famine.

RESOLUTION.

THE volume named "Famine Aspects of Bengal Districts" has been prepared by Mr. W. W. Hunter, Director of Statistics, in accordance with a request by the Government of India that he would embody in a compact form, out of the materials which he has collected for the Gazetteers of Bengal, such information as might be useful at the present time.

2. The work has been well and quickly executed, and will be found to contain much practical information. It is to be understood that the Preface is not intended to give expression to the views of the Government, but only to the conclusions which Mr. Hunter has himself deduced from the information at his command.

3. The thanks of the Government are due to Mr. Hunter for this valuable contribution to the Famine Statistics of Bengal.

COPIES of the work will be transmitted for the information of the Government of Bengal, and for circulation, together with this Resolution, to Departments, local officers, and others concerned.

(True extract.)
(Signed) A. P. HOWELL,
Deputy Secretary to the Government of India.

No. 13 OF 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.
Famine.

To The Most Honorable the MARQUIS OF SALISBURY, Her Majesty's Secretary of State for India.

MY LORD MARQUIS, Calcutta, the 27th February 1874.

IN continuation of our weekly despatches we have the honor to forward a copy of the supplement to the Calcutta Gazette of the 25th instant, from which Your Lordship will observe with satisfaction that the generally favorable character of the district reports, noticed in our despatch of the 13th instant, has been maintained, and that in some of the distressed districts prices have slightly fallen.

2. We further enclose, with reference to para. 7 of our last despatch, the record of proceedings at the conference* held on the 21st instant for the disposal of current

* Page 119.

business. We have invited the Lieutenant-Governor of Bengal to a similar conference to be held weekly for the same purpose.

3. We enclose copies of Sir Richard Temple's minutes* of the 19th instant, Nos. 25 to 28, received from the Government of Bengal, on the subject of the supplies required and the relief operations in progress in different parts of the Bhaugulpore Division. As Sir Richard Temple is expected to return to Calcutta to-morrow, we defer until next week a full account of his proceedings. At present we will only observe that complete arrangements for transport, as summarised in our telegram of this date, have now been made in the Patna Division and the Bhaugulpore District. * Pages 123, 126–127.

4. We have on a previous occasion explained to Your Lordship that the additional transport arrangements made up-country have put a severe pressure upon the carrying power of the East Indian Railway, which we calculated would limit the daily despatches from Calcutta to an average of 2,000 tons independent of the requirements of private trade. This average has been somewhat exceeded, as will be observed from the enclosed schedule. We have no doubt, that when some further facilities, now in progress at the several points of despatch, have been completed, the daily despatches on account of Government will amount to 2,500 tons. Our supplies from beyond sea continue to arrive in sufficient quantities to maintain this rate.

5. We enclose the first report* of the Superintendent of State Emigration, showing that, as a beginning of operations, about 250 effective laborers have been despatched to British Burmah, about 100 are awaiting passage, and daily recruitment is going on. A considerable addition may be expected to these numbers when the local officers have carried out the instructions issued to them on the subject as reported in our despatch of the 30th ultimo. * Page 127.

6. We have to acknowledge Your Lordship's telegram of the 24th instant, and in reply we have sent this day a telegraphic summary of the returns called for from the Government of Bengal, showing the number of relief centres in each famine district, the grain actually stored at each centre, the grain in transit, the number of laborers employed on relief works, their rate of pay, and the number receiving gratuitous relief. We enclose the returns in original as received.* They have necessarily been somewhat hurriedly prepared, and we do not think that they are sufficiently complete to make it of any advantage at present to attach, as requested in your Lordship's telegram, a current number to each relief centre, but a more complete list will be sent by next mail, and the additional weekly telegram will be continued. * Pages 129 and 130.

7. We enclose a telegram,* received this day from the Lieutenant-Governor of the North-Western Provinces confirming the favorable anticipations of the coming harvest previously reported. * Page 130.

We have the honor to be,
My Lord Marquis,
Your Lordship's most obedient and humble Servants,
NORTHBROOK.
B. H. ELLIS.
H. W. NORMAN.
A. HOBHOUSE.
E. C. BAYLEY.

List of Enclosures of Despatch to the Secretary of State No. 13 $\frac{\text{Agriculture and Horticulture,}}{\text{Famine,}}$ dated the 27th February 1874.

1. Supplement to the Calcutta Gazette of the 25th instant.
2. Schedule of letters and subjects disposed of, February 21st, by the Governor General of India in Council at a meeting at which the Lieutenant-Governor of Bengal attended.
3. Record of explanations and instructions given to the Central Relief Committee at Government House on the 21st February 1874.
4. Letter from Mr. Buckland, No. 69, dated 21st February 1874, and enclosures.
5. Statement showing the quantity of rice despatched from Calcutta by the East Indian Railway to some of the famine stricken districts of Bengal and Behar from the 18th to 24th instant inclusive.
6. Dr. Payne's memorandum on Emigration to Burma, dated 24th February 1874.
7. Letter from the Government of Bengal, No. 187 P. S., dated 26th February 1874, and enclosures.
8. Telegram from the Government of the North-Western Provinces, dated 27th February 1874.

SUPPLEMENT TO THE CALCUTTA GAZETTE, Wednesday, February 25, 1874.

RELIEF WORKS IN PART OF THE SHAHABAD DISTRICT.

The Lieutenant-Governor is pleased to direct the publication of the correspondence noted below for the information of local officers, and their attention is invited thereto.

No. 1035, dated Fort William, the 19th February 1874.

Memorandum from COLONEL J. E. T. NICOLLS, R.E., Secretary to the Government of Bengal, Public Works Department, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Scarcity and Relief Department.

No. 801, dated the 14th instant.

THE undersigned has the honor to forward for information the annexed extract (paragraphs 7, 8, 13 to 17, and 22) from a report of an inspection made by the Superintending Engineer of the Northern Circle, between the 7th and 13th instant, on relief works in part of the Shahabad District.

EXTRACTS from an Inspection Report No. 801, dated 14th February 1874, from the Superintending Engineer, Northern Circle, on Relief Works in part of the Shahabad District, between the 7th and 13th of February 1874.

Paragraph 7. I remarked in driving along the line the good effects of the measures taken by Baboo Teeluck Sing, a Rajpoot of Barji, in October last; the rubbee crops, as far as the eye could reach on each side of the road, seemed in splendid condition; water was still flowing into the excavations all along the road-side, and is being utilized in irrigation channels.

8. Mr. McNamara, the Executive Engineer, informs me that the zemindar, at a cost of about Rs. 400, had banked up the Durgowty River, and, with the aid of Rajputahs, succeeded in irrigating a tract of land which Mr. McNamara estimates at 30,000 beegahs, extending over twenty-six villages. I do not enter into details of the great benefit conferred on the people by Baboo Teeluck Sing, as I conclude the matter has been brought to the notice of Government by the civil authorities; but I am surprised that similar steps were not taken in other parts of the district to utilize running streams of a similar nature to the Durgowty. The benefit to the country would have been enormous.

* * * * * * * *

From Bhabooa to Bhugwanpore, five miles.

13. This very useful village road has been repaired by Mr. Newland, of Mussahya Factory, from district funds, at a cost of Rs. 10 a mile. It requires raising here and here; and if it is considered necessary hereafter that it should form a relief work, it should be continued from Bhugwanpore through Rajghat to open out the trafic from the plateau on the hills where a tract already exists.

From Bhugwanpore to Chynepore.

14. This a country road eight miles in length, skirting the foot of the hills and runs almost parallel to the line of the Main Western Canal about to be carried out; it has been repaired by Mr. Newland, of Mussahya, and culverts have been constructed.

15. The road is in very good order, and appears to be a useful line of communication from the hills to Durgowty on the Grand Trunk Road; much traffic in lime, stone, hides, spices, rice, &c., passes along the line.

From Chynepore to Hatta and on to Durgowty on the Grand Trunk Road, fourteen miles.

16. The above line ceases near Chynepore, through which runs the road from Bhaboοa. I would recommend that the Bhugwanpore road should be raised and re-aligned so as to meet the Bhabooa road which runs on to Hatta; this might be a relief work if required, but I imagine the canal works will absorb all the labor in the neighbourhood when it is once started.

17. I found about 450 men, women, and children, at work on the road between Hatta and Durgowty. This appeared to be the only spot where want had induced the people to come and work, and the look of the country round showed how the rice crops had failed. I however remarked, with regard to the returns sent in of the different classes of people employed on these relief works, that it does not follow that because the returns show that artizans and handicraftsmen seek work on the roads, that these are men who have actually left their several trades for road-making; but that though they are weavers, &c., by caste or families, many of them have never even learnt their trade, but have been from their infancy employed in agricultural labor, and are used to earthwork.

* * * * * * * * *

22. Near Matianee, in the 375th mile, I observed that the water from the Durgowty was still flowing into the ditches and tanks along the road-side, and was carried away over the country by artificial irrigation channels. The embankment across the river, noticed in my 7th paragraph, is near Matianee; the crops for miles on each side of the road were magnificent.

LIBERALITY OF HIS HIGHNESS THE MAHARAJAH OF BURDWAN.

No. 896—S.R., dated Calcutta, the 21st February 1874.

From A. MACKENZIE, ESQ., Junior Secretary to the Government of Bengal, to the COMMISSIONER OF BURDWAN.

I AM directed to acknowledge the receipt of your letter No. 185T., dated 15th February, reporting that the Maharajah of Burdwan has at his own cost organised a charitable relief department for his estates, with centres at Burdwan, Culna, and Chinsurah.

2. In reply, I am to request you to convey to His Highness an expression of the Lieutenant-Governor's acknowledgment of this fresh instance of the Maharajah's liberality to the poor and suffering. The Lieutenant-Governor felt sure that he was warranted in informing the Government of India, as he did a few weeks back, that in Burdwan our having the Maharajah to rely upon was a great consolation under the present circumstances of that district. The facts reported by you have quite justified His Honor's expectations.

No. 185T., dated Burdwan, the 15th February 1874.

From C. T. Buckland, Esq., Commissioner of the Burdwan Division, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit, for the information of the Lieutenant-Governor, copy of the memorandum dated 11th instant, from His Highness the Maharajah of Burdwan regarding the formation of a relief department at His Highness' own cost in the district of Burdwan. The relief centres will be at Burdwan and at Culna, with a branch at Chinsurah in Hooghly. The Maharajah has made this arrangement in compliance with my suggestion that he should undertake the care of the poor of the district as he did in 1866; and in addition to this, he has written to me to say that he is prepared to do anything else that is necessary for charitable purposes. His Highness' present action is only a continuation of numerous deeds of charity and liberality for which he has always been distinguished, and I have no doubt that it will meet with the suitable acknowledgment of Government.

Memorandum.

I have formed a relief department for the purpose of more efficiently alleviating the distress which is likely to ensue to the poor of the Burdwan Raj during the time of scarcity. This department will be known as the Maharajah's relief department. I have placed it under the direct control and superintendence of my nephew, Lala Bena Beharee Burmah, and my Secretary, Mr. Miller, at Burdwan, until my arrival at that place. The relief will be under the charge of my debutter member, Baboo Bungsee Gopal, and at Culna after my departure the relief works will be supervised by Lala Maneek Chand Kaapoor and Dr. Baboo Mohendro Lall Goopto, medical officer in charge of my dispensary. At Chinsurah the relief work will be under the darogah of the rajbaree. All reports, however, will be made to Lala Bene Behary Burmah and Mr. Miller, who will submit weekly general statements through me to the Commissioner.

Rice is now being purchased at places where cheaper rates prevail, and orders for further importation have been given. The department will be guided by circumstances as to the manner in which the relief may be most effectively administered. At the present time it is intended to make two depôts for the relief of the very poor, one at Culna and one at Burdwan, as was done in 1866. The gift of food will be limited to the old and infirm men and the women and children. All persons fit for labor will be provided with work on the relief works, and the overseer of the latter will receive orders to admit all able-bodied people and give them work. It is also intended to keep as many skilled workmen as possible off the relief works, by providing them with work in their own trade. By these means I hope that if the department works energetically and heartily much suffering may be alleviated.

Mahtab Chunder,
Burdwan Maharaj Udheeraj.

Rajbaree, Culna, the 11th February 1874.

Schedule of Letters and Subjects disposed of, February 21st, by the Governor-General of India in Council, at a Meeting at which His Honor the Lieutenant-Governor of Bengal attended.

I.—Letters from the Government of Bengal

January 31st	No. 334 S. R.
February 3rd	„ 166 P. S.
„ 3rd	„ 415 S. R.
„ 9th	„ 555 S. R.
„ 12th	„ 641 S. R.
„ 20th	„ 856 S. R.
„ 20th	„ 860 S. R.

transmitting weekly transport returns in forms ordered in letter No. 82 of 12th January.

The Government of India will not make any observations upon these returns, believing that the deficiencies have been adequately noticed by the Government of Bengal, and that all concerned are now making every endeavour to organize sufficient transport.

The returns may, in future, be sent in fortnightly in lieu of weekly as originally directed.

II. Letters from the Government of Bengal—

February 13th	No. 664 S. R.
„ 14th	„ 689 S. R.
„ 16th	„ 708 R. S.
„ 17th	„ 178 P. S.
„ 18th	„ 835 S. R.
„ 21st	„ 876 S. R.

on the subject of the transport of grain to the distressed districts.

The Viceroy had an interview with the Agent and the Consulting Engineer of the East Indian Railway Company on the 18th instant, and was assured by the Agent that the Company could convey 2,500 tons a day, besides 200 tons a day consisting of materials for the Chumpta Ghât and Durbungha Railway, and required no assistance from Government, and that, if after a week's experience it was found that wagons were not detained at the up-country stations, the Company could carry a larger quantity.

Further inquiry leads the Government to believe that 2,500 tons a day is rather more than the present facilities for loading, &c., enable the Company to carry. Yesterday nearly 2,000 tons were carried, and it would be unsafe to calculate as yet upon a larger quantity as the daily average.

The present requisitions are—

	Maunds.	
Arrah for Sarun	35,000	a week.
Patna for Chumparun	50,000	,,
Patna fer Tirhoot	100,000	,,
Barrh for Tirhoot	100,000	,,
For Bhaugulpore (estimated)	50,000	,,

Supplies for Dinagepore viâ Rajmehal and some further demands since received make a total of 380,000 maunds, or say 14,000 tons a week, or 2,000 tons a day. Although this quantity may be conveyed, Government consider it to be more safe to relieve the strain upon the transport from Calcutta. The Government of Bengal are, therefore, authorised to instruct the Commissioner of Patna to arrange for part or the whole of the supplies required for Sarun in such way as may be best through the local grain dealers, and arrangements should be made, as far as possible, to supply Dinagepore viâ the Eastern Bengal Railway and Kooshtea, instead of viâ Rajmehal.

Lieutenant-Colonel Taylor, Consulting Engineer for the East Indian Railway Company, has been directed to visit the Howrah Station daily, and report the progress of the transport, with full authority to take any measures he may think necessary to facilitate the despatch of the Government grain. He has arranged that the weighing of rice should be omitted as causing delay; this is one of the suggestions contained in No. 876 S. R. of 21st February. The other suggestion contained in that letter, that the different consignments of rice need not be kept separate, is approved.

The Government of Bengal are mistaken in supposing that there is any deficiency in the supplies of Government rice in Calcutta, there being at the present time about 15,000 tons either stored or afloat in Calcutta.

The demand for transport has been largely and suddenly increased, but the Government of India believe that, although there may be some temporary difficulties, the requirements will be met both in Calcutta and up-country.

III.—Provision of rice in 30-seer bags.

Letters from the Government of Bengal—

February 9th	No. 546 S. R.
,, 18th	,, 825 S. R.

It was arranged that all rice re-bagged in Calcutta shall be bagged in 30-seer bags; that endeavours should be made to obtain 35,000 tons of rice expected in April in 30-seer bags, and some of the rice from Burma in one maund bags, but that the shipments should not be delayed, in order that the size of the bags may be changed.

The Government of Bengal to arrange to re-bag rice, if necessary, at local depôts.

IV. The Government of Bengal are requested to cause the returns of the exports of food-grains given in the appindices to the special narratives to be furnished by the Collector of Customs, as the return in the last narrative differs from that received by the Government of India from him

V.—Orders have been given for the supply of Veterinary Surgeons and Public Works Overseers asked for by Sir Richard Temple. The latter should be trustworthy men. The Secretary in the Public Works Department is instructed to see to this.

An additional Commissioner is authorised to be employed in North Behar, and also to act in conjunction with Mr. Barlow in the Bhaugulpore Division. Allowances to be settled in the Financial Department.

VI.—Letters from the Government of Bengal—

February 16th	No. 705 S. R.
,, 17th	,, 766 S. R.
,, 19th	,, 737 S. R.
,, 20th	,, 864 S. R.

Explanations and instructions were given to the Central Relief Committee, which will be recorded by Mr. Bernard. Copy of record to be submitted to the Government of India for approval.

VII.—Letter from the Government of Bengal—

February 11th	No. 616.

Mr. Geddes to act as Secretary to the Central Relief Committee in addition to his other work connected with the scarcity, and at no charge upon the funds of the Committee.

A. Howell,

Deputy-Secretary to the Government of India,
Department of Revenue, Agriculture, and Commerce.

RECORD of Explanations and Instructions given to the Central Relief Committee at Government House on the 21st February.

PRESENT:

HIS EXCELLENCY THE VICEROY.	THE HONORABLE B. H. ELLIS.
THE LIEUTENANT-GOVERNOR.	THE HONORABLE E. C. BAYLEY.

Members of the Executive Committee:

MR. SCHALCH.	MR. BULLEN SMITH.
MR. DALYELL.	MR. BERNARD.
MR. ROBINSON.	MOONSHEE AMEER ALI.
RAJAH JOTENDRO MOHUN TAGORE.	BABOO DOORGA CHURN LAW.
MR. SUTHERLAND.	

His Excellency the Viceroy said he had invited the members of the executive committee to meet him and the Lieutenant-Governor, because he considered that any matters requiring settlement would be better discussed and decided at a conference of this kind. He reviewed the position; he said that matters had developed since the beginning of November. It had then been intended that the central relief committee should, when constituted, buy grain for relief purposes. But for some time it had been held that a central committee could not be usefully appointed; there were people who said there was no famine and would be none; and while matters were so, it was deemed inexpedient to make any general appeal to the public. Meanwhile the Government had bought or arranged for a very large supply of grain, and would have, in most places, enough grain for charitable distribution.

On the occasion of the conference at Government House, on the 24th of January, at which the instructions to relief committees were settled, the Government did not know so fully as it now does what was or would be the position of affairs. But now we know that, as shown in the Lieutenant-Governor's last special narrative, a large proportion of the whole population will require relief in North Behar, and in some other limited tracts; while over the rest of the country regarding which the Government had been anxious, matters were turning out more favorably. In the very bad tracts the Government of India could not leave the responsibility of superintending the local committees to the central committee at Calcutta. The Commissioner of the division, with his officers, must be responsible for the relief of distress.

The question then arose, how the central committee could work in these very distressed tracts. They might desire to contribute in aid of particular classes of relief there. Perhaps, the Viceroy said, Mr. Schalch had considered the matter, and would explain his view as to any possible division or distribution of functions.

Mr. Schalch observed that the rule at the top of page 3 of the relief committees' instructions (settled at Government House on a previous occasion) clearly laid down that the responsibility for meeting and relieving distress lay upon Government officers.

His Excellency the Viceroy inquired if this point had been clearly put by the central committee.

Mr. Schalch explained that the central committee were circulating the Government of India's orders regarding the functions of the central committee, and that thus the orders and wishes of the Government of India would be clearly made known. These orders (No. 476, dated 13th February), make it very clear that the responsibility and control will rest with the Commissioner and the Government officers.

His Excellency the Viceroy then took up the several references on the subject of the working of relief committees pending before the Government of India, or brought forward by the Lieutenant-Governor for discussion, as follows:

I.—Payment of Relief establishments.

His Excellency the Viceroy read out the Bengal Government letter asking who was to pay the salaries of the relief superintendents who were being appointed to administer relief in relief circles in North Tirhoot, each of which had an area of about 100 square miles.

The Lieutenant-Governor explained that the letter had been sent up hurriedly the previous evening, so that the matter might be ready for the conference, and that in reality there was involved the question of all relief establishments, storekeepers, clerks, &c.

The Viceroy observed that the view of the Government of India would be that relief establishments, designed to distribute and superintend relief on a very large scale in the most distressed districts, were and must be organised by Government, and their staff appointed and paid by Government. The local committees there would act under the general advice and supervision of the officers of Government. In smaller areas of less severe distress, or in large towns like Calcutta, the central committee might very well direct the operations of the local committees. But in tracts like North Tirhoot, where a large proportion of the people would have to be relieved, the work would be beyond the means of the central committee.

II.—Are local relief committees bound to affiliate themselves to the central committee whether they like it or not?

After some discussion it was settled, with the Lieutenant-Governor's concurrence, that local committees may, if they so desire, manage and spend the charitable funds they themselves collect plus the Government subscription, and need not come under the central committee's rules until they ask aid from the central committee's funds. It will be desirable, however, that the central committee should, for purposes of finally reporting on all charitable relief expenditure, obtain some short abstract account from every local committee which may act separately.

III.—Are the district charitable committees bound to buy their rice from the Government stores, or may they purchase grain outside?

After some discussion it was settled, with the Lieutenant-Governor's concurrence, that any committee might buy outside if it liked. If a committe wished to buy from the Government stores, the conditions of such purchase would be as follows :—

If in any district the Government had no grain stores, then of course the committee would have to buy for themselves. If there were Government stores, then the local officer acting under the general instructions of the Commissioner would decide whether the relief committee should be allowed to buy Government rice, or whether they should buy for themselves. For instance, in Shahabad, regarding which district a specific reference had been made, if the Commissioner of Patna thought that the Government stores would only suffice for the laborers on the Government works, and if he were satisfied that the committees could supply themselves cheaply and easily with grain from the North-Western Provinces, then he would tell the district committees to get in grain for themselves from the North-Western Provinces.

IV.—What price were the committees to pay for the Government grain?

It was settled that in the very distressed districts where grain will have to be very largely distributed, the cost of such grain would be beyond the means of the local committees, and that therefore no charge would be made against the committees for any Government grain distributed by way of relief in the very distressed districts which the Lieutenant-Governor should define ; on the other hand, any receipts by committees on account of the sale or advance of grain would be credited to Government.

In regard to other less-distressed districts or tracts it was settled that where there are Government stores, and the Government officers decide to let the committees buy grain from their stores, the central committee, or any district committee working under the central committee's rules, may buy the Government grain at 10 per cent. below the wholesale rate ruling in the nearest large mart where there are ample supplies. The Viceroy explained that for the Patna division Patna prices would rule the selling price of Government grain to the committees in that division.

Under this ruling the Commissioner of the division will settle once a month for his division what is to be considered the market rate of the month under these instructions.

It was explained that the Government granted this concession in respect of Government grain only to committees working under the central committee's rules, because in the case of such committees only would the Government have a guarantee that the committees' sales would not affect the market.

V.

His Excellency the Viceroy then was shown by Mr. Schlaeh the draft of certain detailed instructions about relief arrangements in Tirhoot which the central committee had proposed to submit to the local Government for sanction. His Excellency observed that those instructions, or indeed any instructions laying down the details of relief arrangements in the very distressed districts, could not with advantage issue from the central committee. Instructions such as those might be very well issued by the Commissioner; but it was the Government officers who must be responsible for relief arrangements in the very distressed districts. In such districts the central committee would probably desire to restrict themselves to supplying funds to the local committees. The responsibility for the general relief of distress must not be placed on the central committee for the very distressed districts. The feeling of the Government was that there must be unity of responsibility and control in all the relief matters in such districts, and the responsibility and control must rest with the officers of Government.

The Lieutenant-Governor would let the central committee know now and from time to time in what districts, or parts of districts, the Government officers will relieve the central committee from the responsibility of superintending the local committees.

VI.

The question then arose, who was to pay the relief agency in districts where full relief establishments are not maintained by Government. It was ruled that, if a moderate agency only was employed, the central or district committee would employ, appoint, and pay the agency. But if a large agency for general relief from village to village was required, the committee would apply to Government, and if such an agency were held necessary, then the district would probably have to be brought into the category of districts to be relieved by establishments paid by Government.

VII.

There remained the question, in what way would the charitable funds raised in very distressed districts or allotted to them by the central committee be spent? In reply it was decided that the local committees would act under the instructions contained in paragraphs 2 and 3, heading II. of "Instructions to Relief Committees," settled on the 24th January.

The only modifications and additions being that the local committees in such districts will be under the general supervision of the Commissioner of the division, or such officer as he may appoint, and not under that of the central relief committee;—that Government grain will be supplied to the committees free of charge; and that the expense of the establishments will be borne by Government.

No. 69, dated Durbhanga, the 21st February 1874.

From C. E. BUCKLAND, ESQ., with SIR R. TEMPLE on special service, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, in the Statistical Department.

I AM directed to forward, for the information of His Honor the Lieutenant-Governor of Bengal, copy of the following minutes recorded by Sir Richard Temple; viz., No. 25, regarding the grain requirements of the Soopoole and Mudhepoora sub-divisions of the Bhaugulpore district, and the transport arrangements; No. 26, about the establishment of sub-committees in those sub-divisions; No. 27, on the subject of the relief road works in the same tract; and No. 28, on the Commissioner's estimate of the needs of the Purneah district.

2. Sir Richard Temple earnestly hopes that his recommendations may meet with His Honor's approval, and that the necessary steps may be taken to carry them into effect.

MINUTE No. 25, by the Honorable SIR R. TEMPLE, K.C.S.I., dated Soopoole, the 19th February 1874.

1. HAVING visted the north part of the Bhaugulpore district, which may be regarded as the distressed part, and conferred with the Commissioner, the Collector, the civil officers of the Soopoole and Mudhepoora sub-divisions, where the distress is most likely to occur; also with the officers of the Court of Wards in the Nareedigur pergunnah of the Soopoole sub-division, and with those Native gentlemen whom I have been able to meet, I have to record the following observations.

2. The Collector, Mr. V. Taylor, assures me that in those parts of the district which lie south of the Ganges, and those which are situate on the basin of the river Kosee, there is no reason to fear any serious distress, and on the north bank of the Ganges the crops are excellent; indeed the excellence of the prospects of the crops near the Ganges is beyond doubt. Here and there owing to the high range of prices all over the country, there may be scattered outbreaks of distress. Otherwise the prospect of wide-spread and protracted distress is restricted to the tract which lies on the eastern or left bank of the Teeljooga, which tract extends eastward till it approaches the "spill" or basin of the Kosee, the said tract adjoining the Mudhobanee and Durbhanga sub-divisions of Tirhoot.

3. This tract includes the thannahs of Soopoole, Bungaon, Pertabgunge, (Soopoole sub-division), and the thannah Mudhepoora (in the Mudhepoora sub-division). The population of these thannahs is as given below:—

Soopoole	-	279,102
Bungaon	-	145,088
Pertabgunge	-	141,577
Mudhepoora	-	251,683
Total	-	817,430

4. The cause of distress here is much the same as in North-Eastern Tirhoot:—namely, the failure of the principal rice crop, which failed from insufficiency of rain on a hard soil peculiarly needing abundant moisture. The case is, however, slightly better than Eastern Tirhoot, because of the murwa crop of August being somewhat larger, the spring crop of wheat being somewhat better, and the supplementary crop, cheena, sown since recent rain, being susceptible of irrigation. Still allowing for all these circumstances, the nature of the case in most parts of the above-mentioned thannahs does not materially differ for the better from North-Eastern Tirhoot. There is reason to fear that for several months the distress will be severe.

5. The Commissioner of the division, Mr. Barlow, has given me a careful and elaborate calculation, which I append. He has made this after consulting the Collector and the sub-divisional officers. The result is that he reckons on a possibility of 1,71,651 persons needing assistance for a period of five months, hence he deduces a requirement of 5,00,000 maunds at ¾ seer per head per diem, to which he adds 1,00,000 maunds as a margin of security.

6. My own opinion, after the best consideration which I am able to give to the subject, is that some of the per-centages assumed in Mr. Barlow's calculation may be exceeded actually in many parts of the tract when the worst season of distress arrives.

7. All things considered, I estimate that in thannahs Soopoole and Bungaon 50 per cent. of the population may need assistance in the most distressed half, and 30 per cent. in the other half; that in thannah Pertabgunge, not quite so distressed, there would be 30 per cent.; that in Mudhepoora, in one half badly distressed, there would be 50 per cent., while the other half may escape from distress altogether. This estimate gives a total number of 2,74,650 souls, which might need assistance for three and a half months, from 1st June to 15th September, while half this number might need assistance for April and May and one quarter of this number for March. This calculation at ¾ seer per head per diem, gives a total requirement of 7,33,732 maunds, or say 7⅓ lakhs of maunds.

8. Looking, then, to the comparatively isolated situation of this tract, far from the Ganges, close to the hill frontier, having few roads passable in the rains and few facilities for private trade, adjoining other tracts even more distressed, I consider it essential to the safety of the population concerned—8,17,430 souls—that 7⅓ lakhs or 7,30,000 maunds should be brought within its limits by the 15th June.

9. The Collector reports that 1,00,000 maunds have been carted into the tract, which leaves 6⅓ lakhs or 6,30,000 maunds to be brought up.

10. The Commissioner states, after consulting the special Inspector of Transports, Mr. Han-

key, that carriage has been arranged, that is, carts and bullocks are present to carry 60,000 maunds a month for four months, or 2,40,000 on the whole.

11. Both Mr. Barlow and Mr. Hankey state that great difficulty has been experienced in finding carriage in the Bhaugulpore district and in opening out new routes. They have just succeeded in effecting a contract for six lakhs of maunds to be carried from Monghyr to Soopoole in four months. It yet remains to be seen whether this contract will be entirely fulfilled. But we may expect that it will be fulfilled for the most part. If it is, then there will be carriage for—

2,40,000 maunds.
6,00,000 „

8,40,000

This would provide an ample margin over and above the requirement. In that case, however, there is plenty of work for the spare carriage, inasmuch as further means are needed to convey supplies to the neighbouring district of Purneah.

12. I had previously arranged to obtain 2,000 (two thousand) carts from the North-West Provinces. This carriage, if it shall be actually obtained, will be available for Tirhoot where the carriage as yet falls short of requirements.

13. It may be added that an arrangement has been made for the conveyance of 1,00,000 maunds up the Kosee river by boat, which quantity will be available either for the Bhaugulpore or the Purneah district according to circumstances.

14. I desire in conclusion to state that the exertions made by the local officers, Mr. Barlow the Commissioner, Mr. Villiers Taylor the Collector, and Mr. Hankey the Inspector of transport, to obtain carriage in a country where carts are scarce and routes difficult, are very creditable, and will, I hope, eventuate in complete success.

15. I have ordered further enquiries to be made as to the quantity that could be conveyed, if required, to Soopoole by the river Teeljooga during the rains.

16. I have now to recommend that 40,000 maunds a week may be sent by rail to the railway stations between Bhaugulpore and Monghyr.

R. TEMPLE.

COPY of the above forwarded to G. N. Barlow, Esq., C.S.I., Officiating Commissioner of the Bhaugulpore Division, for information.

C. E. BUCKLAND, on special duty.

Durbhanga, 21st February 1874.

SUMMARY.

Total to be relieved (probably) during the five critical months	155,021
Add—	
Three per cent. of population of thannah Budhowa, in Muddehpoora sub-division	4,110
Two per cent. of population of Banka sub-division	7,640
One per cent. of population of Sudder sub-division	4,880
Probable total to be relieved in Bhaugulpore during the five critical months	171,651

171,651
3

4) 514,953

40) 128,738 seers a day.

3,218 maunds a day.
30

96,540 per month.
5

482,700 say 5 lacs.

Allowing one lac stored now for consumption before May.

Total requirement - = 6 lacs.
or
To be carted hereafter, - 5 lacs.

G. N. BARLOW,
Officiating Commissioner.

TABLE showing the probable number to be relieved in Bhaugulpore District in the most afflicted tracts during the period of greatest suffering, viz., from 1st May till end of September

Name of Caste as entered Census Statement III.	Half Muddehpoora Thannah at full rates = whole Thannah at half rates.			Thannah Soopole at full Rates.			Thannah Bongong at full Rates.			Nathpur, or Thannah Pertabgunge, at about half Rates.		
	Total Number of Population.	Per Cent. of Distress.	Number to be relieved.	Total Number of Population.	Per Cent. of Distress.	Number to be relieved.	Total Number of Population.	Per Cent. of Distress.	Number to be relieved.	Total Number of Population.	Per Cent. of Distress.	Number to be relieved.
Aboriginal tribes	735	5	36	1,792	10	179	5	10	—	1,542	5	77
Semi-hindnised (Aboriginals)	33,232	20	6,646	31,499	40	12,599	19,311	40	7,724	19,267	20	
Superior Castes, I.	8,342	5	417	10,042	B 20	2,008	11,152	C 20	2,230	6,726	10	672

Laborers, X.	4,173	A 10	417	8,695	20	1,739	626	20	125	1,162	10	116
Fishers, XI.	21,608	10	2,160	33,648	20	6,730	10,106	20	2,020	11,435	10	1,143
Hindus not recognising Castes	522	2	10	351	5	18	96	5	5	623	2½	15
Mahomedans	15,005	8	1,200	24,995	20	5,000	15,668	20	3,410	14,318	10	1,431
			32,422	Say 50,000	—	57,282	—	—	32,051	—	—	15,748

Mr. Martin (Sub-divisional Officer, Muddehpoora) agrees in these rates, save that he thinks those marked A too high, while B should be 15; and my figures thus corrected would stand 32,422, say 50,000 outside, including all west of A.B. Mr. Smith (Sub-divisional Officer, Soopole) agrees to the averages of his thannahs. He thinks the rates marked C should be halved; he would take Pertabgunge at half instead of one-third rates. This would make the figures for that thannah according to the entries.

Including increased figures proposed by both Sub-divisional Officers, the total will come to 1,55,021:—

TOTALS IN DISTRESSED THANNAHS.

Muddehpoorah	50,000
Soopole	57,282
Bongong	32,051
Nathpur	15,748
Total	155,021

MINUTE by the Honorable SIR RICHARD TEMPLE, K.C.S.I., No. 26, dated Soopoole, the 19th February 1874.

1. IN continuation of my Minute of this day's date, No. 25, regarding the grain requirements of the Soopoole and Mudhepoora sub-divisions of the Bhaugulpore district, I have to request that sub-committees under rule 7, part 2, of rules for relief committees may be established at the following places, which have been settled by the Commissioner in consultation with the Collector and the sub-divisional officers, viz., Soopoole, Ekar, Simrahi, Nareedigar, Behwanipore, and Kamp.

2. There will be, if possible, an European officer stationed at each of these places, save Nareedigur, for which circle European supervision will be provided by the Court of Wards.

3. The Commissioner is authorised to have temporary accommodation constructed at each place where accommodation may not be already available, before the hot weather begins.

4. The Commissioner is requested to declare the places where, and the dates when clause *g* of rule 3, part 2, regarding sale of Government grain should be applied; also to determine the classes who should come under clause *f*.

R. TEMPLE.

Copy of the above forwarded to G. N. Barlow, Esq., C.S.I., Officiating Commissioner of the Bhaugulpore division, for information.

Durbhanga, the 21st February 1874. C. E. BUCKLAND.

MINUTE No. 27, by the Honorable SIR RICHARD TEMPLE, K.C.S.I., dated Soopoole, the 19th February 1874.

I HAVE to record the following remarks regarding relief works in the Bhaugulpore district after carefully consulting the Commissioner, the Collector, and the sub-divisional officers of Soopoole and Mudhepoora.

2. The District Engineer, Mr. Grant, has presented a statement, hereto appended, of roads running through distressed tracts to a total length of 215 miles. These are recommended by him and the Collector as useful and practicable. But both he and the district authorities apprehend that the amount of work which might be advantageously executed on these roads, cannot afford relief to more than a limited number of persons, and that a large number would still remain to be employed on other works.

3. The Commissioner and his officers consider that no more roads can be advantageously designed, and that the only class of works which they can recommend for the relief of distress consists of the tanks near the villages, on the road-sides, or in other places open to the public. They urgently request that they may be permitted to employ the distressed poor on these tanks, and they represent that there is no other way of fully employing the distressed people who are now seeking employment.

4. Looking to the tenor of the official correspondence on this subject, to the necessities of the case, and to the permanent benefit of the population, I authorise the Commissioner to cause relief labor to be employed on the tanks of the country, either in excavating new tanks or clearing out old tanks, care being taken to work at those relief roads which are included in the 215 miles mentioned above.

5. There are, I find, other lines of road designed by the Executive Engineer. But both he and the Collector affirm that these lines are worse than useless, and the Commissioner supports this view. The construction of these particular lines as relief works is not therefore to be attempted.

(Signed) R. TEMPLE.

Copy of the above forwarded to G. N. Barlow, Esq., C.S.I., Officiating Commissioner of the Bhaugulpore Division, for information.

Durbhanga, the 21st February 1874. C. E. BUCKLAND.

A. GRANT, Executive Engineer.

MINUTE No. 28, by the Honorable SIR RICHARD TEMPLE, K.C.S.I., dated Soopole, the 19th February 1874.

THE Commissioner of the Bhaugulpore Division, Mr. Barlow, has shown me a careful and elaborate calculation, whereby he estimates that 6,50,000 maunds of grain will be required for the thannahs of Kusbah Amour, Bulrampore, Kudbah, Purneah (part), all thannahs in Arrareeah sub-division, all thannahs in Kishengunge, in the Purneah district. He reports that 1,00,000 maunds have arrived, and he desires my approval to his proceeding at once to provide carriage for the remainder, 5,50,000 maunds.

2. I am not able myself to affirm the correctness of the estimate till I shall visit the district. But looking to the authority of an estimate proceeding from the Commissioner, and to the urgency of the case, I deem it necessary to authorise Mr. Barlow to go on with transport arrangements within the limits of his own estimate, and to constitute as many sub-committees in the thannahs above mentioned as will be required, according to the principle which I have agreed to for the north part of the Bhaugulpore district.

RICHARD TEMPLE.

Copy of the above forwarded to G. N. Barlow, Esq., C.S.I., Officiating Commissioner of the Bhaugulpore Division, for information.

EMIGRATION TO BURMA.

MEMORANDUM.

ON 15th February possession was obtained of the depôt lately occupied by the Jamaica Agency during the suspension of the colonial emigration, and it is hoped that permanent tenure may be obtained. Meanwhile such repairs in the office building and such works of construction as are indispensable, will alone be undertaken. The depôt is very conveniently situated, to the south of the old High Court buildings adjoining the two Lunatic Asylums. In its present state it is to cost only Rs. 100 per mensem in rent.

An establishment was hurriedly got together on the basis of the colonial establishments; it is not expected that it will be found altogether suited to the work in its present state, but experience will point out the changes that are required—more rapid shipment of emigrants will bring greater pressure of office and other work, and it is probable that higher salaries and more hands will be needed here than elsewhere.

Stationery and medicines are obtained from Government stores on chargeable indent.

Magistrates of districts have been addressed, and information asked for on the prospects of emigration from the several localities. Suggestions on the details of conducting recruitment and despatch have been forwarded to Magistrates, and supplies of contract forms to those who have called for them. The replies of Magistrates may be summarised as follows: From Monghyr, a large emigration may be expected very shortly. In Sarun, people are collecting, and from Bancoorah, Rajshahye, and Patna there is prospect of early despatch. From Jessore, Hooghly, Nuddea, Midnapore (at present), Tirhoot, Rungpore, and Singhbhoom, emigration is considered improbable. No definite information has yet been received from other districts.

With regard to direct recruitment, on which the immediate despatch of people must depend, difficulty arose at first from the very high rates of charge accepted in the colonial agencies which were not yet closed for the season. With every desire to take advantage of the low passage money offering in the rice vessels, the advantage vanished if it were to cost from Rs. 17 to 23 per head for recruitment only, as was the case elsewhere. Contractors offered me people in numbers, and were refused on their own terms. I roughly calculated a mean cost of transport from the interior which would have to be paid on people despatched by the Magistrates, and on this basis fixed Rs. 4 for a man, and Rs. 3 for a woman, as the sum to be paid to local recruiters. Comparing the circumstances of the several agencies, it appeared that while emigrants to the colonies were detained for several weeks, at the cost sometimes of maintenance and always of custody to the recruiters, during which the latter received nothing, those for Burma would remain only a week or ten days in depôt after being admitted and fed from the time they were accepted, and the recruiters would be paid up at once on the departure of a ship, and be at liberty and in funds for further operations. Thus it seemed that at the end of the month the recruiter would find his work more profitable here, and in a manner that the class are not slow to appreciate.

My terms were regarded with some little amusement at first, not to say derision; but I suppose they were studied to a different conclusion, for quite as soon as I was ready to receive them, parties of emigrants began to arrive, and continued to do so, until, on the 22nd instant, I was enabled to embark on board the "Himalaya" 262* souls, about 250 effective laborers, and have now about 100 awaiting passage, with daily recruitment going on.

*220 men.
21 women.
13 boys.
5 girls.
8 infants.

Office and depôt organisation are somewhat in abeyance, giving way to the exigencies of immediate despatch; but I believe that with the people the Chief Commissioner will find himself in possession of all the information he will require for their speedy distribution. I desired to present him with a separate account of each man's expenses at the same time, but found it impossible at the last, as they varied somewhat, but all will be despatched in a day or two. I think, however, that an exact separate account will be impracticable; some average charges must be introduced in future, so as to equalise the sums due from individuals. This is as necessary to facilitate recovery in Burma as it is for preparation of accounts here.

I have now given out that I will make no payment for women recruited. It is to be expected that many will be received from the famine districts, and it is advisable that the smallest number possible be engaged here therefore, so that in Burma inconvenience on this account may be as limited as it can be. I have asked Mr. Eden for specific instructions on that point.

I submit this hasty memorandum for Secretary, because I believe His Excellency the Viceroy desires to hear what has been done and what are the immediate prospects of emigration.

At request of Government of Bengal, a fortnightly statement of operations will be forwarded for information of His Honor the Lieutenant-Governor. Perhaps a similar statement will be useful in Mr. Hume's Office. It shall be prepared and forwarded unless I am otherwise instructed.

ARTHUR J. PAYNE,
Superintendent, State Emigration.

The 24th February 1874.

No. 187—P. S.

From C. BERNARD, Esq, Acting Secretary to the Government of Bengal, to the DEPUTY SECRETARY to GOVERNMENT OF INDIA in the Department of Agriculture, Revenue, and Commerce.

Statistical Department, Scarcity and Relief.

SIR, 26th February 1874.

IN reply to your Letter, No. 652, dated 25th February, I am directed to submit three Returns.

No. 1. Showing the relief committees appointed, the relief centres established, and the number of persons being relieved in the distressed districts.

No. 2. Showing the amount of grain stored in each district and the amount of grain transit to each division.

No. 3. Showing the number of persons employed on relief works, and their rate of wages in money, with its equivalent in grain. The workpeople on relief works are at present nowhere being paid in grain.

2. I am to explain that for some districts the information given in these returns is up to no later date than the 7th February, because the reports from some of the more remote districts for the fortnight ending on the 21st February have not yet reached Calcutta.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Acting Secretary to the Government
of Bengal.

No. 1.

Return showing the Number of Relief Centres established, of Relief Committees appointed, and of Persons receiving gratuitous Relief in each District up to date of last Return.

Name of District.	Number of Committees appointed.	Number of Relief Centres actually established and at work.	Number of people receiving gratuitous relief from Government or Relief Committees, besides private charity.
Burdwan - -	District committee formed -	No relief centres yet required; but at Ranegunge, where an influx of paupers is feared, everything is prepared for giving relief, and sheds are ordered at one grand trunk road.	
Beerbhoom - -	Ditto - - - - -	—	
Bancoorah - -	One district committee and one sub-divisional committee, for each thanna (or 5 in all).	No relief centres as yet wanted.	
Hooghly - -	One district committee, and other sub-divisional committees.	Relief centres not as yet required.	
Howrah - -	1 - - - -	One centre in Howrah city.	
Moorshedabad -	Four, besides sub-committees in several thannas.	Relief centres not as yet required.	
Dinagepore -	One committee, and other sub-committees formed.	Relief centres not as yet regularly established.	
Maldah - -	3 - - -	3 - - - -	1,175 in all; or about 140 daily.
Rajshahye - -	2 - - -	None needed as yet.	
Bograh - -	2 - - -	None yet at work up to 7th February.	-
Rungpore - -	7 - - -	10* - - -	*1,146 since reported up to 7th February. A. H. 27/2.
Patna - -	3 - - -	None wanted as yet. Native zemindars in the interior have established relief houses for helpless poor.	Arrangements for giving relief at Patna city are complete.
Shahabad -	3 - - -	None wanted as yet; preparations forward.	
Gya - - -	4 - - -	None wanted as yet; preparations complete.	
Tirhoot - -	8 - - -	Twenty centres selected, of which some have been actively established.	Returns of the paupers under relief are not yet received.
Sarun - -	2 - -	None wanted yet; preparations well forward. Lieutenant-Governor has ordered centres to be opened.	
Chumparun -	3 - - -	3 - - - -	Numbers not given, but they expected on the 7th February to have about 2,500.
Monghyr - -	13 - - -	13 - - - -	1,005.
Bhaugulpore -	13 - - -	7 - - - -	330.
Purneah - -	7 - - -	7 - - - -	Numbers not given, but do not seem to be large.

26th February 1874. (Signed) C. Bernard, Acting Secretary.

No. 2.

Return showing the Amount of Grain stored in or in Transit to each District.

Name of District.	Amount of Grain actually stored by latest Returns.		Approximate Amount in transit between Calcutta or Railway Stations and the final destination in each Division on the 26th February.

In transit between Calcutta and the final depôts - - - - -	†21,33,108	
Despatched from Calcutta up to 26th February - - - - - -	30,00,000	
Received into the districts by local and N. W. P. purchases - - -	5,50,000	
		35,50,000

† These two figures must be reduced and increased by 79,254, the number of maunds since ascertained to be in store in the Dinagepore district.—(Signed) C. B.

Note.—It takes a very long time for returns for far outlying grain stores to reach the sub-divisional officer, the district officer, and the Government; and it is believed that much of the grain shown as "in transit" is by this time really in store.

26th February 1874. (Signed) C. Bernard, Acting Secretary.

No. 3.

RETURN of Persons employed on Relief Works in each District, Rates of Pay, &c., according to latest return.

Name of District.	Date up to which the figures now offered go.	Total number of Laborers on Government Relief Works and Court of Wards' Works, under Government Officers.	Rate of Wages or Payment.
Burdwan - -	21st February -	3,958	Well work, mainly yielding a daily wage of from 2 as. and upward, equal to 1½ seer of grain.
Beerbhoom -	" -	991	Well work, mainly yielding a daily wage of from 2 as. and upward, equal to 1½ seer of grain.
Hooghly - -	" -	1,145	Same wages as above, 5,542 are said to be at work on private tanks.
Nuddea - -	7th February -	1,500	Same as Burdwan, but wages go up to 2½ as.
Moorshedabad -	21st February -	3,562	Wages or piece-work amounting to about 2 as. a day or 1½ seer of grain.
Dinagepore -	" -	23,914	Piece-work and wages which yield from 2 to 2½ as. a day, or about 1½ to 1¾ seer of grain.
Maldah - -	" -	2,019	Same as Dinagepore.
Rajshahye - -	" -	465	Same as Dinagepore, but rates of piece-work in some parts come up to 3 as. a day, or a full day's work.
Rungpore - -	" -	2,068	Piece-work entirely, which yields from 2½ to 3 as. a day to an adult male, equal to 1½ to 1¾ seer of grain.
Bograh - -	" -	2,810	Piece-work, which yield daily earnings of 2 to 2½ as., equal to 1½ seer of grain.
Northern Bengal Railway and its feeder roads.	14th February -	5,000	Piece-work, which yields a daily average earning of 2½, 3 as. and even more per adult male, equal to 1½ to 2 seers of grain.
Patna - -	21st February -	6,936	Mostly on piece-work, wages are 1½ to 2 as. a day where daily wages are paid. Payments not made in grain, wage is equal to from 1¼ to 1½ seers of grain.
Gya - -	7th February -	1,593	As above.
Shahabad - -	" -	1,851	As above.
Tirhoot - -	" -	19,217	Daily wages are here more common, and the rate is 1¼ to 2 as. a day, and at some three works Government grain is being sold to the laborers on the works. As yet the wages are as stated above.
Sarun - -	" -	70,000	Same as in Tirhoot, except that Government grain is not being sold on the works.
Chumparun -	" -	12,999	Same as Tirhoot rate.
Soane Canal Works	" -	32,000	Wages are paid almost entirely by piece-work, and the most ordinary laborers earn about 2 as. a day. Skilled laborers earn more.
Gunduck Embankment Works.	" -	9,500	Wages are still mainly paid on piece-work, and men earn from 1½ to 2 as. a day, equal to 1¼ to 1½ seers of grain.
Monghyr - -	21st February -	3,845	Paid by piece-work entirely, which comes to nearly 2 as. a day for an ordinary man.
Bhaugulpore -	7th " -	6,400	Partly piece-work, rate of wages is 1½ as. for a man, yields about 1 seer of grain.
Purneah - -	21st " -	2,650	Mainly piece-work; no adult man gets less than 1½ as. a day; grain is selling from Government store on the works.
Sonthal Perghs. -	7th " -	3,260	Wages for adult male by piece-work amount to about 1½ as. a day, which is the usual rate of wages.
Grand total - -		217,683	

26th February 1874. C. BERNARD, Acting Secretary.

TELEGRAM from the GOVERNMENT of the NORTH-WESTERN PROVINCES to the GOVERNMENT OF INDIA, dated 27th February 1874.

Ghazeepore, 23rd February.—Prices a little lower. Distress decreasing. Nine out of nineteen relief works closed. Charitable relief at head-quarters and tehseelies.

Benares, 24th February.—No change. Crops beginning to ripen. Good prospect of average outturn. No signs of increasing distress. Applicants for labor few.

Mirzapore, 22nd February.—Much good from late rain in the South. Distress not extending. Imports rather greater.

Goruckpore, 23rd February.—Grain, except rice, somewhat cheaper, owing to imports from Oudh and near prospect of harvest. Benefit from rain greater than at first thought. Damage to Urhur in North over-estimated. Relief works still largely attended and charitable relief at Goruckpore to about 1,200 daily.

Bustee, 23rd February.—Prices steady. Rubbee ripening fast.

Azimgurh, 22nd February.—Prices slightly lower. Rubbee generally doing well. Relief works on small scale in Nugra Tehseel. General prospects better.

Jounpoor, 23rd February.—Prices lower owing to increased imports and approaching harvest expected in about a fortnight. Some barley already cut. No necessity for relief works.

General remarks.—Prospects continue to be more cheerful. Distress expected to be diminished by approaching harvest. Relief works and charity provided, where necessary, for the destitute.

(True copy).
(Signed) ARTHUR HOWELL,
Deputy Secretary to the Government of India,
Department of Agriculture, Revenue, and Commerce.

INSTRUCTIONS TO RELIEF COMMITTEES.

I.

ORGANIZATION OF COMMITTEES.

There will be three classes of committees—first, the central committee at Calcutta; second, district committees; third, sub-divisional committees. The latter will generally be organized for a sub-division, but where necessary more than one of such committees may be appointed in a sub-division.

2. The central relief committee at Calcutta will be organized under the immediate supervision of the Lieutenant-Governor of Bengal.

3. The district relief committees will be organized in such districts as the Commissioner of the division may think it desirable. The Magistrate and Collector of the district will usually be the chairman of the district committee, and will arrange for the appointment of the members in communication with the Commissioner of the division.

4. The sub-divisional committees will be organized wherever the Magistrate and Collector of a district consider it desirable. The Sub-divisional Officer will usually be the chairman of the sub-divisional committee, and will arrange for the appointment of members in communication with the Collector of the district.

5. The district relief committees will communicate direct with the central relief committee at Calcutta.

6. The sub-divisional relief committees will act under the general supervision of the district relief committees.

7. The sub-divisional relief committees will be responsible for organizing the agency for the relief of distress within their area. They will be authorised to employ sub-committees, or any other agency which, with a view to local circumstances, they may think best suited for the purpose, or to delegate any portion of their duty to the other members. The sub-divisional committees will be responsible that the whole of the relief operations within the sub-division should be constantly inspected once a week at the least for the purpose of ascertaining whether the relief operations have been properly carried on, and whether there are any places in the sub-division in need of relief where relief operations have not been instituted. For this purpose they will apply, through the Collector of the district for such additional assistance, whether Native or European, as they may require.

II.

DUTIES OF COMMITTEES.

The functions of the central relief committee will be to collect subscriptions and to supply money or food, as the case may be, to the district committees; to exercise a general supervision over the proceedings of those committees; to receive their reports; and to examine their accounts.

2. The functions of the district relief committees will be to draw supplies of money or food from the central relief committee; to collect subscriptions on their own behalf, but so as not to interfere with the resources of the sub-divisional committees; to supply the sub-divisional relief committees with money or food; to exercise a general supervision over the proceedings of those committees; to receive their reports; and to examine their accounts, forwarding reports and accounts to the central relief committee at Calcutta.

3. The functions of the sub-divisional relief committees will be—

(*a.*) To collect subscriptons and to distribute the resources which will be at their disposal from local subscriptions, from the contributions of Government, and from the grants received from district committees.

(*b.*) To provide food for relief purposes from local sources or Government depôts.

(*c.*) To transport food to convenient places, and to provide for its proper storage.

(*d.*) To distribute gratuitous relief to persons in need of it and unable to work.

(*e.*) To provide useful employment for those people who apply for it, and are able to work, by instituting minor relief works and providing other employment, such as spinning, weaving, husking rice, &c. Sub-divisional committees will have full information of the imperial and provincial public works in their neighbourhood, in order that, if desirable, able-bodied laborers may be despatched to those works, together with their families.

(*f.*) To provide, in such manner as may be considered the best, in each particular locality, for the relief of such persons whose caste usages and feelings prevent them from going to the Government public works—women of good family and others—who would die of starvation if not relieved. Relief for this class of persons might be afforded either wholly gratuitously or partly gratuitously by the sale of grain under the market rates, or even in some cases, with due precautions, by the advance of money or grain, to be subsequently repaid.

(*g.*) If there should be an absolute deficiency in the supply of grain in any part of their district the sub-divisional committee may, with the previons approval of the Collector, make arrangements for the sale of grain from Government stores. The arrangement should be made through the agency of the traders, which will probably be available everywhere. The price should be fixed at that of the nearest large mart, where supplies are readily brought in by railroad or river, together with such addition representing the cost of transport as may be considered proper. Such sales should be stopped at once as soon as the local trade receives supplies, and any competition with the local trade should be carefully avoided.

(*k.*) It will be probably found necessary for the sub-divisional committees to establish in certain parts of their districts poor-houses, where those who apply may be received and furnished with cooked food. It will be essential, however, that besides such houses relief centres should be established, if possible, in every large village in which severe distress exists, from which centres the distribution of food, either cooked or not, might be made to those who, under the general principles laid down, should receive gratuitous relief as unable to work. It appears highly desirable to avoid the congregation of large masses of people together away from their homes for the purpose of relief.

III.

ACCOUNTS.

The Central Relief Committee at Calcutta should draw up forms of account for the use of the sub-divisional and district committees. Provision will be made, in communication with the central committee, for the proper audit of their accounts.

IV.

MISCELLANEOUS.

Nothing in these rules is intended to preclude relief committees or officers of Government from adopting special measures to relieve sudden and severe distress wherever it may occur, reporting the measures they have taken at once for the approval of superior authority.

2. Further and more detailed instructions for relief committees will be given from time to time by the Central Relief Committee at Calcutta in communication with the Government of Bengal.

No. 14 of 1874.

GOVERNMENT OF INDIA.

DEPARTMENT OF REVENUE, AGRICULTURE, AND COMMERCE.

Agriculture and Horticulture.
Famine.

To the Most Honorable the MARQUIS OF SALISBURY, P.C., Her Majesty's Secretary of State for India.

MY LORD MARQUIS, Calcutta, the 6th March 1874.

WE have the honor to transmit the twelfth special narrative of the drought in Behar and parts of Bengal for the fortnight ending the 5th instant.

2. We entirely concur with the Lieutenant-Governor of Bengal in acknowledging the great advantage to the public service from Sir Richard Temple's zealous and energetic labors in inspecting and supervising the relief operations in Behar. Sir Richard Temple returned to Calcutta on the 28th ultimo, and left on the afternoon of the 4th instant for the purpose of inspecting the relief operations in Purneah, Maldah, Dinagepore, and Rungpore, with the same full powers that the Lieutenant-Governor delegated to him upon the occasion of his visit to Behar.

3. In addition to the information with respect to prices contained in the special narrative, we are glad to be able to report that the price of common rice at Calcutta has fallen steadily during the last four weeks. The daily quotations for "Ballam "low to good middling" were, on the 7th of February, Rs. 3-4 to Rs. 3-7½ per maund, and on the 4th of March Rs. 2-15 to Rs. 3-2 per maund. The price of wheat has also steadily fallen of late in Calcutta.

4. While the general condition of the preparations made to meet the impending distress is shown from the fortnightly district narratives to have improved, and the arrangements in some districts to be very complete and much to the credit of the local officers, the Lieutenant-Governor again expresses considerable anxiety as to the condition of the arrangements both for relief works and the distribution of food in the northern sub-divisions of Tirhoot. Mr. Worsley's report of the condition of the special tract of Singhiya and Bahera, Durbhunga sub-division, is alarming, and private information since received has induced Sir George Campbell, with the approval of the Viceroy, to decide upon visiting the spot himself, in order to see that the local arrangements are properly organised. Sir George Campbell leaves Calcutta this evening for that purpose.

5. With reference to the 9th and 10th paragraphs of our Despatch No. 11 of the 13th of February, the 7th paragraph of our Despatch No. 12 of the 20th of February, and the record of proceedings at the conference held on the 21st of February, we beg to enclose copies of letter No. 801 of the 5th instant, addressed to the Government of Bengal, and of a Resolution of Government of this date, promulgating, with some preliminary observations, the instructions to Relief Committees issued by us on the 24th of January, modified in some respects in communication with the Lieutenant-Governor of Bengal and the Executive Committee of the Central Relief Committee. We trust that the instructions now issued will be found to be sufficient for the guidance of local officers and Relief Committees. We are satisfied that the Executive Committee have wisely desired that the responsibility of directing the local Committees shall not be divided, but shall rest exclusively with the local officers of Government. Enclosure No. 1. Enclosure No. 2.

6. We have taken measures to increase the quantity of rice at our command, in order to be in a position to meet any further demands for supplies. Enclosure No. 3.

7. In continuation of our Despatch No. 11 of the 13th of February, we enclose a return showing the export of food-grains for the Presidency of Bengal in the five months from the 1st of October to the 28th of February in each of the official years, 1872–73 and 1873–74.

Enclosure No. 4.

8. We enclose a list of relief sub-divisions numbered consecutively in accordance with the desire expressed in your Lordship's telegram of the 24th of February.

We have the honor to be,
My Lord Marquis,
Your Lordship's most obedient, humble Servants,
NORTHBROOK.
NAPIER OF MAGDALA.
B. H. ELLIS.
H. W. NORMAN.
A. HOBHOUSE.
E. C. BAYLEY.

Enclosure No. 1.

No. 801.

GOVERNMENT OF INDIA.

DEPARTMENT OF AGRICULTURE, REVENUE, AND COMMERCE.

Agriculture and Horticulture.
Famine.

To the SECRETARY to the GOVERNMENT OF BENGAL.

Fort William, the 5th March 1874.

SIR,

I AM directed by the Governor-General of India in Council to place on record, for the information and guidance of the Government of Bengal, the following arrangements which were concluded yesterday by the Viceroy in communication with the Lieutenant-Governor of Bengal and the Executive Committee of the Central Relief Committee.

2. The following papers were taken into consideration:—

(1.)—The instructions to Relief Committees given by the Government of India on the 24th of January last.

(2.)—The letter from the Government of Bengal, No. 705 S. R. of the 16th of February, enclosing Bengal circular letter No. 703 S. R. of the same date, with reference to the orders of the Government of India of the 13th of February and to certain "additional instructions" to Relief Committees which it was supposed had been issued by the Central Relief Committee.

(3.)—The record of explanations and instructions given to the Central Relief Committee at Government House on the 21st of February.

(4.)—The letter from the Government of Bengal to the Secretary of the Central Relief Committee, No. 1071 S. R. of the 26th February, transmitting, with explanatory remarks, the above-mentioned record.

3. The Executive Committee of the Central Relief Committee suggested that it would be desirable that the officers of Government should have executive control over the relief operations of all the Local Committees, and that the functions of the Central Committee should be limited to the collection and distribution of funds and the receipt of reports. The Viceroy concurred in the wisdom of this suggestion as being calculated to prevent any risk of divided responsibility in dealing with distress. The instructions to Relief Committees have accordingly been modified in communication with the Executive Committee, and with their concurrence.

4. It appeared, on enquiry, that the "additional instructions" of the Central Relief Committee, quoted in Bengal circular letter No. 703 S. R. of the 16th of February, had not been issued, but were under consideration. The circular will, therefore, be cancelled, and it is unnecessary for His Excellency to make any observations upon the contents of that circular, or of the draft "additional instructions," which will no longer be required.

5. The change now made in some of the functions of the Central Committee will make the explanations and instructions contained in Bengal letter No. 1071 S. R. of the 26th of February unnecessary, and no further observations on the subject appear to be required from the Government of India.

6. His Excellency in Council considers that the instructions to Relief Committees of the 24th of January, as modified in the revised issue forwarded herewith, will probably suffice for the guidance of the Committees, and this is the opinion of Sir Richard Temple, derived from his experience in Behar. They will be immediately made public by the Government of India, together with some preliminary remarks; and the importance of avoiding any misapprehension

on the subject of the duties of the Committees is so great that I am to request that, should the Government of Bengal consider any further general instructions or explanations necessary, they should be referred before issue for the previous approval of the Government of India.

I have the honor to be, Sir,
Your most obedient Servant,
A. Howell,
Deputy Secretary to the Government of India.

Enclosure No. 2.

No. 813.

Extract from the Proceedings of the Government of India in the Department of Agriculture, Revenue, and Commerce,—dated Calcutta, the 6th March 1874.

Resolution.

Active operations for the relief of distress having now commenced, the Governor-General in Council reminds local officers that it is their duty to see that the arrangements for the relief of distress are adequate within the area under their charge, and that they will be held responsible that no deaths from starvation occur, which could have been avoided by any exertion or arrangement within their power and the means placed at their command.

2. His Excellency in Council is satisfied that all officers have cheerfully accepted this responsibility, and that they will perform the arduous task imposed upon them with the zeal, ability, and self-sacrifice which have always distinguished the servants of the Crown and of the East India Company in India in times of difficulty and danger.

3. The instructions to Relief Committees issued on the 24th of January last are re-published herewith, with some modifications made in communication with the Lieutenant-Governor of Bengal and the Central Relief Committee.

4. The duty of superintending the operations of Relief Committees rests with the sub-divisional and district officers under the general instructions of Commissioners of divisions.

5. Relief Committees have been authorised by the instructions to adopt any measures necessary to meet sudden and severe distress. The same authority is given to local officers under similar circumstances. Where the danger is sudden, officers must act promptly to the best of their power, and not be satisfied with making reports to their official superiors.

6. The instructions leave much to the discretion of Relief Committees, and to that of the local officers of Government, under whose supervision they will act, as regards the manner in which distress is to be met.

7. The Government has not prescribed the invariable use of any test, either by labor or by the distribution of cooked food, for the purpose of determining who are fit objects for relief. Such tests are desirable and necessary under certain circumstances. It is right that able-bodied men, accustomed to labor, should, as a general rule, be required to work in return for the food or money supplied to them. It is desirable that light work should be found for others where this can be arranged profitably and without obliging large numbers of people to leave their homes. In dealing with certain classes of distress, especially in towns, the issue of relief in cooked food may be useful as a test. But stringent tests are inapplicable to those limited tracts of country where, owing to the great failure of the crops and the absence of private trade, the Government have, in accordance with their Resolution of the 7th of November last, assumed the task of importing grain for sale and distribution to the people.

8. In such tracts the difficulty will be not to prevent undeserving applicants from being relieved, but to ensure that sufficient supplies reach those who require them; and, in addition to the modes of relief and the provision for the sale of grain specified in the instructions to Relief Committees, grain should be freely advanced to zemindars and mahajuns under the instructions already issued by the Government of Bengal, as well as to cultivating ryots, where there is a reasonable probability of repayment, at the discretion of the local officers, and with a due regard to the maintenance of a sufficient reserve.

(True Extract.)
A. Howell,
Deputy Secretary to the Government of India.

INSTRUCTIONS TO RELIEF COMMITTEES.

I.—Organisation of Committees.

There will be three classes of Committees,—first, the Central Committee at Calcutta; second, District Committees; third, Sub-divisional Committees. The latter will generally be organised for a sub-division, but where necessary, more than one of such Committees may be appointed in a sub-division.

2. The Central Relief Committee at Calcutta has been organised under the immediate supervision of the Lieutenant-Governor of Bengal.

3. The District Relief Committees have been, or will be, organised in such districts as the Commissioner of the division may think desirable. The Magistrate and Collector of the district will usually be the chairman of the district Committee, and will arrange for the appointment of the members.

4. The Sub-divisional Committees will be organised wherever the Magistrate and Collector of a district considers it desirable. The Sub-divisional Officer will usually be the chairman of the Sub-divisional Committee, and will arrange for the appointment of members in communication with the Collector of the district.

II.—DUTIES OF COMMITTEES.

The functions of the Central Relief Committee will be to collect subscriptions and distribute them to the local Committees in such amount and for such objects as they may consider desirable, and to receive reports of the expenditure of the funds supplied by them.

2. The functions of the District Relief Committees will be to collect subscriptions, but so as not to interfere with the resources of the Sub-divisional Committees, to supply the Sub-divisional Committees with money, and to receive their reports.

3. The Sub-divisional Relief Committees will organise the agency for the relief of distress within their areas. They will be authorized to delegate any portion of their duty to individual members, and to employ Sub-Committees, or any other agency which, with a view to local circumstances, they may think best suited for the purpose. The Sub-divisional Committees and the Sub-Committees will arrange that the villages within their several circles shall be constantly inspected (once a week at the least) for the purpose of ascertaining whether the relief operations have been properly carried on, and whether there are any other places in the circle in need of relief. For this purpose they will apply through the Collector of the district for such additional assistance, whether European or Native, as they may require.

The principal functions of the Sub-divisional Committees and the Sub-Committees will be—

(*a.*) To collect subscriptions and to distribute the resources which will be at their disposal from local subscriptions, from the contributions of Government, and from the grants received from District Committees.

(*b.*) To distribute for relief purposes grain received from local sources or Government depôts.

(*c.*) To transport grain to convenient places, and to provide for its proper storage.

(*d.*) To distribute gratuitous relief to persons in need of it and unable to work.

(*e.*) To provide useful employment for those people who are in need, and are able to work, by instituting minor relief works and providing other employment, such as spinning, weaving, husking rice, &c. Sub-divisional Committees will have information of the Government public works in their neighbourhood, in order that laborers may be despatched to those works, together with their families, if desirable.

(*f.*) To provide in such manner as may be considered the best, in each particular locality, for the relief of persons whose caste, usages, and feelings, preclude the application of a labor test, women of good family and others, who may be in great distress. Relief for this class of persons may be afforded either wholly gratuitously, or partly gratuitously, by the sale of grain under the market rates, or, with due precautions, by the advance of money or grain to be subsequently repaid.

(*g.*) If a serious deficiency of grain in any part of their district is apprehended, which the trade is unable to supply, the Sub-divisional Committee may, under instructions from the Collector of the district, make arrangements for the sale of grain from Government Stores. The arrangement should, as a rule, be made through the agency of the traders, which will probably be available everywhere. The selling price should be fixed at that of the nearest large mart, where supplies are readily brought in by railroad or river, together with such addition representing the cost of transport as may be considered proper. Sales should be stopped as soon as the local trade receives sufficient supplies, and any competition with the local trade should be carefully avoided. This rule will not interfere with the sale of rice under the market rate as a means of relief under clause (*f.*) to persons whose cases have been inquired into by the Committees or their officers.

(*h.*) The congregation of large masses of people away from their homes for the purpose of relief should be avoided. Every village in which general distress exists should, so far as is practicable, be dealt with separately as regards relief works and the distribution of gratuitous relief. The acceptance of cooked food should not be insisted upon as an invariable test to be applied to all who require relief. In the very distressed districts such a test would generally be inapplicable. It may be necessary to establish poor houses in some places, such as considerable towns. In those houses food might be distributed cooked or uncooked as may be most convenient. Generally speaking, those who are unable from illness to cook their own food should be provided for in hospitals.

III.—MISCELLANEOUS.

Nothing in these rules is intended to preclude Relief Committees from adopting any measures necessary to relieve sudden and severe distress wherever it may occur, reporting the measures they have taken at once for the approval of superior authority.

A. HOWELL,
Deputy Secretary to the Government of India,
Department of Agriculture, Revenue, and Commerce.

March 5th, 1874.

NAMES OF RELIEF STATIONS in Famine Districts with Current Number.

Famine District.	Name of Relief Station.	Current Number.
Tirhoot	Mozufferpore	1
	Hajeepore	2
	Tajpore	3
	Dhulmya	4
	Hatee	5
	Mudhoobanee	6
	Naryn	7
	Seetamurhee	8
	Poopree	9
Chumparun	Moteeharee	10
	Dhaka	11
	Govindgunge	12
	Bettiah	13
	Ramnugger	14
Bhaugulpore	Bhaugulpore	15
	Banka	16
	Soopoole	17 In these two sub-divisions six relief circles have already been opened.
	Mudeypoora	18
Monghyr	Monghyr	19
	Beegoserai	20
	Jamni	21 In this sub-division 3 circles under civil officers have been formed and are at work.
Purneah	Kudbah	22
	Kusba Amow	23
	Purneah	24
	Kissengunge	25
	Arrareah	26
Sonthal Pergunnahs	Godda	27
	Rajmehal	28
Moorshedabad	Berhampore	29
	Sah Bagh	30
	Jangypore	31
	Rampore Haut	32
Maldah	Chunchul	33
	Maldah	34
Dinagepore	Raneesunkoil	35
	Raigunge	36
	Gungarampore	37
	Pateram	38
	Ghoraghat	39
	Kullugung	40
Rajshahye	Rampore Bauleah	41
	Nattore	42
Rungpore	Rungpore	43
	Bhowaneegunge	44
	Koraigaon	45
Sarun	There are 18 first grade relief centres in this district, names will follow next mail.	

No. 1250.—S.R.

From the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL in the Statistical Department, to the DEPUTY SECRETARY to the GOVERNMENT of INDIA, Department of Agriculture, Revenue, and Commerce.

Scarcity and Relief.

Calcutta, $\frac{\text{dated 5th March}}{\text{issued 5th March}}\Big\}$ 1874.

SIR,

IN continuation of my letter No. 847—S. R., dated the 19th February 1874, I am directed to forward herewith seven copies of the twelfth Special Narrative of the drought in Behar and parts of Bengal, from the 20th February to the 5th March 1874, inclusive.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

TWELFTH SPECIAL NARRATIVE of the DROUGHT in BENGAL, from the 20th February to the 5th March 1874.

Weather and rainfall.

THE weather has been on the whole very seasonable. In parts of Eastern Bengal there has been a moderate amount of rain during the fortnight, and there has been some little rain in Central Bengal. But between the showers in Bengal and during the whole fortnight in Behar, the weather has been for the most part clear and bright. Only from one very limited tract of Chumparun was any fall of hail reported. The rain was wanted in East Bengal, and the dry weather was wanted in Behar to ripen the spring crops, so that the weather has been on the whole as good as could be wished. As yet there has been no cholera or threatening of cholera among the laborers on any of the works. Regarding the weather of the fortnight at Calcutta, the Meteorological Reporter writes:—

Rainfall of the fortnight in inches.

Dacca - - - -	0·35
Furredpore - - -	1·40
Backergunge - - -	2·53
Mymensing - - -	·0·49
Sylhet - - - -	3·19
Chittagong - - -	2·31
Noacolly - - -	1·78

"Since the date of the last report the weather has been on the whole fine, but occasionally cloudy in the day-time, and foggy in the early morning. On the 26th a few drops of rain fell at Calcutta, and between the 22nd and the above date slight showers were felt in some parts of Bengal Proper and in Maunbhoom. At this time the weather was close and oppressive, and warmer than is usual at the time of year; but since then the wind has gone round to the west, and it has become cooler."

The weather and rainfall reports for the two weeks under review form enclosure No. 1.

Price of grain.

2. In last Narrative a fall of prices was recorded in the Rajshahye Division, and a general rise in prices over the rest of Bengal and Behar. The prices-current for Saturday, the 28th February, show that there has been a fall in prices over the whole of Western and over parts of Central Bengal. The only parts that show a considerable rise in prices are the districts of Chittagong, Tipperah, and Noacolly, which supply the port of Chittagong. In Backergunge there was a great rise, but the price has fallen again. The Lieutenant-Governor thinks there is a general tendency to a rise of prices in Eastern Bengal. In the Rajshahye Division prices are about the same as they were at the date of last Narrative. In Behar also there has been a slight fall in prices excepting only in the districts of Sarun and Chumparun, where a slight rise has occurred. In Chumparun the price of maize, the ordinary food of the common people at this season, has gone up from 14½ to 13 seers per rupee. The price of common rice in the principal districts compares with those quoted in last Narrative thus:—

	Number of seers of common rice sold for a rupee.		
	On 31st Jan.	On 14th Feb.	On 28th Feb.
Burdwan	14	13	13½
Beerbhoom	12⅜	12	12½
Hooghly	11 to 12	10 to 10½	11½ to 12½
Calcutta	12½	10½	12¼
Dinagepore	13¼	14	14
Maldah	11¾	12½	12
Rungpore	11¼	11¼	11¼
Dacca	16	16	14
Backergunge	16½	13½	15
Chittagong	18	17	16½
Noakhally	17½	16	13
Patna	12	13	13½
Shahabad	13	11¾	12½
Tirhoot	10	10	10
Chumparun	11¾	11¼	11
Bhaugulpore	12⅝	11¼	11⅜
Lohardugga	15½	16	16
Maunbhoom	15	14½	14½

From passages in the district narratives it will be seen that in many districts the price in the interior is higher than the prices above quoted, which are only those of the district head-quarters town. The price-current statements for the two weeks under review form enclosure No. 2.

State of the crops.

3. The district officers have now been able to form some estimate of the probable yield of the spring crops. The rainfall at the beginning of February has done immense good to the crops, and the yield will probably be, on the whole, more than twice as heavy as it would have been without rain, provided no fresh misfortune from hail, excessive rain, or the like occurs. Still, on the whole it is hardly to be expected that the yield of the spring crops will be equal to the yield of an average year. It is in South Behar, in Sarun and Chumparun, and the lower parts of Tirhoot, Bhaugulpore, and Purneah, that these crops contribute largely to the food of the people. No doubt in all the alluvial lands they will be very fine indeed; but in the northern parts of Tirhoot and Bhaugulpore, and in much of Dinagepore and some adjacent tracks, the spring crops give but an insignificant addition to the food-supply. In Patna, Monghyr, Purneah, and South Bhaugulpore, the yield of the spring crops is expected to be nearly as good as in ordinary years. In Gya the crop will be fair; but only half the ordinary area was, the Collector estimates, sown with these crops. In Tirhoot the yield may be nearly half the average. In Sarun the Collector expects that two-thirds of an average crop will be got all round; the Commissioner estimates the yield at a somewhat lower proportion, but he is making further enquiries. In Chumparun, the yield will be probably above half of an average crop. In the Rajshahye Division the spring crops will be little below the average.

Later estimates of the rice crop.

4. Since the last Narrative was submitted, estimates of the out-turn of the principal rice crop have put the yield of some of great producing districts, such as Backergunge and Chittagong, at something less than had been previously estimated. These estimates, taken together with the general rise in prices in Eastern Bengal during the last five weeks, make the Lieutenant-Governor fear that the stocks in Eastern Bengal may, as suggested in paragraph 26 of the last Narrative, have been much depleted. If so, then the need for a reserve of Government grain to meet possible demands for North-Eastern, Central, and Western Bengal becomes greater. The matter has been laid before the Government of India with an expression of the Lieutenant-Governor's views.

Supply of grain.

5. The supply of grain is still sufficient in all the large marts except in North Behar, and at occasional places in the interior of the Rajshahye Division. In some villages in North Tirhoot grain is not to be bought, and at one point on the Northern Bengal Railway works the supply of grain fell short in the local bazaars. Still up to the present time the Government stores have been opened for the supply of laborers on only a very few works. At one or two places, where prices were very high, Government grain was offered for sale to the

workpeople; but they preferred to provide for themselves from the bazaar as long as they could. Private trade in grain is still active in the Patna, Shahabad, Monghyr, Purneah, Rajshahye, Rungpore, and Bograh Districts; in the other distressed districts private trade in grain is very slack indeed. During the period under review private traders carried by railway into Behar—

From the North-Western Provinces
and Punjab - - - 7,881 tons of grain during one week.
From Calcutta - - - 4,186 „ „ two weeks.

This gives a private import of grain of about 1,424 tons a day. There is still, so the Patna dealers report, very much grain ready for export from the Punjab, if only its owners could get railway wagons on which to carry it into Behar. The private imports of grain reported from the Sarun District continue to range at about 1,20,000 maunds per fortnight, but probably there is a good deal of petty import not reported.

Export of grain.

6. The export of grain from Calcutta during the month of February is returned by the Collector of Customs at 15,421 tons, which is a very great reduction on the exports of the two preceding months. On the other hand the imports are now very large amounting in February to 60,068 tons. The total exports of grain from Bengal from the 1st October (up to the 28th February for Calcutta and Chittagong, and up to the 15th February for the Orissa ports), is shown by the Collector of Customs to be 174,628 tons, and to be 155,926 tons reckoning from the 1st November, so far as returns have been received from the outlying ports. The grain imports since the 1st October are shown by the Collector of Customs at 100,064 tons, of which 3,723 tons were imported on private account. As was supposed, it turns out that a large part of the imports on private account stated in last narrative was really on Government account. This Government has no exact information regarding the grain consigned to the Government of India which has arrived in the river, and that statement has therefore been omitted; only the imports which have been entered in the Collector of Customs' books is given. Enquiry was made regarding the private imports which were ascertained to be as above stated; of this, part was rice imported from the Madras coast for the Hutwa Wards' Estate, indigo factories and the like; and part consisted of experimental imports from Burmah. Enquiry has been made regarding the result of these Burmah imports, but the information elicited is contradictory, one importer stating that the rice was good and the result successful, while another firm declare that it is still on their hands and cannot be sold except at a heavy loss.

Condition of the people.

7. The only districts or tracts in which the condition of the people would seem to be perceptibly worse than it was at the time of the submission of last narrative are Northern Tirhoot and parts of the Rungpore district. From all the rest of the distressed districts it is reported either that the improving prospects of the spring crops have brought prices down and made the people more cheerful, or that the relief works and charitable relief arrangements are meeting and alleviating distress. In the Patna District prices are high, and professional beggars cannot get arms from their ordinary supporters, but there are no other signs of distress. In Gya "the condition of the people remains good, but the Magistrate cannot expect "this to last much longer." Four or five isolated cases of distress met relief. In Shahabad there is no general distress, though "pressure is being felt by the more "indigent of the high castes, and by those who ordinarily subsist on charity, or "who from bodily infirmities are incapable of work." In Sarun the condition of the people is expected to improve "for a time at least" in consequence of the yield of the spring harvest. "Meanwhile, the provision of relief works has been found "to relieve distress wherever reported;" and it is believed that "widespread and "general distress among the laboring classes has thus been avoided." From the very worst parts of Chumparun it is reported that there had been great distress, but that owing to the various relief measures, "a material and already perceptible im"provement in the condition of the people has been caused." In Monghyr, the condition of the spring crops is excellent, and there is much work to be had in the fields; but in two limited tracts the condition of the people is said to be bad, though the distress has been "hitherto confined to the old, infirm, widows, and children." From the very worst parts of Bhaugulpore, the Magistrate, who was there in camp, was able to report that much field-work was going on, and the general "condition "of the people was better than he had anticipated." The Purneah reports show that

Districts where things are better.

distress is extending in the two worst thannahs, where arrangements are being made to meet it; but the rest of the district is apparently better off than it was a fortnight ago. From Moorshedabad, Rajshahye, and Bogra, it is reported that the condition of the people is not critical, and actual distress is felt as yet only by the old, infirm, and diseased. The Maldah report says there is no actual distress except in one tract where people flocked much to the works, and charitable relief was being given in grain and food. The Dinagepore Magistrate reports that the prospects of his district "appear much more hopeful than they did a short time ago."

The district narratives, bringing the history of affairs in the distressed districts down to the 21st February, will be found in enclosures Nos. 3, 4, and 5.

Tracts where matters are worse.

8. The only distressed district from which the report is clearly worse is Tirhoot. In the three southern sub-divisions of Tirhoot there is not any general distress except in certain limited tracts. But in the three northern sub-divisions of Durbhanga, Seetamurhee, and Madhoobunee matters are worse. In many tracts of these sub-divisions distress is increasing. Prices are very high, and grain is not always to be had at the nominal prices, so that it has been necessary to commence the sale of Government grain. People are now flocking to the works in much larger numbers; the infirm and the professional beggars are coming in to relief centres to be fed. The Lieutenant-Governor trusts that the arrangements now made in Tirhoot will meet the distress as fully as has been done in Sarun and Chumparun. Hitherto the system of relief works in parts of Tirhoot had not been at all so good as in the last named districts, and it is not yet certain that they are what they should be. Abuses are said to have prevailed which must be remedied; every effort is being used to prevent their recurrence.

The Magistrate of Rungpore reports the condition of the people to be worse, and that a police officer employed on inspection reported severe distress leading to the sale of wives and children. Previous accounts had not led the Lieutenant-Governor to anticipate such statements, and he has urgently referred the matter to the Relief Commissioner, who very recently visited the district. The Lieutenant-Governor's own hope is that things are not so very bad in a district like Rungpore, where prices are always high and nearly everybody is well-off; still the last reports show that parts of Rungpore require very careful watching and relief. If there is plenty of rice in the eastern districts, private trade will bring much of it to Rungpore when the south winds blow, but if the sources of supply fail they must be supplemented.

Even in Dinagepore, Sir George Campbell does not anticipate there will be so much suffering as in Tirhoot, now that a large supply of Government grain is provided for that district, and he hopes that by selling grain to the people, the Government may enable most of them to tide over the difficulty. (See Bengal Government letter, No. 1236, dated 4th March, at Appendix C.*)

* Page 158.

Disposal of references and questions by the Government of India in oral communication with Lieutenant-Governor.

9. On Saturday the 21st, and on Saturday the 28th February, His Excellency the Viceroy was pleased to invite the Lieutenant-Governor to meet the Government of India, for the disposal of pending references and questions on famine matters after oral discussion. In Appendix G* will be found schedules of the points and letters which were discussed and disposed of at these meetings. Action has already been taken on most of these points, as will appear from subsequent paragraphs of this narrative. It is therefore unnecessary to go through the several questions seriatim in this place.

* Page 169.

Sir Richard Temple in Behar.

10. Since the submission of the last narrative, Sir Richard Temple has completed his tour in Behar; he has visited North Bhaugulpore, and has again travelled through the worst parts of Tirhoot, seeing to the completion of the relief arrangements there; he has, during the past week, come to Calcutta, where he has conferred with the Lieutenant-Governor upon the state of the distressed districts. He has now started on another tour, in which he will visit Purneah and Dinapore, and probably some other places. At Appendix C* will be found minutes showing Sir Richard's conclusions regarding Bhaugulpore, and a conditional opinion regarding Purneah, also the letter in which he reported the conclusion of his first tour, and the Lieutenant-Governor's reply warmly ackowledging Sir Richard's services, and stating the subjects to which the Lieutenant-Governor would now specially call his attention. The Lieutenant-Governor has before acknowledged the great energy, ability, and tact with which Sir Richard Temple has directed famine operations in North Behar during his tour there, and he has derived much benefit from being able to discuss matters personally with Sir Richard during his present short visit to Calcutta.

* Page 153.

Allotments of Government grain.

11. The allotment of Government grain to the different districts remains very much as was stated at paragraph 26 of the last (eleventh) Narrative. Sir Richard Temple's estimates for Bhaugulpore differs very little from that of this Government. Not having visited Purneah, he has not yet given a final opinion as to the amount of grain that will be there required; he has, for the present, authorised (see minute No. 28 in Appendix C*) the Commissioner to arrange for carriage up to a total allotment of 6,50,000 maunds for Purneah. But, as the last accounts are favorable there, the somewhat smaller quantities previously contemplated by Government may be found sufficient. Meanwhile, in order to relieve the pressure on the East Indian Railway traffic upwards from Howrah, the Government of India, on the Lieutenant-Governor's suggestion, has authorised him to provide for the Sarun district and for any pressing needs of Shahabad by purchasing grain through the Patna dealers who draw their supplies from the North-Western Provinces and the Punjab. A portion of this may also be diverted for Tirhoot. When the carrying power of the East Indian Railway was specially slack, and contractors' carts were being kept empty opposite Patna, authority was given to the Commissioner of Patna to purchase locally enough grain to keep the carts going. Under the latter authority some small amount of grain was bought; all the grain so purchased, and the supplies to be brought for Sarun, will be so much in excess of the original total provision of 340,000 tons of Government grain. 1,000 tons of Government rice has been made over to the Nepal Government for the relief of sufferers in the Nepal terai; the grain is now on the way to Bhaugulpore, where it will be taken over by Nepal Famine Commissioner.

* Page 158.

Despatch of Government grain from Calcutta.

12. The total despatches of Government grain from Calcutta during the fortnight under review were (see Appendix B) 10,33,737 maunds. Altogether 36,50,000 maunds (about 135,000 tons) of Government grain have been despatched to or received in the distressed districts up to date. The daily despatches by the East Indian Railway during the month of February averaged 1,700 tons. At one time an attempt was made to load up and despatch in one day as much as 2,800 tons, in order to make up for previous slack days, and to meet the indents of the officers who had collected means of transport at the stations up-country. But the locomotive department could not carry away the full quantity loaded, and the Government of India decided that the strain upon the railway caused by such large Government despatches, in addition to the ordinary traffic of the country, would be too great, and directed that not more than 2,500 tons of Government grain should be loaded up at Howrah in any one day. Effort is being made to have a reserve equal to two or three days' supply at all the great river-side depôts, so that the local means of transport may not be thrown out of gear by occasional short despatches on the East Indian Railway.

River crossings.

13. In last narrative it was stated that the arrangements for crossing the grain over the Ganges from the East Indian Railway and Eastern Bengal Railway stations into the very distressed districts were being made fairly complete. During the past fortnight one additional Government steamer, three hired steamers, eight flats, and three cargo boats have been added to the fleet which is occupied in crossing grain over the Ganges. Some of these vessels may not yet have reached their respective stations; but there either are or soon will be present—

At the Kooshtea crossing—three large river steamers with six flats, one smaller steamer, with a flat, besides country boats;

At the Rajmehal crossing—one river steamer with one flat, besides country boats;

At the Barrh ghât crossing—three river steamers with four flats and two cargo boats, besides country boats;

At the Futwa ghât crossing—two river steamers with four flats or cargo-boats;

On the rivers in the interior of Rajshahye—one small steamer with two barges already at work, one steam launch about to arrive, and three steamers expected shortly to arrive from Godavery.

At each of these crossings there are large numbers of native boats. But when the strong west winds begin to blow steadily these country boats will find it a very long business indeed to cross the Ganges, and especially to beat up-stream as they have to do from Kooshtea and Futwa Ghât. The trip from Kooshtea up to Godagaree takes a steamer and flats three or four days, and it takes a native boat from fourteen to twenty days; up to Manick Chuck, opposite Rajmehal, the voyage is still longer. Against the stream of the Ganges at this time of year native boats can rarely make more than 8 to 10 miles a day, and when the west wind is against them, they often fail to make 5 miles a day.

Inland transport.

14. The arrangements for carrying the allotments of Government grain into the interior are now complete and systematic. Even allowing for occasional mishaps and disappointments, there seems every reason to hope that the large allotments of grain made to the most distressed tracts will be well into the interior before the 15th June. If there should be any disappointment, the water-routes and the Durbhanga railway may make up the supply after that time. Sir Richard Temple's minutes reviewing the transport arrangements, will be found in Appendix D.* No. 35 reviews the transport arrangements for Tirhoot; his minute No. 34 describes the reserve carriage which has been provided. It will be seen that arrangements have been made by contract for throwing 42,00,000 maunds into the three northern sub-divisions of Tirhoot before the rains. This, with the quantity before provided by other means, and that supplied by Durbhanga Court of Wards, will make fully 45,00,000 maunds, say 166,000 tons. This is a very fully sufficient supply for almost the whole population for several months, and that part of the country is amply secured against a failure of the general food-supply. It will be seen that it has not been found necessary to rely on the North-Western Provinces contracts for more than 4,00,000 maunds. Even for so much it was necessary to pay excessively high rates, and the Lieutenant-Governor is very glad that Sir Richard Temple has been able to arrange without further drawing on this source at present. It will be seen that besides the contracts a reserve of Government carriage has been provided. The Patna divisional narrative (enclosure No. 8)* gives details of the transport scheme for Sarun and Chumparun, and describes the steps taken by the officers of the Quartermaster-General's Department to keep the roads in order, and by other military officers to maintain discipline and system at the river-side depôts whence such immense numbers of carts have to start daily. An additional crossing place and route into Tirhoot is to be opened opposite the Mokameh railway station, and is to be worked by a contractor from the North-West Provinces from the 15th March. Altogether, the full Tirhoot supply is arranged for; and so are the supplies for Sarun and Chumparun. The transport contractors are working well so far as is yet known; their carts and cattle are in good condition. Fodder is being collected, and there is no reason why the contracts should not be fulfilled. Most of the transport contracts carry the grain to great centres, and the local officers will, with the help of local planters and zemindars, distribute the grain to the more remote centres. Sir Richard Temple's minute No. 36 (Appendix D*) shows that pack-bullock carriage is being engaged for this work of internal distribution. Several thousands of small gunny bags, to contain 30 seers (61 lbs.) of grain apiece, are on the way to each of the distressed districts. They will be distributed to each grain depôt, so that grain can be packed in them and sent to villages either on pack-bullocks, or on coolies' heads.

* Pages 163 and 164.

Patna Division.

* Page 243.

* Page 165.

Bhaugulpore Division.

15. The Monghyr District has always been able to carry all the grain it got or could want. But in North Bhaugulpore there had been difficulty and delay in getting the grain away from the river-side. Contracts have, however, been made for carrying into the northern tracts all the grain that has been allotted. Efficient officers of the Quarter-Master General's Department have been told off to bridge the streams, keep the roads in order, and systematise the working of the two traffic routes. The Purneah district has recently been carrying into the interior fully 5,000 maunds of grain a day, and it is believed that this rate will be increased. The Dinagepore district looks to get some part of its supplies through Purneah, where the roads are good. Accordingly, Mr. Hankey has gone to Purneah with a view of obtaining sufficient carriage to raise the Purneah transport power as much as possible.

Rajshahye Division.

16. It had been stated in previous Narratives that the transport into the remoter parts of Dinagepore, where a very large supply of grain was required, had been difficult to arrange. The difficulty has, however, now been overcome; and from the papers in Appendix E* it will be seen that the Relief Commissioner expects to get the whole Dinagepore supply (10,00,000 maunds of grain) into the district by nine different routes before the end of May. Since the summary in Appendix E was written, report has been received that the officers are already working up to the full estimate on three or more of these routes, and the Commissioner of the division has informed the Government that even more may be done. The Commissioner reports that the engineers occupied in improving

* Page 165.

the bed of the Mahanuddy, hope by the end of March, to secure a good straight channel, 100 feet wide and 3½ feet deep, up the Mahanuddy as far as Maldah. As this will open the river for large boats and small steamers half-way to Raigunge, the principal depôt of north-west Dinagepore, the benefit to the grain transport will be very great if this expectation is fulfilled.

General aspect of the grain transport question.

17. Thus then, it may be said that the Government officers have now arranged, at great expense indeed in some cases, but still they have arranged, to carry into the interior of the most distressed districts all the grain which Government proposes to send; and there is every reasonable hope that these arrangements will, notwithstanding the misadventures which must occur in great undertakings of this kind, be effectually carried out. At Appendix F* will be found a table showing the quantities of Government grain which had reached its final destination in the interior of the districts up to the date of the latest returns. The total of that statement is 16,97,467 maunds, or 62,870 tons. Considering that the latest returns do not bring the facts for remote store-houses up to later than the 17th or 18th February, and that the despatches were largest at the end of January, while the internal transport was not then fully developed, it may perhaps, be reckoned that the grain now reaches the final storehouses in the interior of the worst districts within a month of its leaving Calcutta.

* Page 168.

Relief works.

18. The fortnightly returns of persons employed on the Government relief works will be found at enclosure No. 6.* The numbers receiving relief in this shape have increased largely during the fortnight in all the worst districts, except Bhaugulpore and part of Monghyr. Compared with the figures given in the last narrative (paragraph 27), the numbers employed daily stand thus:—

* Page 241.

	Last fortnight.		Fortnight under report.
Patna Division - - -	120,000	people.	162,267
Soane Canal works - - -	32,000	„	36,000
Gunduck Embankments - -	9,500	„	19,240
Bhaugulpore Division (inclusive of Kurruckpore works) - -	19,000	„	16,310
Rajshahye Division - - -	24,000	„	35,940
Burdwan Division, Nuddea, and Chota Nagpore - - - -	6,000	„	11,754
Northern Bengal Railway - -	3,000	„	6,200
Total - - -	213,000	„	287,711

The districts where relief is most freely given on works are, Sarun, with its daily average of 82,820 people, exclusive of those on the Gunduck embankment; Chumparun, with 25,787 relief laborers, besides 7,900 on the embankment works; Dinagepore, with 25,000 people on the district works, besides 6,200 on the railway. In Tirhoot the relief works are being developed; 25,889 people are employed (according to the narrative, enclosure No. 3)* on Government works, besides 13,000 on Court of Wards' works, and 5,036 on private works. But, as has been said, some abuses and failures have come to light in this district, and we have yet to learn that the arrangements are all we could desire. In the Sarun districts, and in South Behar, the number of work-people fell off during the latter days of the fortnight; this decrease was due to the demand for labor for the spring harvest, and partly to the slight fall in the price of food.

* Pages 189 and 190.

In North Bhaugulpore and Purneah, the number of laborers on the Government relief works continues to be small. In the former tract a great deal of relief work on village tanks is said to be now being done by private persons; in Purneah the system of daily payments to laborers has been strictly introduced, and it remains to be seen if the number of work-people increases greatly. Happily the condition of Purneah appears to be, excepting certain limited tracts, better than had been at first feared.

Relief works system.

19. The system of administering the relief works differs in different districts. In Sarun and Dinagepore, there has been little or no demand for additional trained subordinates of the Public Works Department, yet the works are attracting an immense number of people and much good work is being done. The people on some of the Sarun and Shahabad works are paid by what is called "the cowrie system," under which each man, woman, or child re-

ceives payment in cowries (that is, in the lowest denomination of money) for each basket of earth lifted. In these districts the people worked for the most part with their own tools, but a reserve of Government tools is provided. From Tirhoot, on the other hand, a requisition has been made for a very large number of trained overseers and for 60,000 tools; and it is said that the work cannot be done and the people cannot be paid regularly unless the requisition is met. Rather than run any risk that there should not be enough work for the able-bodied poor in a very distressed district like Tirhoot, the Lieutenant-Governor has, with the help of the Government of India, arranged that additional overseers shall be sent into Tirhoot to the extent of an indent passed by Sir Richard Temple; but after consulting Sir Richard Temple, he has refused to attempt compliance with a much larger demand for Department of Public Works establishments since made by Mr. Worsley. The indent for tools has been partially, and soon will be wholly, complied with. But seeing how very much of the relief work will be on common earth roads and tanks, the construction of which the people perfectly understand, and that in other districts relief works are very satisfactorily managed through the people themselves, the Lieutenant-Governor has thought that the Tirhoot officers have in this matter fallen very far short of the measure of success attained by officers of other districts. Copy of certain orders under which the Lieutenant-Governor's views on this subject were conveyed will be found at enclosure No. 7,* and farther orders are about to issue. The real difficulty is to see that the money charged to Government is really disbursed. For this purpose unprofessional is as good as professional agency, and the duty must be undertaken by the relief establishments. The Commissioner is now on the spot; his views are quite in accord with those of the Lieutenant-Governor, and he will see that things are put on the best footing possible.

* Page 242.

Charitable relief.

20. Now that the arrangements for transporting Government grain into the interior are fairly complete, and that relief works for the employment of the able-bodied are ready in all the distressed districts, the subject to which the attention of Government, its officers, and of the local Relief Committees, is now mainly directed, is the organization and distribution of charitable relief. At Appendix G. to the tenth Narrative were given the "Instructions to Relief Committees"; a very wide discretion was left to the local Committees and their subordinates, who were—

(1.) to ascertain where relief was required within their circles.
(2.) to collect subscriptions and to obtain resources either from Government or from the Central Committee.
(3.) to give relief either—
  (*d.*) gratuitously to those who were unable to work;
  (*e.*) in the shape of wages for in-door employment or for petty village works;
  (*f.*) by advances of money or grain, or by sale of grain at reduced prices to classes and persons who were by usage prevented from working;
  (*g.*) by sale of grain through the agency of local traders in tracts where there was an absolute deficiency of supply;
  (*h.*) by establishing poor-houses for the reception of paupers and for feeding them.

21. The Central Committee have already at their disposal about Rs. 7,00,000 (70,000*l.*) for the central relief fund. Over and above this total considerable sums, amounting altogether to over Rs. 1,00,000 (10,000*l.*), have been collected in the distressed districts, and are being spent there by the local committees.

Central Relief Committee.	Rs.
Subscriptions paid or promised in India to the Central Committee - -	2,99,567
Subscriptions remitted by the Right Honourable Lord Mayor from London -	2,09,265
Subscriptions remitted from Madras - - - - - - -	67,000
Subscriptions remitted from Rangoon - - - - - -	34,000
Government contribution towards doubling private subscriptions - -	1,00,000
Total -	7,09,832
or £	70,983

The Central Committee have granted from their funds Rs. 2,05,000 to the districts shown in the margin. The expenditure of these grants will be conducted under the control of the Government officers, but will be accounted for to the Central Committee.

Patna, Gya, Shahabad, Tirhoot, Sarun, Chumparun, Monghyr, Bhagulpore, Purnea, Dinagepore, Maldah, Rungpore, and Bogra.

22. Meantime, the organisation of relief in the worst districts has been pushed on. Sir Richard Temple had, in communication with the local officers, arranged (see Minutes 26 and 33, Appendices C* and D,*) details of the relief sub-divisions and relief circles in Tirhoot, Chumparun, and North Bhaugulpore. He is now proceeding to Purneah, where he will revise the relief circles there required. The Commissioner of the division has reported (see Appendix H*) upon the relief circles he is organising in Dinagepore. As yet the relief circles have not all been manned, but the officers told off to the relief sub-divisions and relief circles are arriving at their posts daily; and in the meanwhile such distress as comes to light is relieved through the civil officers, engineers, police, or other Government officials who may be on duty in the interior. At Appendix J* is given a statement showing how far the charitable relief organisation has been completed or is at work. The numbers of persons actually in receipt of daily charitable relief are not accurately given for every district, but the total numbers thus relieved by the local committees or by Government officers (exclusive of the recipients of private charity) range from 200 to 1,200 a day in the districts for which returns are complete.

Relief organisation in the districts.

* Pages 157 and 162.

* Page 174.

23. For each of the most distressed districts the following short notes of actual operations may be given:—

Progress of charitable relief in the worst districts.

Tirhoot.—Till recently no charitable relief operations on a large scale have been undertaken in the three western sub-divisions, but the last accounts show that it has been necessary to take immediate measures to relieve a part of the head-quarter sub-divisions. Sub-committees have been appointed and are being appointed where distress is anticipated. Sir Richard Temple has given orders regarding relief sub-committees in Tajpore. In three sub-divisions three additional relief sub-divisions have been formed, and twenty relief circles; the sub-divisions have been manned, and so have seven of the circles. The relief officer of Durbhanga reports that funds for charitable relief have been placed at the disposal of factory managers and village headmen in the worst tracts; and he adds: "our relief superintendents are now arriving every day; the ensuing fortnight will show great progress in this direction. Meantime, I think all precautions are being taken to prevent the occurrence of deaths from starvation. Each superintendent on his arrival is posted to a circle and directed to visit every village in his jurisdiction without delay, to prepare lists of the headmen through whom he will work, and to collect all information that he can obtain regarding the condition of the inhabitants."

Sarun.—In the Sarun district reliance has hitherto been placed, and very successfully placed on a very large system of public works; but the persons in charge of the 18 first grade relief centres have been placed in funds to enable them to relieve casual distress, and so also have most of the Government officers on duty in the interior, and regular relief centres have been opened at two places on the Hutwa estate. The Lieutenant-Governor has instructed the Magistrate at once to open centres similar to that at Hutwa in the parts of the district where any of the inspecting officers report signs of actual distress not met by works.

Chumparun.—In the Chumparun district five relief sub-divisions have been formed, and four of them have been manned. In the fifth, or most distressed, sub-division three circles have been formed, all three of which are manned by officers who have already been for some weeks at the work. In the other relief sub-divisions the circles will be in charge of indigo planters and native zemindars, who have undertaken and may be trusted fully to discharge the relief duties. Of the most distressed, the Ramnuggur relief sub-division, the Magistrate-Collector writes: "Colonel Boulderson is collecting statistics, village by village, in the tract under his care, and distributing relief. Mr. Howe is doing the same for Ramnuggur; 200 persons have already been relieved; these are almost all cripples and men who, from sickness or other cause, are unable to work. A relief-house and dispensary are also being erected at Ramnuggur. At Bagha Messrs. Chritien and Moore distribute relief to about 200 to 300 persons daily."

North Bhaugulpore.—In the north of Bhaugulpore six relief circles have been formed in the sub-divisions of Soopole and Mudheypoora under the sub-divisional officer, and the circles are being manned. Meanwhile the Soopole sub-divisional officer "has started charitable relief at Soopole, Nowhatta, and Kunda in anticipation of formal sanction; and about 100 persons are now fed daily at Soopole, 150 at Nowhatta, and 50 at Kunda. These persons appear to be chiefly of the lowest classes, and a large proportion of them children." The Mudheypoora sub-divisional officer writes that in his jurisdiction "four centres have been started, out of which three are in full work, relieving on an average ten daily. No one as yet seems willing to apply for relief at Ghylar."

Purneah.—In the Purneah district seven centres have been formed in the worst tracts; at two of these centres a Government officer is in charge; at the others planters and zemindars have undertaken the duty. Sir Richard Temple will decide, after visiting Purneah, how many centres, with full relief organization, are required in Purneah.

Dinagepore.—The Commissioner's report in Appendix H* shows that he has constituted six relief sub-divisions, to each of which an officer has been told off. Mr. Molony hopes to administer the circles through village headmen and local people rather than by paid agency. The Lieutenant-Governor trusts that these arrangements will suffice, for he does not anticipate such severe and helpless distress in Dinagepore as will have to be met in North Behar.

* Page 173.

Maldah.—In the Maldah district only one relief sub-division besides the district head-quarters has been opened. But in the worst tract of the district seven relief centres are in operation, whereat from 140 to 200 people are relieved daily.

25. Of the remaining districts, charitable relief is being given most largely in Monghyr and Rungpore. Of Monghyr the Magistrate-Collector writes:—

"Officers engaged in distributing relief complain much of the difficulty in selecting candidates for tickets; crowds of lepers, blind, and cripples, styled professional beggars, whose profession however is the result of necessity rather than choice, present themselves. It appears hard to refuse charity to such persons, but if once they come on our hands, it will be a problem of some difficulty to determine at what hour we are to shake them off. I have not thought proper to insist on any very hard-and-fast rules; the distributing committees must use their own discretion in each instance.

"The following is a list of the relief centres already opened:—

No.	Name of relief centre.	Number of persons fed.	Under whose supervision.
1.	Monghyr	359	Municipal committee.
2.	Buktearpore	70	M. More and committee.
3.	Chupraun	65	Mr. H. Christian aided by a committee.
4.	Lukhiserai	60	Local committee superintended by Mr. Currie.
5.	Sheikpoora	104	Mr. Currie aided by local committee.
6.	Secundra	200	Mr. Money aided by committee.
7.	Garua Parsanda	12	Ditto ditto ditto.
8.	Orain	50	Moulvie Abdul Jubbar aided by committee.
9.	Obeypore	20	Mr. J. Christian aided by committee.
10.	Pachna	5	Mr. Currie aided by committee.
11.	Sondhi	20	Only just opened by Moulvie Abdul Jubbar.
12.	Choara	40	Mr. Money aided by committee.
13.	Jamui	0	Return not received."

From Rungpore the Magistrate writes:—

"Relief is being distributed at the following places—

	Persons.
Pyraband	400
Meetapuker	231
Pirgunge	76
Govindgunge	34
Kamdair Haut	(Unknown.)
Gaibunda	39
Sundergunge	150
Kalligunge outpost	16
Naldanga	120
Luckhipore	80
Total	1,146

Uncooked food, half potatoes half rice, is being given; but arrangements will be made to give cooked food. At Mohigunge, two private annochatras (relief-houses) have been opened, and relief is given to about 600 persons in cooked food, and on Sundays Basanta Geer Sunnasi gives a dole of rice. I was present yesterday, and about 2,500 people attended for it. In Batashun, Baboo Luchmipat Dugar gives a week's supply of rice to about 400 of his ryots. The Superintendent is going from village to village and gives tickets to the deserving objects of charity, on the production of which a supply of rice is given at the cutcherry. In Baharbund annochatras (relief-houses) are opened at Olipore and Lalchamara Haut, and will be opened at other places. No particulars as to numbers relieved are at hand."

Advances for purchase of grain and landed improvements.

26. Advances for purchase of grain continue to be taken in Sarun and in South Behar. In the Sarun district also, advances to the amount of Rs. 51,853 have been made for the execution of landed improvements. In North Bhaugulpore the zemindars are coming forward much more freely than hitherto to undertake tanks and other works for the benefit of their estates. A leading zemindar, named Hurbullub Narain Sing, has set a specially excellent example in this respect (see enclosure No. 4).* The Government of India has been pleased to remit the stamp duties charged on deeds required for advances of money to persons in Bengal for the purchase of grain or for the maintenance of ryots during the present season.

* Page 214.

Burdwan Division.

27. There is no material change in the condition of the Burdwan Division, though the tendency of prices is still upward; and in Hooghly the cultivators are now refusing to part with their stores of grain. This affects the supply of the smaller markets in the interior of that district, which are now fed from the large importing depôts on the banks of the large rivers. Upwards of 6,000 laborers are employed on works in Hooghly. In Midnapore supplies are ample and exportation from the district still goes on. But the weaving class are beginning to suffer, and subscriptions are being collected and relief organised to meet the wants of this and other non-cultivating castes. The Messrs. Watson have opened their stores of rice in the wilder part of the district, called the Jungle Mehals, but there is no demand for the rice at present, though the number of laborers at subsistence rates on the works provided is said to be increasing fast. From Burdwan district export is still going on, and prices are beginning to pinch rather severely in parts. Relief arrangements are complete. Last Narrative stated that the Maharaja of Burdwan had, with his usual princely liberality, undertaken the gratuitous relief of all the poor and helpless in his zemindaree, and had organised a relief system on a very ample footing. Other zemindars are, the Lieutenant-Governor is glad to say, now following this good example. In Beerbhoom and Bancoorah distress affects at present only the non-cultivating and indigent classes. Relief Committees are now at work, and labor is provided for all who require it. It may possibly be found desirable to give advances to zemindars and others in one corner of Bancoorah to enable them to import some rice; but the Commissioner has not yet declared this necessary.

Chota Nagpore Division.

28. In Manbhoom prices are slowly rising all over the district though they vary very much, 17 or 18 seers of common rice being obtainable for a rupee in the south and south-west of the district, while only 13 seers can be got in the north-west. Exportation is going on still to Hazaribagh and Ranigunj. No cases of casual distress for want of food have yet been met with, but it is extremely probable that, as noted in last narrative, some Government grain will have eventually to be sent into this district. The average daily number of laborers on the roads was 2,260 for the fortnight. Advances for land improvement have been taken to the amount of Rs. 36,435. Charitable relief arrangements are still backward, but the Lieutenant-Governor has insisted on their being at once completed.

From Palamow there is nothing fresh to report. Orders have been given for strengthening the sub-divisional staff to meet the demand for supervision of works, and to dispose of applications for advances.

Later reports from other districts show that the rain in the beginning of February has done much good everywhere in this division, especially in filling the tanks and bringing on the crop of mhowa, and the jungle products, upon which the poorer classes here habitually live. The part of Hazaribagh, near Palamow and Gya, may still, the Commissioner thinks, require special relief, and the storage of some Government grain is recommended.

From Singbhoom the Deputy Commissioner writes with enthusiasm of the "steady honesty and zeal" with which the villagers are working out their advances. No less than 40 really useful reservoirs have been constructed for Rs. 7,000. The people under their mankis, or village headmen, are working "with clannish emulation" in throwing up embankments, and the system of relief seems both complete and successful.

The Commissioner, Colonel Dalton, has been on tour in the Tributary States of Sirguja, and Korea, where he has been stimulating the chiefs and headmen to look into the condition of their people. Though there was some failure of crops, Colonel Dalton finds that there is food enough in the country. Work will be found for those who need it. But the large purchases of lac for export are said to have put even the poorer classes in funds, and there is altogether no great cause for anxiety about these States.

Nuddea district.

29. In Nuddea supplies are reported still sufficient, but prices have an upward tendency, ranging from Rs. 2-8 to Rs. 3-3 per maund. The only classes, however, that feel actual distress are day-laborers and weavers. 1,500 persons are now employed on tank-digging and roads. For the weavers, attempts are being made to supply work at their own trade in making gunny-bags for Government. Charitable committees will be at once formed to give advances for, and look after this mode of relief.

Sonthal Pergunnahs.

30. It was stated in a former Narrative that prices had risen very greatly in the Rajmehal tract of the Sonthal Pergunnahs, and at one time the Commissioner had recommended that Government grain should be stored in that district. Looking to the facts that the Sonthal Pergunnahs are situate on two lines of railway, that the information as to the threatenings of distress was incomplete, and that grain was still being exported largely, the Lieutenant-Governor was for some time unable to agree to store Government grain in the Sonthal Pergunnahs. There was risk that if Government grain was brought in prices would fall, and the exports from the district would become brisker than ever. Now, however, more complete, though still not final reports have been received; it appears that for the greater part of the Sonthal Pergunnahs there is no immediate anxiety, but that in one limited tract near the railway, where the rice failed and there is no spring crop, prices are very high, and the people eagerly resort to relief works. For the food of these workpeople grain from outside was much required; the Commissioner reported that he could not buy the required quantity of grain locally without greatly disturbing the market; and, accordingly, the Lieutenant-Governor has sent 5,000 maunds of grain, and has promised to send more for this particular tract. Carriage for its transport, and storehouses for its reception, are said to be ready. In one part of the great Government estate called the Damin-i-koh, the Sonthal ryots are said to find difficulty in paying their rents owing to the failure of their crops. The Lieutenant-Governor has accordingly authorized the suspension of the Government demand from those ryots who are really in straits and require such a concession.

Cooch Behar.

31. The Commissioner of Cooch Behar has reported that in the protected state of Cooch Behar and in the young Rajah's zemindaries situate in the Rungpore district, there is much scarcity; that rents cannot be collected by tenure-holders; and that distress is beginning among the old and infirm. The Commissioner has, from the revenues of Cooch Behar, imported and stored grain, has opened relief works, and has arranged for in-door works for the women and the infirm. By these measures he hopes to enable the people to tide over the hard times until the early rice harvest of the month of May.

Irrigation department works.

32. The daily average of laborers on the Soane canal works has risen to 36,000. The laborers continue to draw their supplies from the neighbouring bazaars, where prices have, according to the engineer officer's reports, fallen appreciably. On the Gunduck embankments, the number of laborers is increasing rapidly, notwithstanding that the prospects of the country are better than they were twenty days ago. Food is said to be a little cheaper in the local bazars whence the laborers supply their wants. The number of laborers has risen from 6,000 to 10,000 a day on the Chumparun embankments, and from 3,500 to 10,283 on the Sarun embankments. The supplies of Government grain for the embankment works are coming in rapidly, 20,000 maunds are said by the engineer to be arriving weekly in the Chumparun embankments. As yet the Government grain is not being used on the works.

The temporary dam which threw the Damoodah water into the Kana Nuddee was carried away by the freshes in the middle of February, and it has not yet been reconstructed. New embankments under construction in South Midnapore will give employment to about 1,000 persons. From the Jungle Mehals (forest tracts) of Midnapore, where there was much failure of the crops, laborers are going to the irrigation and embankment work on the Cossye river; and about 700 carts from this tract are employed regularly in carrying stone for the irrigation department.

Northern Bengal Railway.

33. The latest returns from the Northern Bengal Railway show that for 98 miles of the main line the side-widths have been set out. 130 miles of railway-feeder roads have been marked out, and 10 miles of the Rungpore branch have been lined out. The land is being taken over under the Act as rapidly as it is required. Comparatively few people seek work on the lower length of the line, but on the upper length there are plenty of workpeople. Up to the 14th February 6,241 people were employed; they were all paid by piece-work and the average earnings of an adult male came to over three annas a day. Brickmaking was being pushed on for the bridges; the telegraph line from Julpigoree southward, as far as the marshy country was complete, and communication was established. Forty-five storehouses for rice were complete, and the rest were approaching completion. The supply of grain in the local markets was for the most part sufficient, and prices were about 11 seers per rupee. At one or two points on the line supplies are said to be falling short, but the Government stores have not as yet been opened.

Emigration.

34. One effect of the scarcity has been a considerable increase in the number of emigrant-laborers to the tea-districts. Colonial emigration has not been increased in the same proportion. The majority of the emigrants come from Western Bengal, Chota Nagpore, and the Sonthal Pergunnahs, rather than from the very distressed districts of Behar. The scheme, which was described in a previous Narrative for promoting emigration to British Burmah, has now begun to take effect, and up to the end of February 503 persons had taken advantage of Government assistance to emigrate to British Burmah; out of these 427 were recruited in Calcutta, and 76 in the Monghyr District. No emigrants for Burmah have as yet come from other districts. These emigrants are bound in course of time to repay the money spent by Government in carrying them over to Burmah, so that the emigration fund will be replenished, and it may be possible to maintain a constant stream of emigrants. The numbers of emigrants during the four months, November to February during the last two years, have been as follows :—

NUMBER of EMIGRANTS despatched from Calcutta during the Famine months as compared with the corresponding months of the preceding season.

	November.		December.		January.		February.		Total for the four months.	
	1872.	1873.	1872.	1873.	1873.	1874.	1873.	1874.	1872–73.	1873–74.
To the Colonies and West Indies	2,148	3,222	760	3,045	1,701	1,939	2,758	2,525	7,862	10,731
To the tea districts	1,113	2,218	1,418	3,929	2,095	4,718	2,427	2,398	7,348	13,268
To Burmah	—	—	—	—	—	—	—	503	—	503

The total for the past four months is thus 24,497 as against 14,410 in the preceding year. The numbers are as yet too small to give any appreciable relief to the afflicted districts, but the increased supply of labour will be of much benefit to the tea districts.

Railway to Durbhangah and telegraph lines in the distressed districts.

35. The staff for the construction of the Durbhangah railway have been on the ground now for some weeks. Two companies of Sappers have been sent to Chumpta ghât whence the line starts. Material is arriving steadily and is being unloaded and carried across the Ganges. More specific progress reports of this work will be given in future narratives. Telegraph lines have been laid and are now in working order from the Ganges to Mozufferpore, Durbhangah, Moteeharee, and Bettiah. The line is being carried on to Mudhobanee. Telegraphic communication has also been established between Julpigoree and the greater part of the Northern Bengal Railway works. As yet cables for carrying the telegraph lines under the Ganges at Patna ghât and Barrh ghât have not been arranged. It is proposed to work a military field-telegraph across the Ganges from Barrh to Chumpta ghât, by means of boats moored at intervals on the river.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

Calcutta, 5th March 1874.

APPENDIX A.

MOVEMENT OF FOOD-GRAINS.

Some discrepancies have been discovered in the statements of exports and imports of food-grain received from the Collector of Customs, Calcutta, and the out-port officers. These are under examination as regards Chittagong and the Orissa Ports, but for Calcutta amended returns have been received, which give the following results :—*

	Exports to places outside Bengal. Tons.	Imports from places outside Bengal. Tons.
October	14,220	2
November	13,398	2,219
December	32,632	9,068
January	42,346	28,707
February	15,421	60,068
Total	118,017	100,064

Of the imports the following are returned as private :—

	Tons.
In October	2
„ November	159
„ December	1,004
„ January	788
„ February	1,770
Total	3,723

The export is falling off rapidly, the figures for the last three weeks being 2,10,224 maunds, 1,00,883 maunds, and 56,843 maunds respectively.

As regards the out-ports, the monthly returns under the signature of the Collector of Customs, which this Government has received for Chittagong, show the following totals of export to places outside Bengal :—

CHITTAGONG.	Exports to places outside Bengal. Tons.
October	3,309
November	7,004
December	9,294
January	12,769
Total	32,376

A different set of statements submitted to the Government of India direct put the total at 4,192 tons less. The discrepancy is now under examination.

From the 1st to the 15th February the export from Chittagong is returned at 5,021 tons in the half-monthly statement. For the second half of the month the figures as telegraphed are 9,957 tons, which, if correct, would make the total export for February 14,978 tons, and the total export beyond Bengal from Chittagong up to date 47,354 tons.

From the Orissa ports the exports are returned by the Collector of Customs thus :—

	Exports to places outside Bengal. Tons.
October	1,173
November	735
December	1,650
January	4,107
Total	7,665

Another set of returns, however, place the total at 7,629 tons. The discrepancy has here also to be explained. According to the half-monthly return, the exports for the first half of February were 1,592 tons. Later returns have not been received. The total exports beyond Bengal from Orissa, therefore, as by the returns before this Government, stand to 15th February at 9,257 tons.

---

* Throughout this Appendix the ton is taken at 27 maunds.

The grand total of exports to places beyond Bengal since the 1st October, according to the returns before this Government, is thus:—

		Tons.
To end of February	Calcutta	118,017
	Chittagong	47,354
To 15th February	Orissa ports	9,257
	Total	174,628

From the 1st November the total is 155,926 tons.

2. Between the 18th and 24th February, 4,77,700 maunds of rice left Howrah for Behar, and between the 25th February and 3rd March 4,80,000 maunds more, making a total for the fortnight of 9,57,700 maunds or 35,581 tons.

The total amount of food-grains despatched since 1st November to Behar from stations below Jamui on the Chord line and Rajmehal on the Loop line was as follows:—

In November	16,555	tons, of which	2,829	tons was Government rice.	
„ December	24,656	„ „	11,849	„ „ „	
„ January	47,776	„ „	26,682	„ „ „	
Total	88,987	„ „	41,360	„ „ „	

The difference, viz., 47,627 tons, represents the amount of private grain sent up-country to Behar since 1st November up to the end of January. The Railway return for February has not been received, but the despatch upwards of Government grain in that month was 49,482 tons.

The Railway brought down from the North-Western Provinces to stations between Buxar and Rajmehal, from the 14th to 21st February, 7,881 tons, and from the 21st to 28th, 6,967 tons, making 84,428 tons since the 1st November.

3. From the 18th February to 3rd March, 5,24,846 maunds, or 19,438 tons, of food-grains entered Calcutta by the eastern canals, making a total of 146,910 tons since the 1st October.

4. During the latter half of February, 68,678 maunds, or 2,543 tons, of food-grains passed up by Sahebgunge, and 9,926 maunds, or 367 tons, passed up. At Goalundo, between the 15th and 25th, 60,100 maunds, or 2,225 tons, were registered going up, and at Kooshtea during the same period, 13,500 maunds, or 500 tons, passed down.

A. Mackenzie,
Junior Secretary to the Government of Bengal.

Calcutta, 5th March 1874.

Appendix C.

No. 69, dated Durbhanga, the 21st February 1874.

From C. E. Buckland, Esq., with Sir R. Temple on special service, to the Officiating Secretary to the Government of Bengal in the Statistical Department.

I am directed to forward, for the information of His Honor the Lieutenant-Governor of Bengal, copy of the following minutes recorded by Sir Richard Temple, viz., No. 25, regarding the grain requirements of the Soopoole and Mudhepoora sub-divisions of the Bhaugulpore district, and the transport arrangements No. 26, about the establishments of sub-committees in those sub-divisions; No. 27, on the subject of the relief road works in the same tract; and No. 28, on the Commissioner's estimate of the needs of the Purneah district.

2. Sir Richard Temple earnestly hopes that his recommendations may meet with His Honor's approval, and that the necessary steps may be taken to carry them into effect.

Minute No. 25, by the Honorable Sir R. Temple, K.C.S.I., dated Soopoole, the 19th February 1874.

1. Having visited the north part of the Bhaugulpore district, which may be regarded as the distressed part, and conferred with the Commissioner, the Collector, the civil officers of the Soopoole and Mudhepoora sub-divisions, where the distress is most likely to occur; also with the officers of the Court of Wards in the Nareedigur pergunnah of the Soopoole sub-division, and with those Native gentlemen whom I have been able to meet, I have to record the following observations.

2. The Collector, Mr. V. Taylor, assures me that in those parts of the district which lie south of the Ganges, and those which are situate on the basin of the river Kosee, there is no reason to fear any serious distress, and on the north bank of the Ganges the crops are excellent; indeed the excellence of the prospects of the crops near the Ganges is beyond doubt. Here and there, owing to the high range of prices all over the country, there may be scattered outbreaks of distress. Otherwise the prospect of wide-spread and protracted distress is restricted to the tract

which lies on the eastern or left bank of the Teeljooga, which tract extends eastward till it approaches the "spill" or basin of the Kosee, the said tract adjoining the Mudhobanee and Durbhanga sub-divisions of Tirhoot.

3. This tract includes the thannahs of Soopoole, Bungaon, Pertabgunge (Soopoole sub-division), and the thannah Mudhepoora (in the Mudhepoora sub-division). The population of these thannahs is as given below:—

Soopoole - - - - - - -	279,102
Bungaon - - - - - - -	145,088
Pertabgunge - - - - - - -	141,577
Mudhepoora - - - - - - -	251,683
Total - - -	817,430

4. The cause of distress here is much the same as in North-Eastern Tirhoot, namely, the failure of the principal rice crop, which failed from insufficiency of rain on a hard soil peculiarly needing abundant moisture. The case is, however, slightly better than Eastern Tirhoot, because of the murwa crop of August being somewhat larger, the spring crop of wheat being somewhat better, and the supplementary crop, cheena, sown since recent rain being susceptible of irrigation. Still, allowing for all these circumstances, the nature of the case in most parts of the abovementioned thannahs does not materially differ for the better from North-Eastern Tirhoot. There is reason to fear that for several months the distress will be severe.

5. The Commissioner of the division, Mr. Barlow, has given me a careful and elaborate calculation, which I append. He has made this after consulting the Collector and the sub-divisional officers. The result is that he reckons on a possibility of 171,651 persons needing assistance for a period of five months, hence he deduces a requirement of 5,00,000 maunds at ¾ seer per head per diem, to which he adds 1,00,000 maunds as a margin of security.

6. My own opinion, after the best consideration which I am able to give to the subject, is that some of the per-centages assumed in Mr. Barlow's calculation, may be exceeded actually in many parts of the tract when the worst season of distress arrives.

7. All things considered, I estimate that in thannahs Soopoole and Bungaon 50 per cent. of the population may need assistance in the most distressed half, and 30 per cent. in the other half; that in thannah Pertabgunge, not quite so distressed, there would be 50 per cent., while the other half may escape from distress altogether. This estimate gives a total number of 2,74,650 souls, which might need assistance for three and a half months, from 1st June to 15th September, while half this number might need assistance for April and May, and one quarter of this number for March. This calculation at ¾ seer per head per diem, gives a total requirement of 7,33,732 maunds, or say 7⅓ lakhs of maunds.

8. Looking, then, to the comparatively isolated situation of this tract, far from the Ganges, close to the hill frontier, having few roads passable in the rains and few facilities for private trade, adjoining other tracts even more distressed, I consider it essential to the safety of the population concerned—8,17,430 souls—that 7⅓ lakhs or 7,30,000 maunds should be brought within its limits by the 15th June.

9. The Collector reports that 1,00,000 maunds have been carted into the tract, which leaves 6⅓ lakhs or 6,30,000 maunds to be brought up.

10. The Commissioner states, after consulting the special Inspector of Transports, Mr. Hankey, that carriage has been arranged, that is, carts and bullocks are present to carry 60,000 maunds a month for four months, or 2,40,000 on the whole.

11. Both Mr. Barlow and Mr. Hankey state that great difficulty has been experienced in finding carriage in the Bhaugulpore district and in opening out new routes. They have just succeeded in effecting a contract for six lakhs of maunds to be carried from Monghyr to Soopoole in four months. It yet remains to be seen whether this contract will be entirely fulfilled. But we may expect that it will be fulfilled for the most part. If it is, then there will be carriage for—

2,40,000 maunds.
6,00,000 „
8,40,000

This would provide an ample margin over and above the requirement. In that case, however, there is plenty of work for the spare carriage, inasmuch as further means are needed to convey supplies to the neighbouring district of Purneah.

12. I had previously arranged to obtain 2,000 (two thousand) carts from the North-West Provinces. This carriage, if it shall be actually obtained, will be available for Tirhoot, where the carriage as yet falls short of requirements.

13. It may be added that an arrangement has been made for the conveyance of 1,00,000 maunds up the Kosee river by boat, which quantity will be available either for the Bhaugulpore or the Purneah district, according to circumstances.

14. I desire in conclusion to state that the exertions made by the local officers, Mr. Barlow, the Commissioner, Mr. Villiers Taylor, the Collector, and Mr. Hankey, the Inspector of Transport, to obtain carriage in a country where carts are scarce and routes difficult, are very creditable, and will, I hope, eventuate in complete success.

15. I have ordered further inquiries to be made as to the quantity that could be conveyed, if required, to Soopoole by the river Teeljooga during the rains.

16. I have now to recommend that 40,000 maunds a week may be sent by rail to the railway stations between Bhaugulpore and Monghyr.

R. Temple.

Copy of the above forwarded to G. N. Barlow, Esq., C.S.I., Officiating Commissioner of the Bhaugulpore Division, for information.

C. E. Buckland, on special duty.

Durbhanga, 21st February 1874.

Summary.

Total to be relieved (probably) during the five critical months -	155,021
Add—	
Three per cent. of population of thannah Budhowa, in Muddehpoora sub-division - - - - - - - -	4,110
Two per cent. of population of Banka sub-division - - -	7,640
One per cent. of population of Sudder sub-division - - -	4,880
Probable total to be relieved in Bhaugulpore during the five critical months - - - - - - - - -	171,651

	171,651 3	
4	514,953	
40	128,738	seers a day.
	3,218 30	maunds a day.
	96,540 5	per month.
	482,700	say 5 lacs.

Allowing one lac stored now for consumption before May.
Total requirement - - = 6 lacs.
or
To be carted hereafter - 5 lacs.

G. N. Barlow,
Officiating Commissioner.

			32,422	Say 50,000		57,232	—	—	32,051	—	—	15,748

Mr. Martin (Sub-divisional Officer, Muddehpoora) agrees in these rates, save that he thinks those marked A too high, while B should be 15; and my figures thus corrected would stand 32,422, say 50,000 outside including all west of A.B. Mr. Smith (Sub-divisional Officer, Soopole) agrees to the average of his thannahs. He thinks the rates marked C should be halved; he would take Pertabgunge at half instead of one-third rates. This would make the figures for that thannah according to the entries.

Including increased figures proposed by both Sub-divisional Officers, the total will come to 155,021:—

TOTALS IN DISTRESSED THANNAHS.

Muddehpoorah	50,000
Soopole	57,232
Bongong	32,051
Nathpur	15,748
Total	155,021

MINUTE by the Honorable SIR RICHARD TEMPLE, K.C.S.I., No. 26, dated Soopoole, the 19th February 1874.

1. In continuation of my minute of this day's date, No. 25, regarding the grain requirements of the Soopoole and Mudhepoora sub-divisions of the Bhaugulpore district, I have to request that sub-committees under rule 7, part 2, of rules for relief committees may be established at the following places, which have been settled by the Commissioner in consultation with the Collector and the sub-divisional officers, viz., Soopoole, Ekar, Simrahi, Nareedigar, Behwanipore, and Kamp.

2. There will be, if possible, an European officer stationed at each of these places, save Nareedigur, for which circle European supervision will be provided by the Court of Wards.

3. The Commissioner is authorised to have temporary accommodation constructed at each place where accommodation may not be already available, before the hot weather begins.

4. The Commissioner is requested to declare the places where, and the dates when clause *g* of rule 3, part 2, regarding sale of Government grain should be applied; also to determine the classes who should come under clause *f*.

R. TEMPLE.

Copy of the above forwarded to G. N. Barlow, Esq., C.S.I., Officiating Commissioner of the Bhaugulpore division for information.

Durbhanga, 21st February 1874. C. E. BUCKLAND.

MINUTE, No. 27, by the Honorable SIR RICHARD TEMPLE, K.C.S.I., dated Soopoole, the 19th February 1874.

I HAVE to record the following remarks regarding relief works in the Bhaugulpore district after carefully consulting the Commissioner, the Collector, and the sub-divisional officers of Soopoole and Mudhepoora.

2. The District Engineer, Mr. Grant, has presented a statement, hereto appended, of roads running through distressed tracts to a total length of 215 miles. These are recommended by him and the Collector as useful and practicable. But both he and the district authorities apprehend that the amount of work, which might be advantageously executed on these roads, cannot afford relief to more than a limited uumber of persons, and that a large number would still remain to be employed on other works.

3. The Commissioner and his officers consider that no more roads can be advantageously designed, and that the only class of works which they can recommend for the relief of distress consists of the tanks near the villages, on the road-sides, or in other places open to the public. They urgently request that they may be permitted to employ the distressed poor on these tanks, and they represent that there is no other way of fully employing the distressed people who are now seeking employment.

4. Looking to the tenor of the official correspondence on this subject, to the necessities of the case, and to the permanent benefit of the population, I authorise the Commissioner to cause relief labor to be employed on the tanks of the country, either in excavating new tanks or clearing out old tanks, care being taken to work at those relief roads which are included in the 215 miles mentioned above.

5. There are, I find, other lines of road designed by the Executive Engineer. But both he and the Collector affirm that these lines are worse than useless, and the Commissioner supports this view. The construction of these particular lines as relief works is not therefore to be attempted.

(Signed) R. TEMPLE.

Copy of the above forwarded to G. N. Barlow, Esq., C.S.I., Officiating Commissioner of the Bhaugulpore Division, for information.

Durbhanga, 21st February 1874. C. E. BUCKLAND.

		Total	215

A. GRANT,
Executive Engineer.

MINUTE, No. 28, by the Honorable SIR RICHARD TEMPLE, K.C.S.I., dated Soopole, the 19th February 1874.

THE Commissioner of the Bhaugulpore Division, Mr. Barlow, has shown me a careful and elaborate calculation, whereby he estimates that 6,50,000 maunds of grain will be required for the thannahs of Kusbah Amour, Bulrampore, Kudbah, Purneah (part), all thannahs in Arrareeah sub-division, all thannahs in Kishengunge, in the Purneah district. He reports that 1,00,000 maunds have arrived, and he desires my approval to his proceeding at once to provide carriage for the remainder 5,50,000 maunds.

2. I am not able myself to affirm the correctness of the estimate till I shall visit the district. But looking to the authority of an estimate proceeding from the Commissioner, and to the urgency of the case, I deem it necessary to authorise Mr. Barlow to go on with transport arrangements within the limits of his own estimate, and to constitute as many sub-committees in the thannahs above mentioned as will be required, according to the principle which I have agreed to for the north part of the Bhaugulpore district.

RICHARD TEMPLE.

Copy of the above forwarded to G. N. Barlow, Esq., C.S.I., Officiating Commissioner of the Bhaugulpore Division, for information.

C. E. BUCKLAND,
On Special Duty.

Durbhanga, 21st February 1874.

No. 85, dated Bankipore, the 26th February 1874.

From C. E. BUCKLAND, ESQ., on special service with SIR RICHARD TEMPLE, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I AM directed to report that Sir Richard Temple, having visited the Tirhoot, Chumparun, and Sarun districts of the Patna division, as well as the Soopole sub-division of the Bhaugulpore district, proposes to return to Calcutta for the purpose of conferring with His Honor the Lieutenant-Governor of Bengal before proceeding to the other distressed districts, especially those of Purneah and Dinagepore. After visiting these, he can revisit the Patna division if that course shall be deemed desirable.

2. I have duly forwarded to you, for submission to His Honor, all the Minutes of substantial importance, recorded from time to time by Sir Richard, regarding the districts inspected and the questions submitted to his notice. Recapitulation of the facts therein contained is therefore unnecessary.

3. But Sir Richard cannot leave the Patna division for a time, without offering to the Lieutenant-Governor the expression of his sincere acknowledgment for the cordial approval so promptly accorded to his suggestions; and of his hope that his recommendations, submitted after personal investigation on the spot, may continue to coincide with the policy of Sir George Campbell.

No. 1236—S. R.

From the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL in the Statistical Department, to C. E. BUCKLAND, ESQ., on special duty with the Honorable SIR RICHARD TEMPLE, K.C.S.I.

Scarcity and Relief.

SIR, Calcutta, 4th March 1874.

I AM directed to acknowledge your letter, No. 85 of 26th ultimo, in which you announce the completion of the tour in Behar which Sir Richard Temple was so good as to undertake, and his return to Calcutta for a time before undertaking another tour. The Lieutenant-Governor begs most heartily to acknowledge, as he has already acknowledged to the Government of India, the very great advantage to the public service from Sir Richard's most zealous and energetic labours in inspecting and supervising the relief operations in Behar, and settling, on the spot, very many things which could not have been so well or so promptly disposed of in any other way. The Lieutenant-Governor is much gratified to know that Sir Richard Temple feels that his action has been facilitated by the cordial support of this Government, and Sir George Campbell on his part, desires prominently to acknowledge that Sir Richard Temple's aid and co-operation have been rendered to him in a manner calculated to promote to the utmost, harmony and common effort for the public good.

2. In regard to the further tour which Sir Richard Temple is about to undertake, the Lieutenant-Governor, having fully conferred with Sir Richard, need say little in this letter. Copies of the most recent letters and reports from Purneah, Dinagepore, and the Sonthal pergunnahs, have been furnished to Sir Richard.

3. There has been so much variation in the accounts regarding Purneah, that, although the last accounts are on the whole favorable, it will be a great relief to the Lieutenant-Governor to have Sir Richard Temple's deliberate opinion of the needs of that district, formed after inquiry on the spot.

4. The demands made for assistance for the Sonthal Pergunnahs have till now been very indefinite and very insufficiently supported by proper information. The last account of a small portion of those Pergunnahs is however more precise, and so alarming that the Lieutenant-

Governor has thought it right to direct the immediate despatch of a small supply of grain. He trusts that Sir Richard Temple will be good enough to give him the opinion which he may be able to form after hearing the local officers, and making such inquiry as he deems requisite on the question whether further arrangements are necessary to secure the safety of the Pergunnahs.

5. As respects Dinagepore and Maldah, the Lieutenant-Governor hopes it will be found that the arrangements of the local officers are good; that relief work has been given promptly, judiciously, and in good time; that the transport arrangements are now sufficient; and that the provision for charitable relief is organised on a good plan, and is being brought into active operation as fast as the circumstances require.

6. The situation in Dinagepore and Maldah, and to some extent in Purneah, is somewhat different from that in the districts of North Behar, which contain a much denser and poorer population. The people generally are better off, and not so much accustomed to labor for hire. In certain tracts very extensive relief will be necessary, but it is hoped that more may be done by selling grain in places insufficiently supplied by private trade, and allowing the people to distribute it themselves, and that less gratuitous relief will be necessary than in those poorer districts where we may be obliged thus to feed a very large proportion of the population. The Lieutenant-Governor has no doubt that, in considering the arrangements made by the local officers, Sir Richard Temple will give full weight to the circumstances of that part of the country.

7. The Lieutenant-Governor has expressed a hope that when Sir Richard Temple again visits Patna, he will be good enough to give a final opinion as to whether it is necessary to provide any further supplies of grain at present for Gya and Shahabad.

8. The district officers of several districts of the Burdwan and Chota Nagpore Divisions have made applications for supplies of grain. The Commissioner of Burdwan has not yet thought this necessary, and the Commissioner of Chota Nagpore has only recommended it for some very limited localities to a certain extent. Still prices must be high, and much of the population in the western districts is poor; and the Lieutenant-Governor would be glad if, returning by the Chord Line from Patna, Sir Richard Temple would take the opportunity to make such inquiries as he can, and favor the Lieutenant-Governor with his opinion on his return.

I have the honor to be, Sir,
Your most obedient servant,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

APPENDIX D.

No. 67, dated Camp near Buhera, the 17th February 1874.

From G. H. R. HART, ESQ., on special service, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

SIR Richard Temple desires me to forward for submission to His Honor the Lieutenant-Governor of Bengal, copy of minute No. 22, dated 17th instant, containing Sir Richard's revised forecast of the requirements of grain for the Tajpore sub-division during the anticipated period of scarcity.

MINUTE by the HONORABLE SIR RICHARD TEMPLE, K.C.S.I. (No. 22), dated Camp near Buhera, the 17th February 1874.

IN my minute, No. 1, of the 31st January I wrote as follows regarding the Tajpore sub-division:—

"There will be distress throughout the north-west corner of the Tajpore sub-division. The Collector thinks that 30,000 persons may here come on our hands."

I have since had the advantage of visiting this sub-division in company with the civil officer, Mr. Wace, and I fear that the estimate above given is too low.

2. Mr. Wace considers that the greater part of Sureysa, the principal pergunnah in the sub-division, and a pergunnah containing a population of 550,000 souls, will be distressed, the Indian-corn and murwa having yielded about half of the average, the rice having failed, and the spring crops promising only one-third of the average yield even after the recent rains. On the other hand, these last rains have enabled the people to sow the supplementary crops, moong, cheena, and the like. If these shall germinate and yield proportionately, they will do much to carry the people on till the new Indian-corn comes in during September. This however depends, Mr. Wace thinks, on another fall of rain a fortnight or so hence; and this view corresponds with what I have heard elsewhere.

3. At the best, however, I have to request that the Commissioner will provide for a much larger number than 30,000 persons, say 60,000 at least.

4. If the supplementary crops shall be poor, then looking to the population of Sureysa, and allowing for the advantages of this tract in its vicinity to the Gangetic tracts where the spring crops are good, I consider that we shall not be safe unless we provide for 150,000 persons, and this must be considered as over and above the provision of four millions of maunds stated in my minute of the 31st ultimo. This can, however, be better decided a fortnight hence. Had Sureysa been more remote, we should be obliged to decide now. But as it is so near succour, we may postpone decision for a fortnight yet.

5. Meanwhile not a bag of grain need be kept in Tajpore, but all that passes through the sub-division should be pushed on with all speed towards Durbhunga and Mudhoobanee. I have instructed Mr. Wace accordingly.

6. And if any indigo-planters in Tajpore sub-division be found willing to take up carriage contracts they should be invited to do so, not to the south of Poosa, but on the contrary to the north of Poosa towards Mudhoobanee.

No. 975—S.R.

Copy, with copy of Sir Richard Temple's minute, forwarded to the Commissioner of Patna for information and guidance.

By order of the Lieutenant-Governor of Bengal,
A. Mackenzie,
Junior Secretary to the Government of Bengal.

Calcutta, Scarcity and Relief Department,
24th February 1874.

No. 71, dated Durbhanga, the 22nd February 1874.

From C. E. Buckland, Esq., with Sir Richard Temple, on special service, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit for the information of His Honor the Lieutenant-Governor of Bengal, copy of a Minute No. 29, dated Durbhangah, the 21st February, by Sir Richard Temple, regarding the state of affairs in the Mudhobunee sub-division of the Tirhoot district.

2. I am to add that Sir Richard has full confidence that his requirements will be carried out by the sub-divisional officer, Mr. C. F. Magrath, in an energetic and practical manner.

Minute, No. 29, by the Honorable Sir Richard Temple, K.C.S.I., dated Durbhangah, the 21st February 1874.

I have now passed through different parts of the Mudhobunee sub-division on three occasions, and observed the western, the north-eastern, the south-eastern, and the central portions; and I have seen and heard enough to convince me that wide-spread distress is imminent; indeed some distress exists already, though I hope I may say that it has not yet attained any large proportions. There are symptoms apparent which show that it is essential to the well-being, perhaps to the safety of the people in this sub-division, that additional facilities should be afforded for the obtaining of food. Private trade, however much it may be doing for other parts of Tirhoot, has done but little for this sub-division up to the present date, and at this period, which might prove to be the eve of famine unless aid were afforded, reliance could not be placed on trade in this comparatively remote and roadless tract.

2. Grain depôts are being prepared at the following places,—

Harlaki, Pheet, Deodha, Benipatee, Palee, Ureynd, Korohiya, Khagouli, Narhar, Ladnia, Patrahi, Bari Bazar, Lowkaha, Pirozghur, Parsa Dankhwa, Narahiya, Mathour, Mahadeomat, Andramat, Domra, Basdeopore, Madhepurah, Jhanjarpore, Sarso, Pandowl, Bachowr, Mudhubani; additional depôts can and probably will be fixed at the discretion of the sub-divisional officer.

3. Already there are within the limits of the sub-division—

	Maunds.
Government grain - - - - - - -	37,000
Durbhungah Raj grain - - - - - - -	24,000
Total - - - -	61,000

This would suffice at ¾ seer per head to keep about 200,000 persons alive for a fortnight which is about 25 per cent. of the population of 700,000 souls.

4. After carefully consulting the sub-divisional officer, Mr. Magrath, Colonel Burn, manager of the Durbhungah Raj, Mr. Llewhellin, and Mr. Stevens, I have to request that a supply of grain out of the 61,000 maunds above mentioned, be pushed on with all despatch to each one of the grain depôts above mentioned, and that at certain depôts the grain be sold under clause *g.*, rule 8, Part II., at the rate of 10 seers the rupee, that being the rate recognised in the orders of Government, and being the rate, which in the opinion of the sub-divisional authorities best fulfils the conditions of the said clause *g.* The depôts in question will be those situate within the pergunnahs of Bahera, Bachour, Alapore, Puchwi, and Jabdi, which are the most distressed portions of the sub-division.

5. The sub-divisional officer represents that he cannot at the outset find available trade-agency of a sufficiently trustworthy character to carry the arrangements out except under supervision. He wishes that a trader (village bunya) should be employed at the depôt to conduct the sales on behalf of Government, care being taken that the grain was sold only for the relief of necessity, and not at all for trading or storing.

6. If any ryot shall require sustenance, the sub-divisional officer is authorised to give advances repayable in a year, if the said ryot can give security, or if the zemindar shall agree to become security.

7. The foregoing orders apply to the pergunnahs above specified only. If Mr. Magrath shall find them needed for the remaining pergunnahs of the sub-division he should make official application for extension accordingly. Further, Mr. Magrath is requested to establish small depôts with a bunya near the places where relief works are being carried on, so that the laborers may be able to obtain grain easily. This order applies to the whole sub-division.

8. If these orders shall have the effect of exhausting the supply of 61,000 maunds, it is to be remembered that within a fortnight 60,000 maunds in addition of Government grain are expected from the direction of Chumpta Ghaut, and 12,000 maunds Durbhungah grain from the Monghyr route, and after a fortnight much larger supplies will be coming in weekly.

9. The sub-committees, as ordered in my minute, No. 2, of the 1st February, are being formed at the following places:—

Umgaon.*
Bela.*
Pirozghur.
Mahadeomat.
Madhepurah.
Kachra.*
Patrahi.
Narahiya.
Rudpore Damra.
Jhangharpore.

At those marked with an asterisk accommodation is available. At the rest the Executive Engineer is about to begin the construction of temporary accommodation for the European officers who are to preside over the sub-committees. The several circles, of which the above-mentioned places are centres, will comprise the whole area of the sub-division.

10. Until these officers arrive (which will, I hope, be very shortly) the distribution of gratuitous relief in every village where it may be needed can hardly be managed; meanwhile I observe with satisfaction that much relief is being afforded at Mudbuni, at Jharyharpore, at Mudepoora, and to some extent at the police posts on the frontier.

11. Meanwhile I hope that all officers concerned will be on the alert to watch for individual cases of severe distress, not only in large centres and in large villages, but also in villages scattered about in remote localities. I fear that ere long no village will be free from cases in which gratuitous relief must be promptly afforded in order to save life.

12. The object will be to so arrange the relief works that this form of assistance shall be within reach of every village; wherever there are tanks to be cleared out or to be made, they become relief works of the most effective kind, where they do not exist there are cross-country roads to be made.

13. I have agreed to the plan of such roads as formed by Lieutenant Wright in consultation with Mr. Cochran (late sub-divisional officer), the total length being 220 miles in all. I hope to hear next week that Mr. Magrath, in conjunction with Lieutenant Wright, has commenced work on many different points on these lines of road. I have made, some days ago, an urgent requisition for ten overseers to serve under Lieutenant Wright, and I have authorised him to employ Mr. Sherman, who is on the spot. But pending the arrival of the overseers, Mr. Magrath is requested to employ any qualified natives he can find temporarily, inasmuch as the work ought not to wait till the existing distress becomes worse.

14. The main line for the transport of grain supplies is that from the Durbhungah border to Peepra Ghaut on the Bolan viâ Jhunjharpore to Nuraya. Up to Peepra Ghaut it is in charge of the sub-divisional officer. From Peephra Ghaut to Narya, it is in charge of Mr. Stevens (Engineer of the Durbhungah Raj), and will be bridged before the rains, the screw-piles and other materials being on their way. The provision of water along this line as far as Junjharpore will be easy, but not so from Jhunjarpore to Nuraya, there being only five tanks between the two places. One or two more will be needed at intervals, and also, at Nuraya itself, the terminus of the main line of transport.

15. Mr. Magrath has gone through with Mr. Gale (manager of the Pundoul concern, and engaged in the transport contract) the branch routes of the transport, and given orders for clearing the way for carts.

16. I have ordered that relief labor may be employed as much as possible in cutting the small "doop" grass, which is sufficiently abundant all over the sub-division. In this way, very large quantities of grass ought to be received; when so received it is to be stacked at convenient places on the various lines of transport for fodder for the draught cattle. It will doubtless be taken over by the contractors at a valuation. The contractors attach importance to the collection of adequate quantities of this grass. I beg the particular attention of the sub-divisional officer to this, also of Colonel Burn and the officers of the Durbhangah Raj. Without this arrangement there will be difficulty about fodder, and the matter is one in which the whole agricultural community may fairly be called upon to help, and that, too, immediately.

17. I further beg the attention of Colonel Burn and the officers of the Durbhangah Raj to the facilities which the Raj rent-system, with its tuhsildars and naib tusildars, affords for the management of relief. In the sub-division there are eight such officials necessarily acquainted with members of villages in the midst of which they reside. I hope that Colonel Burn will make them understand the responsibility which attaches to them to search out and bring to notice all cases of distress.

18. On this, as on former occasions, I have received complaints from distressed Brahmins who will not work on relief works, and who would run the risk of starvation sooner than do so. The difficulty of those cases is so well known that I need not say more. But I find that in such cases (at least in those where application is made to me), the Brahmin is almost always a cultivator of land on a small scale, and may therefore receive some assistance by way of advance if he can give security, or if his zemindar will be security. In some cases I enquired into, I should think that such advance may be given; but it must be doled out bit by bit, so as to prevent the Brahmin from trading with it. I request the subdivisional officer's attention to this method of dealing with a very difficult class of cases.

19. A large part of the zemindaree of the sub-division belongs to the Durbhungah Raj. Some other zemindars known as as "the Mudhoobunnee Baboos" have done a little in the way of constructing tanks and subscribing; others, notably the Mirzapore Mohunt, and several native bankers have done nothing. I trust that Mr. Magrath will bring to bear such influence as he fairly can to induce these gentlemen to do their duty by their tenantry and dependents.

20. Some native traders have stated to me their desire to get grain from a distance. I have not much reliance on their request, as it comes rather late. But I have told them that they may

have advances to enable them to get grain from such places as Rosera and Kugurrea. The sub-divisional officer is requested to bear this in mind.

No. 1,035—S.R.

COPY forwarded to Commissioner of Patna and Collector of Tirhoot for information.

No. 1,036—S.R.

EXTRACT (paragraph 19) forwarded to the Government of the North-Western Provinces, and the Commissioner of Benares, with a request that, if deemed proper, the Mohunt of Mirzapore may be persuaded to do his duty by his tenantry on his estates in the Mudhoobunnee sub-division.

By order of the Lieutenant-Governor of Bengal,
R. KNIGHT,
Assistant Secretary to the Government of Bengal.

Calcutta Scarcity and Relief Department,
25th February 1874.

No. 80, dated Bankipore, 26th February 1874.

From C. E. BUCKLAND, ESQ., with Sir RICHARD TEMPLE, on special service, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I AM directed to submit, for the information of His Honor the Lieutenant-Governor of Bengal, copy of a Minute, No. 33, dated 25th February, regarding the posting of the officers selected for sub-divisional committees and sub-committee circles in the distressed sub-division of the Tirhoot district.

2. His Honor will observe that a copy of this Minute has been given to the Commissioner of Patna.

MINUTE, No. 33, by the Honorable Sir RICHARD TEMPLE, K.C.S.I., dated Bankipore, 25th February 1874.

THE Commissioner of Patna has, at my request, furnished me with the following list of officers now present or arriving for sub-divisional committees or sub-committee circles, in the distressed sub-divisions of the Tirhoot district.

I.—DURBHUNGA SUB-DIVISION.

Mr. A. P. Macdonnell, C.S., sub-divisional officer
„ Aikman, C.S., 2nd relief sub-division, Hatee.
„ Dempster, Judicial Officer at Durbhunga.
„ Henry, C.S., Durbhunga circle.
„ Harris, C.S., Dosowta circle.
„ Oranne, C.S., Buhera circle.
„ Doveton, Hirnee circle.
Ramakhoy Chatterjee, Singheea circle.
Mr. Tonnerre (under training at Durbhunga).

Thus five sub-committee circles are filled up out of eleven, leaving six to be filled.

II.—MADHOBANI SUB-DIVISION.

Mr. Magrath, C.S., sub-divisional officer.
„ Forbes, C.S., 2nd relief sub-division at Naraya.
Umbica Churn, Judicial Officer at Madhobani.
Mr. Marindin, C.S., a sub-committee circle.
„ Williams, C.S., ditto.
„ Paul, C.S., ditto.
„ Meiklejohn, C.S. ditto.
Ishree Persad, Jhunjharpoore circle.
Mr. Macfarlane, a sub-committee circle.
„ Collis, ditto.

Thus seven out of ten sub-committee circles are filled up, leaving three to be filled.

III.—SEETAMURHEE SUB-DIVISION.

Mr. O'Reilly, sub-divisional officer.
„ Beamish, 2nd relief sub-division at Pooprее.
„ Mackertich, Judicial Officer.
„ Campbell, a sub-committee circle.
„ Rattray, ditto.
„ Lorimer, ditto.

Thus three out of six sub-committee circles are filled up, leaving three to be filled.

2. Therefore the number of sub-committee circles remaining to be filled up stands thus:—

Durbhunga - - - - - - -	6
Mudhoobanee - - - - - -	3
Seetamurhee - - - - - - -	3
Total - -	12

3. On the 13th February I telegraphed to the Quartermaster-General for the services of twelve junior military officers for relief operations.

4. By resolution of the Government of Bengal of the 21st February, I find that the following officers will be available for relief work. Lieutenants Lyster, E. Money, and P. Buckland, and two officers from Meerut, *i.e.*, five in all. It appears thus that seven junior military officers still remain to be named for this work.

5. I have since learned that Lieutenant Buckland has been selected for the transport department under Colonel Macgregor. There will, therefore, be eight officers to name instead of seven.

RICHARD TEMPLE.

No. 79, dated Bankipore, the 26th February 1874.

From C. E. BUCKLAND, ESQ., on special service with SIR R. TEMPLE, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I AM directed to submit, for the information of His Honor the Lieutenant-Governor of Bengal, copy of a minute, No. 34, dated 26th February, recorded by Sir Richard Temple, regarding the reserve carriage for transport of grain in the Patna Division.

2. Although the carriage contracts are working well and promise to continue to do so, yet, considering the importance of the issue at stake and the possibility of the contracts failing, Sir Richard has thought it absolutely necessary, after consulting with the Commissioner of Patna and Colonel Macgregor, to establish this reserve of 4,000 Government carts, and to place it at the disposal of the Commissioner.

3. Sir Richard trusts that this action will be approved by His Honor the Lieutenant-Governor.

MINUTE No. 34, by the HONORABLE SIR RICHARD TEMPLE, K.C.S.I., dated Bankipore, the 26th February 1874.

1. I DESIRE to record, for information of the Commissioner, an abstract of what I have done or ordered respecting reserve carriage for transport of grain in the Patna Division.

2. Two hundred carts were ordered to be made up at Patna, three hundred in the Tirhoot district, in all five hundred. For these bullocks were ordered to be purchased in Nepaul Territory by a Subadar under orders of the Resident: three hundred pairs have been already purchased. If on the completion of these purchases anything remains in order to make up the five hundred pairs, it is to be purchased by the Commissioner of Patna in the districts south of the Ganges.

3. Seven hundred and fifty carts and bullocks have been ordered to be hired in the North-West Provinces: of these, four hundred are reported by Mr. Rivett-Carnac to be on the way marching down; and the remainder, three hundred and fifty, to have been ordered and to be coming very shortly.

4. One thousand carts have been ordered to be made up in the Arrah district, through Mr. Fox: the bullocks to be purchased by the Commissioner of Patna at the cattle fairs of that district. This order is reported to be in due course of preparation.

5. One thousand carts were, on the 15th February, ordered to be purchased through the Government of the North-West Provinces, and Mr. Rivett-Carnac reports that most of this number have been purchased, and that the order is nearly completed.

6. I have just ordered one thousand carts, in addition, to be purchased in the North-West Provinces in order to complete the reserve, as Mr Carnac assures me that the North-West authorities will be able to effect this.

7. The numbers then stand thus:—

	Carts with bullocks.
Tirhoot and Patna	500
North-Western Provinces, hired	750
Purchased in Arrah	1,000
Already purchased in North-Western Provinces	1,000
Just ordered to be purchased in North-Western Provinces	1,000
Total reserve carriage	4,250

8. This reserve transport, which is of considerable strength, will be at the disposal of the Commissioner, who is requested to place them under the immediate executive orders of Colonel Macgregor. I leave their disposal to the discretion of the Commissioner, with the general proviso that a considerable portion be kept north of Durbhanga or in the Mudhobanee Subdivision.

R. TEMPLE.

COPY of the above given to S. C. Bayley, Esq., Commissioner of Patna, for information and guidance.

Bankipore, 26th February 1874. C. E. BUCKLAND.

No. 84, dated Bankipore, the 26th February 1874.

From C. E. Buckland, Esq., with Sir Richard Temple on special service, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I am directed to submit, for the information of His Honor the Lieutenant-Governor of Bengal, copy of a minute, No. 35, of to-day's date, recorded by Sir Richard Temple regarding the contract arrangements for the transport of Government grain in the Tirhoot district.

2. It will be observed that these arrangements are irrespective of those recapitulated in minute No. 34, regarding the reserve carriage for transport of grain in the Patna division, a copy of which was forwarded to you under cover of my letter No. 79, also of to-day's date.

Minute No. 35, by the Honorable Sir Richard Temple, K.C.S.I., dated Bankipore, the 26th February 1874.

I desire to record an abstract of the contract arrangements for the transport of Government grain in the Tirhoot district.

2. The Western Company, represented by Messrs. Smith, Minden, Wilson, and Company, undertake to convey six lakhs of maunds from Bunkur Ghât, near Hajeepore, to Seetamurhee *viâ* Mozufferpore, and four lakhs to Contai on the west of the above-mentioned line to Seetamurhee.

3. The same Company further undertakes to carry from Bunkur Ghât five lakhs to Ottar and Poosa, places to the east of Mozufferpore, and five lakhs to Durbhunga.

4. Thus the total amount to be sent forward by this Company from Bunkur Ghât is to be twenty lakhs.

5. The two contracts in Eastern Tirhoot, one represented by Messrs. Meredyth, Lloyd, and Company, and the other by Messrs. Macjoon and Company, have been amalgamated into one called the Alliance Company. This Company undertakes to carry, from Chumpta Ghât, opposite Barh, eighteen lakhs of maunds to the various depôts in the Durbhunga sub-division.

6. A native Company, Neel Comul and Company, undertake to carry from the ghât opposite Mokameh four lakhs of maunds to Durbhunga.

7. The amounts to be sent forward from the north bank of the Ganges then stand thus:—

	Lakhs.
Western Company	20
Alliance "	18
Native "	4
Total	42

8. But it will be observed that these quantities will not be conveyed by these Companies beyond the following places:—

Seetamurhee and Contai.
Ottar and Poosa.
Durbhunga and places near it.

9. From Seetamurhee and Contai a considerable portion of the 10 lakhs (6+4) will have to be carried on to various depôts. For this a separate Company has been formed, represented by Messrs. Tripe, Begg, and Company.

10. The five lakhs conveyed to Ottar and Poosa, will have to be carried on to Kamtaul by an Association represented by Messrs. Studd and Wilson.

11. At Kamtaul this quantity will be taken over by contracts arranged under Mr. Llewhellin, Assistant Manager of the Durbhunga Raj, for conveyance into the Madhoobunee sub-division.

12. From Durbhunga 11 lakhs are to be carried on into the Mudhoobunee sub-division by contracts arranged under direction of Colonel Burn and Mr. Llewhellin of the Durbhunga Raj. These contracts arranged by the officers of the Durbhunga Raj, which represents the largest landed interest in Mudhoobunee, are managed by the indigo planters resident there, at the head of whom is Mr. Gale. A portion of the contracts is arranged in the Sarun district under the management of Mr. Llewhellin's brother.

13. Thus the amount for Madhoobunee will be—

	Lakhs.
From Kamtoul	5
" Durbhunga	11
Total	16

14. It has been seen, however, that Durbhunga is to receive—

	Lakhs.
From the Alliance Company	18
" Western "	5
" Native "	4
Total	27

15. Out of this 11 lakhs sent on to Madhoobunee leave 16 lakhs for Durbhunga.

16. Thus the apportionment of the 42 lakhs between the three distressed sub-divisions stands thus—

	Lakhs.
Seetamurhee	10
Madhoobunee	16
Durbhunga	16
Total	42

17. Besides this contract carriage there is the reserve of 4,250 Government carts with bullocks mentioned in my minute No. 34 of this day's date.

R. TEMPLE.

No. 90, dated Calcutta, the 2nd March 1874.

From G. H. R. HART, Esq., on special service, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I AM directed by Sir Richard Temple to forward, for submission to His Honor the Lieutenant-Governor, copy of a Minute No. 36, describing an arrangement for supplementing the regular transport service in Tirhoot and Chumparun, by means of pack-bullocks at the various grain depôts.

MINUTE No. 36, by the Honorable SIR RICHARD TEMPLE, K.C.S.I., dated Bankipore, 27th February 1874.

Subject to Mr. Bayley's directions, Colonel Macgregor is to have not less than 50 pack-bullocks at each grain depôt. Numbers of depôts not exactly known, and may slightly alter from time to time, but can hardly be less than 100. Thus 50 × 100 = 5,000.

2. For safety, I think that 6,000 pack-bullocks should be immediately purchased or hired south of the Ganges, or beyond the northern frontier of Tirhoot, through such agency as the Commissioner may select.

3. Colonel Macgregor is to arrange the pack-bullocks among the depôts in time, so that they may be ready to distribute grain among the villages.

4. It is to be understood that these bullocks must not be hired in Tirhoot for fear of interfering with our own carriage contractors, save perhaps in the Mudhobanee sub-division, but even there it must not be done without the consent of Colonel Burn and Mr. Llewhellin, who are responsible for the supply of transport carriage there.

5. This strength of pack-bullocks is not to be regarded as a part of the reserve carriage. On the contrary the bullocks will form a supplement at the end of the regular transport service.

P.S.—In the Chumparun district the same principle will apply, but in that district pack-bullocks may be hired.

No. 1,201—S.R.

COPY forwarded to Commissioner of Patna, with a request that orders may be given to all sub-divisional officers and relief superintendents as to employment of these bullocks.

By order of the Lieutenant-Governor of Bengal,
R. KNIGHT,
Assistant Secretary to the Government of Bengal.

Calcutta, 3rd March 1874.

APPENDIX E.

RESOLUTION.

SCARCITY AND RELIEF DEPARTMENT.

READ— Calcutta, 25th February 1874.

The under-mentioned correspondence on the subject of grain transport into the interior of the Rajshahye Division—

Commissioner of Rajshahye's letter No. 30, dated 11th February.
The Lieutenant-Governor's demi-official letters, dated 13th February, to Mr. Molony and Mr. Robinson.
Commissioner of Rajshahye's letter No. 45, dated 16th February.
Relief Commissioner's letter No. 283, dated 16th February.
Relief Commissioner's memorandum, and enclosure, dated 22nd February.
Report by Mr. Jenkins on his survey of the Mahanuddee, and further notes of his observations.

RESOLUTION.—Mr. Molony's letter No. 45, dated 16th February, gives in detail his plans for sending forward, storing in main depôts near rivers, and securing within the most distressed tracts the whole of 10,00,000 maunds of Government grain allotted to the Dinagepore district. Mr. Molony considers that Maldah, lying as it does close to the Ganges and on the road to Dinagepore, can be at any time supplied; sufficient grain to meet emergent needs has already been stored in the Maldah district. Rajshahye is not very necessitous; and its most needy tracts, which are in the north-east, can best be supplied by the Burrul and the lower Atrai. Bograh can be supplied from the Berhampooter landing places; and Rungpore can carry her comparatively small supply by carts and boats from Kaligunge at the mouth of the Teesta. The difficulty of transport in the division is thus, how to get the 10,00,000 maunds into Dinagepore before the 1st June.

2. Mr. Molony's scheme reckons that a large portion of the Dinagepore supply will come viâ Purneah. But the needs of Purneah have expanded, while its performances in the way of carriage have hitherto been disappointing; and therefore the Lieutenant-Governor has warned both Mr. Molony and Mr. Robinson, that they and their officers must do all they can to get their supply with as little reliance on Purneah as possible. Mr. Robinson's memorandum of the 22nd, which works on the basis of Mr. Molony's letter of the 16th, shows how it is proposed to meet the Lieutenant-Governor's views.

3. The first stage in the transport after the grain leaves the river is the crossing of the Ganges. Mr. Dawson of Kooshtea has stated that, if need be, he could with two steamers, three flats, and his native boats, put across the Ganges to Godagaree, Rampore Beauleah, and Dhaparee, from 2½ to 3 lakhs of maunds a month. The steamer and boats at Rajmehal can for the present sufficiently supply the requirements of Manick Chuck and the Hyatpore route. It has been settled that, in order to relieve the pressure on the East Indian Railway, the wants of Manick Chuck will, if possible, be met by steamer from Kooshtea. Mr. Toynbee will at once communicate with the Marine Department and the River and Eastern Bengal Railway Companies, and offer an opinion on what arrangements are required for this purpose, and also whether Hyatpore can be supplied in the same way. Mr. Molony will also be called on for an immediate expression of opinion. Meanwhile, until this is quite settled, the Rajmehal and Hyatpore routes will be fed by the East Indian Railway.

4. Mr. Robinson's scheme for Dinagepore is for three months' (ninety days') work; and he proposes to throw into the—

	Mds.
Raigunge tract (Western-Central Dinagepore)	2,40,000
Raneesunkool (North-Western)	1,40,000
Dinagepore town (Central)	1,50,000
Tambooloe tract (South-Central)	1,00,000
Neetpore tract (South-Western)	1,40,000
Putneetola tract (Southern)	1,80,000
Ghoraghât (Eastern)	5,00,000
Total	10,00,000

And Mr. Robinson proposes and hopes to carry all this amount by the following routes:—

	Mds.
(1.) From Sahebgunge, on the East Indian Railway, viâ Hyatpore and Khurbah; already 5,000 maunds a week is coming by this route. Mr. Robinson has arranged for carts and pack-bullocks which will raise the weekly despatches to 10,000 maunds a week. Small one-maund and 30-seer bags for pack-bullocks are to be sent up for this route. The grain will go all through from the Ganges to Raigunge by land carriage. 10,000 maunds a week, for twelve weeks, gives in all	1,20,000
(2.) From Manick Chuck, opposite Rajmehal, which is to be fed either from the East Indian Railway or by steamer from Kooshtea. Mr. Robinson calculates on working up to 2,000 maunds a day by cart. Already, though the route has not been at work for a month, the despatches of the last 14 days average 1,199 maunds a day; and the officer in immediate charge feels certain that by the 1st March 2,000 maunds a day will be got off. This rate for 90 days would give 1,80,000 maunds; Mr. Robinson has reckoned only upon	1,75,000
(3.) From Godagaree by boats up the Mahanuddy to Raigunge, at the rate of 2,000 maunds a day for two months. Mr. D'Oyly's report seems to show that he too thinks this rate possible. This route, therefore, for two months gives	1,20,000
(4.) From Godagaree by cart all the way to Dinagepore and Luckerhaut at 833 maunds per day	75,000
(5.) From Godagaree to the Neetpore tract, 200 maunds a day by carts, and 1,250 maunds by boat up the Poornababa, for 90 days gives	1,40,000
(6.) From Godagaree by cart to Putneetollah, 10,000 maunds a month for the three months	30,000
(7.) From Goalundo by the Oorasagor and thence by the Jaboona, and by the Atrai, at the rate of 50,000 a month	1,50,000
(8.) From Shahjeepoora on the Berhampooter, by cart to the Ghoraghat tract	50,000
(9.) Viâ Caragola, Purneah, and the Darjeeling Road	1,40,000
Total	10,00,000

5. About routes Nos. 1 and 2 by Hyatpore and Manick Chuck, the Lieutenant-Governor has little fear; he believes that the estimates for those routes will be worked up to.

6. Routes Nos. 3 and 5 require that 3,250 maunds a day should start up the Mahanuddee in boats; as yet this average has certainly not been worked up to. Still Mr. Jenkins' report of his survey of the Mahanuddee is very encouraging; he got up from Godagaree to Raigunge in six days, though he stopped often to survey the river and measure its breadth. If small boats are collected in large numbers by the offer of sufficiently liberal rates of pay to boatmen or contrac-

tors; if the river is properly looked after; if the snags and sunken boats are at once blown up and the passage cleared, and if an efficient patrol of the river for expediting the traffic and helping break-down is organised under an officer of the Quarter-Master-General's department, the Mahanuddee route ought certainly to become more rapid and more effective. A steam launch (the "Fanny" of Backergunge) is on her way to Godagaree, where she can be used by the patrol officer; and one of the steamers* from the Godavery might be able to tug native boats up to Maldah, or at any rate to the Bholaghat shoal. Mr. Jenkins appears to think that a steamer drawing 2½ feet could be warped over the Bholaghat sandbank, and that the channel would be much improved thereby.

* Three of these steamers are on their way to Kooshtea for orders.

7. Routes Nos. 4, 5, and 6 require that about 1,500 maunds a day (150 carts) should start from Godagaree with different destinations. More than half the carts will have to go through to Dinagepore, a lead of over ninety miles. If the journey to and from Dinagepore takes 18 days, and the other journeys (Neetpore and Putneetollah) take 14 days to and fro, then at least 2,500 carts will be required for the service. It is not clear whether this number has been provided, but Mr. Robinson seems confident that it will be done.

8. Regarding route No. 7, the Lieutenant-Governor has some misgiving whether arrangements have really been made to get 50,000 maunds a month through the Chullum Bheel to Nowgong and Sahebgunge. Mr. Molony and Mr. Clay will doubtless do what they can to secure this result, and Major Lindsay's engineers have already much improved the channel at the shallow points. Mr. Toynbee will, at any rate, be instructed to keep Goalundo supplied with grain at a rate of not less than 15,000 maunds a week.

9. The Shahajeepoora and Govindgunge route involves a comparatively short lead by carts, and has been arranged for. The cart routes from Rampore Beauleah and Dhaparee, up to Sumjhia, Teygatchia, and towards Sultanpore are left by these arrangements exclusively for the Northern Bengal Railway grain and for their material. The railway officers to carry up and store 2,00,000 maunds, if possible, and the further into the interior they can send it the better.

10. Copies of this resolution, and of the papers quoted at the top of this Resolution—

(*a.*) To the Commissioner of Rajshahye, with the request that he will report with reference to paragraph 3, whether he wants another steamer and pair of flats to feed Manick Chuck; that he will give such orders as may be required for clearing the bed of the Mahanuddee from snags, and collecting carts and boats, and acting fully up to the estimate now framed; and that he will give such orders as may be needed for preparing ample storage room on the rivers.

(*b.*) To the Relief Commissioner for attention and necessary action, and to the Engineer-in-Chief, Northern Bengal Railway.

(*c.*) To the Magistrate-Collectors of Rajshahye, Maldah, Dinagepore, and Bograh; to Messrs. Westmacott, Dawson, Reilly of Chanchul, and to Lieutenant Eliot of Sahebgunge for information, with a view to their carrying out such orders as Mr. Molony or Mr. Robinson may issue.

(*d.*) To Mr. Toynbee and Mr. Davis of Goalundo, in order that the required supply of 15,000 maunds a week to Goalundo may be kept up, and that Rajmehal and Sahebgunge may be supplied from Calcutta until such time as either or both can be fed by steamer from Kooshtea. Mr. Toynbee will be asked to report at once on the subject of paragraph 3.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Begal.

No. 1,034—S.R.

Copy, with copies of the papers named at the top of this Resolution, forwarded to the—

Commissioner, Rajshahye.

By order of the Lieutenant-Governor of Bengal,
C. Bernard,
Officiating Secretary to the Government of Bengal.

Calcutta, 25th Feruary 1874.

Dated Dinagepore, the 22nd February 1874.

Memorandum by W. LeF. Robinson, Esq., Relief Commissioner.

This statement is made out so as to agree as nearly as possible with Mr. Molony's scheme, as shown in his No. 45—S.R. of 16th February. The following remarks, will, I hope, show clearly how I mean to bring it in.

A. This 120,000 is identical with Molony's (1) 120,000 Godagaree to Raigunge, only he is to put it down at Old Maldah, and smaller boats are to take it on to Raigunge.

B. 120,000. Mr. Molony has only put down 50,000 maunds for this route. At present, by my latest information, 5,000 maunds are coming weekly this way, and I calculate that if I put 500 carts more on that line (and I can do so) it will double the amount, *i.e.*, make it 10,000 maunds weekly, or 120,000 in three months.

C. If Purneah will cart 40,000 maunds to Hurrypore on the border some 12 miles from their Raneegunge thannah, or about 30 miles, I think, from Dengraghât, and will put 100,000 maunds for us at Kissengunge, I will undertake to bring the latter amount into the Dinagepore district at the rate of 1,000 maunds a day.

D. 75,000 maunds. This is identical with Mr. Molony's (4) Godagaree to Dinagepore, 500 maunds per day by cart, and his (No. 5) by cart, Godagaree to Luskurhaut, 333 maunds per day.

E. 75,000 maunds. This corresponds to Mr. Molony's (3) Rajmehal to Dinagepore, 60,000; it may come either viâ rail or steamer to Manikchuck, or by boat Godagaree to Old Maldah. We will bring it in by carts or bullocks.

F. 100,000 maunds to Manikchuck either by rail viâ Rajmehal or Sahebgunge, or by steamer up river from Kooshtea or anywhere else. We will bring it in by bullock train.

G. 140,000 maunds. This corresponds with Mr. Molony's (No. 6) Godagaree to Neetpore by cart, 10,000 maunds, and (No. 7) Godagaree to Neetpore by boat, 60,000 maunds, and the Lushkerhat 20,000 maunds. Mr. Molony is 90,000 maunds for the three places in sixty days. We calculate 115,000 in 90 days, leaving a balance of 35,000 maunds, which I think can be managed from Godagaree to Neetpore by boats.

H. 180,000 maunds. This corresponds with Mr. Molony's Nos. (8), (9) and (10); he promises 70,000 under those heads in two months, equivalent to 105,000 in three months, viâ Godagaree, Oorasagur, and Atrai (Sahebgunge), and Oorasagur and Jaboona (Nowgong); there would be a balance of 75,000 maunds, which might be put down either at Nowgong or Godagaree, and be carted on to Putnitolla. I expect myself to have 600 or 700 carts for local transport in Putnitollah and its immediate vicinity.

I. This has been provided for viâ Bogra.

Name of the localities.	Former allotment.	Present allotment.	Total.	ROUTES TO BE BROUGHT BY

C. BERNARD,
Officiating Secretary to the Government of Bengal.

Calcutta, 4th March 1874.

APPENDIX G.

No. 613, dated Calcutta, the 23rd February 1874.

From ARTHUR HOWELL, Esq., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to the SECRETARY to the GOVERNMENT OF BENGAL.

I AM directed to forward, for the information of the Government of Bengal, the enclosed schedule of letters disposed of at the conference held at Government House, in accordance with my No. 566 of the 20th instant.

2. The record of instructions issued to the Central Relief Committee referred to in the last paragraph of the schedule is awaited.

SCHEDULE of Letters and Subjects disposed of, February 21st, by the Governor-General of India in Council, at a Meeting at which His Honor the Lieutenant-Governor of Bengal attended.

I.—Letters from the Government of Bengal—

January 31st	No. 334, S. R.
February 3rd	„ 166, P. S.
„ 3rd	„ 415, S. R.
„ 9th	„ 555, S. R.
„ 12th	„ 641, S. R.
„ 20th	„ 856, S. R.
„ 20th	„ 860, S. R.

transmitting weekly transport returns in forms ordered in letter No. 82 of 12th January.

The Government of India will not make any observations upon these returns, believing that the deficiencies have been adequately noticed by the Government of Bengal, and that all concerned are now making every endeavour to organise sufficient transport.

The returns may, in future, be sent in fortnightly in lieu of weekly as originally directed.

II.—Letters from the Government of Bengal—

February 13th	No. 664, S. R.
„ 14th	„ 689, S. R.
„ 16th	„ 708, S. R.
„ 17th	„ 178, P. S.
„ 18th	„ 835, S. R.
„ 21st	„ 876, S. R.

on the subject of the transport of grain to the distressed districts.

The Viceroy had an interview with the Agent and the Consulting Engineer of the East Indian Railway Company on the 18th instant, and was assured by the Agent that the Company could convey 2,500 tons a day, besides 200 tons a day, consisting of materials for the Chumpta Ghât and Durbungha Railway, and required no assistance from Government, and that, if after a week's experience it was found that wagons were not detained at the up-country stations, the Company could carry a larger quantity.

Further inquiry leads the Government to believe that 2,500 tons a day is rather more than the present facilities for loading, &c., enable the Company to carry. Yesterday nearly 2,000 tons were carried, and it would be unsafe to calculate as yet upon a larger quantity as the daily average.

The present requisitions are—

	Mds.
Arrah for Sarun	35,000 a week.
Patna for Chumparun	50,000 „
Patna for Tirhoot	100,000 „
Barrh for Tirhoot	100,000 „
For Bhaugulpore (estimated)	50,000 „

Supplies for Dinagepore viâ Rajmehal, and some further demands since received, make a total of 380,000 maunds, or say 14,000 tons a week, or 2,000 tons a day. Although this quantity may be conveyed, Government consider it to be more safe to relieve the strain upon the transport from Calcutta. The Government of Bengal are, therefore, authorised to instruct the Commissioner of Patna to arrange for part or the whole of the supplies required for Sarun in such way as may be best through the local grain-dealers, and arrangements should be made, as far as possible, to supply Dinagepore viâ the Eastern Bengal Railway and Kooshtea, instead of viâ Rajmehal.

Lieutenant-Colonel Taylor, Consulting Engineer for the East Indian Railway Company, has been directed to visit the Howrah Station daily, and report the progress of the transport, with full authority to take any measures he may think necessary to facilitate the despatch of the Government grain. He has arranged that the weighing of rice should be omitted as causing delay; this is one of the suggestions contained in No. 876—S.R., of 21st February. The other suggestion contained in that letter, that the different consignments of rice need not be kept separate, is approved.

The Government of Bengal are mistaken in supposing that there is any deficiency in the supplies of Government rice in Calcutta, there being at the present time about 15,000 tons either stored or afloat in Calcutta.

The demand for transport has been largely and suddenly increased, but the Government of India believe that, although there may be some temporary difficulties, the requirements will be met both in Calcutta and up-country.

III.—Provision of rice in 30-seer bags.

Letters from the Government of Bengal—

February 9th	- -	No. 546, S. R.
„ 18th	- -	„ 825, S. R.

It was arranged that all rice re-bagged in Calcutta shall be bagged in 30-seer bags; that endeavours should be made to obtain 35,000 tons of rice expected in April in 30-seer bags, and some of the rice from Burma in one-maund bags, but that the shipments should not be delayed, in order that the size of the bags may be changed.

The Government of Bengal to arrange to re-bag rice, if necessary, at local depôts.

IV.—The Government of Bengal are requested to cause the returns of the exports of food-grains given in the appendices to the special narratives to be furnished by the Collector of Customs, as the return in the last narrative differs from that received by the Government of India from him.

V.—Orders have been given for the supply of Veterinary Surgeons and Public Works Overseers asked for by Sir Richard Temple. The latter should be trustworthy men. The Secretary in the Public Works Department is instructed to see to this.

An additional Commissioner is authorised to be employed in North Behar, and also to act in conjunction with Mr. Barlow in the Bhaugulpore Division. Allowances to be settled in the Financial Department.

VI.—Letters from the Government of Bengal—

February 16th	- -	No. 705, S. R.
„ 17th	- -	„ 766, S. R.
„ 19th	- -	„ 737, S. R.
„ 20th	- -	„ 864, S. R.

Explanations and instructions were given to the Central Relief Committee, which will be recorded by Mr. Bernard. Copy of record to be submitted to the Government of India for approval.

VII.—Letter from the Government of Bengal—

February 11th	- -	No. 616.

Mr. Geedes to act as Secretary to the Central Relief Committee in addition to his other work connected with the scarcity, and at no charge upon the funds of the Committee.

Arthur Howell,
Deputy Secretary to the Government of India,
Department of Revenue, Agriculture, and Commerce.

No. 782, dated Calcutta, the 4th March 1874.

From A. P. Howell, Esq., Deputy Secretary to the Government of India, Department of Agriculture, Revenue, and Commerce, to the Secretary to the Government of Bengal.

I am directed to forward, for the information and guidance of the Government of Bengal, the accompanying schedule of letters and subjects disposed of by the Governor-General in Council at the conference held on the 28th ultimo.

Schedule of Letters and Subjects disposed of, February 28th, by the Governor-General of India in Council, at a meeting at which His Honor the Lieutenant-Governor of Bengal attended.

I.—Read letters No. 1038—S.R., from the Government of Bengal, of the 25th, and No. 1070—S. R., of the 26th February, and the summary * by Lieutenant-Colonel Taylor of the last week's operations in the despatch of Government grain from Howrah.

* Appendix A.

The estimate of proposed daily despatches during the week beginning on Monday, the 2nd of March, enclosed in letter No. 1070—S.R., of the 26th February, was examined in detail and considered to be sufficient to keep up the supplies to the places named. 2,500 tons are to be the maximum of the daily despatches for the present.

The decision arrived at last Saturday with respect to the supply of the grain required for Sarun through the local grain dealers was re-considered and confirmed, and extended to any supplies that may be required for Shahabad and the Soane canal works.

With reference to paragraph 2 of letter No. 1038—S.R., the Government of India have never received any information as to the insufficiency of the supplies of rice in Calcutta to furnish the quantity required to be sent up-country by the East Indian Railway, and it is believed that any difficulty which may have arisen was in consequence of the arrangements at Howrah necessary to provide for the increased traffic not having been completed. It is impossible to be quite certain that ships will arrive in such order that there will never be a temporary check in the supply; but up to the present time it is believed that there has been no such check.

In order to prevent any risk of delay in the transport arrangements, the Commissioner of Patna should be directed to buy, as soon as possible, and store at Bunkur Ghât, opposite Patna, sufficient grain to load the contractors' carts, which start from that place, for two days, and report by telegraph when one day's supply is stored, and when the two days' supply are stored. This should be the first object to which the Commissioner of Patna should apply the grain he was authorized to purchase locally for the supply of Sarun, if he has made any such purchases at Patna. When this arrangement has been made, in the event of any temporary check or unexpected demand elsewhere, the consignments to Patna might be stopped for two days without inconvenience.

N.B.—This was arranged with the Lieutenant-Governor on the 2nd instant.

The Lieutenant-Governor arranged to request Sir Richard Temple to see the fulfilment of the orders issued. In the meantime the supplies to any district, except those in which severe distress is expected, to be reduced to the lowest possible amount.

II.—Letter No. 1071½—S.R. of the 26th February.

The objects to which the funds furnished by the Central Committee to the District Committees might with advantage be applied in the very distressed districts appear to be proper.

Questions relating to the responsibility of local officers, and whether more precise rules should be given to the Local Committees, were considered, as well as the observations on the subject of the distribution of cooked food contained in the 3rd paragraph of Mr. Mackenzie's circular of the 16th February, and letter No. 1090—S.R., of the 26th of February, on the subject of advances to cultivators. It was decided that a letter should be addressed to the Government of Bengal explaining the views and instructions of the Government of India on those important subjects.

III.—Sir Richard Temple and General Norman to arrange for the assistance to be rendered by the Military Department in sundry particulars. The requisition for cavalry sowars was withdrawn.

The orders issued in consequence were as follow:—

1. Department of Agriculture, Revenue, and Commerce, No. 644, dated 25th February, asking that officers appointed to famine districts may be allowed to take their horses with them at Government expense.

Sanctioned to the extent of two horses each by Military Department No. 1598, dated 28th February.

Copy to the Government of Bengal, No. 1598A., dated 28th February 1874.

2. Commissary-General's No. 1330, dated 25th February 1874, asking if Commissariat Serjeants are to be given on the application of civil officers for employment on famine relief works.

Ordered to be complied with when no serious inconvenience will arise. In such case previous reference to be made to the Government of India. Letter to the Commissary-General, No. 1599, dated 28th February 1874.

Copy to the Government of Bengal, No. 1601, dated 28th February 1874.

3. Department of Agriculture, Revenue, and Commerce, No. 691, dated 27th February, forwarding communication from the Government of Bengal urging the necessity for re-enforcing the native troops at Bhaugulpore.

The Quarter-Master-General requested, by Military Department No. 1603, dated 28th February 1874, to arrange for the relief of the detachment, 4th Native Infantry, at Berhampore, to enable it to rejoin its head-quarters at Bhaugulpore, and to enable the Officer Commanding to furnish the guards requisite for local and central jails at Bhaugulpore.

Copy to the Government of Bengal by Military Department No. 1605, dated 28th February 1874.

4. Department of Agriculture, Revenue, and Commerce, No. 704, dated 27th February, forwarding request of the Government of Bengal that two companies of sepoys be sent to Mozufferpore, and one company to Bankipore, to relieve the district police and the guards on jail and treasury at those places, in order that the police may be available for transport duties.

The Quarter-Master-General requested by letter No. 1607, dated 28th February, to arrange for detachments of native infantry of sufficient strength being sent to the two places, and for the duty indicated.

Copy to the Department of Agriculture, Revenue, and Commerce, No. 1608, dated 28th February 1874.

Copy to the Government of Bengal, No. 1609, dated 28th February.

5. Department of Agriculture, Revenue, and Commerce, No. 626, dated 24th February 1874, forwarding application from the Government of Bengal for 100 sowars for service in the Patna district, and 30 to 40 in the Bhaugulpore division.

Replied to by Military Department No. 1611, dated 28th February 1874, that, after consideration, it was decided on the whole to be unadvisable to employ the native cavalry at Segowlie in the manner suggested by the Government of Bengal.

Copy to the Government of Bengal, No. 1612, dated 28th February 1874.

6. Quarter-Master-General's Nos. 103C and 157C, dated 24th and 27th February, regarding Sappers and Pioneers for the Railway at Durbhunga.

The Public Works Department informed that two companies of Sappers had been previously ordered down; that was supposed to be enough; that the head quarters of the 32nd Pioneers would be at once sent for employment on the railway at Durbhunga; and that any further requisitions awaited an expression of the wishes of that Department.

Copy to the Department of Agriculture, Revenue, and Commerce, No. 1614, dated 28th February 1874.

Copy to the Government of Bengal, No. 1625, dated 28th February 1874.

7. Department of Agriculture, Revenue, and Commerce, No. 681, dated 26th February, forwarding communication from the Government of Bengal, asking for 40 Non-Commissioned Officers and 163 sepoys from the Pioneer Regiment to enable Lieutenant-Colonel Macgregor to maintain a cooly train on the main lines of road over which grain is carried.

The Quarter-Master-General requested by Military Department No. 1616, dated 28th February 1874, to send down 200 men of the 32nd Pioneers at once to Patna for employment under Lieutenant-Colonel Macgregor, and also the remainder of the Regiment to Durbhunga for employment on the railway now in course of construction there.

Copy to the Department of Agriculture, Revenue, and Commerce by Military Department No. 1617, dated 28th February 1874.

Copy to the Government of Bengal by No. 1618, dated 28th February 1874.

8. In addition to the above, letters are now about to issue to Bombay and Punjab, saying that the river and other small steamers stated to be available will not be required, and the Government of Bengal will be informed.

IV.—Letter No. 1038—S.R. of the 25th of February, paragraph 3, on the packing of rice in small bags.

The supply of one-maund bags for re-bagging rice in Calcutta will be obtained by the Government of India, if possible, without indenting upon the Government of Bengal's supply of bags made in the local jails. This will give about 6,000 tons in one-maund bags. Besides this amount, 10,000 tons of Saigon rice, to arrive in March and April, will be in bags of 30 seers, and arrangements have also been made to have 14,664 tons of Burma rice sent up in one-maund bags; thus the total quantity of rice in small bags will be about 30,500 tons. Beyond this the arrangements already made for the supply of Burmese rice in two-maund bags cannot be altered, and the Government of Bengal must arrange to re-bag the rice, when necessary up-country.

A. P. Howell,
Deputy Secretary to the Government of India,
Department of Revenue, Agriculture, and Commerce.

Appendix A.

Memorandum.

The following summary of the week's operations in the despatch of Government rice from Howrah is submitted agreeably to orders:—

	Tons.
Friday, the 20th, about	2,000
Saturday	1,800
Sunday	2,700
Monday	2,200
Tuesday	3,000
Wednesday	2,250
Thursday	2,300
	16,250
Deduct 3 trains still on hand	700
Total	15,550

being a daily average of 2,220 tons.

2. But, omitting the two days' despatches before operations were properly organized, the daily average may now be taken at over 2,400 tons.

3. Messrs. Bird & Co. landed a daily average of 2,580 tons, a part of which was sent to the Eastern Bengal Railway. Their operations were not sufficient to keep the East Indian Railway fully supplied, and the reserve stock in the engine shed, amounting to 5,000 tons, has been used up during the week. This result will be brought to their notice, in order that suitable arrangements may be made for the future.

The reserve stocks in the railway premises are to-day almost "nil," say 446 tons.

4. The week's reports began with a supply of about 12,000 tons on board 13 ships, and about 5,000 in store on the railway premises; 6,496 tons have arrived in port during the week. Of the above amounts, 6,800 tons are still on board ships, and 16,250 have been loaded up for despatch.

5. During the week ending 5th March 18,000 tons are expected to arrive, which, with the 6,800 tons now in the river, will leave a reserve margin of 8,000 tons (or rather less than three days' supply) after providing for the week's despatches at the rate of 2,400 tons per diem. The reserve must be judiciously distributed amongst the several loading places so as to be immediately available:—

Say 3,000 tons at Sulkeah.
„ 3,000 „ at Goods Shed.
„ 2,000 „ at Engine Shed.

and this shall be arranged for.

6. On Monday, with the approval of His Excellency the Viceroy, the Government Agents were instructed to discontinue the attempt to keep the various consignments and qualities of rice separate, and a marked improvement was at once perceptible in the loading.

7. On Wednesday, the 25th, I brought to the notice of His Excellency the Viceroy that the agreement of the 18th instant, regulating the daily despatches to 2,400 tons, had been departed from by the Government of Bengal without due notice, and instructions prohibiting loading more than the fixed maximum of 2,500 tons were issued on the 26th. The attempt to raise the daily average disorganized the working arrangements of the terminus, and showed that the limit of the present carrying power of the line had been reached.

8. The sheds which are being constructed by Government at the Sulkeah branch are already in partial use, and several new sidings and cross-over roads have been put in to facilitate the despatch of trains during the week.

F. S. Taylor, Lieut.-Col., R.E.,
Consulting Engineer to the Government of India
for Guaranteed Railways.

February 28th, 1874.

APPENDIX H.

No. 380, dated Dinagepore, the 25th February 1874.

From W. LEF. ROBINSON, Esq., Relief Commissioner, Rajshahye Division, to the SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

IN reply to your No. 663—S.R. of 12th February, I have the honor to state that hitherto the district of Dinagepore has been divided into the following circles for relief work:—

1. North-West.—Raneesunkol as head-quarters, with Mr. Scanlan in charge, comprising thanna Raneesunkol and the bad parts of thannas Peergunge and Thakooragon.

2. Raigunge Circle.—Mr. Jones in charge; head-quarters at Raigunge, comprising the whole of thanna Hemtabad; and a portion of thannas Kalliagunge and Bungshiharee.

3. Gungarampore.—Head-quarters at Gungarampore, comprising the whole of thanna Gungarampore and parts of Bungshiharee and Poorsha. Sub-Deputy Collector Baboo Hurree Mohum Chunder in charge.

4. Patiram.—Head-quarters at Patiram; Mr. Finucane, Assistant Magistrate and Collector, in charge, including the whole of thannah Patiram and parts of Chintamon and Putnitolla.

5. Ghoraghat.—Baboo Poorna Chunder Gupta in charge, comprising the whole of Ghoraghat thannah and part of Nawabgunge and Chintamon.

6. Kalliagunge.—Head-quarters at Kalliagunge, comprising part of Kalliagunge thannah and part of Bungshiharee and Rajarampore thannahs; Baboo Hurro Kallee Mookerjea being in charge.

The Magistrate of Dinagepore wishes (and I myself fully agree with him) to retain the general management of all relief business in the hands of those officers who have most of them been now for some time actively employed in road-making, import of grain, and other relief work; who have acquired the confidence of the people: and who know where the greatest distress exists, or is likely to show itself.

I propose therefore to have mat bungalows built at all those places at once in anticipation of sanction.

But besides these, I think, and the Magistrate, I may add, agrees with me, that such bungalows should also be built at (1) Chooramun, (2) Bindole, (3) Tamboolee, (4) Lushkerhat, (5) Poorsha, (6) Badooria, (7) Putnitolla. This gives a total of 13 centres at which bungalows would have to be built, and this number we hope will be sufficient, though each centre will certainly comprise a greater radius than eight miles.

It is however very difficult to find a suitable place everywhere to select for the residence of a relief officer, and in some cases I feel convinced that I can trust to the charity and right feeling of residents to supply the wants of their poorer neighbours if we supply the means. For instance, I should have put an officer at Kordoho, but the Dinagepore Rajbaree has a cutcherry there with local knowledge of everybody's wants, and I know I can depend on the manager, Baboo Khetter Mohun Sing, to afford every assistance in his power. So, again, at Moheepaldigee, half way between this and Tamboolee, I might have put a bungalow there, but there are many well-to-do mundals in that part of the country, and they have themselves come forward with a subscription Rs. 3,000. I am told by the Magistrate, and the officer at Tamboolee will, I think, be able to manage this tract through the agency of the mundals without any difficulty, and one of the local zemindars, Mahomed Ali Khan, will, I know, assist.

It is, I think, in every way desirable that where possible we should get as much relief work done by the people themselves, giving them of course every assistance and passing leniently over unintentional mistakes. At the same time I am of course quite ready, if the Government think I should make further provision for relief operations, to do so.

The bungalows I should propose to build would be sufficient to contain two rooms, 12 by 16 feet each, a 6-foot verandah on three sides, with bath rooms at two corners, a cook-house, and a couple of huts for servants, and I estimate the cost of each roughly at about Rs. 300.

To occupy the bungalows and look after relief works of all sorts in the vicinity I have, as at present, advised the following officers:

Raneesunkol - - - -	Mr. Scanlan.
Raigunge - - - -	Mr. Jones.
Gungarampore - - -	Sub-Deputy Baboo Hurree Mohun Chunder.
Patiram - - - -	Mr. Finucane.
Ghoraghat - - - -	Baboo Poorna Chundra Goopta.
Kalliagunge - - - -	Baboo Hurrokally Mookerjee.

The last-named officer has only lately gone there, and I propose to send him on to Chooramun, as soon as possible, to work under Mr. Jones.

The following officers have been ordered to join, and I propose to locate them as follows:—

Bindole - - - -	Mr. Fasson.
Kalliagunge - - - -	Mr. Pollen.
Tamboolee - - - -	Mr. Horsley.
Lushkerhat - - - -	Baboo Jadav Chunder Gosvami.
Poorsha - - - -	Mr. Livesay.
Raigunge - - - -	Mr. Jarbo.
Putnitola - - - -	Mr. Brown.

I have not a man at present for Badooria, but if Mr. Westmacott, after the transport is thoroughly working on the Manikchuk to Dinagepore line, is available for such work, I should propose to put him at Putnitola, Mr. Brown at Lushkerhat, and Baboo Jadav Chunder Gosvami at Badooria.

The officers must, I am afraid, in some instances build their own houses, living as best they can in the meantime, for there is not an unoccupied house in Dinagepore, or even a spare room.

Where there is a thannah in the vicinity, they must rough it in the one room available, or in such tent accommodation as we can afford, unless they bring their own tents with them. I have requested the Magistrate to commence these bungalows at the places indicated at once, but every officer has his hands so full of work of one kind and another just now that I am quite sure the bungalows will not be run up so quickly as is desirable, unless the officers are on the spot to look after their own accommodation, and I shall, as soon as the officers join, send them out to the various places named with the best accommodation in the way of tents I can afford them, unless I receive orders to the contrary: but I think it right to say that in my opinion each officer sent should be provided with a tent; it would, I believe, be less expensive to furnish each one with a tent and put a roof of thatch over it than to build everywhere.

No. 1238—S.R.

From A. MACKENZIE, ESQ., Junior Secretary to the Government of Bengal, to the RELIEF COMMISSIONER OF RAJSHAHYE.

Scarcity and Relief.

SIR,

Calcutta, 4th March 1874.

I AM directed to acknowledge the receipt of your letter No. 380, dated the 25th ultimo, reporting on the circles for relief works organised in the Dinagepore district, the officers posted to each, and the accommodation provided for them.

2. In reply, I am to say that the Lieutenant-Governor approves generally of the arrangements made, and authorises the building of mat bungalows at the places noted by you, including accommodation for two or three officers at head-quarters. Meantime the Government of India will be addressed to supply more tents for the officers employed on famine work in the Rajshahye Division.

3. His Honor requests that you will be good enough to hurry as much as possible the officers posted to the distressed districts under your supervision. I am also to say that the Lieutenant-Governor considers that you have done very well indeed for the Dinagepore district so far.

I have the honor to be, sir,
Your most obedient servant,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

No. 1239—S.R.

COPY of above, and of letter to which it is a reply, forwarded to L. A. Abbott, Esq., for submission to Sir Richard Temple, with the intimation that the Lieutenant-Governor trusts that Sir Richard Temple will kindly examine the arrangements referred to when he goes to Dinagepore.

No. 1240—S.R.

COPY forwarded to the Commissioner of Rajshahye for information.

No. 1241—S.R.

COPY of paragraph 2 forwarded to the Accountant-General, and Deputy Comptroller-General, Department of Scarcity and Relief, for information.

By order of the Lieutenant-Governor of Bengal,
A. MACKENZIE,
Junior Secretary to the Government of Bengal.

Calcutta, 4th March 1874.

APPENDIX J.

RETURN showing the progress in the organization of Local Relief Committees and Relief Centres, and in the distribution of Charitable Relief.

Burdwan.—Six committees have been formed. No regular charitable relief has been found necessary, but each sub-committee has been put in funds to meet urgent cases. Sheds are ordered to be ready near the Grand Trunk Road at Raneegunge. The Maharajah of Burdwan has arranged to relieve all distress in his zemindary.

Bancoorah.—Has a general committee and small committees at each thannah and outpost. No actual relief is yet required.

Beerbhoom.—Has seven committees in all. No actual relief is yet required, save for some villages of weavers for whom work is being found.

Hooghly.—Has one district and five sub-committees. More are being formed; actual relief not yet required.

Howrah.—Has one district and two sub-committees. A small quantity of rice was being imported by one of these, but actual relief had not been required.

Rungpore.—Three relief committees are appointed; ten relief centres are in operation, and by the last accounts, 1,146 people daily were receiving relief. At private alms-houses maintained by zemindars in the interior several hundreds of paupers are being relieved daily.

Moorshedabad.—Sixteen committees have been formed; money and grain have been placed at their disposal; isolated cases of distress are relieved. But matters are not yet bad. Exact returns of the number of persons relieved have not yet been received.

Dinagepore.—Six relief sub-divisions have been established, and most of them are already officered. Relief centres under these officers will be managed for the present by the local residents, zemindars, and village headmen. Returns of persons receiving charitable relief are not yet received, and it is believed that such relief is not as yet much required.

Maldah.—One additional relief sub-division has been established, and eight relief centres are open at which, up to the last reports, about 200 persons a day were receiving charitable relief.

Rajshahye.—Two relief committees are in operation and sub-committees are being organised. Superintendents have been appointed to make local inquiries in tracts where distress may hereafter be severe. As yet the few cases of sickly and infirm people who are in want are being relieved by local charity under the Magistrate's instructions.

Bograh.—Two relief committees have been appointed; as yet it has been necessary only to aid cases of individual distress; this has been done. Regular relief centres are not yet wanted.

Patna.—Four relief committees have been constituted, and at Patna and Dinapore, houses for relief centres have been prepared. Other relief centres have been selected in the tract around Patna. As yet regular charitable relief through the Government officers has been neither required nor given. Zemindars have established private alms-houses in the worst tracts.

Gya.—Relief committees have been appointed at the four sub-divisions; relief houses are prepared; professional beggars and weakly people have been relieved at four centres to the number of 181. The number of persons receiving daily relief has not been precisely reported. Regular relief circles are not yet required.

Shahabad.—Four relief committees have been organised; no charitable relief has ye been given. Arrangements are being made to give light work, and food or gratuitous relief to those who require it.

Tirhoot (Head-quarters Relief Charge).—Three committees and one sub-committee have been appointed. No charitable relief operations had been begun. But recently there had been a report of threatening distress in the head-quarter sub-division, and sub-committees, with one or more relief circles, are being formed for the ascertainment and relief of distress.

Tirhoot (Durbungah Relief Charge).—Three extra relief sub-divisions have been opened and officered. Twenty-seven relief circles have been formed, out of which fifteen have been manned, and the rest are being manned. Meanwhile, until the new special organization is fully at work, charitable relief is being given through the managers of factories, through special Government officers on tour, and through the superior and inferior officers in charge of police posts. Complete returns of the numbers of persons receiving gratuitous relief have not yet been received.

Sarun.—The persons in charge of the 18 grade relief centres have been placed in funds to enable them to relieve casual distress. The officers of Government in the interior in all departments (and there are many such officers) also distribute casual relief. Two regular relief centres have been opened, and more will be opened when necessity arises. Numbers of persons receiving relief have not yet been submitted.

Chumparun.—Five relief sub-divisions have been arranged, of which four are officered. In one of these sub-divisions there are three circles, all of which are already manned by special superintendents. The rest of the circles will be managed by indigo planters and zemindars. At one circle 200 to 300 people daily were receiving relief; returns of the other circles have not yet been received.

Monghyr.—Four committees have been formed; in the worst or Jamooee sub-division three special officers are engaged in searching for and relieving distress; thirteen relief centres were in operation, at which 1,005 people were being relieved.

Bhaugulpore.—Six relief circles have been opened in the two distressed sub-divisions; at one of these a special officer is already in charge, and for the rest special officers are on the way. Charitable relief is now being distributed at seven centres, at which 330 people were receiving daily relief by the latest accounts.

Purneah.—Seven relief centres have been opened in the worst tracts; at one centre a special Government officer is in charge; the other centres are as yet managed by planters and zemindars. Returns of the people receiving relief at each place are not yet complete.

5th March 1874.

Enclosure No. 3.

RESOLUTION.

Scarcity and Relief Department.

Read— Calcutta, 3rd March 1874.

The district narratives of the Patna division for the fortnight ending on the 21st February 1874.

The Sarun narrative was not received until the 28th February, and the Tirhoot narratives until the 1st March. The Lieutenant-Governor must beg that narratives be sent in punctually.

2. *Patna.*—Supplies in the local markets are sufficient; prices in Patna itself are low, though at Behar and Barrh common rice is as high as 11½ and 12 seers per rupee. 6,956 labourers were on the relief works, but the numbers were decreasing, as hands were wanted for the rubbee harvest, which promises to be very good. The transport and storage of Government grain in the Patna district is sufficiently forward. Advances are still being taken to considerable amounts for the

purchase of grain by zemindars, who send to the North-West Provinces for their supplies. Charitable relief centres are fixed for the two head-quarter sub-divisions; but it is expected that no systematic relief of this kind will be required for the other sub-divisions. The Lieutenant-Governor considers that for Patna city, Bankipore, and Dinapore relief houses and relief organization must be kept quite ready; for if things get bad across the Ganges there will certainly be an influx of paupers into these large centres of population.

3. *Gya.*—The supply of food in the bazars is sufficient; prices have slightly fallen, though coarse rice is still ten seers per rupee at Jehanabad. Mr. Palmer explains that there was nearly half an average rice crop, and that the spring crop yield will be good; he says also that half the usual area of spring crops was sown, and that there is a great deal of food of many kinds to be had in the jungles. Private trade brings rice into the worst tracts on the Trunk Road. It is no doubt the case the people of the wilder tracts do eat a great deal of jungle produce for several months of the year in ordinary seasons. But if the rice crop of Gya was below half an average crop, and if (as separately reported by Mr. Palmer) the total yield of the spring crop will, owing to short sowings, be only half the yield of average years, then there must be risk of distress breaking out in parts of Gya later in the year. Relief works are as yet not much required, but should be kept ready, as well as full and efficient means of charitable relief for the very poor and helpless, who must suffer from protracted dear times in a very poor district.

4. The transport and storage of Government grain appear to have, so far as the Gya authorities were concerned, gone on well. The failure in arrivals of rice was due to the inability of the railway to carry the very greatly increased quantities which were being despatched during the last few days for Tirhoot. The Lieutenant-Governor hopes that either demurrage was paid to the carters, who were kept waiting (paragraph 38), or that the carts were made over to private traders.

The Lieutenant-Governor will be ready to relax the rules so far as to permit such other classes of officers as the Commissioner may recommend (see paragraph 51 of Mr. Palmer's report) to inquire into applications for land improvement loans within defined money limits. But final orders on such a subject cannot be passed in a review of the district narratives. It is not clear whether the figures of persons relieved (paragraphs 54, 55) show the total number relieved during the fortnight, or the daily average.

5. *Shahabad.*—Supplies in the Shahabad bazars are sufficient; food is somewhat cheaper; rice is nowhere dearer than 11 seers to the rupee, while barley and maize are quoted much cheaper. The spring crops are good, and some of them are coming into market. Few people come to the relief works, which, however, are ready in many parts of the district. Charitable relief committees are ready for operation, but as yet only a very few people who are unable to labor have come upon the committee's charity. No anxiety is felt by the Magistrate about any part of the district, except a small tract south of the Grand Trunk Road.

6. *Tirhoot Mozufferpore relief charge.*—Supplies of grain in the local markets are sufficient, except in some few out-of-the-way villages. Prices have on the whole fallen somewhat; the spring crops continue to promise well on the whole, though in special tracts less than one-third of an average outturn is expected. The Lieutenant-Governor is particularly glad to see notice of fine rubbee crops in fields given up on account of the failure of the opium sowings. No cases of starvation are known to have occurred. Only 2,270 persons are shewn as being upon the relief works; but the narrative states that there are no returns available for road-works under planters. The Lieutenant-Governor would wish to have some kind of fortnightly return of all the laborers employed as has been already directed. He cannot suppose that the gentlemen who employ laborers will have difficulty in sending a simple statement of the numbers employed. He considers that arrangements must be made to open other works in the Toorkee direction, if the embankment scheme (paragraph 3 of Mr. Halliday's letter) is condemned. The Lieutenant-Governor approves Mr. Gordon's action (paragraph 15) in regard to the distressed village of Chajun. He trusts that since the works proposed will not benefit the people but only the factory, the manager of the factory will contribute. In any case, however, work must be found for those who would otherwise starve.

7. Private trade in grain would seem, from Mr. Gordon's report, to be very slack, even in the head-quarters sub-division. But 1,06,000 maunds of Government grain appear to be already in store.

8. Charitable relief arrangements, in the parts where distress is expected, must be put on a more systematic footing, even though it may not be necessary to appoint circle Superintendents everywhere.

9. *Durbhanga relief charge.*—Supplies of grain are sufficient in the larger bazars, and prices have slightly fallen. In the worst parts ot Durbhanga grain is said not to be procurable at the village bazars. It seems that in Bahera, Hathee, and Singhya of the Durbhanga sub-division, the condition of a larger number of the people is very near to absolute famine; but the Lieutenant-Governor believes that the arrangement made and making will arrest the evil.

10. The number of people on the relief works is said to be,—

Durbhanga sub-division	- 26,279
Seetamurhee -	- 14,212
Madhobunnee	4,462
Total -	44,953

But the returns from Madhobunnee seem to be wholly incomplete. The Lieutenant-Governor looks to Mr. Magrath, Mr. Forbes, and Lieutenant Wright to make up, by very special exertions, for the shortcomings of the previous Madhobunnee staff. The occurrence whereby 7,000 work-people on a single road close to Durbhanga were left without wages for four days shows how very much supervision is required. But at the same time the Lieutenant-Governor does not think that the difficulty can be met by turning on to the works a dozen Public Works overseers. In

Sarun, where 82,000 people are employed daily, no extra overseers are asked for; headmen of gangs (mates) are employed from the better classes of the people; each gangman has a few score laborers under him; he pays them daily, and the officer in charge of the work sees that this is done, and that some work is got out of the laborers. The Lieutenant-Governor can see no reason whatever why the same should not be done in Tirhoot. With regard to paragraph 16 of Mr. Worsley's report, where it is said that 60,000 kodalees are wanted in Durbhanga, the Lieutenant-Governor has ascertained that 7,000 tools are being sent up from Calcutta to-day (4th March), and that the rest of the indent will be for the most part complied with during the next ten days. Until the receipt of Mr. Worsley's narrative, no intimation of this large requirement had reached Calcutta, and a telegram asking for 60,000 tools was received by the Chief Engineer some hours after he had been informed of the contents of paragraph 16. The Lieutenant-Governor must beg officers to forecast their requirements with more care and consideration.

The private trade in grain is extremely small. The grain finally stored in the three subdivisions was—

	Mds.
Seetamurhee sub-division - - -	70,885
Madhobunnee „ - - -	38,493
Durbhanga „ - - -	41,992
Total - -	1,51,370

Next narrative should, if the carriage contracts work well, show large increases in these figures.

11. Charitable relief is as yet given through the sub-divisional officers, the indigo planters, and a few special officers in special tracts. No returns are given of the persons actually receiving charitable relief, and this omission should be supplied in future narratives.

12. The Lieutenant-Governor desires to observe that he is satisfied both by what he has learned from Sir Richard Temple and by Mr. Halliday's own account of his operations, that he, as Magistrate-Collector of Tirhoot, has actively and well directed the operations now going on in so many parts of his great district.

13. *Sarun.*—In the Sarun district private trade is still very brisk, and more than 1,20,000 maunds of private grain are known to have come into the district during the fortnight; supplies in the local bazars are sufficient; prices are nowhere dearer than 10½ seers a rupee for coarse rice, or 14 seers for maize; the spring crops continue to promise well, and the Magistrate-Collector expects to have two-thirds of an average yield from the spring crops all round. The general condition of the people seems to be improved, owing to the fall in prices and the abundance of relief works opened throughout the district.

14. The Lieutenant-Governor concurs in Mr. Drummond's view (paragraph 16) that the payment by cowries (petty job work) should not be too universally adopted in all cases, lest the weakly laborers should be kept off the works, or should be unable to earn enough to support themselves. But as far as is possible to use it the cowrie is an excellent system and much liked by the people. Probably gangs of incapables might be employed separately. The relief works provided in this district continue to be most ample; an average of 82,820 persons are employed daily, of whom about one-third are men, one-third women, and one-third children. The rate of daily wages is mostly 1½ anna for adult males, 1 anna for women, and under 1 anna for children. The works are roads, tanks, drainage cuttings, and village tracks; and Mr. Drummond says that though in some cases the work may be expensive owing to the short tale of labor given by the work-people, still a very great deal of lasting good will have been done. The relief work arrangements are most creditable to Mr. Drummond and his subordinates.

15. 1,71,858 maunds of Government grain had been stored in the district, besides 52,448 maunds belonging to the Hutwa Ward's estates. The transport arrangements appear to work well, the only hitch as yet has been the irregular arrival of Calcutta despatches at Arrah. The Commissioner has now been authorised to arrange for the Sarun supplies from the North-Western Provinces through Patna dealers, if possible, and it will probably be possible for him to arrange to have four or five days' supply always stacked on one or other side of the river, so as to prevent inconvenience to the cartmen.

16. The advances made for land improvements have already reached Rs. 51,853, and the advances taken by zemindars to assist their ryots have now reached the considerable amount of Rs. 1,34,879. In this respect also Mr. Drummond and Mr. Hudson have been successful.

17. The persons in charge of the 18 first grade relief centres have been placed in funds to enable them to relieve casual distress, and so also have most of the Government officers on duty in the interior, and regular relief centres have been opened at two places on the Hutwa estate. The Lieutenant-Governor trusts the Magistrate at once to open centres similar to that at Hutwa in the parts of the district where any of the inspecting officers report signs of actual distress.

Chumparun.—Supplies of food appear to be fairly sufficient except in the Ramnugger bazars. Prices are somewhat lower than they were; the prospects of the spring crops are good except in the south of the district, regarding which tracts there had heretofore been less anxiety. There has not been much grain-stealing, and the people are coming to the relief works, especially to tank works, in large numbers. Mr. Howe reports that there was much distress in Rumnugger, but that it is being met and relieved. No cases of starvation are reported. The Opium Department officers have been directed to assist in distributing advances of grain or money to opium ryots in anticipation of the ordinary advances.

As Sir Richard Temple has been so recently in the district and most of the arrangements now reported were made with his sanction, it will suffice for the Lieutenant-Governor to observe that on the district relief works 25,787 people are employed daily, besides 7,900 on the Gunduck embankment works, that the grain transport contract is said to be doing well, and that 1,76,890 maunds had actually been stored, mostly in the northern and most distressed tracts. At the five circles into which the district has been divided for charitable relief purposes, relief is now being given under the supervision of responsible people. At one of the sub-centres in the 5th or worst circle, "two to three hundred persons daily are receiving gratuitous relief."

19. In future narratives the Lieutenant-Governor would wish to have statements of the average number of persons receiving gratuitous relief at each centre during the fortnight. But meanwhile Sir George Campbell is satisfied from Mr. Kean's and Mr. Howe's reports that distress is, with the help of the indigo planters of Mr. Gibbon, being adequately met in Chumparun.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Officiating Secretary to the Government of Bengal.

No. 1139—S.R.

COPY with copies of district narratives forwarded to the Commissioner of Patna, and to the Magistrate-Collectors of Patna, Gya, Shahabad, Tirhoot, Sarun, and Chumparun whose attention is drawn to the instruction given at paragraph 19 above; to the Relief Officer, Durbhanga; to the Commissioners of Rajshahye and Bhaugulpore; to the Relief Commissioners Rajshahye, North Behar, and Bhaugulpore.

By order of the Lieutenant-Governor of Bengal,
C. BERNARD,
Calcutta, 3rd March 1874. Officiating Secretary to the Government of Bengal.

No. A, dated Patna, the 22nd February 1874.

From A. C. MANGLES, ESQ., Collector of Patna, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I HAVE the honor to submit the following narrative for the fortnight ending the 21st instant.

A.—STATE OF THE COUNTRY.

2. The supply of grain in the several bazars of the district is abundant and especially so in the markets adjoining the line of railway. But I am afraid that should the grain merchants or Government advance-holders on the other side of the river avail themselves of the concession recently accorded to them, and export grain from the Patna city market, the stock will be considerably lessened and rates rise proportionately, the consequence of which will be that we shall have some distress which would otherwise have been averted by the abundance of grain in the market and the harvesting of the spring crops.

3. The following are the prices of food-grain obtaining in the principal bazars of the district—

Patna.

	Seers.
Rice, best	11
Rice, common	13
Wheat	16
Barley	19
Jowar	19
Maize	17
Gram	19

Barrh.

Rice, common	10½
Wheat	12
Gram	12½
Maize	12½

Behar.

Rice	11½ to 12
Maize	17
Gram	15
Wheat	12

Dinapore.

Rice	11 to 11½
Khessarie	16 to 17
Wheat	13 to 15
Gram	16 to 17
Maize	15 to 16

The high prices of grain in Barrh, which has every advantage for supplying its wants by rail and water, as compared with the other sub-divisions is surprising. The Deputy Magistrate has been called upon to explain the cause of this extraordinary difference.

The sub-divisional officer of Behar is confident that "prices will fall considerably within the "next fortnight, *i.e.* as soon as the new wheat, barley, and massoor come into the market."

4. In connexion with this subject, I have again to bring to the notice of Government the fact

that several complaints have been received during the fortnight with regard to the block at the Loodhiana railway station, whereby a large quantity of grain bought up for Patna by the private traders and the Government advance-holders is lying in the bazars of that station, or on the railway platform, there being no available carriage to bring it to its destination.

5. There was no rainfall during the fortnight except in Behar where the Deputy Collector reports that he had ·51 inches, but in this I think he makes a mistake, and is referring to what fell as reported in my last. The weather has been clear and cool, and in fact all that could be desired for harvesting the crops ready to cut, and bringing to maturity those not yet ripe. From all accounts the prospects of the spring crops continue quite as good as reported in my last, some of them, such as massoor, gram, and other pulses have been reaped and are now finding their way into the local markets.

The Barrh sub-divisional officer says—"The harvesting of rubbee crops has commenced. The crops in every place I have lately visited appeared excellent, and as far as this sub-division is concerned I fear no distress." The Deputy Collector of Behar writes—"I was lately out and I can assure you that I never saw such splendid crops since 1870. The ears are full of well-developed grain and the plant reaches almost up to one's breast. Poppy, too, is excellent this year."

In the greater part of the sudder and Dinapur sub-divisions the crops are as good as in any ordinary year.

6. No case of misery or starvation was reported during the fortnight. The harvesting of the rubbee has given the people employment in the fields, and the consequence has been that the number of laborers employed on our roads has fallen off considerably. Owing to the prevailing high prices and the consequent inability of the working classes to give alms, the number of professional beggars in the city and the larger bazars is increasing, they flocking there to obtain the relief which in ordinary years they obtained in their own villages. But for the present I trust that the alms-houses started by the rich native gentry, such as Baboo Brother Sing at Paleegunge, Baboo Gujadhun Pershad at Nasrigunge, and Baboo Nownidh Lall in the city, will be sufficient to afford relief to all those seeking it without any interference on our part. All those seeking work can find it in abundance, and it is only the professional beggars and those unable to work who are in want of gratuitous support.

7. No case of grain robbery was reported during the fortnight, but there were 40 cases of theft mostly of a very petty nature, and none of them worthy of comment.

B.—RELIEF WORKS.

8. The latest returns of local fund and relief works received from the Executive Engineer are those for the week ending the 14th instant. They show an average daily number of 6,956 laborers employed on the several works, but as I have already observed, the numbers are daily decreasing owing to the work in the fields and may be expected to continue to do so for the next month and a half.

No special grant of relief-fund money was applied for during the fortnight, though there are some 20 roads in different parts of the district on which work is given to all those seeking it.

C.—TRANSPORT OF FOOD.

9. The following figures will show the transport of food-grains into the district between the 1st and 14th instant, as per latest information furnished—

	Rice.	Wheat, oats, and barley.	Genara.	Other grains.
By rail - - -	326,047	24,369	61,354	160,708
By river - -	1,565	50	3,500	1,900
Total -	327,612	24,419	64,854	162,608

Or a grand total of 579,493 maunds, whereof 250,575 maunds were belonging to Government, and 328,918 maunds to private individuals.

10. The means of transport continue to be sufficient in this district.

D.—STORAGE OF GOVERNMENT GRAIN.

11. Out of 67,500 maunds of grain assigned to this district in the first and second allotments, I have received 53,497 maunds, whereof 46,256 maunds have reached their final destination as detailed in column 7 of statement No. II. for the week ending 20th instant, forwarded to Government.

All the interior golahs in the sudder and Dinapore sub-divisions have been supplied with grain varying in quantity from 500 to 3,000 maunds, and in most of the Barrh ones grain has also been stored. I would have sent more grain into the interior of the sudder sub-division had it not been for the large demand for carts for transporting treasure and tools across the river.

E.—ADVANCE TO PRIVATE PARTY.

12. During the fortnight Rs. 30,000 were advanced under the Commissioner's sanction to three of the leading zemindars of this district, under clause A, paragraph 4, of the Government Circular No. 80. They have sent their men to the North-west Provinces and the Punjab for the purchase of grain.

The zemindars who got their advance in past months continue to sell their grain in the south and south-west of the sudder sub-division as already reported in previous reports.

13. Only one application for an advance of Rs. 200 for agricultural improvement was complied with during the fortnight, though I was obliged to reject others, the security offered being insufficient. From enquiries made it would appear that the public being generally aware of the Government's willingness to grant loans, any petty landholder, no matter how small his share may be in a joint undivided estate, puts forward his claim to a sum of money being lent him free of interest, on the pretence that he wishes to make an embankment or clear out a tank when he knows that he has not the power to do the one or the other without the consent of his co-sharers, and whose real intention is either to pay off his mahajun who he is paying at a high rate of interest for some previous loan, or to pay the marriage expenses of a son or a daughter. Considering our favorable prospects I think it necessary to exercise considerable caution in granting these loans, and only do so on satisfactory information received that they are to be used bonâ fide for the purposes stated in the application.

F.—CHARITABLE RELIEF.

14. In the sudder and Dinapore sub-divisions, houses have been fixed upon for charitable relief centres, and where no houses can be obtained sheds will have to be built in case they are required. In the Barrh and Behar sub-divisions no step has been taken in this direction, the sub-divisional officers being of opinion that owing to the abundant harvest no gratuitous relief will be necessary.

On my return from camp in the course of the next fortnight or three weeks, I intend sending or the zemindars owning estates in the south and the south-west of the district, and see what an be done towards increasing the number of the private alms-houses and will, if practicable, have one such started for every two or three villages so as to avoid as much as possible the connecting together of the decrepid and the diseased in our larger towns and markets.

No. 340 C, dated Gya, the 23rd February 1874.

From A. V. PALMER, ESQ., Collector of Gya, to the SECRETARY to the GOVERNMENT OF BENGAL, Famine Department.

I HAVE the honor to submit my report on scarcity and relief in the Gya district, for the fortnight ending Saturday, 21st February.

A.—STATE OF THE COUNTRY.

2. The bazars continue to be fairly supplied. There is no lack of food for those who are able to pay the prices asked. Most of the agricultural population are living on their own produce. It is a fact that the more remote and insignificant a village is, the better are the terms on which food is procurable. The high prices in Jehanabad and Gya, that have for some weeks obtained, are entirely due to a combination amongst the banyas. As regards Gya, I know the prices at which the beparees purchase and at which they sell to the banyas, and am consequently in a position to pronounce the banya's profits on rice as altogether inequitable.

3. The following table will show the reported price-currents during the past fortnight in the principal bazars:—

—	Wheat.		Barley.		Rice, 1st Sort.		Rice, Common.		Millet.		Indian Corn.		Gram.	
	Week ending 21st February.	Week ending 7th February.	Week ending 21st February.	Week ending 7th February.	Week ending 21st February.	Week ending 7th February.	Week ending 21st February.	Week ending 7th February.	Week ending 21st February.	Week ending 7th February.	Week ending 21st February.	Week ending 7th February.	Week ending 21st February.	Week ending 7th February.
	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.	S. C.
Gya	10 8	10 6	14 8	14 6	8 4	8 0	10 0	9 12	14 0	—	13 8	11 8	13 0	12 0
Nowada	11 0	11 0	13 0	15 0	—	—	11 4	11 4	13 0	13 0	12 0	12 0	12 8	13 0
Jehanabad	13 0	12 8	14 0	15 0	9 0	9 0	10 0	10 0	—	15 0	13 12	14 0	13 12	13 0
Aurungabad	13 0	10 13	14 0	14 0	10 0	9 12	11 0	10 4	13 0	13 8	13 8	13 8	13 14	13 3
Daoodnuggur	11 6	11 0	16 0	15 0	10 8	10 0	11 0	11 0	—	14 0	14 0	13 8	13 0	13 0

4. This table speaks for itself, and shows that there has been a very slight improvement in the prices of food-grains.

5. Now that the dhan crop has been threshed, the outturn of which, as far as I have been able to ascertain, has been a 6 or 8-anna crop, there is food in every agriculturist's or field laborer's house. There are more small stocks of food all over the district than were first anticipated, and I have no reason to think that any general distress will show itself until after the rubbee crops have been harvested.

6. There has been no rainfall during the past fortnight, nor is any required. The rubbee crops are as good as could be desired, and there is every expectation of a full crop of rubbee being yielded on all the lands thus sown.

7. The benefits resulting from the rain, followed by a keen drying west wind, were, as I anticipated, very great.

8. The poppy suffered slightly, but a good average outturn of this is anticipated. It appears strange that the prices in the chief markets should still remain so high, and should have been affected to so small an extent (especially in the case of barley, wheat, and gram) by this rainfall, and the fact that agriculturists anticipate twice the crop they did of these food-grains before the rain fell. It would appear that circumstances, which ordinarily affect the markets elsewhere, do not do so here, and this I believe to be in a great measure due to the cliquedom of the banyas. The district being a Bhowlee tenure district, the bazar prices do not affect the majority of the population, and this enables the three or four banyas to fix their own prices and dictate their own terms.

9. The condition of the people remains good, but I cannot expect this to last much longer.

10. During the fortnight I have had one case of distress reported from Aurungabad and five from Jehanabad.

11. In Aurungabad the case was of a Gwalla, who had been suffering from fever for upwards of 20 days. He had no relatives or friends to look after him, and had become incapacitated. Under the instructions previously issued he was fed by the abkary daroga for four days to recruit his strength and then sent to an adjacent relief work.

12. In Jehanabad four persons in one village and one in another to the north-east of the sub-division were found to be in a distressed condition. These men were sent in to sub-divisional head-quarters where they have been cared for and light work given them.

13. The sub-divisional officers report that grain thefts and robberies have not increased to any appreciable extent.

14. I wish to say a few words with respect to the condition of the people to the south of this district. To the south-east and south-west of the district the rice crops have been excellent. There remains then the centre portion, which I may call that part of the old Sherghotty sub-division lying south of the Grand Trunk Road. The rice crop here was very poor, the bhadoi crop was not good, and the rubbee is not harvested.

15. The fact is that both from Palamow and Hazareebaugh rice is brought across country by pack-bullocks.

16. The latest information shows the price at which rice is procurable at Palamow to be 17 seers pucca per rupee, and it is a matter of fact that at all the smaller villages rice and food generally is to be had on easier terms than in the larger marts.

17. At Imamgunge, to the extreme south; at Raneegunge on the Grand Trunk Road, and at Bodh Gya, to the north-east, rice has been during the fortnight selling at 19 seers (kutcha weight) per rupee.

18. But apart from the price of rice not being as high as it had been elsewhere, there is another reason why, notwithstanding short crops, distress or want is not apparent here.

19. The old Sherghotty sub-division is nearly all composed of jungle lands, especially to the south of the Grand Trunk Road.

20. The cultivation here at all times is very small, the soil is sandy and poor, and the sub-division in no year produces sufficient food for its own consumption.

21. The people are what may be termed "junglee." Their chief occupation is the herding of cattle in the jungles, and the result of this is that the herdsmen become acquainted with the different jungle fruits, roots, and berries, and I may say that the majority of the poorer classes find a subsistence from this source.

22. It may not be out of place to state briefly the food that the jungles afford.

23. First of all, there are the roots of three creepers called the tayna, doorareh, and gaintee. The two former are long in shape, measuring about one to one-half hâths in length, and about one-half to two inches in diameter.

24. The third is a bulb about the size of a large potato. These, I am informed, are boiled and then eaten. They are procurable all the year round, except when the jungle is burnt.

25. Secondly, there is the byre tree, which grows very profusely in these parts. The fruit of this is now ripe.

26. Thirdly, next month there will be the mohooa, the goolar, doomur, kaind, and bail fruits.

27. Fourthly, in July the following herbs are procurable.

28. The mutee sag, the leaf from a large tree, chukwah, pyla, a creeper, and kunwa.

B.—Relief Work.

29. The marking out of works has been already reported; no others are required at present. The return, which will be submitted three days hence to the Department of Public Works branch of the Secretariat, will show at a glance the information required on this point. There is a relief work now open in every sub-division. The daily average of coolies thus employed is 1,125.

30. 2,700 tools have been received from the Commissioner, but I fear they are unsuitable. The picks are too heavy and the kodallees of very bad quality. In all contract work the contractor, if possible, supplies his own tools. If unable to do so, and we have tools available, we ordinarily allow him the use of them.

C.—Transport of Food Grains.

31. The following table will show the reported importations during the past fortnight in the principal bazars:—

Bazars.	Wheat.	Barley.	Rice, 1st sort.	Rice, 2nd sort.	Millet.	Maize.	Gram.
	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
Gya - - - - -	457	218	184	1,648	26	412	209
Jehanabad - - - - -	153	52	43	135	148	100	185
Aurungabad - - - - -	30	4	85	—	—	40	—
Daoodnuggur - - - - -	148	60	360	225	70	70	65

32. This gives a total of 5,105 maunds against 4,237 imported in previous fortnight, an increase of 868 maunds imported.

33. I annex also a comparative statement showing the private importations to Sudder bazar Gya alone, as compared with previous fortnight:—

—	Wheat.	Barley.	Rice, 1st sort.	Rice, 2nd sort.	Millet.	Maize.	Gram.	Total.
	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.	Mds.
This fortnight - - - - -	457	248	184	1,648	26	412	209	3,154
Past fortnight - - - - -	460	81	199	1,171	9	265	261	2,446

34. The means of transport, both for private and Government purposes, are sufficient. Captain Taylor has been sent to Aurungabad to assist the sub-divisional officer in transporting grain to his subordinate storehouses, but I have not heard from him what he is about. (Since writing this I have heard from Captain Taylor.) The transport has worked smoothly. The Jehanabad sub-divisional allotment has been completed, and it only now remains for the sub-divisional officer to distribute it in the localities where it is required.

D.—STORAGE OF GOVERNMENT GRAIN AT RELIEF WORKS.

35. In my last report I enumerated the places that had been selected for storage of Government grain, and I further reported that storage houses had been arranged for at each.

36. The return submitted on the 21st will show the amount of food actually stored in the district. This is 1,20,752 maunds against 1,21,799 maunds received at the railway stations.

37. It is very much to be regretted that the consignments indicated by the Government have not been despatched.

38. At Bihta and Bukteearpore there have been a large number of carts waiting since the commencement of the month. To the former no grain whatever has been sent, and to the latter only 3,732 maunds during the month. At Bihta 10,000 maunds and at Bukteearpore 12,000 maunds were expected by the 15th instant.

39. Advantage has been taken to push on the supplies in the interior, and the last fortnight's transactions in this respect are thus detailed:—

Grain stored at interior store-houses.

Store-houses.	As intimated in last fortnightly Report.	During fortnight under Report.	Total.
Bela - - - - - - - -	2,006	1,006	3,012
Sherghotty - - - - - - -	—	4,279	4,279
Uttree - - - - - - - -	—	3,745	3,745
Borachutti - - - - - - -	—	808	808
Urwul - - - - - - - -	13,876	—	13,876
Erkee - - - - - - - -	—	—	—
Gundhar - - - - - - - -	—	1,034	1,034
Wor - - - - - - - -	964	1,094	2,058
Ruffigunge - - - - - - -	—	240	240
Kootoomba - - - - - - -	—	2,285	2,285
Kadigunge - - - - - - -	2,884	—	2,884
Pukreeborwan - - - - - - -	—	1,872	1,872
Rujowlee - - - - - - - -	—	3,401	3,401
Total - -	19,730	19,756	39,494

40. I believe the stock assigned to us to be sufficient for all our purposes. We are quite able to carry our grain. We only require that it should be sent us to carry.

E.—ADVANCE TO PRIVATE PARTIES.

41. For the purchase and storage of grain no application has, during the past fortnight, been made.

42. The following is an account of advances to private parties for land improvements:—

Advance for Land Improvement.

Name of Applicant, and rights held by him.	Nature and Locality of Works.	Amount of Advance.			Period within which work is to be completed.
		RS.	A.	P.	
Hunooman Mahto, servant (ryot)	For repairing a well, and to dig a new well in Mohunpore.	50	0	0	Six months.
Shugwan Mahto, servant (ryot)	For two pucca wells in Muthair, Pergunnah Sunont	200	0	0	Four.
Gungar Ram, zemindar	Embankment and repairing Pyne in Mouza, Nujunna Hazaree, Pergunnah Kootoomba.	225	0	0	June 1874.
Maharajah Joy Purkash Singh, Bahadoor.	Pucca dam	2,000	0	0	
Pirthee Nath Singh and Rasbehary Singh, zemindars.	Embankment, repairing tank in Mouza Pokbraha in Cherailee.	150	0	0	Within one year.
Gunesh Narain Singh, zemindar	Embankment in Mungra Kurma, Pergunnah Kootoomba.	249	0	0	June 1874.
Ditto ditto	Embankment and repairing tank in Dhobdiha, Pergunnah Kootoomba.	153	0	0	One year.
Roy Het Narain Singh, Bahadoor	Embankment and repairing tank in Pipra, Pergunnah Kootoomba.	249	0	0	31st July 1874.
Musst. Imamum	Embankment and well in Kirpa Bigha, Pergunnah Summai, Zillah Gya.	500	0	0	May 1874.
	Total	3,776	0	0	

43. In Aurungabad there have been altogether 11 applications to deal in grain. Of these 10 have been granted and one is under inquiry.

44. Of 74 applications for land improvement—

20 have been complied with and money paid.
7 have been rejected.
10 reported for sanction.
20 further security called for.
5 inquiry finished.
12 pending.

74 total.

45. In Nowada there have been no applications to deal in grain, and only two for land improvement.

46. Of these two one has been granted and cheque sent, and the other has been rejected owing to the insufficiency of the security.

47. In Jehanabad there has been no fresh application to deal in grain, but there have been 27 applications for land improvement.

48. Of these 27, four have been granted and the rest are pending.

49. Mr. Bourdillon mentions, and with reason, the difficulty experienced by local enquiry not being deemed sufficient, unless made by an officer not below the rank of canoongo.

50. He represents that his canoongo has been employed in receiving grain at Patna, and that his sub-deputy, whose services are otherwise required in housing grain, &c., is the only officer he can employ in these enquiries. He suggests that distillery darogas and sub-divisional nazirs are in the habit of testing securities, and that it would be a great boon if these were permitted to report on the applications.

51. I concur in Mr. Bourdillon's suggestions. I have already brought to notice the delay that must necessarily ensue under the existing system, and have recommended that officers might be permitted to select competent persons for this duty.

52. In the Sudder sub-division there have been two applications for advances to purchase grain, one has been withdrawn and the other has been granted.

53. For land improvement there have been 21 applications received. Of these three have been transferred to Jehanabad, nine have been rejected, two withdrawn, one granted and six pending.

F.—Charitable Relief.

54. No special operations beyond the construction of roads have been undertaken. At Nowada, Jehanabad, and Aurungabad, it has been found necessary to assist some professional beggars as per margin.

Nowada	24
Pukreeborwan	20
Aurungabad	50
Jehanabad	50

55. In addition to these there have been some 15 indigent persons sent into Jehanabad and 23 to Aurungabad. Those who are capable of doing light work are made to do it and receive five Goruckpooree pice, or one anna daily.

56. At Urwul, the Jehanabad sub-division officer had a meeting during the fortnight, but nothing decisive was done. He proposes to raise subscriptions at next meeting, and also will shortly convene a meeting for that purpose at Jehanabad.

57. At Nowada a meeting was held on 10th, and a subscription list opened; Rs. 4,750 and 1,000 maunds of rice were promised.

58. At the Sudder station a meeting has been convened for 7th proximo for the same purpose.

No. 2Ct.F, dated Camp Gurani, the 23rd February 1874.

From H. W. ALEXANDER, ESQ., Collector of Shahabad, to the OFFICIATING SECRETARY to the GOVERNMENT of BENGAL, Statistical Department.

I HAVE the honor to submit my sixth fortnightly report for this district.

A.—STATE OF THE COUNTRY.

1. The supplies of grain in the principal marts of the district are said to be ample. The smaller marts to the east, on the bank of the Soane, are reported to be importing less, but this is accounted for by the grain finding its way to the Gya markets, where prices are higher.

2. The annexed statement (Appendix A) gives the kind and prices of grain selling at one or two of the principal marts in the district. It will be noticed that, whilst the price of wheat and rice has generally risen at most places to a slight extent, the price of barley, peas, maize, and gram has fallen; the latter may be attributed, I think, to the peas crop, which is now being cut and harvested. On this point the sub-divisional officer of Buxar reports very decidedly "that the peas are coming into use, and the price of rice in the Buxar sub-division yesterday (19th instant) had fallen to an appreciable extent, good rice being one seer cheaper." This Mr. Armstrong attributes, as well as the fall in the prices of nearly all kinds of grains in the Buxar bazar, to the decrease in the number of purchasers on the commencement of the pea harvest.

3. I have nothing to add to my last narrative in regard to the quantities of grain in the hands of zemindars and others.

4. During the fortnight there has been no rainfall, excepting in Bhubbooa, where ·22 inches is reported to have fallen.

5. The rubbee is reported everywhere to be looking well; this no doubt is due to the rain which fell at the beginning of the month, which did material good to the wheat, barley, and other backward crops. In many places "cheena" has been sown in the moistened lands, more especially in pergunnah Rohtas. Peas, mussoor, and kerao are being generally harvested, and in some places wheat, barley, and gram are very nearly ready to be cut.

6. There is plenty of employment for able-bodied men in gathering the crops which are ripe. Pressure is being felt by the more indigent of the high castes and by those who ordinarily subsist on charity, and who from bodily infirmities are incapable of work. Arrangements for giving light labour and gratuitous relief are in progress. Steps have been taken to obtain, through the police, chowkeedars, planters, zemindars, and others, immediate information of the cases of all such persons which call for succour.

7. The sub-divisional officer of Buxar reports that money has been advanced to a member of the sub-divisional committee from funds in hand to provide with food five persons who have heretofore lived on charity, and are unable to work for their living.

In accordance with instructions conveyed in letter No. 202—S. R., dated 21st January 1874, the Manager of the Court of Wards has submitted a full report in regard to each village under his management. In one village, Basawana, one unfortunate man, leprosy-stricken, is reported to be in a distressed state, and totally incapable of all work. I have directed the Manager to arrange that he receives a daily meal sufficient to keep him alive. In the village of Mithaba, two Brahmin women of good family, dependent entirely on charity, are reported to be in bad circumstances; work will be provided for them in the way of spinning cotton, for which they will receive payment at the ordinary rate. The money expended in charity in these cases should be debited to the estate of the adopted minor Despati Singh. No cases of starvation have been reported.

8. In the Arrah sub-division six cases of theft of grain are reported to have occurred, the total amount of grain carried away being 17 maunds 21 seers. In one case 4 maunds 5 seers of Government grain was said to have been stolen, on the night of the 19th, from outside the central depot at Gurani. From inquiries I made myself yesterday in regard to this case, I am fully convinced that it was not the work of bonâ fide thieves; the cartmen from whose carts it was taken are no doubt the guilty parties, and I shall hold the cart contractor answerable for the amount.

In the Buxar sub-division there has been no remarkable increase in grain-thefts and robberies.

Eleven cases of grain-thefts are reported in the Bhubbooa sub-division; the grain stolen was mostly peas and mussoor from crops on the ground. Four cases of burglary are also reported in which rice was stolen, but the amount was not correctly reported.

In the Sasseram sub-division thirteen cases are reported, all, with one exception, petty thefts of crops, peas, mussoor, and wheat, on the ground.

9. I have nothing to add to my last narrative in regard to the condition of special tracts.

In the Arrah sub-division that part especially alluded to in previous narrative is being carefully watched. I am at present out in camp in this direction making inquiries in regard to the condition of the people. Relief works have been commenced here.

In the Buxar sub-division work has been commenced in the west of Chousah, and in Sasseram and Bhubbooa. The vicinity of Chand, the Rohtas pergunnah generally, and the country between Chennary and Bhugwanpore, require attention.

B.—Relief Works.

Full details in regard to all such works in progress will be furnished in the statement called for in Circular No. 5718, dated 3rd December last, due on the 25th instant.

During the fortnight in the Arrah sub-division work has been commenced on the Arrah and Sahar, Arrah and Kaimnuggur, Arrah and Peroo roads.

In the Buxar sub-division the roads from Khyree to Poorunda, and from Chousah to Jumooaon, have been started as relief works in the Chousah pergunnah.

In the Sasseram sub-division money has been made over to the sub-divisional officer for commencing relief works on the roads between Chennary and Mulhipore, and Akherpore and Juddonathpore.

C.—Transport of Food.

Private importation by rail during the fortnight will be submitted in a separate statement which will follow. I never receive the return of exports and imports for the fortnight from the Traffic Department, East Indian Railway, in time to embody it in my narrative. Large quantities of grain are being daily sent from the Arrah railway depôt to Burahra on the Ganges for storage in the Sarun district. A number of the carts belonging to this district are employed in the transport of this grain; and as they are paid at a higher rate than has heretofore been given for carrying grain to be stored in the central depôts of the Arrah sub-division, this may create an unwise competition. At present, as very little grain has been received for this district at the Arrah station, no inconvenience has been felt, but in all probability will arise when more grain arrives for this district, as I certainly hope ere long it will. At present there is no block, and the means of transport are sufficient to meet the demands of Government and private importers.

By river, during the fortnight under report, some 1,650 maunds of wheat, gram, bajra, and janera have been imported in the Arrah sub-division.

In the Sasseram sub-division 1,821 maunds have been imported from outside, not including private imports by rail, and in the Bhubbooa sub-division 364 maunds.

D.—Storage of Government Grain, &c.

For the Arrah sub-division advice was received of 340 bags having been despatched, instead of which 777 bags were delivered at the Arrah station, said to contain 771 maunds, but which were found on re-weighment to hold only 725 maunds 19 seers. This confusion and discrepancy has been separately reported; it is probably attributable to the large consignments of grain coming daily to the Arrah station for the Sarun district. In all then, up to date, of 21,633 maunds said to have been despatched, 21,509 maunds 15 seers have been received and actually stored in the central depôts.

In the Buxar sub-division Mr. Armstrong reports: "The return submitted yesterday (the 19th instant) shows 20,263 maunds of grain as received, of which 18,529 maunds have been stored at the central depôts, some 800 odd bags of wheat and barley being still at the Doomraon delivery depôts. At Buxar all has been cleared out, and the second consignment is awaited, of which only 2,424 maunds have been received up to date.

In regard to the Sasseram and Bhubbooa sub-divisions, Mr. Eyre reports: "The total amount of grain received up to date at Zumaniah and Doomraon is—

	Mds.	S.	C.
At Zumania - - - - - -	18,706	30	6
" Doomraon - - - - - -	4,013	10	6
Total - -	22,720	0	12

"The whole of this had been despatched by the 16th February. I learnt this to-day from a report transmitted by the despatch clerk. The details of weights and quantity in transit are not given, and I am unable therefore to give more than a general amount on this head.

	Mds.	S.	C.
Grain received at delivery stations - -	22,720	0	12
Quantity stored - - - - - -	20,230	1	10
" in transit - - - - -	2,489	39	2
Total - -	22,720	0	12

In regard to the sufficiency of stocks for Government purposes, I trust that the further requirements I have asked for in a separate report, and as mentioned in my last narrative, may be early complied with. Presuming that this further amount will be supplied, grain golahs have been completed and are being constructed to store it in.

E.—Advances to Private Parties and their Results.

1. For purchase and storage of grain in the Arrah sub-division, one advance has been made of Rs. 500 to one Jowahir Lal of Kori, and an application has been made for Rs. 3,000 by another zemindar, and if there is nothing against it the advance will be made to him.

In the Buxar sub-division Mr. Armstrong reports that "for advances for the purchase of grain five petitions have been presented. In the case of one petitioner the security offered has been found insufficient; in the case of a second no security is forthcoming; while a third has changed his mind, and now says he does not want the loan: the loan in the remaining two cases will be recommended on the applicants registering a deed of security, which they are expected to do to-day. - -

2. *Advances to municipalities for works and description thereof.*—The Arrah municipality has sent up a formal application for a loan of Rs. 8,041 for the two works alluded to in my last narrative. No other municipality have come forward.

3. *Advances to private parties for land improvements.*—In the Arrah sub-division five applications have been made for a sum aggregating Rs. 2,350 for digging wells, &c., and the canoongoe has been directed to make inquiries with a view of ascertaining whether the sums may be properly advanced in each case.

In the Buxar sub-division Mr. Armstrong reports: "There have been eighteen petitions for advances for improvements, of which three have been sent to the Arrah Collectorate for necessary inquiries concerning the security offered, and one to Sasseram for a general inquiry. In one the security offered has been found insufficient, and in the remainder the inquiries are not yet complete so as to admit of my formally applying for the advances. Nearly all the applications are for the construction of pucka wells, the making of which will not give work to the sort of people who really want it, and, except where required for irrigating poppy, the expenditure would seem to be unwise with the prospect of canal-water in every direction."

F.—CHARITABLE RELIEF.

No actual relief operations have been commenced further than what has been already mentioned under heading A of this report. District and sub-divisional relief committees have been formed and reported on separately. Sub-committees in connection therewith have been nominated, and are being selected. Arrangements are being made to collect at each relief centre stores of bagaye grass and fibre for making rope and string, and uncleaned cotton will also be stored to be spun by women of high and low caste who cannot engage in out-door labor of other kinds.

A meeting was held at Arrah on the 19th instant, and collections promised to the amount of Rs. 11,500, besides a monthly subscription of Rs. 255 during the time that charitable relief is given. I expect to be able to realize more than this, however, as many zemindars and mahajuns did not attend the meeting, and subscriptions remain to be obtained from the canal, police, and opium departments.

At Buxar a meeting was held on the 10th instant, and a sum of Rs. 1,195 subscribed, and it is expected that more than this will be ultimately collected.

In the Sasseram and Bhubhooa sub-divisions subscriptions are being collected.

The total amount expended during the fortnight under report is Rs. 641-7-3.

H. Alexander,
Collector.

No. 391 F., dated Mozufferpore, the 26th February 1874.

From F. M. Halliday, Esq., Collector of Tirhoot, to the Officiating Secretary to the Government of Bengal, Statistical Department.

I have the honor to submit by to-day's post the accompanying fortnightly report received from Mr. Worsley late yesterday evening.

2. With regard to what Mr. Worsley writes of the requirements for the Madhubani sub-division, the original estimate was for something over 12 lacs. The Government has since been informed of Sir Richard Temple's subsequent calculations putting the requirements at 16 lacs, and this no doubt is a sufficient provision. The fact that the Nepaulese subjects along the border will probably flock to our relief works and depôts, was a point necessary to take into consideration in calculating for additional requirements, and this was probably thought of in increasing the provision.

3. On the subject of Mr. Worsley's 13th para. I beg to state that the Commissioner has advised me of the despatch of 320 kodalees and 1,000 picks. These will be distributed on arrival.

I cannot but think, however, that the Executive Engineer of the Northern Division could make more use of the local supplies of kodalees available in every village, and a little tact and energy would result in the required tools being forthcoming on the spot.

4. With regard to para. 24 of the report, I have to add that Mr. Llewhellin who has, under Sir Richard Temple's instructions, been placed in charge of the transport arrangements of the Madhubani sub-division, passed through Mozufferpore a few days ago under orders from Sir Richard Temple, to see what supplies of carts could be obtained from Sarun, where, as I understand, the demand for carriage for Government transport is very far below the capabilities of the district to supply. Mr. Llewhellin informed me that he hoped shortly to make the Madhubani arrangements satisfactory.

4. On the transport of grain to Seetamarhee through the Hajeepore and Sudder sub-divisions I have already reported through Mr. Gordon. It will be observed that the storage in the Seetamarhee sub-division considerably exceeds that of other sub-divisions.

5. I have to report that telegraphic communication has now been opened between Mozufferpore and Durbhanga, Mozufferpore and Seetamarhee, and Mozufferpore to Moteeharee and Soogowlee. The line between Mozufferpore and Hajeepore has been also permanently constructed and opened. Captain Mander, Assistant Engineer, writes from Bazeedpore, opposite Barrh, that the new rail works to Darbhunga are proceeding rapidly.

6. In conclusion I would beg to submit the following with regard to the remarks recorded in the last Government resolution on Mr. Worsley's fortnightly report for the period ending 7th February 1874, in connexion with the delay in submitting that report. When that report was under preparation by Mr. Worsley, Sir Richard Temple had arrived at Mozufferpore, and I accompanied him to Durbhanga, the Commissioner being then at Seetamarhee on his tour from the Chumparun district. When Sir Richard Temple left Durbhanga for Seetamarhee and Moteeharee, I proceeded with Mr. Bayley to the Allahpore Pergunnah, and visited the extreme corner of my district with him at Andramuth. Thence I accompanied him back through Durbhanga to Nagarbusto and Chumpta Ghaut, where we met the gentlemen who had undertaken the transport contracts which had been negociated during our visit at Durbhanga. From Chumpta I proceeded by rail (this being the quickest way) from Barrh to Bankipore, and across to Hajeepore, where I visited and inspected the transport arrangements at Bunkhur Ghaut, and finally returned to Mozufferpore to carry on the negotiations with the planters of this side of Tirhoot for the transport arrangements from Hajeepore to Seetamaree sub-division, and other parts of the district in that direction.

This will account for my not having been able to prepare the report submitted by Mr. Worsley. I would further submit that my own personal exertions and action in connexion with famine relief operations have not been prominently before Government, simply from the fact that hitherto the reports of all actions taken, have been submitted direct by Mr. Worsley. Under the Commissioner's instructions, and on this point I have purposely interfered with him as little as possible; but I would beg to submit that the direction and superintendence of all matters have been in my hands as they were before, and the responsibility of the whole has been and remains on my shoulders. The Commissioner is aware of this, and I trust His Honor the Lieutenant-Governor will not suppose that I have been sitting at the Sudder station with folded hands.

No. 34, dated Durbhangah, the 23rd February 1874.

From C. F. WORSLEY, Esq., C.S., on Special Duty, Tirhoot, Northern Division, to the OFFICIATING SECRETARY to the GOVERNMENT OF BENGAL, Statistical Department.

I HAVE the honor to submit my Narrative of Scarcity and Relief for the fortnight ending Saturday 21st February 1874.

A.—STATE OF THE COUNTRY.

2. In Seetamarhee sub-division the prices of grain, which fell slightly for a few days after the rain in the early part of the month, have again risen.

3. In Madhoobanee sub-division it is reported that there is no actual scarcity at present; prices continue very much the same, but "makai" has slightly fallen.

4. In Durbhangah sub-division the supply of all sorts of food-grains has been sufficient at the Durbhangah and Rowserah bazars. In the Bahera and Singhiya markets the high prices previously reported still prevail, and though the price of rice is quoted, the grain itself is not procurable in these markets. Maize and millet are the chief grains sold, and they are very scarce. The produce of the newly gathered mustard crop is being rapidly and recklessly bartered for food.

5. The subjoined statement shows the kinds and prices of grain selling at some of the principal marts.

Name of Mart.	Wheat.	Barley.	Common Rice.	Lesser Millets.	Maize or Indian Corn.	Gram.
Seetamarhee - - -	11¼	14	10	14	13¾	12½
Jalleh - - -	—	—	10½	11½	11½	—
Madhoobani - - -	10	16	10	12	12	10
Khijowlee - - -	10½	15¼	10½	12	10½	13
Durbhangah - - -	11	—	10	13	13	—
Bahera - - -	11¼	—	9½	12¾	9½	—
Singhiya - - -	10⅓	—	9	11½	13½	—

The fall of prices in the town of Durbhangah is attributed to the enormous importations which Government has commenced to make.

6 There is no further information to report regarding stocks. The late sub-divisional officer of Madhoobani Mr. Cochran) writes that he "still adheres to his previous estimates," and this notwithstanding that he has now reduced his estimate of the dhan out-turn from more than 2 annas to less than 1 anna. He observes: "I think it right to place on record that I am of opinion fully 2 millions of maunds will be wanted if all the people are to be kept alive. I would point out that when our estimate of the stocks was made it was early in November, and the Mozufferpore and Seetamarhee estimates agreed with mine; three months have passed since then, and sufficient allowance must be made for the amount consumed during that time. The Ughani harvest, I am inclined to think, was less than one anna on the whole; I formerly said two annas, which having to trust at first to native reports, was a fairly close guess, but whether it was half anna or two annas, the original stock supplemented by the late harvest, must have dwindled down to a very little; any one can work out the sum." If Mr. Cochran had himself proceeded to work out the sum, he would have seen that the stocks originally estimated (*i.e.*, five lacs of maunds), supplemented by what he considered to be the out-turn of a 2 to 3 annas dhan crop (*i.e.*, one lac of maunds, vide my narrative No. 1 F, dated 15th ultimo, paragraph 4) must have been already quite exhausted, the rate of consumption in his sub-division being at least three lacs of maunds per month. I informed Sir Richard Temple, who was at Durbhangah yesterday, that Mr. Cochran had increased his demand to two millions of maunds, but Sir Richard stated that the new sub-divisional officer, Mr. Magrath, had reported the allotments already made, viz., 16 lacs, to be sufficient. It is very difficult for me, having no extensive knowledge of Madhoobanee sub-division, and no reliable data on which I might ground an opinion (for Mr. Cochran has not only been unable to give the areas of land under dhan and rubbee crop respectively, but has submitted three different estimates of the out-turn of the dhan harvest), to say how large an allotment ought to be made, but so far as I am in a position to judge, I believe that a 10 months' supply for half the population is an adequate allotment.

7. In the early part of the fortnight some rain fell in Seetamarhee, and there has been a total fall of ·29 in Durbhangah. In Madhoobanee there has been no rain at all.

8. In Seetamarhee sub-division the state of the crops is better on the whole than it was a fortnight ago. The damage done to the rahar by frosts has been found not so great as was at first supposed, and it is believed that the rubbee crop may be rather more than 6 annas. Cheena, moong sama, and kowni are reported to have been sown since the 6th instant.

9. In Madhoobanee sub-division there has been no improvement in the state of the crops, and though the police report cheena and moong dhan to have been sown in large quantities, Mr. Cochran remarks that "from his own observations and from the information of persons who are in a position to know, he is convinced the total area so sown is small."

10. In Durbhangah sub-division the only good crops are rahar and mustard, each of which is estimated at 10 annas. The mustard crop is now being gathered, and rahar is approaching maturity. The other rubbee crops will not afford the people much assistance. Cheena, dhan, and moong have been sown to a considerable extent, but how the sowings may turn out can scarcely be determined at present. Tobacco is under the average of good years.

11. In parts of the Seetamarhee sub-division, especially at Kamtoul, Jellah Cheerout and Shahpore, the condition of the people is bad. At Jalleh and Cheerout, rice has been selling at times at 8½ seers per rupee, and the middle classes who refuse to go to the relief works clamouring for advances either of grain or money. I have authorised the Deputy Collector to sell Government rice in small quantities at these two places, and have directed him to provide light employment for the higher classes without delay. I have no reason to think now that the number of relief works for the laboring class in this sub-division is insufficient for present wants.

12. In Madhoobanee sub-division "the poorer and laboring classes" are said to be "getting pinched" and to be of wretched appearance here and there. Gratuitous relief in the shape of cooked food is being given at Jynugger, Madhoobanee, Beejwan, and Pandoul. At Jhunjharpore there is a good deal of distress, but ample work on tanks is provided by the Court of Wards. The worst pergunnahs of the sub-division are Jabdi, Alapore, Bachour, parts of Hathee, Dharur, and Pachahee. Mr. Cochran considers that "the whole sub-division is almost equally badly off for crops, and the distress when it does come will be general.".

13. In the Durbhangah sub-division, the Bahera and Singhiya thannahs will be treated as one special tract. In Rowserah thannah, there has been no change for the worse, but in Durbhangah town and to the north-west and east of it distress is increasing.

Special Tract of Mahind and Kanhowlee. No. 1, Seetamarhee Sub-Division.

14. The Deputy Collector has recently visited many villages in this tract. At Kachore in Kanhowlee Pergunnah he found that seven families had deserted their houses on the day before his visit; at another place he met six families migrating from Radhao, a Court of Wards' village, to Majhowhlia; at Pursa he found several persons on a tank work in bad condition. In Pergunnah Mahind the people were all busily occupied in ploughing their fields and sowing cheena. Since the Deputy Collector's visit, more works have been opened in this tract which has been formed into a special relief circle, and pending the arrival of the gentlemen who has been appointed Superintendent it will remain under the immediate charge of the Deputy Collector and the Manager of Dyne Chupra Factory.

Special Tract of Singhiya and Bahera, Durbhangah Sub-Division.

15. Distress prevails throughout this tract, and crowds of beggars who have deserted their villages are congregated at Hathee, Singhiya and Bahera; some of these are so weak and emaciated as to be wholly incapable of doing work and the sub-divisional officer has arranged for their being temporarily relieved by police officers and Mr. May of Hathee factory. By degrees we hope to send back all beggars to their own villages, but until our relief circles are filled by Superintendents, it will be necessary for us to provide shelter for destitute vagrants at two or three central places. The question is not whether beggars are to be attracted to certain centres, but whether we are to take the only means in our power of saving a large number of most destitute paupers. The immediate effect of providing shelter will of course be to attract beggars; but this is an evil that cannot be avoided. The fact is, the famine has got a short start of us, but I have no doubt that we shall quickly overtake it, and that under our arrangements no real harm can arise in the meantime. The sub-divisional officer writes.—"I have during my visits into the interior, come on scores of men, women and children engaged in cutting on the chours a sort of grass which runs to seed, and extracting the seed for food. They were all more or less suffering, as much from unwholesome food as from want of wholesome diet. Those people I sent to our work. About Hathee in all directions there is great distress, and cases of emaciation are not unfrequently met with, but generally, it must be remembered, among the pauper class alone, until quite recently.

"From Hathee up to Bahera east and west, distress is prevalent among the laboring classes, and most shows itself here as elsewhere among the women and children."

16. The want of tools is now being felt very greatly. Local supplies have proved insufficient, and as the number of laborers is increasing by hundreds every day; it is very necessary that a large allotment of tools should be made to this district from the Public Works Department. The Executive Engineer has endeavoured to buy tools in Calcutta, but they are not procurable. He requires 60,000 kodalees.

B.—Relief Works.

17. The number of relief works in the Seetamarhee sub-division is as follows:—

	Public Works.	
21 Road works - - - - -	3,599	laborers daily.
35 Tank „ - - - - -	2,756	„
Total -	6,365	
	Private Works.	
61 Roads and tanks - - - - -	5,036	
	Court of Wards' Works.	
Tank works - - - - -	2,82	
Grand total -	14,212	

Of the public works no less than 42 are under the charge of private gentlemen; the rest are under the Executive Engineer. The list of public works is shown in a separate statement.

18. From Madhoobanee sub-division returns have only been received for three road works—

Motipore road	99 laborers.
Beniputtee road	293 „
Sarsoo road	556 „
Total	948

An overseer has been deputed to lay out roads in the east of the sub-division, and Lieutenant Wright who has now been placed by Sir Richard Temple's orders in separate charge of Madhoobanee and Durbhangah sub-divisions will also proceed to Madhoobanee, for the purpose of opening more works.

No return of Raj works in this sub-division has been received.*

19. In Durbhangah sub-division the returns are as follow:—

Public Works.

Hathee Mangalgar viâ Singhiya road	4,226
Durbhangah, Behera road	12,000

Court of Wards' Work

3 Tanks 4 Embankments 5 Road bridges	10,053
Total	26,279

For two public works, viz., Bahera, Peepra road and Hathee, Hirnee road no returns have been received.

19. The above figures have been mainly obtained from the sub-divisional officers' narratives, the Executive Engineer's returns not having yet arrived.

20. The sale of Government grain at the Durbhangah end of the Durbhangah, Bahera road has commenced, but laborers are not much inclined to buy it. At present they can buy Marûa at a cheaper rate. I regret to report that on visiting this road on 20th instant, I found some 7,000 laborers at work, several of them being in a very bad condition indeed, and all suffering from want of pay, which they had not received for four days. The overseer who had previously been in charge of the work had been transferred suddenly to Madeypore in Madhoobanee sub-division, and no proper arrangements had been made for drawing money from the treasury for payment of the laborers, nor had any intimation been given to the sub-divisional officer of the transfer of the overseer. I directed Mr. Assistant-Magistrate Henry, who was with me, to get money at once from the treasury and pay the laborers the same evening for the last day's work, and to pay off all arrears amounting to some Rs. 2,300 on the following morning. This was promptly done by Mr. Henry, and the work has remained under his immediate charge from that date.

21. There is no doubt that this very grave blunder might have been avoided by ordinary care; but though it cannot be excused on the ground of want of overseers, I feel that it could not have occurred under a more perfect system. I think that no work of such magnitude as the Durbhangah Bahera road should be liable to be placed for a single day under sub-overseers of the class that we are obliged to employ in these parts, men upon whom we have no hold, and who cannot be safely trusted with larger sums of money; and I cannot help feeling much anxiety regarding the management of works in the interior of the Durbhangah and Madhoobanee sub-divisions, when I consider that the only officers under me having real responsibility are one engineer and two overseers, and that the present blunder as well as the abuses mentioned in paragraph 16 of my narrative, No. 98 F., dated 16th ultimo, have all been committed within a few miles of Durbhangah itself.

22. I have received this day a comprehensive scheme of relief works for Seetamarhee sub-division. It is, of course, impossible to say to what extent the number of laborers may increase, but I expect that the works proposed for this relief district will give employment for at least two months, the total estimate being upwards of ten lacs of rupees.

C.—TRANSPORT OF FOOD.

23. There has been a slight increase in the grain traffic between Rowserah and the districts south of the Ganges, the imports being about 200 maunds a week. Small quantities of grain have found their way up to Madhoobanee from the south.

24. I have nothing further to report about transport arrangements, which are complete so far as Durbhangah sub-division is concerned, but at present inadequate as regards Madhoobanee. Further efforts are being made under Sir Richard Temple's immediate orders, the purport of which has not been notified to me. The transport of grain to Seetamarhee is carried on under the Collector's directions.

---

* Since this was written a return has been submitted showing the daily number of laborers to be 3,514.

D.—STORAGE OF GOVERNMENT GRAIN.

25. The quantity of Government grain already stored is as follows :—

	Maunds.
Seetamarhee sub-division - - -	70,885
Madhoobanee „ - - -	38,493
Durbhangah „ - - -	41,992
Total - -	151,370

26. I have not received complete lists of all the golahs recently selected by each sub-divisional officer, or of the grain to be stored in each golah. This information will be supplied in my next narrative. All the golahs in Durbhangah sub-division are near completion, and the construction of golahs in the other two sub-divisions is being pushed on rapidly.

E.—ADVANCES.

27. Applications for advances are increasing in number, especially in Seetamarhee and Durbhangah sub-divisions. In the former sub-division, six large zemindars have just applied for advances aggregating Rs. 47,700 to lend to their ryots, which will be at once recommended for sanction.

F.—CHARITABLE RELIEF.

28. In Seetamarhee sub-division funds have been placed in the hands of the managers of the chief factories who have been giving relief partly in money and partly in grain to "those actually in great want." The sub-divisional officer has also made advances to village headmen at Soorsund, Shewhur, Jalleh, and in the special tract of Kanhowley and Mahind for employment of people in spinning and weaving. The total amount spent under this head up to date is Rs. 1,172-4. A relief meeting was held during the fortnight at which Rs. 5,000 were collected.

In Madhoobanee sub-division charitable relief is given through the managers of Jynugger and Pandoul factories, through a Deputy Collector at Jhunjharpore, and through all police officers in charge of thannahs and out-posts.

In Durbhangah sub-divisions Rs. 12-10 have been advanced to members of the Relief Committees in the distressed tracts for employment of respectable women in spinning, and 220 maunds of grain have been issued for sale to persons so employed on the same terms as those on which grain is sold to our own laborers.

Each sub-divisional officer is now specially employed in maturing arrangements for administering charitable relief, and I need only add here that as our Relief Superintendents are now arriving every day, the ensuing fortnight will show great progress in this direction. Meantime I think all precautions are being taken to prevent the occurrence of deaths from starvation.

29. Each superintendent on his arrival is posted to a circle and directed to visit every village in his jurisdiction without delay, to prepare lists of the headmen through whom he will work, and to collect all information that he can obtain regarding the condition of the inhabitants. Up to the present time three superintendents have been posted to circles in Seetamarhee, two to circles in Madhoobanee, and two to circles in Durbhangah sub-division. I have directed each sub-divisional officer to cause translations and extracts to be made of the manuscript census village registers in his office, and to supply each superintendent with particulars of castes and population for all villages in his circle.

LIST of PUBLIC WORKS in Seetamarhee Sub-Division.

Name of Works.	Average daily number of laborers.	Rate of wages.	Name of persons in charge.	REMARKS.
ROADS.				
1. Seetarmarhee and Sonbursa road.	301	Men at As. 1-6. Women at „ 1-3.	Sergt. O'Farrel.	
2. Cheerout to Poopree -	301		Ditto.	
3. Nanpore to Jalleh -	133		Chowdhry Roodur Persad.	
4. Jalleh to Baghoul -	52		Sergt. O'Farrel.	
5. Poopree to Bhugwanpur -	100		Mr. Shortt.

No. 904 F, dated Sarun, 26th February 1874.

Memorandum by J. S. Drummond, Esq., Officiating Magistrate and Collector of Sarun.

Forwarded to the Secretary to the Government of Bengal, in the Statistical Department, Calcutta, for information, with reference to his circular, No. 80, of the 17th November 1873.

Narrative of Scarcity and Relief in Sarun district for the fortnight ending 21st February 1874.

A.—State of the Country.

Abundance or Scarcity of Supply in the Bazar.

1. Some scarcity of supply in the bazars of the Bussuntpore, Mashrakh, and Parsa thannahs is reported; but the district marts generally are sufficiently supplied with grain, and importations continue.

2. The private importations in the sudder sub-division during the fortnight were to Revelgunge, 1,16,962 maunds, of which 88,000 were maize, 16,600 rice, 12,300 barley and wheat, and the rest other grains; to Dooreegunge 6,348 maunds, of which 2,928 were rice; and at Maharajgunge 2,392 maunds; while the imports at the Gunduck ghâts from Tirhoot and Chumparun were 474 maunds. The exports of grain to Tirhoot and Chumparun amounted to 3,577 and 200 maunds respectively.

3. Of the Sewan sub-division, the following is Mr. Wright's account:—

"Grain still continues to be imported into the division, and the pea crop, which is now being gathered, is being brought into the markets; there is therefore no scarcity of supplies in the bazars. Mr. Rattray, in writing from Pasnowlee, says that the importations of grain to the mart at Pasnowli are said to exceed six hundred carts a week, principally Indian corn from Revelgunge.

"The private importations of grain during the past fortnight at Sewan, Darawli, Guthani, and Siswan amounted to 18,439 maunds. Of this amount 4,258 maunds was rice, 10,700 maunds

Indian-corn, 1,288 maunds paddy, and the rest consisted of small quantities of wheat, kodo, gram, urid, rahar, and peas. The importations were principally from Goruckpore, Azimgurh, and Revelgunge, and a small quantity, consisting of 175 maunds of rice and 150 maunds of wheat, from Bhaugulpore."

4. Of the Hatwah estate, Mr. Hodgkinson writes:—

"The bazars continue to be sufficiently supplied; small sales of grain have been made in the western zillahs: but now the earlier spring crops are ripening, there will be no further demand for our imported rice for the present. The small importation, which still continues from Goruckpore and the south, is entirely of makai for immediate use."

The kind and price of grain.

5. The kind and price of grain at the principal marts, and at the thannahs and outposts, are given in the annexed statement.

6. Peas of this year's crop are now coming into the market, and are selling at 18 and 16 seers for the rupee at Chuprah and Sewan respectively.

Stock of food in the hands of the people.

7. I have nothing to add to what has been reported under this head, but the following from Mr. Hudson's report may be quoted:—

"I have occasionally come across carts laden with grain belonging to small traders of the district, and observe a good supply of grain in the substantial buneahs' shops in the large bazars; but the zemindars and ryots almost invariably assert that they have no grain in stock at all. I found carts at Bussuntpore, which had brought grain for sale from Maharajgunge, and on other occasions have observed some circulation of supplies going on through the hands of petty traders. The kinds of grain are always the same—rice, makai, gram, wheat, and a little kerao, khesaree, and rahar dall."

Rainfall.

8. There has been no rain during the past fortnight, and in certain quarters apprehensions as to the water supply for cattle exists. Old tanks are, however, being deepened for the purpose at the cost of Government, wherever private enterprise holds back, and a real necessity is shown to be likely to arise. The addition of drinking troughs to existing wells is also contemplated as a cheaper method of supplying the want.

State of the Crops.

9. With the favorable weather since the rain, the improvement in the crops already reported has continued constant; but it would, I think, be unsafe to estimate the yield for the entire district at more than eight annas, or two-thirds of an average crop all round.

10. Mr. Hudson writes as follows of the Bussuntpore and Mashrakh thannahs:—

"The crops about Bussuntpore are not generally good, and there is a great deal of partee and rice land; but in this neighbourhood, and especially about Ranipore,* near Gajadhar Persad Narain's factory, they look remarkably well; west and north-east of Bussuntpore to Rajaputty in Mashrakh the crops are thin and bad."

* Western borders of Mashrakh thannah.

11. The following is Mr. Wright's report of the Sewan sub-division:—

"The weather during the past fortnight has been all that could be desired for the crops. This fine weather following the rain we had at the beginning of this month has done the crops an immense amount of good. The crops are now ripening fast, and if the weather continues favorable, the out-turn of the crops will, on the whole, be very fair, averaging from an eight to ten annas crop. In the Barawli thannah, excluding the jurisdiction of the Gopalgunge outpost, the crops will not average above four to six annas; but in Gopalgunge they promise to give a twelve to fourteen annas out-turn. In nearly the whole of Darawli thannah the crops are excellent, and will yield very little, if anything, short of a full crop.

"Mr. Rattray, in writing of the crops in pergunnah Dangai, says: 'Fully two-thirds of the land in the northern part and half the land in the southern part of the pergunnah is under paddy cultivation. The harvest to the south is said to have been a total failure; in the northern half, the out-turn is estimated as having been from five to ten maunds per beegah. Wheat and barley promise an out-turn of eight to twelve annas, and rahar and other pulses about eight annas in the southern part of the pergunnah. To the north the rubbee will not exceed six annas. The average for the whole pergunnah may be put down at six to eight annas.

"'The Indian corn harvest is said to have been a very good one in the pergunnah, from twelve annas to a full crop, and the bulk of the poorer classes have been almost entirely dependent on it for their daily meal. The out-turn of the paddy crop in the northern part of the pergunnah, small as it was, has been of some help to the people.'

"I have not as yet received Mr. Rattray's report for last week, but in his diary for that period, he estimates the rubbee crops of wheat and barley in the southern portion of the Barawli thannah as a four to six annas crop, and the same crop in the eastern portion of the Sewan thannah at six to eight annas. The rahar in both the above-mentioned tracts of country he estimates as an eight anna one.

"Of the probable out-turn of the poppy crop in this division, Mr. Tytler tells me that he expects it will be about one-sixth less than what it was last year."

12. Mr. Hodgkinson writes as follows regarding the crops on the Hatwah estate:—

"The past fortnight has witnessed a great improvement in the standing crops, the result of the rain which fell at the beginning of the month. In some parts, such as Puchdearee in the north, and Gopalgunge to the north-west, fully a six or eight annas crop may be expected; but in others, the rain came too late to do more than make up for the severe damage done by the frosts of January, and on the whole, more than a four anna crop can hardly be expected. The opium will (except to the north of Sreepore) be a fair 10 or 12 anna crop at least."

Condition of the people.

13. With the somewhat lower prices that may be expected to prevail as the result of the rubbee harvest now soon to be reaped, it may be hoped that the condition of the people will, for a time at least, improve; meanwhile the provision of relief works has been found to remove distress wherever reported, and the result has been that the people have been able to tide through the past period of high prices until the advent of the harvest and the season for agricultural operations, and I have little doubt that widespread and general distress amongst the laboring classes has thus been avoided. Our relief works also have supported many as mates who, from considerations of caste, would not have worked themselves; though, as will appear from the returns, many persons, too, of castes who would not labor on the public roads in ordinary years, are now to be found on the relief works.

14. Mr. Hudson, who has been steadily employed in the interior of the sudder subdivision, writes as follows:—

"As yet I have not remarked any great extent of distress in any neighbourhood; nor have I met with any absolute scarcity of food in any of the chief bazars, whence the villages, within any given radius, obtain their supplies. The prices seem to keep pretty steadily at 12 seers pukka weight for rice, and 15 or 16 for makai and gram, wheat a little less.

"The village of Rampore near Bussuntpore, is the only one in which I have met with any loud outcry about distress. Often as I ride through the villages, if I get into conversation with the villagers, they complain of distress and of the bad prospect for the crops; but the people never looked famished or anxious, and I generally remark how very much things appear to be going on as if there had been no failure of harvest at all. I have spoken of the special case of Rampore in a former summary. Since then I have met the brother of Deega Singh, of Nahranpore, the mahajun who has been in the habit of making advances to the ryots of Rampore, and I have been told that he has resumed making advances. In Rampore itself, also, I was told that he was supporting the Brahmins who are the chief sufferers. The Chuttrees will go to the relief work."

It is satisfactory to learn that some mahajuns are resuming advances to the ryots, but I fear that the mahajuns generally are not making such advances.

15. The sub-divisional officer of Sewan reports as follows:—

"Prospects are becoming more cheering for the people since the rubbee crops have been commenced to be gathered. Prices of food grains have fallen somewhat in the bazars, and agriculturists are again giving employment to numbers of people in preparing and cultivating their lands. Ample relief works have been provided throughout the division for the poor laboring classes. Large numbers are flocking to these relief works, but I think that the fact of people crowding to these works is no good test by which to judge of the amount of distress amongst the people, as they come to the works in crowds under the idea that orders have been issued by Government that money sanctioned for relief works is to be given away to people, whether they work for it or not, and consequently large numbers of able-bodied persons are to be seen daily at relief works doing little or no work, but merely putting in an appearance, so as to secure payment of daily wages for themselves. The cowrie system, *i.e.*, that of paying a certain amount in cowries for each basket of earth carried from a tank or ditch to the place where it is to be thrown, is a very good test. By this means, people cannot scheme from work, else they make nothing, and as soon as the cowrie system is introduced at a relief work, half the people who crowded to labor before leave the work, shewing clearly thereby that they are not in distress.

"It must not be supposed that the people leave because the work required to be performed by them to earn an ordinary day's wages is more than they can easily do. On the contrary, they can, if they like to work, earn more by the cowrie system than the ordinary day's hire.

"I found the above the case at the tank I am having dug at Sewan; since I introduced the cowrie system, numbers of the laborers have left, but yet a greater amount of work is done by the smaller number of laborers than used to be done before, when there were a large number at work.

"In case of persons coming to work who are weak and unable to do full work, arrangements could be made to have them employed separately, and they could be paid at a higher rate for each basket of earth that they carried, so as to enable them to get a full day's hire for even a short amount of work. No such persons have, however, as yet come to work."

The Sub-Deputy Collector says under this head:—"Laborers commonly are not now in want of labor, works having commenced in agriculture, particularly in indigo plantations. Extracting juice from sugar is still going on, and sugar plantation also is now widely carried on."

Of the condition of the people, Mr. Rattray writes as follows:—"Distress prevails among the laboring classes, but not to an alarming extent, and the worst of the pressure has been removed by the relief measures in hand;" and again in a subsequent report he says, "The laboring classes are said to be finding work in the ploughing of fields and on the roads."

16. The cowrie system advocated by Mr. Wright has been introduced to some extent on minor works under my immediate supervision; but it would be utterly impossible without a largely-increased staff to carry out the system generally on the extensive works in progress throughout the district, nor do I think that the system is one which is suited to relief works in time of general distress. Neither is it possible on such works to discriminate between the able-bodied and the weak in the manner proposed in the fourth paragraph of the above extract. Mr. Wright has

failed to perceive that the object of the Government, that persons should only earn a bare subsistence on relief works, would be entirely defeated if the strong and able-bodied laborers were permitted to earn enhanced wages at the expense of those who are old, weak and sickly, or of tender age. If there is one thing more than another that should be insisted on at relief works, it is that, whatever the work performed, the wages in return should be sufficient for subsistence in all cases and no more in any. It is for the persons in charge of the works to see that the proper amount of labor suited to physical condition, age, or sex, is exacted from all who come, and with proper supervision this end may to a great extent be secured; though even if it were not altogether secured it seems to me a mistaken view to suppose that the fact of persons coming to the relief works is not a test of their requiring relief, as neither the rate of wages nor the work itself is so attractive as to be likely to induce people to leave their homes in large numbers to labor on the public roads unless a demand for work as a means of subsistence really existed. Of course, in times of distress, and under the daily labor system, there must be considerable waste of power and greatly enhanced cost, but nevertheless much useful work has been and is being done throughout the district, and the view of Mr. Wright that the people on the works do nothing is certainly not borne out by the results. If it be generally the case anywhere that " large numbers of able-bodied persons are to be seen daily at relief works doing little or no work, but merely putting in an appearance so as to secure payment of daily wages," Mr. Wright will perform a more useful office if, instead of placing on record vague and general statements of this sort in his fortnightly narratives, he specifics from time to time the particular works on which such general inaction is observed to prevail, with a view to the prompt dismissal of the overseers thereon, and he will be desired in future to act in the matter himself by furnishing precise and definite information on all such points and not to imagine that his function is discharged by criticising, on imperfect grounds, the system very properly adopted by the Executive Engineers as best suited to the exigencies of the time, and in accordance with the views of Government.

17. Of the people on the Hatwah estate, Mr. Hodgkinson writes as follows:—

"I have met with no bad cases of starvation, except among professional beggars, some of whom stand in need of treatment which will be given them under orders which I have issued at the dispensaries. Small-pox is very prevalent in some villages; and although it is not generally of a bad type, many deaths will undoubtedly occur if the outbreak continues amongst a people already weakened by a deficiency of food. Looking at the persons who come to our relief works, I do not consider that their physical condition is up to date worse than in ordinary years."

18. And the General Wards' manager reports thus:

"To my last and previous narratives on this head, I may only add that the distress is being felt really by the poorer classes only, and among them no more caste prejudice is observed in seeking for employment and earning a livelihood."

Known cases of misery and starvation.

19. I have only met with one case of a ryot in really bad condition, and he was at once granted an advance on the authority of Sir Richard Temple's recent orders. Amongst the middle classes, two boys also of the Kaistho caste were found in an apparently starving condition consequent on the desertion of the father of the family. These as well as other isolated cases of distress among the lower classes and among beggars from time to time reported, have been sufficiently provided for.

20. Under this head, Mr. Wright reports thus:

" One or two cases of persons who were professional beggars suffering from distress have been reported and steps have been taken to provide for them.

" Mr. Rattray says that there has been no case of death from starvation brought to his notice during his movements in the interior, nor has he met with any cases of destitution or misery in the villages visited by him."

Grain-thefts or robberies.

21. There have been 12 grain-robbery and grain-thefts during the fortnight.

Condition of any special tracts.

22. The western and northern portions of the Hatwah estate, and the Bussuntpore, Meshrakh, and Pursa thannahs continue to be the worst tracts. There is, however, nothing special to report about these tracts.

B.—Relief Works.

Progress of relief works, &c.

23. The annexed statement show the relief works in progress and the number employed thereon. The average number daily employed during the fortnight has been 82,820, but with the commencement of agricultural operations these numbers will now probably decrease. On the works under Captain May, the proportion of non-laboring classes has increased from 13 to 15 per cent. of the total number employed, while of the persons at work in the town about a third belong to such classes.

24. Under this head, Mr. Hodgkinson reports thus:—

" The bulk of the persons engaged on the relief works continues to consist of the women and children of the ordinary laboring classes; but the wages offered would only attract a small proportion of them in ordinary years. The cowrie system is almost universally adopted now. A small proportion of the laborers, however, perhaps one-twentieth, is of the higher castes."

C.—TRANSPORT OF FOOD.

Approximate account of private food-supplies.

25. All the information procurable under this head has been given in paragraphs 2 and 3.

26. Regarding the Hatwah grain-supplies, it appears from Mr. Hodgkinson's last weekly grain return, that of the 1,20,000 maunds engaged for the Raj, 57,925 maunds had been received into the district, of which 52,448 maunds had arrived at final destination, and 5,477 maunds were in transit from points of receipt.

27. The General Wards' manager reports that an advance of Rs. 50,000 has been made to Choonee Lall, the banker, for purchase of grain to be advanced to the ryots, as well as for distribution among the persons employed on relief works. The Commissioner has objected to Government loans for this purpose in the case of involved estates, but as, failing the funds of such estates, the necessary expenditure on this account would have to be met by Government in some form or another, it seems to me that Government assistance by way of loan recoverable at some future period, however distant, is at least preferable to an unconditional grant from public funds. It is hoped, therefore, that the steps already taken in anticipation of sanction may now be approved.

D.—STORAGE OF GOVERNMENT GRAIN.

Place of storage and amount of grain received.

28. The accompanying statement shows the storage places, the distribution thereat of the grain allotted, and the amount of grain received at the different storage places as per last weekly grain return. It will be observed that the total allotment for the district has been increased, on the basis of Sir Richard Temple's estimate, from 2½ to 5 lakhs of maunds. The total amount of grain received had been 1,97,423 maunds, of which 1,71,858 maunds had been finally stored, and 20,155 maunds were in transit. Constant complaints are received from Major Jackson, at Arrah, that the grain for this district is received in broken consignments. It will be of very little use despatching the fixed quantity daily from Calcutta if the railway authorities continue to cut it off en route and send it up in broken portions according to their convenience.

Construction of golahs and arrangements for custody of grain.

29. The subjoined statement shows the storage arrangements made at the different places of storage, and extra establishment for the custody of the grain is being entertained as from time to time needed.

Names of places where golahs have been or are being constructed at Government expense.

	Rs.	As.	P.
1. Pursa	160	0	0
2. Manjhi	114	12	0
3. Bussuntpore	100	0	0
4. Pygamberpore	100	0	0
5. Sewan	242	11	6
6. Barawli	157	11	0
7. Gopalgunge	115	0	0
8. Darawli	25	0	0
9. Mirzapore	100	0	0
10. Amnour	7	0	0
For constructing Sheds.			
11. Dighwara	9	0	0
12. Goldengunge	9	0	0

Names of places where existing Government or private houses are being made use of for storage places.

1. Chupra	Banwaree Lall's Serai.
2. Garkha	House of Rai Shawgholam Sah Bahadoor.
3. Buniapore	Abkaree godown at Pygamberpore.
4. Maharajgunge	House of Mathoora Kalwai.
5. Bussuntpore	" Ramgholam Singh.
6. Amnour	" Baboo Ootem Singh.
7. Mirzapore	" Goona Doobey.
8. Dighwara	" Ramnoorah Sing.
9. Mashrakh	" Debi Pershad and the Government Bungalow at Sarungpore.
10. Pursa	Indigo Factory of Moulvie Abdool Hai.
11. Sewan	Opium godowns.
12. Darawli	House of Beharee Shaw and the Government Serai.
13. Raghunathpore	Indigo Factory of Golam Abas.
14. Barawli	Sarya Bungalow.
15. Barragaon	Sreepore Factory.
16. Gopalgunge	Olipore Bungalow.

17.	Barharria	Indigo Factory of Karimbux and others.
18.	Maharanee	Banawli Bungalow.
19.	Manjhi	Government golah.
20.	Ekma	House of Sheogholam Roy.
21.	Sonepore	„ Begoo Sing Sen and others.

With reference, however, to the largely-increased allotment, it will now be necessary to revise all the storage arrangements, and regular golahs on a large scale will have to be constructed at most places. Immediate measures for the purpose are being taken.

E.—ADVANCES TO PRIVATE PARTIES AND THEIR RESULTS.

Advances for purchase of grain and for land improvement.

30. Rs. 2,000 have been advanced during the fortnight for purchase of grain for sale, and Rs. 1,07,473 to zemindars for grain or money advances to their ryots, making up the total as yet advanced on these accounts to Rs. 1,26,500 and Rs. 1,34,879, respectively; and for land improvement Rs. 21,650 have been advanced, bringing up the total on this account to Rs. 51,853. The sum of Rs. 40 has also been advanced to a person for the support of his family.

NOTE.—The figures given in the last narrative for advances to zemindars for money or grain advances to their ryots, were incorrect.

F.—CHARITABLE RELIEF.

31. With reference to the remarks of Government in the resolution on the last narrative, it should have been stated that, besides every thanna and out-post in the district being supplied with a sum of Rs. 50 for expenditure on charitable relief where needed, arrangements were being made to supply all the 1st grade relief centres with sums of Rs. 100 for a similar purpose, and that the superior Government officers employed on duty in the interior were also about to be furnished with funds on this account for the relief cases coming under their notice. The following statement shows the sums actually advanced from relief funds for this purpose:—

List of gentlemen to whom money has been advanced from the relief funds for gratuitous relief.

To whom remitted.	Amount. Rs.
Rev. C. Banmour	30
D. C. Reid, Esq., Moniarah	100
Executive Engineer, Sarun	50
„ L. G. Division	50
G. Grant, Esq.	50
Sub-Deputy Opium Agent, Chupra	50
W. H. Hudson, Esq.	50
Manager of Ramcollah Factory	100
„ Burhoga „	100
„ Arrah „	100
„ Arrah „	100
„ Rajaputty „	100
„ Hurpore „	100
„ Bala „	100
„ Garkha „	100
„ Rampore „	100
Moonsiff of Pursa	100
Manager of Bansghat Factory	100
Total	1,480

32. Mr. Wright reports as follows under this head:—

"As I before reported, a subscription list has been opened and names have been entered in it to the amount of Rs. 874, of which Rs. 429 have been realized. Fifteen first, six second, and twenty-one third grade relief centres have been selected, but no operations have as yet been commenced at them, nor do I think, as I have already on several occasions stated, will there be any necessity for charitable relief operations to be commenced, if it be at all required before the end of May or in June. The few cases that may require charitable relief will, I feel sure, be provided for by private charity. However, a hundred rupees is going to be sent, according to the instructions of the Magistrate-Collector of the district, to each of the first grade relief centres for expenditure on charitable relief.

"A large number of the zemindars of this division have now agreed to lay in stores of grain for the benefit of their ryots, and many of them have, I believe, already done so."

33. And the following arrangements have been reported by Mr. Hodgkinson in connection with charitable relief in the Hatwah estate:—

"The following are the orders issued in regard to a charitable relief centre at Hatwah; they have also been extended to Bhorey:—

"A relief centre will be opened at Hatwah under the superintendence of the Sub-Assistant Surgeon, who will be authorized to give charitable relief under the conditions following:—

"(1.) Only persons who are suffering from physical infirmity or sickness which totally incapacitates them for work, will be allowed charitable relief.

"(2.) Professional beggars should not be encouraged; but assistance will not be withheld from them, if they are found to be really suffering from hunger to an extent which affects their health.

"(3.) Old and infirm persons who are capable of light labor, such as spinning thread, &c., will not be entitled to any relief unless they perform a task which, in consideration of the circumstances of each individual, may seem proper; arrangements for carrying out this task-work will be made as soon as it is found necessary.

"(4.) Tickets similar to those used in the dispensary should be given each person who is passed by the Sub-Assistant Surgeon as a proper recipient of charitable relief. The names and circumstances of the persons will be recorded in a register, and the tickets will be available for one week from the date of each inspection, which will be recorded on them.

"It must be distinctly understood that total and utter incapacity for work is an absolute condition for gratuitous relief; and no exception from this rule must on any account be made."

These arrangements, as well as the rules framed by Mr. Hodgkinson, are approved by me.

34. For the relief of purdah-nushin women, arrangements are being made for the purchase of 2,000 maunds of cotton, and a supply will be sent to each of the first grade relie centres; notifications that relief of this nature can be obtained at such centres, being at the same time widely issued, and the assistance of zemindars and village headmen being invited. Any attempt to make preliminary lists of such women, by means of official agency, would, it is believed, occasion widespread distrust of the motives of action.

No. 540F, dated Chumparun, 23rd February 1874.

From H. KEAN, ESQ., Collector of Chumparun, to the SECRETARY to the GOVERNMENT OF BENGAL.

I HAVE the honor to submit the fortnightly narrative of scarcity and relief for this district for the fortnight ending Saturday, the 21st February.

A.—STATE OF THE COUNTRY.

Grain is still tolerably abundant at any rate in all the larger places. The accompanying statement will show the rates at which food-grains are selling. The prices have been pretty stationary. The average rate of coarse rice is 11 seers per rupee and of maize, &c., about 14 or 15.

From the Bettiah sub-division I have received the following cheering accounts: "The rubbee crops south and west of Bettiah promise a 12-anna outturn, and the opium is magnificent. The price of grain remains steady, and the people are wonderfully free from panic. Confidence has been completely restored by the knowledge that Government will not sell unless grain falls below 10 seers the rupee. Day laborers attend the works in large numbers, and ryots are anxious to take advances to enable them to support their families at home. The timely measures adopted to afford relief, and the wide publicity given to them, will enable us to keep the famine at arm's length throughout the year." From the north-east portions of the district (Adapore and Gherasahm) I have also received favorable accounts of the prospects of the rubbee, which in some places will, it is said, yield a 16-anna crop. Very large quantities of "cheena" (millet) have also been sown. The same may be said of the eastern portions of the district. From the south and south-west the reports are not so favorable. From Madhoobun Mr. Kilby reports that the rubbee and opium crops will be a failure, and Mr. Weekes, that in thannahs Gobindgunge and Kesariah, with the exception of villages near the Gunduck (in which an 8-anna rubbee crop is expected), the rubbee and poppy is bad, and will not yield probably more than a 2-anna crop; many fields have been ploughed up and sown in "cheena." The poppy here is also said to be still worse off. I have not yet received * the latest accounts from Ramnugger, but there is no great extent of "rubbee" or poppy grown in those tracts. In thannahs Modhoobun, Kesareah, and Gobindgunge (south-east, southern, and south-west portions of the district) the condition of the people in some of the less-favored villages is becoming very bad. They still seem very hopeful and willing to incur all risks to obtain a crop. All express confidence in Government, and thankfulness for the efforts made to relieve distress. They are at the same time eager to help themselves. "Those who have no work in the fields, and are not fit to work on the embankment, flock to the other relief works." They say, "it is these relief works that keep them alive. The excavation of tanks pleases them most. People of all classes (Brahmins, Rajpoots, Babhans, Kayesths, &c.) are seen on such works, but the greater proportion are of course, Dosadhs, Chamars, and other low castes, who, badly off at all times, are especially so now, and it is gratifying to see that they prefer work to stealing." The instructions lately received sanctioning a grant of Rs. 50,000 to this district for the re-digging of old tanks will be taken advantage of as much as possible, but it is found difficult in practice to induce the native landowners, &c., to take their share of the duty. Advances have been, however, and will be, made to the European residents for this purpose, and the Opium Department (a very ready agency for measures of this sort) has also been taken advantage of, Mr. Cooper, the Sub-Deputy Opium Agent, having given me much assistance, both by placing his subordinates at my service, and by personally aiding with his local knowledge and experience.

It is the better class of agriculturists who do not in ordinary times do any manual labour, and who will not do so now, on whom the pressure is beginning to be felt, and it will be necessary to assist these persons with grants of grain or money. Large sums have already been advanced to the European residents for this purpose, and further sums are being applied for, so

---

* Since received.

that no fear may be entertained for the welfare of planters' ryots; but there is a large class of course which do not come under this category, and measures are being taken to reach them. The Sub-Deputy Opium Agent has also represented that the opium assamees are in need of special relief; their credit is exhausted, the mahajuns will not assist them, and their opium advances will not be paid them for another month or more; under these circumstances they must receive relief to enable them to tide over that period, and Mr. Cooper suggests that they receive at once a sufficient quantity of grain from the Government stores per man, the price of which will be deducted from their advances a month hence.

If relief was afforded in money it would be seized by the mahajuns! This form of relief appears to be not only feasible but immediate in its action. I have therefore intimated that I am, with the sanction of the Commissioner, prepared to carry it out. Grain thefts are on the increase. There have been sixteen such thefts during the fortnight.

The subjoined statement shows the number of robberies and dacoities during the same period:—

Dacoity - - - - - - -	1
Robbery - - - - - - -	0

B.—Relief Works.

The subjoined statement shows the principal relief works in progress, and the number employed thereon. From this it will be seen that 361,027 persons found relief during the past fortnight:—

Statement showing the Number of People employed on Relief Works on each Road during the last fortnight.

Sudder Division.

	Men.	Women.	Children.

Daily average - - - - - -	14,412	6,727	4,642

Total of men, women, and children in Sudder division -	257,743
„ in Bettiah sub-division - - - -	93,948
„ in lower Gunduck division - - - -	9,336
Total - -	361,027

Daily average of all people employed, 25,787.

This does not include the upper Gunduck embankment works, on which 110,500 persons were employed during the same period. Thus 471,527 persons found employment during the fortnight under review. The Executive Engineer in charge of upper Gunduck works informs me that the workmen prefer mixed grain to rice, and that it would have been better if more of the former had been imported. The poorer classes are living on Indian-corn, gram, suttoo, &c. The Indian-corn, he anticipates, will last for another month, or till the end of March, when most of the rubbee will be coming into the market. The rate of wages paid are—for able-bodied men, average 9 pice, women 6, children 4 [6 pice equal to one anna].

The numbers on all roads are increasing enormously, and difficulty is found sometimes in coping with them.

A grant of 5,000 kodalees and 5,000 picks has been made by the Commissioner to this district.

C.—TRANSPORT OF GRAIN.

The arrangements now finally concluded (and which have been found to work most satisfactorily) for the transport of grain for this district are these:—Mr. Lethbridge conveys the whole allotment of 50,000 maunds per week; 20,000 of this goes to Govindgunge for the embankment works, 10,000 to the Bettiah sub-division, and 20,000 to Motihari for the sudder division. This amount of grain will continue to be received till the end of May.

D.—STORAGE OF GRAIN.

The total amount of grain received into the district was, on the 21st February, 325,034 maunds. Of this 176,390 had actually been stored—

In Ramnuggur circle - - -	59,607 maunds (approximate).
„ Bettiah circle - - - -	78,912 „
„ Sudder division circle - - -	39,871 „

E.—ADVANCES TO PRIVATE PERSONS.

The following sums were advanced during the fortnight:—

(1) For storage of grain - - - -	27,000
(2) Assistance to ryots - - - -	28,650
(3) Land improvement - - - - -	3,368

The total amount expended up to date under the heads are—

(1) - - - - - - - -	87,000
(2) - - - - - - - -	30,000
(3) - - - - - - - -	8,157

In addition to this about 50,000 have been sanctioned under head No. 2.

F.—CHARITABLE RELIEF.

The district, which comprises 3,781 square miles, has been divided for relief purposes, into 5 circles, each of which has been put under the management of a European relief officer, having under him a special establishment.

These circles are—

		Villages.	Houses.	Population.
Circle No. 1.	Thannahs Motihari and Adapore - -	303	41,449	249,182
„ 2.	„ Dhaka and Modhubun - -	424	47,686	315,387
„ 3.	„ Gobindgunge and Kesseria -	422	45,088	292,849
„ 4.	„ Bettiah and portion of Lawriah -	495	58,449	322,212
„ 5.	„ Bugha - - - -	654	48,241	242,949

The average number of villages to each circle will thus be 459, and the average population 286,509. The following officers have been deputed to these circles:—

Circle No. 1, not filled up.
„ 2, Mr. Kilby.
„ 3, „ Weekes.
„ 4, „ Samuells.
„ 5, „ Howe.

Under each of these officers will be employed two native inspectors, one writer, and one mohurir. Each inspector will thus have about 230 villages under his special charge, each of which he will visit and be responsible that relief is afforded. In most of the circles there will be sub-committees.

The following have already been selected:—

In circle No. 5 { Bugha. Harnatour. Balthur.

The head-quarter being at Ramnuggur, Colonel Boulderson superintends Bulthur and Mr. Joakim will be posted at Harnatour. Temporary bungalows have been ordered (under Sir Richard Temple's authority) to be erected at all these places.

In circle No. 4 no special sub-committee will be necessary, but the following arrangement has been made by Mr. Samuells :—

Bettiah town and suburbs have been placed in charge of Mr. T. M. Gibbon.
Pubjirwa circle has been placed in charge of Thakur Mado Singh.
Manpoor „ „ „ „ of Sarnam Rai.
Pursa „ „ „ „ of Mr. W. B. Hudson.
Lohurya „ „ „ „ of „ W. A. MacDonell.
Dakraha „ „ „ „ of „ H. Fraser.
Lalseraya „ „ „ „ of „ J. MacLeod.
Burhurwa „ „ „ „ of „ J. Dixon.

"By this means," he writes, "the people of the division are told off to eight relief centre. Each centre is under the supervision of a responsible and respectable person, to whom all applicants for charitable relief within the circle are referred. Each supervisor has a list of people requiring assistance, and he makes his own arrangements for having them supplied with food, either from his head-quarter or through some subordinate agency in the applicant's own village. Vagrants who are not residents of any circle will be collected at the centre of the circle in which they are found, and either made to work or fed gratuitously; should the numbers increase, they will be collected in a poor-house under proper supervision."

The chief feature in this system is the placing the people under those who know them best, and who are consequently less likely to be imposed upon. Another advantage will be the freedom from disease which must be the inevitable consequence of an opposite system. The Native Christian portion of the town of Bettiah is placed under the Roman Catholic priest. This system is already in force; the exact number of persons relieved is not reported as the lists in some circles are incomplete. The incapable, &c., are divided into those who can do work and those who cannot. The latter are fed gratuitously, and the former are chiefly widows and women who have children in arms. This class are paid in grain as for daily labor, and are supplied with material for sewing and weaving. A sum of Rs. 10,000 has been subscribed to this sub-division by the Rajah of Bettiah.
